Along with the development of socialist society and the maturation of social, political and ideological conditions, the opportunities are created for the perfection of socialist democracy and the affirmation of its capacity as a motive force for the new order. The especially complex tasks of the current stage in our country require the use of the entire potential offered by socialist democracy in the variety of its significance, not only as an expression of leadership exercised in the name of the masses, but especially as an effective and permanent participation by the masses.

Together with a growth in the role of socialist awareness, the development of democracy represents especially significant coordinates for carrying out the objectives of the 12th Party Congress for creating a multilaterally developed socialist society.

ROMAN PRESENCE IN MOLDAVIA IN FIRST MILLENIUM

Bucharest ERA SOCIALISTA in Romanian No 11, 5 Jun 81 pp 36-38

[Article by Dr Dan Gh. Teodor of the "A. D. Xenopol" Institute of History-Archeology in Iasi: "The Roman Presence in Moldavia in the Second Half of the First Millenium"]

[Text] As a result of numerous and broad archeological research efforts undertaken throughout Romania to understand the history of the first millenium of our times, a significantly large number of scientific data has been accumulated in recent decades which has resulted in bringing up for discussion again certain aspects of the problem regarding the formation of the Romanian people from new points of view, compared to those of the inter-war period historiography. These new points of view are incomparably richer, more complete and closer to the historical realities of the development of this process.

In this context, the numerous archeological discoveries in the region to the east of the Carpathians, some of them of great scientific value obtained as a result of broad diggings, probes or intensive surface research, as well as the comparative studies regarding similar and contemporary vestiges from the rest of Romanian territory, gave the researchers a rich and significant number of data. Their use contributed to the clarification or precise understanding of certain aspects referring especially to the characteristics and evolution of local civilizations during the period of the fourth to tenth centuries A.D. In this regard, the fact must be stressed that, just as in the entire Romanian Carpathian-Ponto-Danubian region and in the regions to the east of the Carpathians, the continuity of the native population during the period of the fourth to the tenth centuries A.D. can be followed in the rural areas, where the sedentary Daco-Romanian resistance and, later, that of the Romanians preserved the ancient forms of organization, such as the village council with its mixed economy - agricultural and pastoral - and with its internal structure differing from that of the communities in the neighboring territories. This continuity during this historical period is illustrated by the life style adopted by the native people under the specific political and social-economic conditions brought about by the temporary presence there of certain migratory peoples.

Contrary to certain older or newer theories lacking scientific substantiation, the archeological research carried out in recent decades incontestably prove that the Romanization process of the Geto-Dacian population did not end with the abandonment of Dacia province, but, on the contrary, it continued and even intensified during the course of the fourth to sixth centuries A.D., gradually and irreversibly encompassing the extra-Carpathian territories. Furthermore, it is known that the presence of the Roman Empire for a certain period of time, during the third and fourth centuries A.D., in some parts of Wallachia and Oltenia, as well as in southern Moldavia, favored the continuation of the Romanization process not only in these territories, which were effectively occupied and for a long time became a kind of annex to Moesia, but also in the regions farther away from the Danube, to the east of the Carpathians, which were also closely tied to the Roman material and spiritual life from earlier times. Numerous settlements and necropolises dating to the end of the fourth century until the middle of the fifth century and spread to an equal degree in all forms in Dacia to the east of the Carpathians (many of these places were methodically researched through broad archeological diggings) offer important proof about the stage of socioeconomic development of the native people and the clearly Roman traits that characterize the civilization specific to these regions. Such discoveries were made at Nicolina and Ciurchi-Iasi, Nichiteni and Corlateni-Botosani, Zaharesti-Suceava, Costica and Davideni-Neamt, Dodesti and Valea Seaca-Vaslui, Barcea-Galati and so forth.

In the great majority of the cases, the settlements from that era (and frequently the necropolises as well) are placed over other older settlements from the immediately preceding period or, in some cases, are covered by those dating from a later era, which constitutes, without a doubt, eloquent proof not only about the continuity of the native populations in all its forms in these Romanian regions, but also about the uninterrupted existence, on the same village locations, of Daco-Romans who never abandoned their native lands.

Just as in the rest of the Carpatho-Ponto-Danubian region, the archeological research conducted to the east of the Carpathians offered numerous and important proofs that attest to a prosperous life there based on agriculture, raising cattle and practicing numerous crafts, with metalworking occupying first place. The developed tools discovered in the areas researched, the existence of certain iron ore reduction furnaces, pottery sheds and workshops for making ornaments, the rich variety of vases made on a wheel or by hand showing certain Dacian traditions and, especially, Roman ones, the system of building houses and furnaces and other items are essential elements that distinguish the civilization of the native people to the east of the Carpathians, as well as in the other areas of the country, from the material culture belonging to the diverse migratory populations which temporarily came into contact with them and which, for a certain period of time, dominated some of them in the Carpathian-Danubian regions.

In the evolution of the Carpathian-Danubian society, beginning with the middle of the fifth century, the development of certain historical events marks a separate stage with favorable consequences for the development of the Roman presence in these regions. Thus, the immediate effects of the end of political domination by the Huns in the middle of the fifth century (a domination that lasted there for approximately three-quarters of a century) were expressed, in certain regions of the country, by the establishment of a period of nearly a century of relative peace and, we could even say, of some economic progress which primarily benefitted the native population, temporarily freed from the uncertain political domination that constituted an impediment to its development. Also benefitting from this new situation, which appeared after the middle of the fifth century, the East Carpathian region, characterized by the civilization generally named the Costisa-Botosani type, illustrates the stage of internal development of the local society during the period of the fifth to sixth centuries A.D. while at the same time showing the nature, intensity and multitude of its relations with the Romano-Byzantine world of the Lower Danube.

Established on the basis of the Daco-Roman material and spiritual culture of the preceding era, the Costisa-Botosani type civilization, in addition to the numerous elements of an older Dacian or Roman style preserved within its make-up, also presents many new characteristics, a consequence of its uninterrupted evolution and its ties to contemporary and similar aspects documented throughout the rest of the country's territory, of the type identified in Transylvania at Bratei, Sighisoara, Taga, Poian, Moresti, Berea and so forth, or in Wallachia and Oltenia at Ipotesti, Bucuresti, Tirgsor, Cindesti, Ciresanu and so forth. In this context, one can show, specifically and overall, the originality and especially the unity of the Roman material and spiritual culture throughout old Dacia, proving with arguments of great scientific value the fact that its founders are Romanized Dacians not only from the former territories administered by the Romans, but also from beyond them, from the rural areas of the free Dacians.

The numerous archeological discoveries in recent years, tools and ornaments, ceramic work of local design and Roman influence, the type of settlements, houses and furnaces, the Romano-Byzantine imports, the use of bronze Byzantine coins and the sedentary agricultural and handicraft nature of the settlements, in general constitute eloquent proof regarding the stage of socioeconomic development of the native population and the Roman content of its civilization. Furthermore, the earlier discovery of numerous vestiges of a Christian nature throughout the entire region to the east of the Carpathians shows the early and massive spread of Latin Christianity, conclusively accepted here not only as a result of the old and multiple ties with the South Danubian Roman world, but also as a natural result of common Latin ethnic, cultural and linguistic traits which characterized both the native population there and the one to the south of the Danube. Such discoveries, some of them of great scientific importance, are seen at Botosana-Suceava, Davideni-Neamt, Traian-Bacau, Costesti-Iasi, Dodesti and Murgeni-Vaslui, Stoicani-Galati and so forth.

Certainly, in maintaining and strengthening the North Danubian Roman presence during the period of the fourth to the seventh centuries A.D., an important role was played by the multiple and permanent ties between the native population and the Roman-Byzantine Empire. In this regard, we must also emphasize the significance of the existence, all along the Danube, of numerous Romano-Byzantine cities that were not only defensive fortresses for the empire, but also economic, political and cultural centers having broad influence in the Romanization process to the north of the Lower Danube.

As the rich and significant archeological discoveries therefore show, during the course of the fourth to the sixth centuries A.D. to the north of the Lower Danube and in the old territories of Dacia, there was a broad ethnic, linguistic and cultural Roman area having its own original and unified characteristics.

Towards the middle and the second half of the sixth century A.D., new and important political events effected the Romanian region to the east of the Carpathians, primarily because of its geographic position. Beginning with the middle of the sixth century, and especially in its second half, more or less compact groups of Slavs penetrated and temporarily settled in the East Carpathian regions and on the eastern part of the Danubian Plain, avoiding the lands of Dobrudja which were still firmly defended by the Empire. Although the penetration and temporary settlement of Slavs in the extra-Carpathian regions of Romania in the second half of the sixth century did not have a peaceful impacy, as can be easily understood, the life in the villages of the native population continued at an intense level, despite the clear disruption of the local production forces caused by the new demographic movements that occurred during this era and continued throughout the seventh century, effecting the entire Carpatho-Ponto-Danubian region. The burying of certain Byzantine monetary treasures in the southern part of Moldavia and eastern Wallachia, containing coins from the end of the sixth century or from the first decade of the next century (at Cudalbi and Movileni-Galati; Horgesti-Bacau; Gropeni-Braila; Plumbuita and Unirea-Ialomita), clearly reflects the fact that the massive penetration of the new migrators and, later, their movement into the Empire disturbed the development of certain regions to the north of the Lower Danube more than was presumed.

In the territory to the east of the Carpathians, the most important archeological research into areas dating from this period (the sixth and seventh centuries A.D.), were undertaken at Botosana, Udesti and Sipot-Suceava, Cucorani-Botosani, Bacau-Curtea Domneasca, Davideni and Izvoare-Neamt, Crucea lui Ferent-Iasi, Dodesti-Vaslui and so forth. The data obtained from these discoveries, which are especially important and significant, gave the researchers the opportunity to carry out a careful and complex analysis on the basis of which they succeeded in identifying the characteristics that define the civilization of the native population on one hand and the material culture belonging to the Slavs that penetrate this region, on the other hand.

As shown by the results of the archeological research carried out, the great majority of the objects dating from the sixth and seventh centuries A.D. are layered over other, older ones, offering the opportunities to find not only a clear continuity of settlements on the same spot and in all forms, but also to make a comparative analysis of the evolution of the native population during this time, when new penetrations of migratory populations occurred. It was found that houses continued to be built in the same manner as during the preceding era, having the same type of stove, built from stones or clay, and the same bread oven, of the Roman type. Inside the houses, they generally discovered the same tools used in agriculture or in diverse handicrafts and household work, with most of them, as well as ornamental objects and Christian objects, produced right there in specialized workshops. They found numerous iron ore reduction furnaces specialized tools, melting pots, printing presses, iron blooms and so forth at Botosana-Suceava, Udesti, Costesti-Iasi, Davideni, Fedesti and Horga-Vaslui, Cucorani-Botosani and so forth. The pottery works in the settlements during this era generally continued the older forms, ornaments and work techniques, belonging to earlier periods, in addition to some new elements.

Imports of amphora, tools and ornamental objects, as well as the circulation of bronze Byzantine coins prove that the regions to the east of the Carpathians, despite the sufficiently troubled political situation, continued to be within the economic and cultural sphere of influence of the Romano-Byzantine Empire.

In comparison to the Roman civilization specific to the sixth and seventh centuries A.D., the material cultural brought by the Slavs who penetrated the extra-Carpathian regions during this time was at an inferior level, having certain archaic aspects. After a short period of living in these territories, the vast majority of the Slavs moved, after 602, to the south of the Danube. The rest of the Slavs staying to the north of the river, sufficiently few in number, as well as those that later penetrated some of the western regions of the country, continued to live, after the seventh century, in contact with the native population and began to adopt the higher forms of Roman civilization within a broad and intensive assimilation process.

Besides the penetration of the proto-Bulgarians towards the end of the seventh century, an event which did not directly effect the region except in the southern regions between the Carpathians and the Nistru, as well as the eastern part of the Danubian Plain as shown by the geographic distribution of certain treasures buried at that time, there was no movement of a second massive wave of Slavic population in this area, but merely the infiltration of certain minor elements of this group, which were to be carried away by the above-mentioned proto-Bulgarian invasion. This explains to a certain degree the temporal and spatial coordinates within which the symbiosis of the Romanians and Slavs took place and the assimilation of the Slavs occurred.

Numerous archeological discoveries in the area to the east of the Carpathians, dating from the eighth century and from the first half of the next one, such as those at Hlincea and Dorobantu-Iasi, Lozna and Horodistea-Botosani, Drumul National-Suceava, Izvoare-Bahna and Dulcesti-Neamt, Dodesti, Fedesti and Falciu-Vaslui, Oituz and Lichitiseni-Bacau, Suceveni and Stoicani-Galati and so forth, attest to the continuing existence of a numerous Romanian population with its own original civilization, developed on ancient Daco-Roman bases and identical to that documented throughout the Carpatho-Ponto-Danubian area. On the basis of the research undertaken, it has been proven that the type of settlement, housing and oven do not have essential changes compared to the preceding era, instead there is a clear evolution with the production forces developing even more.

After a period of relative stagnation, brought about by the economic crisis that enveloped the Byzantine Empire during the course of the seventh to the ninth centuries and, therefore, its relations with the north Danubian Roman world, in the settlements in the East Carpathian regions, as well as throughout the rest of the country, from the eighth century there began an increase and improvement of agricultural tools and other handicraft and household tools. New tools also appeared for gardening and vine growing, there was a continuing growth of activities in the area of processing iron and there was an increase in the number of handicraft workshops and, implicitly, their products. In this regard, the research done brought forth numerous proofs about the making of ornamental objects and certain objects made from bone, wood and stone and especially about activities in the area of pottery making. Beginning during this period, ceramics are to an ever greater degree produced on a wheel in a variety of forms and styles, becoming specific only to the regions of the Lower Danube.

From the data presented by the archeological research, we similarly note that, beginning with the ninth century, to the east of the Carpathians, as well as throughout the entire Carpathio-Danubian region, there was a resumption of the dissemination of diverse Byzantine imports, concomitantly with the carrying out of a certain circulation of Byzantine money, which became especially intense during the 10th and 11th centuries.

Numerous necropolises identified north of the Danube, dating from the seventh to the ninth centuries and having a clear Romanian and Christian nature, likewise prove the maintenance of certain close and continuous ties with the civilization of the Byzantine Empire.

It is important to stress the direct conclusion of the research carried out to date that the civilization in the seventh to ninth centuries, as attested to by the hundreds of settlements and necropolises in the East Carpathian territories of Romania, is absolutely identical to that documented in the rest of the Carpathian-Ponto-Danubian region. The clear unity of the old Romanian material and spiritual culture, which began to make itself fully felt during the eighth century, was possible due to the similar development and stage of development

of society concomitantly throughout the former territory of old Dacia, with this being brought about by the common ethnic and language background and by the similar social-economic organization of the village communities, as well as by multiple and permanent relations with the Byzantine Empire.

The essential Roman characteristics, as well as the presence of certain Byzantine elements in the content of this culture, confer upon the overall civilization in the eighth century and the following century its own peculiar characteristics of the Carpathian-Danubian region through which it clearly distinguishes itself from the material cultures of the Slavs in the neighboring territories. The establishment of a specific civilization right from the eighth century on the territory of old Dacia, defined as an aspect of the Dridu type, corresponds generally with the conclusion of the process of forming the Romanian people. Its establishment in the region to the east of the Carpathians is, without a doubt, the result of a local, long and uninterrupted development on a powerful Daco-Romanian base with deep and rich roots in the thousand-year past of our history.

Towards the end of the first millenium of our times, as a result of the internal changes of an economic and social nature that occurred within the heart of the villages and as a consequence of certain foreign dangers caused by the migrations of certain new peoples, including the Hungarians and Petchenegs which we must first of all note, to the east of the Carpathians and throughout the entire territory of old Dacia fortified settlements started to be built, of the type discovered at Funu-Hertii, Derscam Baranga and Tudora-Botosani, Ciurea and Pocreaca-Iasi, reinforced with defensive ditches and mounds of dirt with palisades. They undoubtedly belong to the old Romanian civilization from the ninth to twelfth century A.D., and clearly prove that the local society in this part of the country was at a stage of development similar to the rest of the Romanian population or to that in the other territories in its vecinity.

With regards to this aspect of the problem it is especially important to point out that certain concentrations of settlements and necropolises dating from the ninth to the eleventh centuries A.D. in certain well-defined and naturally defended geographic subunits were to be the sites of the existence of certain powerful village unions and certain already thoroughly organized Romanian political formations, a significant and decisive fact in understanding the traits that characterize early feudalism to the east of the Carpathians. These traits, themselves stemming from the peculiarities of the internal structure of the Daco-Romanian village councils and, later, the Romanian councils during the period of the first millenium of our era, similarly constitute an eloquent statement about their uninterrupted development and close and direct ties with the Roman-Byzantine and Byzantine worlds in the Lower Danube. Such conclusions can be made on the basis of the research carried out at Suceava; Ionaseni, Spinoasa and Baiceni-Iasi; Danesti, Dodesti and Epureni-Vaslui; Oituz and Oncesti-Bacau; Sendreni-Galati; Cimpineanca and Dragosloveni-Vrancea and so forth.

The continuity of the native population to the east of the Carpathians during the first millenium A.D., as well as throughout the entire Carpathian-Ponto-Danubian region, clearly proved by numerous archeological research projects, was the result of the superior economic and social organization of the local village communities and of the high level of their material and spiritual culture, as well as of a broad and continuing process of Romanization which gradually, but conclusively encompassed the entire territory of old Dacia.

The carrying out and conclusion of the process of forming the Romanian people and language in the territory to the east of the Carpathians, which occurred concomitantly and in a unified manner throughout all of the area of Romanian ethnogenesis, would not have been possible without the continued existence of the Romanized Dacian population and without the direct and multiple ties with the Roman presence in this part of southeastern Europe.

Despite all of the difficulties of the period of the first millenium of our era, the native population in the Carpathian-Ponto-Danubian territories with deep and multimillenia roots in these lands defined with vigor and originality, within the framework of a long and complex historical process, the essential traits that depict it as the sole and most authentic heir of the eastern Roman presence.

DRAWBACKS OF CONSENSUS-SEEKING PROCESS DESCRIBED

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1591, 28 Jun 81 pp 10-12, 14

[Article by Dragos Ivanovic]

[Text] "We face an important responsibility. Don't let the situation tomorrow, the day after tomorrow, comrades, hit us in the face!"

This warning was uttered without pomposity, but in tones of serious concern, by a delegate during the recent rather meandering debate in the Chamber of Republics and Provinces of furnishing funds to stimulate foreign trade. It was a question of providing 14 billion dinars, and the Federal Executive Council saw no other possibility for obtaining these funds than to take them from government and social service expenditures, which are larger than they should be.

Everyone agreed in principle, but at the same time everyone had so many individual critical remarks to make that the entire measure was jeopardized because there were so many of them. Don't we often show more passion in defending our separate reasons than in showing our willingness to really detect those interests we have in common? At such a moment of personal divisions and vacillation, the delegates thought it fitting to throw this serious argument into the debate as though on the other pan of the balance: "The situation with our international payments is extremely serious and does not allow for any postponement whatsoever."

Later in fact this issue was resolved in a satisfactory way, but the examples of haggling, hanging back and dragging things out which we often encounter make it imperative that we seriously reassess the practice of our decisionmaking.

The Main Road and the Inevitable Path That Leads Astray

Someone described the way we go about concluding compacts and accords this way in a witty metaphor: This decisionmaking often resembles a train about which the only thing known for certain is where it comes from and who has taken it, but no one knows where it will go and when it will stop. Perhaps this complicated social procedure from the top to the bottom of society, which aside from the main road also has an inevitable path that leads astray, might best be

illustrated by the fate of a resolution--the principal economic document for 1 year.

The procedure for adoption of the resolution ordinarily begins in late October for each year to come. First the preliminary debates are conducted in committees of the assembly, a draft is written, and the republic and provincial assemblies take their position on that document. Reconciliation of these views in the Yugoslav Assembly takes place in December, and at the end of the month the resolution is finally adopted.

It would be premature to say that the job is then over. The decisionmaking train has only reached halfway, since what we have before us is only a list of what we want and what is possible in economic policy for the next year. For this resolution to become "operative" it now has to be furnished measures that guarantee its implementation, and now the republics and provinces, associated labor and many other organizations and agencies have to reach further agreements on all that.

We Can No Longer Remain in a "Nirvana of Generality"

Consensus on all these measures is neither easy nor simple to achieve. Since there is a delay running even to several months, and the measures agreed on, when taken, cannot yield the expected results. For instance, the resolution for this year runs to some 50 tasks which need to be implemented by economic measures adopted with the consent of the republics and provinces or set forth in self-management accords of associated labor. Consensus has been reached on many, but on some it has not yet been reached, though half a year has passed. This incidentally is a practice which has recurred for several years now. Is it any wonder, then, that the resolution for this year is not being carried out the way it was conceived?

The dangers of this deviation are already being noted, but the question being asked is what we can do about the uncontrolled situation of irresponsible delinquency and poor choice of measures, which in turn have the result that our planning documents end up being mere pieces of paper.

According to our custom established over many years, it is then usually said that "someone" has not adopted the agreement, and that "some people" have not taken certain specific measures. Those who say these things, of course, relieve themselves of any responsibility, but they offer little help in finding out who really is at fault.

A few days ago several delegates vigorously asserted that we could no longer remain in this nirvana of generality and of clouding things over. They want it stated in public who has not signed the agreements and who has failed to enact regulations. These should be summoned to the Yugoslav Assembly to explain their actions before the public. This would be a refreshing and interesting departure in the way things are done in the Assembly and would be approved by the public. If responsibility were established in this way, the guilty parties would have to be affected by appropriate measures of the Federal Executive Council.

One of the possible solutions for these unpleasant situations has been suggested by Veselin Djuranovic, who himself was recently the prime minister. He wants the participants in the conclusion of accords and compacts to be given a decent period of time to obtain consensus, and thereafter, in accord with constitutional powers, appropriate measures would be taken by law. This line of action, he is convinced, would not only be in conformity with the essence of our relations in the federal system, but also represents an indispensable condition if we are to avoid the tardiness whose consequences are increasingly serious.

Thus we now have two proposals on how we should avoid these constant and unfortunate delays--proposals which fit more nicely together than they differ.

Out of Step With the Economic Situation

But if the question of deadlines could be reduced to just a matter of better organization, to a more logical and balanced sequence of steps in the decisionmaking procedure, then this hurdle could be taken with relative ease. There are many deeper reasons why the train of our economic policy is always late, why it wanders along its way and gasps as it becomes lost in administrative labyrinths.

They lie above all in the separate interests which by and large we know about and in particular forms of behavior which as a rule we are very poorly informed about. One is encouraged by the willingness to speak more frankly about these "specific forms of behavior." The foundations of our democratic game of political decisionmaking consist of two components: the responsibility of the republics and provinces for their own development and their responsibility for the development of Yugoslavia as a whole.

However, as the chairman of the Federal Executive Council recently said in the Yugoslav Assembly without beating about the bush, "the reaching of consensus of the republics and provinces on the measures of economic policy is evidently out of step with the needs imposed by the present economic situation. Whereas the situation requires effective adoption of economic policy measures and also of measures which are to guarantee enforcement of the jointly established priorities in development, the conclusion of an agreement among the republics and provinces takes a long time and does not facilitate effective action."

The tendencies toward republic and provincial statism, which is arising more and more in the name of associated labor, are becoming stronger. "There is not just the opposition," the chairman of the Federal Executive Council said, "just in the relationship between associated labor and centralistic statism (as we are accustomed to think about it and to speak of it), but also between associated labor and statism, be it centralized or decentralized." What is more, the danger of this latter is indeed greater, since it has more opportunity to adapt and tie up with technocracy "which unfortunately has been strongly confirmed in the decisionmaking on investments."

Everyone Has His Own Part of the Truth

When you speak with the delegates about responsibility for decisionmaking at the top level of society, you frequently have occasion to hear the other side of the issue. It is true, they say, that the Assembly does make the decision, but many things in decisionmaking actually begin and end with the Federal Executive Council. It proposes the measures, it defends them, it takes up the dialogue on critical remarks and it is responsible for carrying out what is adopted.

This is undoubtedly a broad field of political possibilities and constitutional obligations, which also presuppose varying forms of activity. Many delegates feel and on various occasions do not fail to confirm these critical observations of theirs, that the Federal Executive Council is often not acting promptly or vigorously enough. For example, when there is a difference in views between delegations on some issue, it is not always evident what the Federal Executive Council is committed to. And this abstention in cases of disagreement threatens to paralyze decisionmaking or to unnecessarily postpone the final decision.

Disagreements also arise when it is subsequently found that certain measures are not working out in practice. There follows an exchange on the causes of the lack of progress in which each may have his own part of the truth. Some delegates then react strongly and say: "Why doesn't the Federal Executive Council pound the table and say who is responsible?"

It is another question why there is so much opportunism and inexplicable considerations in actual forms of behavior. Perhaps, as some say, this is because even the Federal Executive Council does not have the necessary prerogative in its actions. This refers to those situations when the Federal Executive Council is directed in preparing certain proposals to enter into the necessary consultations with appropriate bodies and agencies of the republics and provinces.

A Question of Confidence Might Also Be Put

Generally speaking, the question of who is to take what measures by what time in order to implement the policy which has been adopted is often debated with quite a few differences and ambiguities. It is just that the Federal Executive Council, which in this respect has definite constitutional and legal powers, undertakes administrative measures with a certain feeling of reluctance, since the latter, even when they are inevitable, "leave less room for decisionmaking by the workers and perpetuate the idea of the all-powerful state."

The delegates in turn are often divided when they assess the purport and value of these measures. Some of them feel that the Federal Executive Council is quick to adopt administrative measures and makes excessive use of them. Nor, moreover, do they avoid rather harsh criticism: Piling one restrictive measure on another does not improve matters, but only takes us further from self-management. Others are convinced that in situations when there is a departure from the established policy, we would fall into still greater difficulties without these measures, and they encourage the Federal Executive Council to make even more use of its power.

These vacillations are to be found not only in debates concerning matters of principle, but also in individual cases when specific steps are to be taken. For instance, when some law is being adopted or policy set forth, then the Federal Executive Council is competent to enforce it. But often our hands are tied, since the Assembly has told it that it must first obtain consent of the republic and provincial executive councils. It is well known what happens then: Often some executive council does not grant its consent, and the decision is postponed.

These untoward situations arouse two types of reaction. Some people are inclined to call for more powers to be granted to the Federal Executive Council and say that the prior consent of the republic and provincial executive councils cannot be sought in such cases of adopting regulations. Others come down hard on the very practice of the Federal Executive Council: Why in a situation when there is no consensus for enforcing the policy that has been adopted doesn't the government use its authority, which is also constitutional, and put a question of confidence?

Of course, all the problems of our self-managing decisionmaking do not lie solely at this federal level or republic level of society. The further one goes toward the base of society, the more rarefied becomes the network of agreements and procedures aimed at agreement. But here again, one hears in various quarters, the dilemmas that arise are just as great.

Someone, for instance, says that we have too many agreements, that we conclude agreements where this is necessary and also where it is not. (One economist remarked in jest: "Pretty soon a man will have to have an agreement to get on a streetcar!")

The critical remarks about the quality of the agreements are much more serious. Although they conform to self-management in their form, the agreements take us away from self-management, especially when they are peddling their own narrow interests. The flows of reproduction are thus interrupted, and the fabric of the unified market torn. So it is no wonder that some people resolutely assert that this kind of discussion and agreement--which is only another expression for administrative action--is actually a fractured decisionmaking which prevents any joint and coordinated action.

As was seen at the Congress of Self-Managers, in many work organizations people have become embittered for this reason and have the feeling that they are hampered by invisible threads outside their control. On the one hand countless agencies and organizations spend several months of effort computing, measuring and foreseeing what will happen with output, prices, exports, spending and the standard of living. On the other the course of events takes a different direction and destroys all that tremendous social effort.

One does not have to be excessively skeptical to realize that this is a story which occurs over and over again year after year. One delegate commented on it this way: "Things that are against the law are beginning to become the custom and take on legitimacy with us." Are we going to turn this sequence of events around so that the situation does not actually hit us in the face all of a sudden?

MACEDONIANS DISCUSS MEASURES TO DEAL WITH ALBANIAN PROBLEMS

New Albanian Textbooks

Skopje NOVA MAKEDONIJA in Macedonian 15 Jul 81 p 3

[Article by Z. Andreevski]

[Text] Delegates of three council committees have been working on Albanian language teaching and educational activities for the 1981-82 school year to develop new textbooks and to provide recommendations for normal implementation of educational objectives.

Delegates of the Committee for the Sociopolitical System of the Sociopolitical Council, the Committee for Education, Science and Culture of the Council for Associated Labor, and the Committee for Sociopolitical Relations of the Council of Opstinas of the Macedonian Republic Assembly, at a session held yesterday, considered information relating to several situations for implementing educational activities for the Albanian language in the republic. The introductory remarks regarding the information came from the republic secretary for education and science, Anatolij Damjanovski.

The initiative for considering this material stems from the May session of the Sociopolitical Council, at which time the delegates pointed out that in some textbooks and supplementary literature for high school and higher level students, without instruction in the Albanian language, a foreign ideological content is to be found. The Republic Secretariat for Education and Science was charged with the task of examining all such textbooks and study aids, and was empowered to withdraw those with nationalistic and other ideological content that is alien to Marxism and the self-management socialist society. The secretariat was also charged with considering the moral and political qualities of the Albanian language teaching personnel in the republic.

Worrisome Situations

The information prepared by the Republic Secretariat for Education and Science set forth concrete data for implementing instruction in the Albanian language at primary and secondary schools, university faculties and other advanced training institutions. These data state that a worrisome situation exists at several key points in the educational and upbringing process. To be precise, the textbook literature contains editions published in the People's Socialist Republic of Albania, reprinted in the

province of Kosovo and adopted for use in the schools of the republics without critical consideration of the content of the books. The texts in these textbooks have been written from alien idiological and political positions, and they are filled with nationalist and irridentist messages. For example, readings include the books "One Stormy Autumn" by Ali Abdi Hojha, and "The Turning Point" by Fatmir Gata, which as the book notes state "by their ideological foundations, satisfy the needs of Albanian ideology."

In the process of implementing pedagogical programs, asserts Anatolij Damjanovski, there have been instances where programs have been reshaped to the detriment of an affirmation of Yugoslav values.

Where textbooks and instructional materials relating to history are involved, there is a noticeable tendency to ignore facts concerning the interaction between Macedonians and Albanians, while on the other hand overemphasis is placed on studying the activities of Skenderbeg, Ali Pasha Janinski, and the history of Albania since the middle of the last century. Students of the Albanian language and literature group at the Skopje Pedagogical Academy throughout their course of study do not study the literature of Yugoslav peoples and nationalities at any time. At some schools in Gostivar, Tetovo and Kumanovo, they use textbooks that have not been approved for use in Macedonia, such as for example the History for the first class of secondary school by Ali Hadri, and the History of Albanian Literature for the first through fourth classes of secondary school by Dimitar Suteriki.

There are also unsatisfactory methods for evaluating the quality of teaching personnel for the Albanian language. A large number do not have suitable education, ideological conviction, or competence in ideology. Incidents have also been reported in the Opstinas of Kicevo, Tetovo, Gostivar and Struga, where persons have been included in the educational process who have been convicted of enemy activities against the people and the state.

The Macedonian language is offered for 2 hours weekly in the curriculum, which really is not sufficient to permit mastery of the language for normal communication and vital needs. Besides that, a number of instances have occurred where the Macedonian language instruction hours have been boycotted.

What do the Delegates Say

Delegates of the three councils at yesterday's session expressed amazement that such situations had been allowed to emerge. They expressed themselves in favor of energetic and most urgent withdrawal of textbooks containing alien ideologies, and of undertaking measures in 1981-82 school year for Albanian language instructional activities that would use new textbooks where that is feasible, and for giving suitable instructions for work without literature in other cases. The delegates agreed unanimously that it would be better to conduct instruction without textbooks rather than to use ones with ideologically unacceptable content and messages.

The delegate Sejfedin Sulejmani dwelled particularly on the materials being used for primary education. Sulejmani cited numerous unacceptable examples. Among readers for the fifth through eighth grades, some 60-70 percent come from authors of the Albanian People's Republic! He backed up his statement by showing the readers to the delegates. As an example, we might cite that in one of them, four of the

texts were by Macedonian authors, three were by authors of Albanian nationality who were living in Macedonia, and fully 40 texts were by authors of the People's Socialist Republic of Albania (?!) The compiler of three of the four readers shown was Ali Aliu, who was convicted for Albanian nationalist activities. Sulejmani presented yet another example: The Rilindza Publishing House of Pristina published Studies in Esthetics in which Yugoslavia was named as an example of revisionism!! The epilogue for this book was, incidently, written by Ali Aliu (and this book was also presented to the delegates).

Ljutvi Marku also spoke about the unacceptable degree to which authors from the Albanian People's Republic were represented in the textbooks that are used in Macedonia. He offered the opinion that there is no place for those writers in our textbooks, since through these texts they transmit ideological and political positions that we Yugoslavs cannot accept.

Petre Tsvetanovski spoke of the responsibility of people who permit the publishing and use of textbooks containing Albanian nationalist viewpoints. He dwelled on the studying of the Macedonian language by members of the Albanian nationality, stressing that without suitable command of that language, they cannot carry out their employment tasks and assignments, or deal with the problems of production processes.

The statements of other delegates also unequivocally underline the urgency and gravity of implementing the measures that have been proposed. To be specific, measures have been foreseen and the concrete approaches determined for reevaluating the curriculum in educational activities in the Albanian language, and for monitoring their accomplishment. Next there are measures for withdrawing and banning the use of textbooks with alien ideological stands, for testing the moral and political qualities of the teaching personnel, and for removing those who do not perform on agreement with the social objectives of education and upbringing. Accelerated publication is foreseen for textbooks where they are lacking, or where they are needed to replace ones that have been withdrawn from use. Steps will also be taken to ensure adequate instruction in the Macedonian language, and to test the attitudes of those receiving stipends and credits in relation to Albanian nationalist and irridentist manifestations; other steps are also foreseen.

It is expected that the information presented and the proposed measures and steps will be approved at today's sessions of the Macedonian Assembly.

Albanian-Language Teaching

Skopje NOVA MAKEDONIJA in Macedonian 15 Jul 81 p 3

[Text] In some curricula, programs and textbooks there are aspects that do not adequately reflect Marxist viewpoints on the national question, Yugoslav community, and the socialist self-management system.

The commission for international relations of the Macedonian Assembly, at yesterday's session chaired by Spirko Spirovski, considered information concerning certain situations relating to the implementation of Albanian language instruction.

In discussing instructional plans, programs and particularly textbooks of the Albanian language, literature, history, sociology, etc., the commission determined

that there were factors present that did not adequately reflect Marxist viewpoints on the national question, or the brotherhood and unity of the peoples and nationalities of Yugoslavia, the expanded national community, and the Yugoslav socialist self-management system.

The commission particularly condemned those manifestations in instructional programs and in individual textbooks and materials that show the presence of a content that indoctrinates ideologically alien influences of Albanian nationalism and irridentism. The commission pointed out that concrete measures should be taken against such manifestations to eliminate everything that is alien to the ideological educational nature of the Yugoslav self-management socialist society.

The commission also directed special attention at the study of the Macedonian language. Here the stand was adopted that the materials used at some schools did not direct attention to the study of the Macedonian literary language, or to the development of a qualified teaching staff. This had led to poor quality in the teaching of this subject, and to poor mastery of the Macedonian language by students of Albanian nationality in some areas. For this reason, and with a view to the fact that part of the students of this nationality are guided into continuing their education in secondary schools and universities where Macedonian is the language of instruction, and for a number of other objective needs in public life and public communications, it is essential that the Macedonian language be offered paralled to the Albanian language in educational institutions, and that such instruction be qualitatively and quantatively better than it is now. Here special concern must be devoted to developing suitable teaching personnel.

As stressed in the material presented to it, the commission stated that in some primary and secondary schools, as well as in institutions of higher education, teachers are employed who have been convicted or against whom ideological corrective measures have been directed because of their hostile activities regarding Albanian nationalist and irridentist positions. As the commission stressed in the report of its past session, there is no place in educational training organizations for such persons.

Question of Albanian Flag

Skopje NOVA MAKEDONIJA in Macedonian 16 Jul 81 p 3

[Text] A change has been suggested in the law on the use of flags.

At yesterday's session of the Opstina Council, the delegate from Struga, Veli Shaipi, presented the resolution of the Struga opstina assembly to initiate a change in the law on the use of flags. The proposal would eliminate from that law the provision by which use of (the Albanian) flag is permitted for members of the Albanian nationality living in Macedonia.

In justifying the initiative, Shaipi said that the flag now being used by the Albanian nationality group in Macedonia is the flag of the People's Socialist Republic of Albania, which since 1948 has carried on a constantly hostile policy toward Yugoslavia. The Struga delegate pointed out that that flag has symbolized for them an extreme Albanian nationalism and irridentism, and that under this flag, whose form and content is not regulated by a single positive regulation, one can

find not only the internal enemy of Albanian nationality, but also adherents of international reactionary positions including Zogists, Balists, Enver (Hojha's) lackies, Ustashe and other hostile elements living abroad.

According to Veli Shaipi's report, the Struga opstina assembly has initiated this action at the request of members of the Albanian nationality group in the Struga opstina.

ANTI-YUGOSLAV PROPAGANDA IN ALBANIAN DICTIONARY CONDEMNED

Skopje NOVA MAKEDONIJA in Macedonian 17 Jul 81 p 7

[Text] A review is presented from the current issue of the Albanian language newspaper FLAKA E VLAZERIMIT, highlighting the overly generalized and tendentious interpretations of several terms in the recent edition of the "Dictionary of the Modern Albanian Language," published in Tirana.

In today's issue, the newspaper FLAKA E VLAZERIMIT presented an article entitled "Anti-Yugoslav Propaganda Even in the Dictionary," which stated the following: "The depth to which Albania is descending into the murky waters of hostile propaganda against Yugoslavia is shown by the 'Dictionary of the Modern Albanian Language,' and the tendentious interpretations of certain terms in it, as prepared in the political offices of Enver Hojha, in order to throw dust in the eyes of both the domestic reader and those abroad who use the dictionary. Obviously not everyone is satisfied with the licentious language and slander of Radio Tirana, ZERI I POPULLIT, other radio stations, newspapers, propaganda books and other media. The dictionary will be used (by Tirana) for its malicious politics, and as everyone knows, that is an application that should have a scholarly character.

"The Dictionary of the Modern Albanian Language" (Tirana, 1980) was published by the Albanian Academy of Sciences and the Institute for Language and Literature, and copies of it, brought in by various means, can be found here in Yugoslavia. It deforms and maliciously interprets the meaning of a number of terms. Such, for example, is the case with the word "vetadministrim," (page 2141 No 2), which Albania, in contrast to the Albanians living in Yugoslavia and living under this system, stubbornly uses for the word "vetkeverisje" or self-management. Their intention is to distort the meaning of the content of the word by interpreting it as a state institution, rather than as a social one in the true meaning of the term." Here is how Tirana politics interprets the Yugoslav notion of self-managment:

"It is a bourgeois system of administration that modern revisionists have established in their economic enterprises and in all walks of life, which is supposedly a creative application of democracy and of popular participation in management. In reality, it removes the working class from its role of guiding and controlling the state and takes away the possibility for the working class to protect its own interests; it promotes anarchy, unequal development and competition, creates political and ideological chaos, increases social differences and complexities in intellectual life, feeds bourgeois individualization and transforms social

property into the property of the management groups, the new bourgeoisie, which claims the added value and becomes wealthy on the shoulders of the workers and the other working masses. This is Yugoslav self-management."

"The Dictionary of the Modern Albanian Language" expresses its "scholarly" (read propagandistic and anti-Yugoslav) stand in a number of other definitions. Modern revisionism (page 1651) to it is "the revisionism that emerged during World War II and which has taken control in a number of countries, where it is used against communism and the revolution." Then as it continues, the dictionary cites as examples Yugoslav revisionism (Soviet, Chinese). Thus accusing Yugoslavia as a revisionist country. "The Dictionary of the Modern Albanian Language," just like the babble of Radio Tirana and ZERI I POPULLIT, also regards it as a bureaucratic (page 200) country in which most of the ruling class (page 1517) has come from the bourgeoisie (page 165), and so on.

For this dictionary, the unaligned countries are "bourgeois and revisionist countries (states) that, according to some wise revisionists and various opportunists, supposedly do not belong to some military or economic block led by the superpowers, but that in reality in various forms and ways are tied to them." (page 1316)

These and similar overgeneralized and tendentious interpretations by this dictionary clearly speak of its unscholarly and propagandistic nature. "The Dictionary of the Modern Albanian Language" could be a useful work, since for 26 years they have been publishing the "Dictionary of the Albanian Language," which now is very inadequate and antiquated in many aspects. Unfortunately, however, the new dictionary is ruined as it bows before the ship of politics dictated from Tirana. It is transformed into a propaganda instrument, and for these reasons we believe that as a tendentious dictionary, with malicious political objectives, it cannot serve the reader or institutions, and should not be allowed into our country.

UNIVERSITY ENROLLMENT DISPUTES REVIEWED

Sarajevo SVIJET in Serbo-Croatian 22 Jun 81 pp 4-5

[Article by Slavko Stanic]

[Text] In the rather acute financial conditions faced by educational institutions, some large universities are trying to close their doors to the flood of students from other areas.

As a rule, at this time of year the newspapers are full of polemical speeches, reports and commentaries about registering new generations of high school and college students. If our future lawyers, economists, professors, docto s and archeologists, not to list all the professions, read all that is written about the future value of their diplomas, they may become apathetic toward study and scholarship. Judging from data of employment offices, even today these graduates are having difficulty finding positions. For example, in Belgrade it has already been calculated that in the next five years there will barely be openings for about a thousand lawyers and economists, while this year alone, seven times that number of students will enroll in those schools of the university. The situation is even less clear for future archeologists, dentists, journalists, art professors, political scientists, sociologists and graduates with technical training, as well as teachers of language and literature, etc. Parents who diligently follow everything that is written and said, instead of being proud that their children are entering high schools and universities these days, will become pessimistic at the thought of the fate of the diploma that their child will receive in four or five years. For that reason, there have been quite a few family discussions that at times finish not merely with "political pressure" on the child to choose "the right school," but even with force.

Great Difficulties

Probably a part of the problem has been caused by the general climate that has been created and nurtured for decades in which, despite the fact that Yugoslavia is a workers' state, a distinction has been made between "true workers" and others. Those others are the citizens with so-called "academic degrees," and everyone, even the sparrows, knows that they were destined for well-lighted offices and higher, guaranteed pay. Therefore it is no wonder that, at the Self-Management Leaders Congress, it was repeated dozens of times that productive work cannot be given a value by resolutions and decisions, but by dinars. True, that is nothing

new. Those conclusions have been reached at all major Yugoslav political meetings in the last ten years or so. Speaking honestly, however, few, if any, results are to be found anywhere. There are regulations under which, for nothing except the possession of a diploma, a person receives higher pay or a dinar supplement, to say nothing of other benefits. Yet that violates the system of rewards according to labor performed, a process that cannot be completed overnight because, for one reason or another, it will always be a component part of the struggle to develop self-management or of efforts to strengthen our overall Yugoslav community.

At this time of year, directly or indirectly, this factor always crops up during the registration of new generations of high school and university students. In the rather acute financial circumstances that affect educational institutions, some large universities attempt to close their doors to the flood of students from other republics and provinces. That recently came to light in the delegates' questions concerning the problems of Vojvodina students who gravitate toward the Yugoslav capital because geographically Belgrade is closer to them, and because of this their school expenses are significantly lower there. Belgrade University's inability to accept everyone who wants to study there is not the only difficulty. There is the problem of uncoordinated study programs at various high schools, so that the barriers to gaining admission are even greater for young people who are not from Serbia proper. The situation, however, is similar at other university centers, and the difficulties facing young people who wish to change their republic or province in selecting their place of advanced schooling are at times insurmountable.

For years there has been talk of the need to reimburse the universities in one sociopolitical community for the expense of educating students from other regions. That has remained an open question, although some self-management agreements should have found a suitable mechanism that would to one degree or another wipe out the boundaries blocking the wishes of young people, so that they could freely and without discrimination select the university center at which they wish to study.

There is a very ugly sound to recently discovered plans for enrolling students, according to which limits would be placed on universities in one republic for students coming from another republic, regardless of the quality or success they had achieved at their high schools. It is even worse when a "nationality key" is added to that youthful dossier, so that it is stated, as recently happened at the university in Pristina, that for every three of four freshmen of Albanian nationality, one who is not Albanian can be enrolled. With full understanding of the concern generated here in Yugoslavia for the education of nationality groups that live in the country, and for planning for their education to that purpose, nevertheless the insertion of a "nationality key" into education cannot be accepted either politically or for any other reason. By so doing we would be making national heritage into a privilege that would drastically devalue other criteria that should be weighed in enrolling students, such as their previous work records or evaluations of their high school success. Another question, which deserves the highest attention, is the matter of ensuring that each people and nationality is provided with all necessary material conditions, so that increasing numbers of young people from its ranks will be able to enter advanced

schools. Imagine how it would sound if Sarajevo University or some other university in the country were to establish an enrollment plan which stated in advance that a certain percentage of Moslems, so many Serbs, Croats, Montenegrins, Hungarians, etc., would be accepted.

The Experience of Vojvodina

Another question deeply effects the Yugoslav community; it relates to the language of instruction at various advanced and lower schools.

Without citing the constitutional rights of Yugoslav citizens regarding language, everything points to the conclusion that one must know not only his or her mother language, but also the language of the place in which he or she is attending school or working. That cannot be left to the good will of the individual, but rather must be achieved by making the study of the local language a mandatory subject, at least to the same extent that French, English or some other foreign language is required. Without that, we would be so bold as to say that there can be no solid community in Yugoslavia, nor free circulation of the labor force within the unified Yugoslav marketplace.

How can a future lawyer who is Serbian, who comes from Kosovo, find a position in thatprovince--where 70 percent of his fellow workers cannot function using his mother language--if he does not know Albanian; or the opposite, how can a young economist of Albanian nationality get a job in Titograd if he must obtain an interpreter in order to carry out his responsibilities. How can a Croat or a Montenegrin fulfill his self-management employment functions in Slovenia if he does not know Slovenian. Another matter relates to the manner in which that new environment is to provide supplementary instruction in their mother language for his children. In that regard, a position of the Presidium of the LCY Central Committee stated three years ago was very clear in requiring that by now, we should have a number of schools in republics and provinces that offer either regular or supplementary instruction in the mother tongue of workers and citizens who, in seeking work, have found themselves in a linguistic environment other than their own.

That becomes a major question for the Yugoslav community, and therefore it is no wonder that in Vojvodina, more than 80,000 young people are already studying the languages of their neighbors and comrades, and the other way round so that 90 percent of the Hungarian nationality group's students and pupils are attending courses in Serbo-Croatian, so that in this respect at least they will be able to seek work in environments where that is the official language. At the first session of the provincial committee of the Kosovo League of Communists, Fadilj Hodza was very insistent that in his province, the languages of peoples and nationalities must not only be equal, but they must also be required subjects at schools and universities. He had in mind both their centuries-old mutual traditions and the possibility of facilitating the circulation of the labor force within the Yugoslav federal community, for despite all our wishes and plans, we should not nurture illusions that we will achieve full employment exclusively by creating jobs where there are excess workers. Rather, in the search for employment the labor force must move outside its sociopolitical community, and thereby outside the region where its mother tongue is spoken. That, incidently, is becoming one of the imperatives of our social community.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

LIBERALISM, CONSERVATISM PERSIST IN FAMILY RELATIONS

Tirana SHQIPTARJA E RE in Albanian Jun 81 pp 8-9

[Article by Ksanthipi Begeja: "The Norms of Proletarian Morality Are the Basis for Our Socialist Family"]

[Excerpts] Despite the successes which have been achieved in the process of the socialist transormation of the family, one cannot say that every family in Albania has those traits which characterize the socialist family. But this is natural. The problem of the creation and strengthening of the new socialist family is not a problem which is resolved in a short time. The obstacles to the further development of socialist realtions in the family continue to be the following: Conservatism which continues to find expression in outmoded marriage customs, in the failure to respect the principle of complete equality in the family, in cases where the woman does most of the housework, in the obstacles to the woman's participation in the social life of the country, in the camouflaging of the forms of buying and selling brides, which appears in some villages where there is bargaining about the dowry conditions which the family of the bride sets forth to the family of the groom, etc. and also, liberalism, which finds expression in the contracting of marriages in a frivolous manner, carried away by a transitory passion, in a frivolous attitude in society or in the violation of conjugal fidelity which conflict with our proletarian morality and which undermines the family, and in love of luxury which has been noted in some cases. Naturally, these tendencies are not extensive but whenever they occur they shake the foundations of the family.

Therefore, the organizations of the Albanian Women's Union must organize a better and more timely campaign to counter these harmful practices, wherever they appear, in the city or in the village. These backward customs, regardless of their form, represent the subjugation of women. Therefore, a united front must be created to stir up healthy social opinion to intensify the struggle against every foreign custom and manifestation which treats women like a commodity on the market or a luxury and which prevents their progress.

HISTORICAL EVENTS IN BALKANS AFTER LIBERATION EXAMINED

Sofia ANTENI in Bulgarian 15, 22 Jul 81

[Article by Prof Dr Simeon Damyanov]

[15 Jul 81 p 13]

[Text] In 1876 Russia had a powerful ally. It was European public opinion which was deeply touched after the excesses committed in Bulgaria. Tolstoy, Dostoyevskiy, Turgenev and Aksakov in Russia, Gladstone and Piers in England, Garibaldi in Italy and several hundred other diplomats, statesmen, writers and journalists the world over, whose conscience had been aroused, were exerting a strong influence on the behavior of Western governments. The voice of Victor Hugo, one of the most noted philosophers and humanists of the age, rose high above all others. The great writer made a warm plea in favor of Bulgaria and accused the European chanceries of remaining indifferent at a time when immediate action was necessary if a nation was to be saved physical annihilation.

The Western European democratic society supported the Russian action of Bulgaria's liberation. The forces which opposed this action were neutralized and a European war was avoided, at least at the beginning of the Russian-Turkish conflict. This enabled Russia to carry out its liberation mission. The culmination point arrived when the Russian army, continuing its victorious march, reached the walls of Constantinople. On 3 March 1878 Turkey was forced to conclude the San Stephano peace treaty.

The treaty called for the restoration of the Bulgarian state in its virtually natural borders. It crowned with success the age-old struggle of the Bulgarian people and the selfless exploits of the Russian soldiers. The bright horizons of a free development, allied with Russia, its liberator, opened to Bulgaria.

It was precisely then, however, that the situation changed suddenly. The European powers were hostile to the creation of a big Bulgaria which, in their view, was nothing other than the excessive expansion of Russian influence on the Balkans. Isolated and financially exhausted by its military campaign, Russia had to avoid at all cost the restoration of the 1853 Crimean Coalition as well as a new war, this time against all of Europe. It yielded to the demand of the powers to convene an international congress to revise the San Stephano treaty.

The Berlin congress (June-July 1878) tore Bulgaria apart. It proclaimed it a vassal principality subordinated to the will of the sultan. Thus the nature of relations

between the new state and the European powers was established for several decades in advance. The young Bulgarian state was faced with the solution of major and vitally important problems: the problem of Eastern Rumelia, which was separated from the Bulgarian Principality and proclaimed an autonomous province under the direct jurisdiction of the sultan; the question of Macedonia and the Odrin Vilayet, whose population was predominantly Bulgarian but over which the sultan's power was fully restored; the problem of the capitulation system, retained from the period of Turkish rule, and so on.

Article 8 of the Berlin Treaty stipulated that "all trade and navigation treaties, as well as all conventions and agreements concluded among the great powers and the High Porte, effective at present, remain applicable to the Bulgarian Principality, and no change may be made in them, which would affect that power, without its agreement." Concerned with the protection of their interests, the Western powers insisted that yet another text be included in the Berlin Treaty, especially drafted as follows: The immunities and privileges of foreign citizens, as well as the rights of consular jurisdiction and protection, as stipulated through capitulations and customs, will remain fully effective unless amended with the agreement of the interested parties."

It was entirely natural that authoritative historical publications assessed the Berlin congress in an extremely negative fashion. The congress' decisions are justifiably considered the result of the selfish policy of the Western powers which, for the sake of their own interests, dealt irreparable damages to the Bulgarian national cause and to the unification aspirations of the other Balkan nations. "Rarely does one come across such strange and unfair decrees," stressed the noted French historian A. Malet in the familiar multiple-volume work by E. Lavis and A. Rambeau, "Universal History from the Fourth Century to the Present." "Two powers which had had no participation in the war, one of which, England, had made the war inevitable with its support of the Turks, benefited the most. England occupied Cyprus and thus ensured for itself a new base in the Mediterranean; Austria-Hungary gained Bosnia and Herzegovina." It was thus that the balance in the Balkans was disturbed.

"Disregarding the will of a nation," A. Malet goes on to say, "Bulgaria was divided into three parts.... At San Stephano Russia had been concerned with ensuring the equality of all Christians; in Berlin neither justice nor the will of the nations nor the requirements of common sense and common interests were taken into consideration. The final act (i.e., the Berlin Treaty) is a monument to egotism, a matter of jealousy, personal hatred, a dishonest and base act, for instead of securing the peace it prepared many grounds for future conflicts and wars."

The reason for which I am drawing the attention of the readers to such extensive but noteworthy excerpts from the work of the noted French historian is because I am firmly convinced that a contemporary historian could hardly add anything new to such a precise and exhaustive description of the political principles which guided the Western European powers in the course of the historical June-July 1878 Berlin meetings, which proved to be so fatal to Bulgaria.

Some of the problems stemming from the unfair decisions adopted at the Berlin congress were systematically resolved thanks to the adamant struggle which the Bulgarian people waged for rejecting its degrading dependence on the High Porte and for gaining national unity. The unification of Eastern Rumelia and the Bulgarian principality was achieved in 1885. In 1908 Bulgaria proclaimed its independence by rejecting its

status as a vassal of the sultan and became a sovereign kingdom. Meanwhile, the capitulation system was abrogated. Henceforth relations between the Bulgarian state and the other powers were to be settled on the basis of bilateral consular conventions. Bulgaria signed equal and mutually profitable trade agreements with the other countries and set up specific customs tariffs. As a result of the wars waged starting with the end of the 19th and the beginning of the 20th centuries, the Balkan status quo of 1878 changed entirely. Almost nothing was left of the stipulations of the Berlin congress 35 years later.

In the view of the Bulgarian statesman of the period, a desire on the part of the great powers to support Bulgaria's national aspirations would have secured them great advantages and the possibility of consolidating their influence in the country. It was this factor that contributed to the gradual clarification of Bulgaria's foreign policy orientation. On the eve of the wars which were to shake up not only the European Southeast but the entire continent, in the second decade of our century, Bulgaria was ready to join that group of forces which was willing to meet the country's national requirements.

Until that time the country was the arena of all kinds of sharp competitions. Each of the great European powers tried to win Bulgaria over to its side. Circumstances appeared quite favorable. In order to meet its requirements, which were based on the accelerated building of railroads and the modernizing of its armed forces, each subsequent Bulgarian government was forced to seek foreign financial aid. Gradually, French bankers became Bulgaria's creditors.

Another important question arises when we consider the role of foreign investments in Bulgaria: to what extent were the great powers able to tie up the country from the political viewpoint to their capital? This problem particularly affected France, which was holding the strongest financial positions in Bulgaria and which, furthermore, on the eve of the 1914 war, claimed the position of leadership in the Antante. It is unquestionably true that the main objective of French economic penetration into Bulgaria was to involve the country entirely from the political viewpoint. Without denying the unquestionable fact that French capital was largely successful in assuming control of Bulgaria (precisely through state loans), nevertheless, the "moneylender of Europe," as France was universally known at that time, was unable to subordinate the country entirely, either economically or politically.

What was the reason for this? Unquestionably, French investments in Serbia and Greece, put together, exceeded investments in Bulgaria by a factor of about five. This largely explains the firm line followed by French diplomacy in its defense of Serbian and Greek territorial aspirations during the Balkan wars and in World War I. Nothing is easier in winning over two or even three Balkan countries than trying to favor them at the expense of a country sacrificed in advance.

At that time England and France were not sympathetic to Bulgaria. Particularly after the Second Balkan War they considered the policy of the Radoslavov government with mistrust, openly accusing it of pro-Austrian sympathies. The leaders of the two powers did not realize that, considering the difficult situation in which Bulgaria found itself after the first national catastrophe of 1913, anyone who was ready to help it could rely on substantial broadening and consolidation of his political influence in the heart of the Balkan peninsula. That was not the way Paris and London

looked at the situation. It was believed there that a "firm tone" must be maintained in the case of Bulgaria. Its request for a new loan was declined by the French government which asked as a condition for granting it that the country immediately join the Antante and accept denigrating financial clauses.

It was at that point that the Austro-German diplomacy passed to the offensive. A German financial group, headed by the Diskonto Gesellschaft Bank, expressed its readiness to grant the Bulgarian government the requested loan. Common sense forced the members of the Antante to counter the German proposals with others more advantageous to Bulgaria. However, it was precisely the opposite that happened. As instructed by his government, the French minister of foreign affairs instructed Alfred de Panafieu, the French minister plenipotentiary to Bulgaria, to warn the head of the Bulgarian government that the Quai D'Orsay "would allow in no case French money to be used today in Bulgaria." This behavior merely speeded up the talks between the Bulgarian government and the Diskonto Gesellschaft. Toward the middle of June 1914, when the financial veto to which Bulgaria was subjected was finally lifted, the Bulgarian government considered its talks with Diskonto as concluded. The Sarajevo assassination was already a fact and a world war was about to break out. A severe blow was struck at the interests of the Antante in Bulgaria in favor of the German forces.

The main reason for the failure of the Antante's policy in Bulgaria on the eve and beginning of World War II lies in the lack of sufficient far-sightedness on the part of government circles in Paris, London and Petersburg. Proceeding from the preconceived idea that no financial aid should be granted the Radoslavov government because of its sympathy for Austria-Hungary and Germany, the leading Antante circles underestimated the fact that granting a new loan could have raised the Bulgarian state indebtedness to France alone to one billion francs. This would have made it impossible for even the most pro-German government to involve Bulgaria in a war on the side of Germany. With the refusal to give Bulgaria financial aid, the Antante powers practically facilitated pro-German propaganda in Sofia and the tying of Bulgaria to the bloc of the Central Powers--initially financially and, subsequently, politically and militarily. Having found the road to Paris blocked, the Bulgarian government, which was experiencing a severe lack of funds, took the only way which proved tempting--the way to Berlin and Vienna.

Nevertheless, the main problem which defined the foreign policy of the Bulgarian government was the national problem. Politically, the cabinet in Sofia was not necessarily oriented toward European powers which had the strongest financial positions but toward powers which had expressed their willingness to support its national aspirations. However, this meant that the "chain of gold" (in the words of Kaiser Wilhelm II), through which the bankers in Paris intended to tie Bulgaria to the Antante, proved to be insufficiently strong for the purpose.

[22 Jul 81 p 13]

[Text] Once again, when it came to the Bulgarian question, the members of the Antante displayed groundless restraint and reservations. During the 1914-1915 talks, while World War I was already being fought and the Bulgarian government had proclaimed its neutrality, mistrust of Ferdinand and Radoslavov prevented the Allies from adopting more flexible and just criteria which could have annulled the steps of

German diplomacy. All disputes and differences were focused then on the so-called "undisputed zone" in Macedonia as defined in the March 1912 Serbia-Bulgaria treaty. The unconditional granting of this area to Bulgaria would have sufficed for winning the country over to the Antante.

At that time Winston Churchill, who was a member of the British cabinet, called for granting immediately to Bulgaria the "undisputed zone." In the spring of 1915, when the Allies had already undertaken the Dardanelles operation, Churchill addressed the now-familiar memorandum to the British government in which he emphasized that "we must win over Bulgaria now. Bulgaria is strong and its army is ready..., its territorial aspirations are just and coincide with the principle of nationalities which must guide us....Bulgaria's demands, as formulated now, contain nothing which is not sensible and honorable."

No such realistic policy prevailed in the approach which the Antante took toward Bulgaria. This facilitated the supporters of Germany in pushing once again the country to a catastrophe instead of preserving strict neutrality and saving Bulgaria tremendous pain and casualties.

The tragic events of the second decade of our century clearly proved that Bulgaria could avoid the great misfortunes which afflicted it, one after the other, only by maintaining good relations with Russia, its liberator, and Russia's allies, and only by firmly rejecting any kind of adventuristic policy. At the same time, let us emphasize, for the sake of the truth, that those who scorned Bulgaria's interests and forced us to seek other means to achieve its goals were also to be blamed for the fatal development of events.

After World War I the situation in the European Southeast became exceptionally complex. Three Balkan countries--Yugoslavia, Greece and Rumania--were in the camp of the victors. Bulgaria and Turkey were defeated and had to bear the heavy obligations imposed with the peace treaties. The Kemal Ataturk revolution in Turkey, nevertheless, enabled it to reject the annihilating clauses of the Sevres treaty so that, in the final account, Bulgaria proved to be the only Balkan country which was subjected to the full strictness of the decisions of the Versailles conference.

The circumstances in Europe became incredibly complex only 15 years after the end of World War I. The establishment of the Hitlerite dictatorship in Germany was a threat not only to the Western countries but to Eastern Europe as well and above all to the first socialist country, the Soviet Union. In the exceptionally delicate circumstances which developed after 1933, the land of the soviets, the most consistent peace-loving power, pursued a firm policy of collective security. Bulgaria's foreign policy was pursuing a strictly-defined objective: no involvement, nonalignment with international blocs and groups, and maintaining good neighborly relations with the other Balkan countries. The Bulgarian governments of that time tried to achieve the resolution of some problems which had remained pending as a result of the peace treaties. In particular, they were hoping to achieve the peaceful revision of the Treaty of Neuilly with the help of the stipulations of Article 19 of the League of National Pact.

The hopes were futile, for the victors opposed any change in the postwar status quo. The political isolation of Bulgaria continued. It ended in 1934 with the conclusion

of the Balkan Pact, which was hostile to Bulgaria. This was a structural part of the French system of European alliances supported by the Quai D'Orsay. On top of everything else, the foreign policy of the Western powers toward Bulgaria was backed by economic and financial measures. The only outlet for Bulgarian agricultural exports was Germany, and such economic ties subsequently led to a political rapprochement with the Reich.

In accordance with their political plans concerning the Balkan peninsula, in the course of time the great powers changed their attitude toward Bulgaria. Not counting Germany which, immediately after 1933, unilaterally rejected the Versailles Treaty, took the path of revenge and openly incited Bulgaria and Hungary to follow its example, a certain change was noted in the British behavior, which was of key significance in determining the positions of the other Balkan countries. Concerned with weakening French hegemony on the continent, as early as the 1920s, Britain did not conceal the fact that it was ready to support some Bulgarian demands for a partial revision of the peace treaty, more specifically that of having an outlet on the Aegean Sea and on the question of Bulgarian minorities in Yugoslavia.

In the final account, although under different circumstances, this political line was concretized with the conclusion of the 31 July 1938 Salonika Convention, according to which the signatories to the Balkan Pact agreed on the abrogation of the military clauses of the Treaty of Neuilly affecting Bulgaria. Henceforth Bulgaria was free to increase the size of its armed forces and to rearm.

"The importance which the British press ascribes to the conclusion of the Salonika Convention," stressed on this occasion the London correspondent of the Bulgarian newspaper ZORA, "is considered by political circles in London a success of British diplomacy." In order not to feel isolated France, followed by the United States, supported the Salonika Convention. This can be assessed as a serious attempt to satisfy Bulgaria, although partially, and thus to win it over to the cause of the Western powers at a time when Hitlerite pressure on the Balkans was being exerted with unusual strength, following the Anschluss and on the very eve of the Munich crisis and of World War II.

The second success of the Bulgarian government, prior to the tragic decision to join the Tripartite Pact, was the return of Southern Dobrudzha. The country's alliance with Hitlerite Germany in World War II was the biggest crime committed by the bourgeoisie and the monarchy in Bulgaria's recent history. As all serious students of that period point out, the pretext was the national unification of the Bulgarian people (which turned out to be entirely fictitious, for no one recognized it). The real reasons for the action were of a class nature. The reactionary bourgeoisie and the monarchy were concerned, above all, with protecting their rule. Bearing in mind that their own forces were insufficient to surmount the rising mass opposition of the people to the bloody regime, they decided to seek the help of a stronger ally, German fascism. The great predator, however, never gives anything for free. Its class support was earned at a high cost, at the cost of the national independence and dislocation of Bulgaria. Simply stated, this can be described as national treason.

The 9 September 1944 revolution not only put an end to monarchical-fascist domination and opened the way to the building of socialism in our country. It also put an end

to the tireless roaming of the bourgeoisie and the palace in search of strong and influential allies in Europe. The fact that Bulgaria was saved from a new and even more terrible national catastrophe with the decisive help of the Soviet Union in itself justifies the general direction which its new foreign political orientation took. A contributing fact in this case was the coincidence of interests and objectives which were shared by the great socialist country and Bulgaria, which had taken a new way. Even during the antifascist resistance every Bulgarian patriot was fighting not only for the liberation of his homeland from class and national oppression but for the sake of the international task of defeating the most terrible enemy of mankind, German fascism, whose objective was to destroy the first socialist state in the world. Whereas after the war the policy of the Western capitalist countries toward Bulgaria had as its sole objective the restoration of the rule of the Bulgarian bourgeoisie, the Soviet Union extended a fraternal hand and selflessly helped in the restoration of the country plundered by the Hitlerites and in the strengthening of the people's regime.

The historical turn in Bulgaria's political orientation after 1944 is final and irreversible. It has its deep roots in the distant past, in the tribal relations among Slavic peoples and in the age-old reciprocal cultural influence and mutual aid between the two nations. This turn was cemented by the blood which was jointly shed for the liberation of Bulgaria from the Turkish yoke and for the victory of fascism in World War II. It was definitively asserted with the conclusion of the 1948 friendship and mutual aid treaty.

Bulgarian-Soviet friendship is one of the unique phenomena of our time. It is a powerful factor in the socialist development and success of the new Bulgaria. In relying on the powerful support of the great Soviet state, Bulgaria gained strong positions in the contemporary world. It is a question, first of all, of the exceptional aid which was given to us by the Soviet Union in the development of a modern industry and mechanized agriculture, which make us a reliable economic partner of the economically most developed country in the world. It is also a question of the firm support which the Soviet Union is giving to any one of our political initiatives in the international arena. In many cases its prestigious word has been decisive when problems of vital importance to Bulgaria had to be settled. Bulgaria has never before had such a selfless and strong ally. That is why reciprocity is the only means with which to repay such an ally.

It was precisely this that led L. I. Brezhnev to declare that relations between Bulgaria and the Soviet Union are a classical example of proletarian internationalism in action. It was this that led Comrade Todor Zhivkov to state that although Bulgaria is a small country, it has a "strong and reliable" support and that Bulgarian-Soviet friendship, tested and tempered in heavy battles, will prevail through the centuries. Our national interests demand of us always and under all circumstances to march in step with the great and invincible Soviet state and with the other members of the socialist comity.

The historical problem of Bulgaria's allies and position in the modern world has been resolved forever and irreversibly.

What conclusion could be drawn from all of this? It is entirely clear that in modern and most modern times, when the historical process is developing most rapidly

and dynamically, Bulgaria does not live separately from the rest of the world. Even during the most tragic centuries of its existence, during the epoch of Turkish domination, when there was no Bulgarian state, the Bulgarians were able to make themselves known to the world, to acquaint the world with their aspirations and to instill love and respect for themselves. Noted Bulgarians, whose characters and merits we may have somewhat neglected, maintained economic, political, religious and cultural ties with many Eastern and Western European countries.

Ever since the European world crossed the threshold of the Renaissance, the Bulgarian people have experienced endless degradations and covered a complex and contradictory way of development. When the Bulgarian state was resurrected and appeared once again on the map of the world the contradictions between the so-called great powers, which were settling the destinies of the world, had become so intense that the Bulgarian national problems became the currency of their "big policy." This brought Bulgaria many new trials and disappointments both as a result of the unbalanced policies of its rulers and of the gross neglect of its national interests on the part of the imperialist countries.

It was only after the 1944 socialist revolution, relying on the support of the USSR, that Bulgaria assumed its proper place in the world as an equal and respected country. Today its road is clearer than ever before. It is a stable factor of good-neighborly relations in the Balkans and is marching in the leading ranks of forces fighting for peace on earth and for social progress.

ALEKSANDUR LILOV INTERPRETS ROLE OF SCIENTIFIC SOCIALISM

Sofia NOVO VREME in Bulgarian No 7, 1981 pp 5-26

[Article by Aleksandur Lilov, Politburo member and BCP Central Committee secretary: "Scientific Socialism: Theoretical and Ideological Foundation of the Bulgarian Communist Party"]

[Text] Ninety years have passed, or almost a century, from the founding of the revolutionary Marxist party in Bulgaria.

The celebration of this important and great Bulgarian anniversary is a major sociopolitical event. The long distance which was covered along the crest of history and of its greatest and most severe class battles, ranging from Buzludzha Peak Balkan Mountains, in the victorious 9 September 1944 socialist revolution, to the building of a mature socialist society in our country today, allows the party to present itself to the Bulgarian working class and Bulgarian people, to the world's proletariat and the international communist movement, on its 90th birthday, as a strong and mature Marxist-Leninist party which is successfully fulfilling its historical mission.

The anniversary presents us with great opportunities for the study and assessment of the distance already covered, the historical victories and gain achieved, the errors allowed, the still-unresolved problems and the lessons for the future.

Looking at the past nine decades globally, we are bound to see that we, Bulgarian communists, have all the reasons to be proud, and are proud, of what the Bulgarian Communist Party is and what it has accomplished over these 90 years. In the first decades, when it planted the seed of socialism in Bulgaria, under the leadership of Dimitur Blagoev-Dyadoto and later, when headed by Giorgi Dimitrov it wrote the glorious and hard pages of the struggle against capitalism and fascism, as well as today, when under the leadership of the Central Committee, headed by Comrade Todor Zhivkov, it is implementing its Leninist April line and is building a developed socialist society, our party was and remains flesh of the flesh and blood of the blood of its class and people and, at the same time, the tested battle vanguard and political leader of the working class and the people in the struggle for freedom, democracy and socialism.

"Never before in the course of its 1,300 year history,"Comrade Todor Zhivkov stated at the recently-ended 12th BCP Congress, "has the Bulgarian people had such a brilliant thinker and inspired poet, scientist, organizer and leader as our Bulgarian Communist Party."[1]

Yes, the BCP has nothing to fear today when it is drawing the balance of its 90 years of struggle in front of the people and the world.

However, the anniversary also offers great opportunities for serious theoretical consideration of the distance covered and the current problems facing a Marxist-Leninist type party today.

Ninety years is a long historical period in terms of the existence and functioning of a political party. It is quite sufficient for the development and manifestation of the basic essential characteristics of such a party: ideological, political, organizational, social, moral-ethical and internationalist. It is entirely sufficient for practically testing and weighing on the scale of social practice the objectives, capabilities and actual historical contribution of such a party. It is entirely sufficient for answering the question of what kind of party this is.

The question of what kind of party this is is a major and topical problem not only from the viewpoint of the 90th anniversary of the founding of the BCP but from a more global viewpoint: what party may be considered a Marxist-Leninst party; does such a party develop and change or is it permanent and fixed; if it does develop and change, what directions and ways does it take and what are the problems accompanying the development of the Marxist-Leninist type party at the current stage, as they appear in contemporary social practice, what are the basic conclusions and lessons which must be drawn from the development of contemporary Marxist-Leninist parties, what are the leading and determining features of this development and so on.

The question of what is and what should a Marxist-Leninist party be today and what problems does a Marxist-Leninist party face today and what kind of party does the contemporary global revolutionary process need is, unquestionably, one of the main problems of contemporary social development and of the contemporary stage in the historical transition of mankind from capitalism to socialism.

In this case, the problem does not acquire an abstract interpretation. We must analyze and sum up the actual historical practice of today without avoiding the tremendous data of positive facts or negative phenomena and facts, similar to those which, for example, triggered the crisis in the Polish People's Republic and the PZPR or else which we note in the development of China and the Chinese Communist Party, of individual parties in some developed capitalist countries, and so on. We must not forget that the development of a Marxist-Leninist party as such neither takes place nor could take place other than by following the path of any development, i.e., by surmounting the contradictions which arise in the course of its historical march and the acquisition of what is most progressive and objectively necessary for the advancement of the party as the political vanguard and leader of the working class and the people's masses in the struggle for the socialist reorganization of society.

Consequently, in order to provide an accurate answer to the question of what kind of a party is a party of a Marxist-Leninist type today, at the end of the 20th and on the eve of the 21st centuries, means to enter one of the general questions of our revolutionary epoch.

This means that history is not satisfied with the ceremonious music played at party anniversaries but faces us with ever-new questions and harmonies of our time and seeks in history, which includes the interpretation of party anniversaries, answers to

questions which it itself creates today or will create tomorrow in the course of the revolutionary socialist reorganization of society.

The study of the 90 years of experience of the BCP, looked at through the lens of the general question of what does a party of a new Leninist type represent today, in 1981, is an exceptionally interesting, tempting and responsible assignment. Naturally, it would require more than the efforts of its single author or the limitations of a single article. It would be impossible within an article to present even the formulation of the problems which, put together, form the contemporary content of the general problem, not to mention the undertaking of their more thorough study.

It is possible, however, as a step leading to this major task, to synthesize and bring up the basic characteristics: the ideological, political, organizational, social, moral-ethical and internationalist features of our party as they develop in the course of the past 90 years, and as they are today in our own social practice and within the context of the reality of the contemporary global revolutionary process and international communist and workers movements.

This article deals with the theoretical and ideological characterization and theoretical and ideological identity of the BCP as a party of a contemporary Marxist-Leninist type.

Historically considered, one of the most characteristic features of the BCP is its strong reliance on the ideas and principles of scientific socialism, its development of a revolutionary Marxist party, on the basis of revolutionary Marxist-Leninist theory, the ideological support and profound theoretical substantiation of its political and revolutionary activity and the conversion and constant strengthening of Marxism-Leninism as a mass active ideological awareness of the party.

Naturally, our party has always taken into consideration the requirements of reality, the development of social reality itself. It has always tried to rely on its own and international socialist and political experience of the working class and the people's masses. The BCP has always tried not to lose its feel for the pulsebeat of the time. It has never erected barriers separating it from reality, from the world. It has never been deaf and blind to the real needs of the working people and their fate, aspirations and dreams. At the same time, however, it has always tried not to become disoriented in the sea of empirical facts and developments. It has never abandoned its class-party criteria, ideological guidelines and revolutionary objectives. Neither the achievements in the class struggle nor the results of the building of socialism today in our country would have been so all-embracing and profound, had the social actions of the masses not been guided by a combat Marxist-Leninist party, armed with profound and practically-tried scientific truths concerning the development of society, and unless at each stage of its development and of the development of society it had been unable promptly to find the true scientifically-substantiated answers to the most acute and topical problems of the class struggle and the building of socialism.

Looking at the 90-year-old road of the founding of the Bulgarian Communist Party, we see that as a political party, from its very beginning and to this day, it has stood on the principled scientific positions of scientific socialism and has always

aspired, precisely on the basis of such positions, to sum up most profoundly and penetratingly the social and political experience of the working class and the people's masses. Our party's entire history unequivocally proves that it is the bearer, on the one hand, of the trend of steadily-rising sociopolitical and revolutionary practices to the level of the requirements and criteria of Marxist-Leninist theory; on the other, to embody the basic stipulations of our theory in life and thus to guide the revolutionary struggle accurately and on a long-term basis. It is thus that unity between Marxist-Leninist theory and revolutionary practice historically determines the overall aspect and behavior of our party, starting with its founding to the present. The highest point of this application of social science in practice is the main result of the revolutionary struggle of the Bulgarian working class--the building of a developed socialist society in our country.

The fact that our revolutionary workers movement experienced the lasting fruitful influence of the Marxist-Leninist scientific knowledge of social life and that it is precisely on this basis that the success was developed in the class struggle, naturally, is not accidental. It is not the random result of historical development or the exclusive personal merit of the creators and leaders of our party, although their contribution in this respect is unquestionable. It cannot be denied that ever since the "Communist Party Manifesto" was published the doctrine of Marx and Engels has covered a remarkable distance and that it has been quite closely linked to the upsurge and development of the revolutionary workers' movement and that it became widespread throughout the world as the most progressive ideology which defends the interests of the broad toiling masses. Understandably, the "ghost" which, according to Marx and Engels, was roaming around Europe as of the mid-19th century, could not fail, in the final account, to reach even the then most neglected areas and countries on the old continent. However, we are bound to err if we consider that in this case it is a question exclusively of purely external and spiritual influences, of a kind of "offshoot" of Marxist ideas and concepts. In this case, it is rather a question of an objective need of our sociohistorical development, which was perceived on time, profoundly and accurately by our first Marxists, and of the systematically and deliberately directed organizational, ideological and political actions, based on this requirement, which very quickly raised the movement of the Bulgarian working class to the level of a most active subjective factor in the historical process.

In this case one feature is noteworthy: the point is that by virtue of our specific internal conditions both the time and the possibility were lacking of enabling the idea of Marx and Engels on the revolutionary role of the proletariat to be asserted slowly and to cover the long distance leading to its application and development. However, it was adapted immediately to the actual needs and eventually turned into the realized need for the creation of a revolutionary party of the Bulgarian proletariat, a party which could defend its class interests and head its struggles. As we know, some European proletarian parties were created under far more favorable circumstances, as parties of a large, already-established working class, which had proved itself in the social struggle, had acquired considerable social experience and had its victories and defeats, class aspect and established joint class interests. Our historical lot was different. The Bulgarian workers class, which began to take shape toward the end of the 19th century, under the conditions of an initial accumulation of capital with an underdeveloped mainly artisan production system, could draw on the shining example of the fighters for national liberation from foreign yoke and their prophetic dream, which the Bulgarian bourgeoisie had forgotten,

of a "single communist order"(Kar. Botev) and a "pure and sacred republic" (V. Levski). At the same time, however, on the other hand, the example of the working class in the more developed capitalist countries in waging an organized struggle for social rights and social liberation was of tremendous importance to it. It was on this basis that history brought about in a very short time period the virtually simultaneous development in our country of a working class itself and of its revolutionary Marxist party. It was no accident that immediately after the Bulgarian Social Democratic Workers Party was founded, at the congress on Buzludzha Peak, in 1891, that Dimitur Blagoev, its founder and creator, published his remarkable work "What is Socialism and Does It Have Grounds in Our Country" in which he described the class differentiation developing in our country and indicated the newly-created need for the development of the class awareness of the workers, the substantiation of their special role as a social class and the dissemination of socialism as the only reliable and really possible future of our social and political development.

Consequently, how could we explain such a less frequent case in the history of the workers and communists movements of a very short timespan separating the forming of the working class itself and of its party? Why is it, by virtue of what circumstances and reasons, that in our country in no more than six to seven years the socialist movement was able to come out of its spontaneous development stage, leave revolutionary phraseology, utopian socialism, nihilism, and Proudhon-Bakunin anarchism behind? How is it that from the moment of its creation our party turned out to be a principle-minded proletarian party, regardless of the power of the bourgeoisie, intolerant of reformist trends, behaving as the complete opposite of newly-developed bourgeois parties which were fiercely involved in the struggle for power, a party invariably focused on a single final objective: the revolutionary reorganization of the capitalist society?

A more analytical consideration of this circumstance, a more profound study of the rapid development of the Bulgarian Social Democratic Party and the Systematic Marxist Party, and a desire to determine more accurately the meaning of its further legitimate historical development on the path of Leninism, which reached its culminating point in the victorious 9 September Revolution and the development of the building of socialism in our country require that we pay particular attention to the specific conditions under which the communist party of the Bulgarian working class was created, developed and won victories.

To begin with, an essential feature of the problem is, as we already noted, that our socialist movement was forced to take its first steps in a rather backward country which had only recently gained its national liberation and had taken the path of capitalist development, a country whose working class was still weak and small. It was precisely these insufficiently developed objective socioeconomic conditions and circumstances that made the position of the newly-formed working class extremely difficult, subjecting it to merciless exploitation and sentencing it to a rightless and silent existence. Small, unorganized, with no concept of class and cruelly exploited, naturally, all by itself the working class could not become aware of its position and become a "class for its own sake" and look for its rights and for an organized solution to this situation. Furthermore, it was actually threatened with falling under the influence of the numerous bourgeois and petit bourgeois parties and, particularly, of their corrupt ideology, which was

fed by the capitalist, essentially petty ownership economic base of society, on whose grounds it grew rapidly. Thus, on the one hand, backward objective socioeconomic conditions aggravated the class differentiation to its extreme and, at the same time, were not contributing to the development of the class awareness of the proletariat. At the same time, however, the adverse objective socioeconomic conditions and circumstances indicated quite clearly the need for a specific proletarian organization which would facilitate the shaping of the proletariat and its development as a new independent social class. In his 1871 letter to F. Bothe, K. Marx wrote: "Wherever the working class has as yet insufficiently developed its organization so that it may mount a decisive campaign against the collective power, i.e., the political power of the ruling classes, in all cases it must be trained to accomplish this through constant agitation against this power and by assuming a hostile position toward the policy of the ruling classes. Otherwise the working class will remain a toy in their hands...."[2]

In order not to become a toy in the hands of the bourgeois parties and be able to wage the political struggle against the ruling classes, it was necessary for the Bulgarian proletariat to set up its independent political party promptly. Under the specific conditions which prevailed in Bulgaria at the turn of the century, it was precisely a longer absence of a proletarian revolutionary party that would have delayed the appearance of the self-awareness of the working class and its political growth and systematic revolutionary development. In order for the latter to become reality it was necessary, to begin with, to achieve a profound, accurate, correct and creative understanding of Marxist theory and the fast, timely and effective propaganda, dissemination and study of the ideas of scientific socialism and the instilling of these ideas in the newly-developing working class.

It is precisely at this point that the social need for and historical role of the subjective factor are strongly manifested, of the role which the individual plays in history. We see the great figure and invaluable personal contribution of Dimitur Blagoev-Dyadoto and his fellow workers. It was precisely they who planted the seeds of Marxism in Bulgaria and who combined scientific socialism with the labor movement in our country. It was precisely they who laid the foundations and formed the roots of one of the most strongly-expressed characteristics and traditions of our party: loyalty for and creative attitude toward scientific socialism as a mandatory prerequisite for the proper development and successful implementation of the party's historical mission.

As we can see, it was precisely the at-first objective socioeconomic conditions that emphasized the need for the party's ideological growth and which accelerated the political organization of the Bulgarian working class on the solid foundations of the authentic Marxist theory, on the basis of the founding ideas of scientific socialism. This was not fortuitous, for it is precisely Marxism, as an exclusively scientific-theoretical accomplishment, that enables any workers movement to develop a long-term confident progress, lasting results in the class struggle and liberation from all oppression and exploitation.

It was on this basis and under these specific circumstances that the establishment of the working class itself became possible and necessary, thus facilitating and accelerating the dissemination and study of the ideas of scientific socialism and, particularly--on the basis of such an ideological unification of the proletariat--the founding of its combat revolutionary Marxist party, able to defend its class interests and objectives.

At the same time, yet another proof exists that the political movement of the working class is not the automatic or schematic consequence of economic and social reality but the result of the class struggle itself, its inevitability, intensiveness, polarization and sharpness. Social progress does not come exclusively from the economic base. To a very large extent it depends also on the deployment and shaping of political forces and the development of social class relations and, particularly, on the class struggle itself. It depends on the self-awareness of the classes, the political awareness of the people and their social and political behavior. It is not without importance to stress in this connection the significant although subjective circumstance that our party was created by people with great revolutionary experience and revolutionary knowledge, people who were educated as Marxists and had developed their Marxist creative personalities, people who were closely related to the revolutionary movement of their time and were armed with the Marxist theoretical concept of the historical role of the proletariat in the age of tempestuous capitalist development. It was precisely on the basis of the principles of scientific socialism and under the guidance of the greatest Marxist in the Balkans by the turn of the century--Dimitur Blagoev--that the Bulgarian proletariat created its revolutionary Marxist party whose aim was to prepare the working class for its historical mission. It was not fortuitous that Blagoev himself acknowledged that, on the one hand, it was precisely Marx' "Das Kapital" that gave him the opportunity to understand "the origin and growth of the working class, the hidden springs of capitalist production, the significance of the working class within it, the status of the class, the grounds for its struggle, its organization and its historical task, the "expropriation of the expropriators,"[3] and, on the other hand, to stress that "the spreading of the ideas of scientific socialism strengthened the movement and rallied a larger number of socialists within an organized force."[4] This makes it clear that it becomes very difficult to understand the starting principles and ideological development of the founders, the organizers and the leaders of the party outside the influence of the subjective factor and of Marxist theory, and to understand even better the relatively early establishment and development of the party itself as the most conscientious and highly organized leading detachment of the Bulgarian working class. It is unquestionable that it was precisely the proper theoretical orientation of the party that assigned it a new considerable role in the country's political life. The main fact is that Blagoev's party, from its very founding and, subsequently, throughout the entire period of its legal and clandestine existence in bourgeois Bulgaria, was radically and diametrically distinct from all other parties and movements in the country by having rejected once and for all the principles of narrow practicalism and political adventurism, not having pursued transient and insignificant objectives and for having acted always without any political, theoretical and ideological carelessness. The party of the Bulgarian communists is a party of the profound and scientifically substantiated Marxist thinking, a party of revolutionary ideals and of great ideological and political objectives. It is a party with revolutionary political, ideological and social scope, whose final objective is the revolutionary reorganization of society.

It would be useful to draw a substantiated conclusion supported by history on the basis of all we have said so far: without clear ideological-theoretical foundations and a clear ideological awareness there could be no strong Marxist-Leninist party. The illuminating role of the theory of scientific socialism is a permanently necessary and irreplacable means for daily, consistent, principle-minded and

effective practical party-political activity. This is a particularly important lesson for our time, when the tremendous successes achieved in the revolutionary reorganization of social life and the tremendous pressure exerted by bourgeois ideology and by right-wing and left-wing opportunism face us with the present danger of a reduction in theoretical awareness, its confusion and reforming, and of a general underestimating of the role of theory itself in today's tremendous revolutionary process. It is no accident that in each individual case the danger of social democratic deformations within some contemporary Marxist-Leninist parties begins precisely with the underestimating of theoretical and ideological foundations of political activity. Actually, any party which would like to remain loyal to the working class and lead it on the way to the revolutionary reorganization of the capitalist society must keep its Marxist-Leninist theoretical foundations clean and strong. It must adopt a consistently principled attitude toward the founding principles of scientific socialism.

The study of history proves that Marxist-Leninist theory and ideology are not merely the foundation on which the communist party of the working class is developed but one of its main and most powerful weapons in the revolutionary struggle. "The Marxist-Leninist Party," emphasized Comrade Leonid Brezhnev at the 26th CPSU Congress, "cannot fulfill its role without paying the necessary attention to the interpretation of everything which takes place, the summation of the new phenomena in life and the creative development of Marxist-Leninist theory."[5]

Now, when voices are heard calling for a reduction of the participation of scientific theory in shaping the policy and activities of communist parties, and when a right-wing revisionist and left-wing revisionist circumstantial political pragmatism is clearly being created and is being manifested ever more clearly, a pragmatism which is dangerous because of its attitude toward theory, it is of essential importance to analyze more profoundly our own historical experience regarding the important and totally irreplacable role of Marxist-Leninist theory in the creation, internal development and progress of the Bulgarian Communist Party, its fruitful participation in the class struggle and the social revolution and the successful and accelerated development of the building of socialism. More specifically, what did scientific socialism contribute to our party?

It seems to us that in this connection it would be proper to go back to one of Lenin's thoughts, namely that "a movement which develops in a young country can be successful only if it implements the experience of the other countries. Such implementation requires more than the simple familiarization with this experience or the simple duplication of the latest resolutions. This calls for the ability to adopt a critical attitude toward this experience and check it ourselves."[6]

In the light of this stipulation we can easily see that the experience of other countries came to our country not merely as a simple reference to some existing examples or the borrowing of individual theses, concepts or even entire resolutions. Particularly important, above all, is the circumstance that the Marxist development of Dimitur Blagoev, the founder of our party, began in the midst of the Russian workers movement. As we know, together with other Russian workers-revolutionaries, as early as 1883 he created the first Marxist group in Russia. That is why Blagoev naturally brought to Bulgaria the live experience of the Russian revolutionary movement and the Russian social democracy. At the same time, he laid

a firm and remarkable beginning for the subsequently historically developed and strengthened tradition of revolutionary fraternity between the BCP and the CPSU, and between our countries and peoples.

However, this too is not all. The essence of the matter is not covered exclusively by the external influences on the subjective factor, for in our country the experience from other countries "arrived" also as a reliance on the revolutionary theory of Marx and Engels and the daily consideration and even testing of this theory on the basis of specifically Bulgarian conditions. To our first socialists it was precisely Marxism that represented the most concentrated form of experience, extracted directly from the international workers movement. It was a source of revolutionary inspiration, theoretical confidence and ideological strength and a most accurate political guideline.

It is a fact of essential significance that starting with the very first day of its founding, Blagoev's party began to resolve the problems of the class struggle from the positions of scientific socialism. On the one hand, this strongly limited the influence of random, secondary, spontaneous and accidental factors on the development of the workers movement; on the other, it enabled the party to maintain a live, permanent and effective contact with the objective and natural course of events and to use it in accordance with the interests of the working class. All this was expressed more durably in the historically established and distinct class-political appearance of our party. Let us consider this matter in greater detail.

To begin with, let us point out that firm reliance on revolutionary Marxist theory enabled our party promptly to identify in the then-new working class the future gravedigger of capitalism, i.e., it was precisely on the basis of this theoretical foundation that it was able to penetrate deeply into the essence of the existing historical situation in our country and, despite a considerable backwardness, to identify the revolutionary future in the development of society. Thus Marxist theory brought the party closer to the specific facts and circumstances; it showed it the deeper inner trends of our economic and political development; it indicated to the party the most accurate political line which it had to take under such specific national conditions and circumstances.

At the same time, on the other hand, it was precisely scientific socialism that revealed to the party most completely and consistently the fact that regardless of the entire characteristic of historical conditions and national development, it was later Bulgaria took the path of a more general capitalist development which was inevitably to lead to the pitting of the working class against the bourgeoisie, to sharp class battles and to a socialist revolution. That is why the workers movement in our country was able to develop on a long-term basis and most successfully precisely as a structural component of the international workers movement. It was thus that in its activities our party has always taken into consideration the specific historically existing conditions of work and struggle in our country without, however, ever having been focused on regional developments or becoming a nationally restricted party. It has always borne in mind that the liberation of the proletariat is an international task and that this is an irreversible global process in which each working class, party and country will make its unique contribution.

Still within the same range of problems and this viewpoint we must also stress that the creation of a revolutionary Marxist party of the Bulgarian proletariat was exceptionally important in terms of our national development and national progress. The timely unification and organization of the revolutionary energy of the Bulgarian working class enabled it to become a powerful motive force in the open, conscious and purposeful class struggle for a new social order and a new life. Whereas economically we found ourselves quite backward, by the turn of the century we were also in the front ranks of global political development. That is why it is no accident that our party led the first antifascist uprising in the world, in September of 1923, and that today it is not accidental in the least that Bulgaria is among the countries which are successfully developing a mature socialist society--the highest level reached in the area of contemporary social progress.

One of the major advantages of our party is the fact that in its entire history, engaged in an open and systematic struggle against reformism and right-wing and left-wing revisionism, it has not experienced periods of ideological division. It has never sought a different ideological and theoretical foundation for itself, for the development of the struggle and for the victory of the socialist revolution other than that of Marxism-Leninism. The party itself defeated and rejected in its time Yanko Sakuzov's reformist "right-wing socialism," and, subsequently, left-wing sectarianism, nationalism and other ideas and trends alien to scientific socialism. This played a tremendous role in its ideological development. In his time it was Engels himself who drew attention to the fact that without a correct, systematic and profound ideological-theoretical formulation scientific socialism would be unable to become the flesh and blood of the workers movement, and that it is precisely indifference to theory that is one of the main reasons for the slow development of workers movements in some large European countries and for conditions of confusion and trouble experienced by such movements. One can easily imagine the difficulties which would have been inflicted on our workers movement, which was developing at a slow quantitative pace, in the midst of a wide petit bourgeois sea, had our party not always had at its disposal the true compass of scientific socialism and Marxism-Leninism.

The profound loyalty of our party to Marxism enabled it not only to remain loyal to the liberation cause of the working class but directly to penetrate deeply into social reality, to detect the most essential, the basic, the class interests of the workers and of all working people and to express and defend such interests. That is why our party has never tried to be and has never been a closed political elite, a kind of separate sect, separated from the working people and indifferent to the interests of the people's masses. This profound internal tie linking the party with the working class, the party and the working people, was expressed in the course of historical development through the extensive spreading of Marxist-Leninist ideas and their transformation into the ruling ideology of our society in the period of the building of socialism. Thus, the more the party developed and headed the revolutionary process as a mass process, as a movement of all working people, the more it needed, objectively and subjectively, a profound Marxist-Leninist theoretical view and criterion regarding processes and phenomena, the class struggle and the prospects for social development, so that it could be able to provide prompt and proper answers to the questions of the time, and to direct and enrich its methods of action; at the same time, however, this process has a back side which is quite essential: the ever more extensive popularization and dissemination of the

ideas of scientific socialism and their conversion into a militant, struggling and winning revolutionary ideology of the masses.

Along with the steady enrichment and expansion of its ideological potential and influence, the party waged a constant, an uninterrupted struggle against the various bourgeois and petit bourgeois currents and theories, against the varieties and various deviations of revolutionary theory and the attempts to prevent the direct spreading of scientific socialism among the masses and its connection with the specific spiritual needs of the broad popular masses. It is thus that its strong and practically-tested Marxist-Leninist theoretical position is specifically embodied in a long and firm Bulgarian tradition of irreconcilable ideological struggle against any and all deviations or ideological encroachments directed against scientific socialism. We are in full agreement with the history of our party and the specific and numerous facts of our ideological life by noting that to this day the forms of open and ideological struggle are among the best and most tried methods for countering and defeating the class enemy and for developing and planting of our ideas among the working class and the broad people's masses.

As we may see, the fact that by relying on the solid foundation of scientific socialism the party rises to the position of leading political force which frees the working class from the influence of bourgeois politics and ideology through its organizational, political and ideological activities, takes it into a new independent orbit of motion and development, and makes it able to provide true political leadership of the toiling masses is of determining significance in the class-political portrait of our party.

Let us immediately add that this ideological-theoretical and revolutionary-practical experience of ours is one of the greatest gains of our party in the course of its 90 years of history and that we are constantly returning to it in order to be able to understand more profoundly and be guided more accurately in the processes of our time. As we know, we are observing today the uninterrupted attempts of bourgeois ideology to infiltrate within the workers movement its own or suitable social democratic views, approaches and solutions, which not only does not threaten but could even be useful to its class interests. At the same time, for many years, modern anticommunism has focused its main forces against Lenin and Leninism and has been doing everything possible to be able to de-Leninize scientific socialism and the international workers movement, and to de-Leninize the communist parties themselves, particularly those in the most developed capitalist countries. These are no longer external threats surrounding the workers movement without any specific consequences. On the contrary, we are noticing today the actual attempts which are being made to change the internal Marxist-Leninist ideological and theoretical nature of some influential communist parties. We must also see, however, that in all such cases we are faced with an extremely dangerous phenomenon: attempts at the ideological disarming of the workers movement and at internally deforming the revolutionary force and energy of the communist party.

Any attempt at the consideration and resolution of ripe problems by themselves, with a view to one or another pragmatic result, rather than from the positions of the overall laws and principles of Marxism-Leninism, destabilizes the communist movement and opens the way to reformism, conciliationism and defeat in the class struggle. A retreat from the positions of scientific socialism contains the real danger

that the communist party may lose its class orientation and objective, abandon the front of the proletarian class struggle, adopt a reformist platform and lose its revolutionary nature. As the initial and basic form of the ideological disarming of a given party under capitalist conditions, its de-Leninization means opening the way to the social democratization of this party which, in turn, is a prelude to a crisis within the party and to its conversion from an enemy to a partner of the bourgeoisie and from a revolutionary force into an integral component of bourgeois society itself. Under socialist conditions the party's de-Leninization marks the beginning of an internal crisis which, as reality proves, under specific adverse domestic and foreign circumstances, rapidly becomes a crisis of the entire society and a real threat of the destabilization of the socialist social system itself.

As our party's history proves, a creative attitude toward Marxism-Leninism is of the greatest importance to the steady development and advancement of the party's organization and policies.

The point is that the mere one-time acceptance of the basic stipulations of scientific socialism, after which they become a dogma or, worse, a kind of catechism, a static mold and criterion for judging social and political phenomena, is not enough. In this case one puts the mold on, measures the sides and if the phenomenon does not fit it means that it is wrong. Both history as well as our modern times offer drastic examples of the way basic stipulations of our theory are used not as a foundation for creativity and for managing the political process but are raised into a frozen inviolable dogma or even into something like a "holy scripture." Unquestionably, this proves a lack of profound understanding and a misshaping of the very nature of Marxist-Leninist theory, which is not only the bearer of the most profound truth related to social development but is also a constant process of the study of social reality itself. That is why any blind veneration of theory or its conversion into a dogma, rather than its use as a specific manual for action, could remove and isolate any party from reality, condemn it to sectarianism, hinder its ties with the broad masses and, in the final account, compromise its leading role and leading ability.

Without going into unnecessary details let us point out that our party not only had the wisdom to adopt the theory of scientific socialism but was able to display in the course of its historical development the perspicacity of learning steadily, mastering this theory and daringly applying it creatively in accordance with our national conditions, while steadily enriching and developing it. As G. Dimitrov pointed out, "It is easier to master the principles of Marxism-Leninism than the ability properly and promptly to apply such principles in practice as a manual for action at all stages of social development."[7]

It is true that in the course of its entire history the party has not always been able to master and apply Marxist-Leninist doctrine properly and promptly when faced with some events and processes. As we know, the delay with which the party accepted the new features which V. I. Lenin introduced into Marxist theory prevented it from accurately understanding and assessing the events and processes which were occurring in our country at the end of World War I and the subsequent years. As a result of this, the party adopted an erroneous position toward the Vladaya events and, particularly, the military-fascist 9 June coup d'etat. However, the beginning process of Leninization of the party and its transformation into a party of a new, a Leninist, type raised it to the level of the tasks and requirements of the time and updated its political activities in such a way that at the proper time it assumed the

hegemony in the revolutionary struggle and became the main leading force of all progressive forces fighting the fascist onslaught. It was thus that, through its own experience, the BCP reached the truth that it is precisely through Leninism that the party can rise to the level of the times and become armed with the theory of the socialist revolution and of the building of a real socialist society.

Our party has always emphasized that it owes its achievements to the creative application of Lenin's ideas. It was precisely the general principles of Leninism and their brilliant consummation in the October Revolution and the building of socialism in the USSR which made it possible for our party to master specifically the historical characteristic of Bulgarian social reality and to provide original solutions to many problems of the building of socialism in our country.

Currently the international communist and workers movements are sharply discussing the dialectics of the universal and the specific in the class struggle and the building of socialism. We hardly consider this to be an artificial discussion. As we know, for a while no attention was paid to these problems, considering their importance. Priority was given to general laws and concepts, while the characteristics of specific processes and phenomena through which they made their way and through which the general laws as summarized in our theory are manifested were studied relatively less. Without reducing in the least the significance of the general laws, the current stage in the development of the revolutionary process and of the building of socialism has given increased current significance to the consideration of specific historical, social, national and other specific features and conditions in which the revolutionary struggle and the building of socialism are developing. Paralleling this positive need a negative trend appeared, according to which, in the final accounting, everything is reduced to the specific, to the regional, to the national levels. From the viewpoint of the matter under consideration, this means the absolutizing of national autonomy and individual characteristics of the separate communist parties. Lenin already has noted in his book "What is To Be Done" that splits, hesitations, readiness to compromise and grand concessions, and the petty practicalism and total theoretical carelessness which prevailed at that time led to the fact that scientific socialism stopped being an integral revolutionary theory, becoming a mishmash to which each newly published German textbook "freely" contributed.[8] For the sake of the truth we must note that today as well, particularly insistent efforts are being made to"pour additional liquids," drawn first and foremost from the misunderstood "national characteristic." It is in this manner that a thoroughly familiar problem of our movement is returning to the foreground: what kind of approach could be classified as being a contemporary and a creative approach to the theory of Marxism-Leninism?

Naturally, in the course of their activities the communist parties are guided by the overall principles and laws, for it is precisely they that crystallize the main, essential, recurrent and natural features of all isolated and special processes and phenomena of the class struggle in each country, big or small, advanced or backward, located in one or another part of the world. At the same time, however, the accurate and creative attitude toward the common and practically-tried truths regarding the class struggle and the socialist revolution does not mean ignoring specific features. It does not mean refusing to take into consideration regional features or pitting some specific conditions against others. Conversely, it means the mandatory adoption of a specific historical approach, for

each common law appears precisely within a given set of specific regional unique phenomena and circumstances. The communist party or communist leaders were unable to understand and take into consideration that the features of the specific revolutionary process and the variety within the global transition from capitalism to socialism are dogmatic and are as dangerous as those who fail to see behind a specific fact a profound pattern and behind a temporary advantage the basic interests and objectives of the revolution. "As long as national and governmental differences exist among nations and countries," Lenin wrote, "differences which will remain for quite some time even after the dictatorship of the proletariat has been achieved on a global scale, the unity of the international tactic of the communist workers movement in all countries demands not the elimination of the variety or of national differences (for the time being, this is a hollow dream) but the type of application of the basic principles of communism (a soviet system and proletarian dictatorship) which can properly change these principles in their detail and properly adapt and apply to national and national-state differences."[9] It is in the spirit of this Leninist thought that we could say that we can speak of a creative Marxist-Leninist attitude, of a heuristic attitude toward contemporary processes and phenomena, only when we penetrate deeply into the new social reality and circumstances, on the basis of common Marxist-Leninist principles and laws, and provide an accurate solution to the topical problems encountered by revolutionary work.

As we know, it was precisely such an innovative dialectical approach that enabled Lenin to resolve both the fundamental and the grave yet topical problems of the socialist revolution and the building of socialism. By adopting such principle-minded Leninist stipulation, the CPSU gave us a unique example of great innovation and creativity unparalleled in human history. Naturally, what the USSR achieved is not a model which can be simply transposed or automatically copied and moved. It is a question of something more important and more complex: of the fact that the practice of the building of socialism in the USSR and the other members of the socialist comity, including our country, unquestionably proves the universal validity of the overall laws of the socialist revolution. At the same time, this is a real triumph of the specific historical characteristic of the development of individual countries and peoples along the socialist path. "As we know," Comrade Todor Zhivkov emphasizes, "the common feature in the revolutionary process and in the building of a socialist society in different countries is implemented in specific characteristic ways."[10]

What else is needed for the adoption of a creative approach and attitude to theory and reality by a Marxist-Leninist party?

We should not look for the answer too far: the 90-year history of the BCP gives us the necessary grounds from which to draw a major conclusion: in order for a party to be creative, a number of things are needed: the high ideological-theoretical standard of the party and its leading cadres, a creative atmosphere, a strong and capable leadership, a creative style and work method, clear awareness of the ways and means through which knowledge and society move, and so on. However, if they are present, the main, the decisive feature is that, on the one hand, Marxist-Leninist creativity is impossible without Marxist-Leninist theoretical consistency and without loyalty and dedication to the ideas and principles of scientific socialism; on the other, that without constant theoretical study of reality and

without taking into consideration the characteristics and changes in specific social practices, no flexible, innovative and creative activity and struggle are possible. The Marxist-Leninist party must adopt not only an accurate but a flexible application of the general principles in terms of specific historical conditions. The fact that new problems constantly arise and demand new answers demands of the party always to display a live, an active, a creative attitude toward Marxist-Leninist theory. As Lenin himself noted, right-wing doctrinairism acknowledges exclusively the old forms, ignoring the new content; in turn, left-wing doctrinairism rejects the old forms without realizing that the new content makes its way through all possible forms. According to Lenin it is the duty of the communist to master all methods, to learn to supplement one method with another and to replace one method with another and adapt their tactic to any triggered change in circumstances with maximum speed.[11]

In the course of its historical development our party has incessantly struggled against conservatism and a dogmatic attitude toward theory, against ossification and sclerosis in the application of the basic Marxist-Leninist principles, against right-wing and left-wing opportunism and against all attempts to revise scientific socialism. Loyal to its creative approach to the topical problems, objectives and tasks of the workers movement and the building of socialism, after each one of its mistakes or omissions, the party was able to draw accurate, profound and, most importantly, principled conclusions, i.e., conclusions based on Marxist-Leninist theory. In this sense it developed as a party with a profound feeling of realism, a critical attitude toward itself and toward achieved results, never conceited by successes or demoralized by difficulties and errors. Our party has always shown a feeling for the new, for the offshoots in life. At the same time, it has always had the strength and valor to look the truth in the eyes. Such a profoundly scientific approach, principle-mindedness and honesty are among its most remarkable virtues.

Therefore, history gives us yet another contemporary lesson: the ability to engage in theoretical and practical creativity is a fundamental characteristic of a Marxist-Leninist party. A party which loses or weakens within itself this feature actually loses the prerequisites for being the political vanguard and leader of the working class and the people's masses.

As we know, the long revolutionary struggle of the Bulgarian working class ended with the victorious socialist revolution and was legitimately extended in the building of the new socialist society. Unquestionably, this historical success achieved by our working class is due to the greatest extent also to the circumstance that it was cohesive and was invariably guided by its own Marxist-Leninist party, which considered scientific socialism as the highest science for the revolutionary reorganization of society.

From an historical viewpoint, the party of the Bulgarian communists enjoys the advantage of firmly relying on revolutionary Marxist-Leninist theory and of steadily enriching itself through the study of the revolutionary experience of the global proletariat and, particularly, the experience of the October Revolution and of V. I. Lenin's great party, and that, above all, it studies attentively and profoundly the specific historical conditions, and the course and development of the revolutionary process in our own country.

It is at this point that some circles ask the following topical question: could we consider the revolutionary experience acquired by our country and the other countries of real socialism practiced by the working class and their Marxist-Leninist parties as one of the essential manifestations of the common laws governing the class struggle, which were discovered and are studied and steadily developed and enriched by Marxist-Leninist doctrine, or should we consider this experience as an individual case which neither could nor should be generalized?

Let us explain: this question does not arise from the need for providing an accurate and precise assessment of our revolutionary traditions, for our attitude toward such traditions is clear and definite: they are the priceless capital of the working class and of the communist party, the entire people. We consider it unquestionable that the revolutionary Marxist party, whose objective is not merely to participate in sharing the power but to lead and take the working class and the people to the revolutionary reorganization of society itself, must stand firmly on the founding principles of scientific socialism, on the theory of Marxism-Leninism. However, the problem is that there exists today a clearly manifested trend, shown by right-wing and left-wing revisionism, of restricting the significance of party revolutionary experience, acquired so far through the class struggle, of underestimating the historical and contemporary achievements of the global socialist system, and of criticizing the CPSU, the BCP and the other communist parties in socialist and nonsocialist countries, which are building real socialism or developing their revolutionary activities in accordance with the basic stipulations and requirements of scientific socialism. In the complex context of today's socioeconomic, political and cultural conditions, some circles have begun to mention the "regional" significance of the experience acquired by the socialist countries and their parties, and about the essential changes in the objectives and tasks and ways and means of the policies practiced by communist parties in some of the most developed capitalist countries, and so on.

A closer look at this phenomenon will inevitably prove that it is actually growing on the thick stem of the contemporary class struggle. It is related to the inordinate current expansion and development of the global revolutionary process. It is also related to the real fact that the international communist and workers movements have entered a new stage in their development and that new phenomena and processes have appeared which must be promptly taken into consideration and studied.

To begin with, the contemporary stage of the revolutionary movement is distinguished by the tremendous changes which have taken place in the ratio of forces in the world between the three currents of the revolutionary movement, on the one hand, and capitalism, imperialism and the other reactionary forces, on the other. Unquestionably, the countries of victorious socialism, headed by the USSR, which are building an essentially new society without class oppression, the exploitation of man by man or antagonistic class struggle, have assumed the leading role in the contemporary revolutionary process. At the same time, the remarkable revolutionary victories of backward yet severely oppressed classes and peoples are of most essential significance. The antiimperialist struggle in colonial and dependent countries made its considerable contribution to the development and enrichment of the global revolutionary process and the intensification of the general crisis of the capitalist social system. Finally, the struggle for social and political independence of the working class in the developed capitalist countries is continuing and is steadily

expanding and intensifying. All theories concerning the "abatement" of internal contradictions within capitalist society and the "disappearance" of the proletariat as a separate class--as a barrier of social and political progress--notwithstanding, the facts irrefutably prove that the basic class antagonism is reproduced at all levels of development of the capitalist socioeconomic system.

We see today the implementation of Lenin's prediction of the historical merger among the struggle for the building of a new socialist society, the struggle waged by the proletariat for social and political liberation and the struggle of the peoples of colonial and dependent countries, within a general revolutionary process. This way the class struggle of the proletariat today is not an isolated phenomenon breaking out in one or another country, as was the case in the 19th century. It is being waged everywhere. It is penetrating in depth in all existing social forms and structures and is conquering in width all countries and peoples, actually the entire globe. It is here that we discover the second characteristic feature of the contemporary revolutionary process: the qualitatively new level of the ideological, political and organizational maturity of individual parties and of the international communist movement as a whole. At the same time, unquestionably this dynamic development in depth and width of the global revolutionary process today seeks and finds its real manifestation in the wealth of ways and means of class struggle, in the wealth of roads and methods leading to the assertion of the socialist social system, and that it is distinguished by the discovery of a variety of ways leading to the revolutionary development of backward and colonial countries. It is thus that in the common flow of the global revolutionary process today there is unity and variety. The various detachments of the revolutionary movement are increasing and steadily enhancing the level of their revolutionary maturity. It is on this basis that new ways leading to a socialist victory are sought. This is an entirely natural phenomenon which reflects and expresses the wealth of the transition from capitalism to socialism on a global scale.

However, it is precisely the circumstance that the contemporary global revolutionary process is transforming when it reaches different levels, in accordance with the level of socioeconomic, political and cultural development of the individual countries, regions or continents, that has encouraged revisionist trends toward absolute separation and excessive and one-sided emphasis on exclusively or essentially national and regional features or on the specific nature of some countries. Under the aegis of their desire to adapt as successfully as is possible to the specific conditions of the struggle and the requirements of the specific historical moment and the national specific features, some people have gone so far as to separate themselves from the other detachments of that same global revolutionary process. Particularly indicative in this respect are the intentions of some leaders and circles of some communist parties in developed capitalist countries to set themselves apart and separate themselves from all other communist parties and, particularly, from the example and activities of the parties in the socialist countries. Thus, priority is given once again to the question of what type of party, policy and theory does the contemporary revolutionary struggle demand?

It becomes clear, therefore, that in this case the directions taken by these and other similar parties do not deviate from the trend existing in the global revolutionary movement. Since, starting with October 1917 and to this day, essentially a process of broadening of the social base of the revolution has been developing, these parties have tried to broaden their social base and become a deeper part of

the social structure of the individual country by involving a more considerable percentage of the people's masses within a democratic movement for social and political change. On the one hand this is necessary with a view to the actual circumstance that in the developed capitalist countries today ever broader masses, the tremendous majority of the toiling population, are involved in class contradictions. An understandable desire exists to use for purposes of the revolutionary struggle the contradiction, the objective clash between the interests of the broad people's masses and the ruling bourgeois class. As Lenin noted perspicaciously, the social revolution is inconceivable without the uprising of small nations in colonial countries and in Europe, without a revolutionary explosion of parts of the petite bourgeoisie, with all its prejudices, and without the movement of the unconscious proletarian and semiproletarian masses against the various forms of social oppression.[12] Indeed, here the question of tapping and controlling the spontaneous indignation of the various petit bourgeois strata and of the unconscious or semiconscious proletarian masses is a key problem from the viewpoint of the creation of a broad antimonopoly front.

At the same time, however, the tendency to adapt more completely to this contemporary situation has led a number of personalities and even individual circles in some parties to the state of openly revising Lenin's theory of the role and nature of the communist party in the revolutionary process.

As we know, the parties of the Second International allowed the free existence of opportunistic currents and factions within themselves. This determined their conciliationist rather than revolutionary political strategy and tactics. Lenin created a party of a new type, a party which, through its ideological and organizational unity for the sake of the final objective, was able to lead the people's masses to a decisive and systematic struggle against the domination of the bourgeois class. However, despite the brilliant historical test which this Leninist concept passed, today mention is being made of abandoning the idea of a "centralized party," and of seeking a different type of party which could open "new prospects leading to socialism," struggle for "democratic and independent socialism" and for "liberal socialism," and so on. This openly raises the question of the respective changes in the internal ideas and organizational principles which govern the structure of the communist party itself. On this basis there has been talk of "ideological pluralism," i.e., of allowing the existence within the party itself of different and even opposite ideas and views; there has also been talk of "organizational pluralism," which means the rejection of the principles of centralism in the internal party structure and the free existence of various groups and organizations within the common overall party organization; finally, the question was raised of political pluralism in the revolutionary process. This means not only the building of a common front by all antimonopoly forces in a given country but also that within this front the working class and the communist party has not been called upon and will not always be able to play a hegemonistic role within the movement.

Unquestionably, each communist party must develop and does develop in accordance with the development of society, the specific circumstances and the search for new allies with a view to its internal ideological, political and organizational growth and in accordance with the changes in the socioclass breakdown and the internal stratification of a given society. Does this mean that all such changes are of a nature such as to go beyond the framework of Lenin's theory of the party? That is precisely the idea to which we object.

As we know, neither Lenin nor Leninism has ever opposed the broad political alliances of the people's masses. They have encouraged them. Neither Lenin nor Leninism has excluded the peaceful development of the revolutionary process and the use of the opportunities provided by the developed forms of bourgeois democracy for the political struggle of the working class and the people's masses under the leadership of the communist party; neither Lenin nor Leninism has excluded in any degree the political and ideological creativity of communist parties under the specific conditions of their work and struggle. Furthermore, it was precisely Lenin and Leninism, after Marx and Marxism, that developed theoretically and applied in practice the concept of the broad political alliance of the masses under the leadership of the working class and the party, such as to isolate the bourgeois class and to pit it against the people at large. It was precisely Lenin and Leninism which, creatively and systematically developing the ideas of Marx and Engels, formulated and applied the theoretical stipulation of a possible peaceful development of the revolutionary process and the utilization of the chances offered by the proletarian struggle acquired as a result of the gains of the working people within the limits of bourgeois political democracy, relating revolutionary force to the behavior of the bourgeois class, and who practically ensured a peaceful period in the development of the October Revolution. It was precisely Lenin and Leninism that always warned not to copy experience but to study and apply it creatively, in accordance with specific circumstances and social and historical specific features in which the common laws governing the revolutionary struggle of the working class are manifested. That is precisely the reason for which the theoretical motivation of the rejection of Leninism is theoretically groundless and essentially represents an unscientific and untheoretical attitude toward Marxist-Leninist theory.

As we can see, the desire to broaden the social base of the revolutionary struggle by penetrating deeper into the social structure of the developed capitalist countries has led some individuals and even individual parties to actually underestimate the theoretical possibilities of Marxism-Leninism in terms of today's revolutionary movement.

This is a significant and dangerous retreat from the positions of scientific socialism. Essentially, it is a question of rejecting Leninism as a revolutionary theoretical weapon wielded by the parties of a new type, as a concept which demands not only the study and utilization of the objective possibilities of gaining new class allies but of engaging in a permanent search for suitable means for the implementation of the hegemonistic role of the working class in the revolutionary process. Leninism is a doctrine of the optimal ways of the transition from capitalism to socialism, rather than a theory of class compromise, ideological retreat or subordination of the revolutionary movement to the existing political and social set of circumstances.

In conclusion, it would be proper to draw and emphasize the main lesson from the analysis of the 90-year history of our party from the viewpoint of its ideological foundations: both in the past and today there could be no revolutionary party whose aim is the socialist reorganization of society without firm reliance on the theory of scientific communism, which gives the party an overall view of the movement and of its specific development during a given period and in the course of the pursuit of the final objectives. Real socialism cannot be built without scientific socialism. It was no accident that in their "Communist Party Manifesto" Marx and Engels

emphasized that a proletarian party has the theoretical advantage of defending the common, the final interests of the proletariat, that it penetrates deeply and understands thoroughly the conditions, development and overall results of the proletarian movement. It is precisely the Marxist-Leninist theory that offers each party a basic solution to the problem, particularly important today, of the communist movement, the problem of the relationship among the party, the working class and the people's masses, and of the specific development of the communist movement in accordance with the realities of the individual country or movement.

Consequently, in the epoch of the building of a developed socialist society as well, and of the radical confrontation between the two global systems--socialism and capitalism--the epoch of revolutionary victories won by colonial countries and peoples, more than ever before we must consider Marxist-Leninist theory not a dogma but a manual for action. From the viewpoint of the problem we are discussing, more specifically this means that the party adapts to the specific circumstances of the struggle not through deviations or the abandonment of Marxist-Leninist principles or the theoretical concepts confirmed by revolutionary practice but through the creative utilization of these concepts and the principled and creative utilization of the tremendous heuristic opportunities offered by the Marxist-Leninist doctrine. This demands that our theory be considered not only as a collection of familiar truths but as a process of the study of reality, of detecting within the confusion of specific circumstances and conditions the best way leading to the truth itself, as a process of constant discovery of new truths which enrich those which are already known.

It is precisely this attitude toward theory that is today as well of essential significance in defining the ways which a contemporary Marxist-Leninist party takes and follows in the course of its policies and its struggle.

ROLE, TASKS OF TRANSPORTATION TROOPS DESCRIBED

Maj Gen Mit'o Kis'ov Interview

Sofia NARODNA ARMIYA in Bulgarian 21 Jul 81 pp 1-2

[Interview with Maj Gen Mit'o Kis'ov, transportation troop commander by representatives of NARODNA ARMIYA, TRUDOVO DELO, GRANICHAR AND MAGISTRALI, and Bulgarian Radio, date and place not given]

[Text] To begin with, it seemed to us that this creative assignment had something unusual in it. A group of journalists were meeting with the command of the troops of the Ministry of Transportation. There was nothing unusual in this. On the contrary, instead of holding a discussion on the problems of the troops in the office of their commander, Maj Gen Mit'o Kis'ov, the journalists were offered an opportunity to visit the most important projects, traveling by motor carriage, to see the daily life of the troops and to meet with those who are implementing the decisions of the 12th congress. Journalists representing the newspapers NARODNA ARMIYA, TRUDOVO DELO, GRANICHAR AND MAGISTRALI, and the military affairs editors of "Zvezda" of the Bulgarian Radio are in the vast hall of the coach, seated around a big oblong table. They will be accompanied on their trip by Maj Gen Mit'o Kis'ov, Maj Gen Stoyan Seymenov, chief of the political department of the forces of the Ministry of Transportation, and the officer Georgi Karakekhayov. The introductions have been made. Well, what kind of introductions? This is a meeting among all the war comrades. When they discuss matters as friends and comrades, frankness is the greatest feature of a fruitful dialog.

Naturally, the journalists are awaiting with particular interest the answers of Major General Kis'ov. The coach takes off slowly. In a while the outline of Sofia remains behind us. We can begin:

Question: The latest organization within the system of the armed forces of the Bulgarian people's republic are the troops of the Ministry of Transportation. Comrade Major General Kis'ov, would you describe their birth, initial difficulties and initial successes?

Answer: This took place in the autumn of 1974. One morning Comrade Vasil Tsanov, minister of transportation, rang up and asked me to be ready, together with Major General Seymenov (at that time Colonel),chief of the political department of the troops,and two other command officers to meet with Comrade T. Zhivkov, on the premises of the BCP Central Committee. I thought that this would take place in at least some ten days, bearing in mind how busy our first party and state leader was. I was greatly surprised when that same afternoon I was told that the meeting would

take place at 1800 hours. Ten minutes before the set time we were waiting in the reception room. I was quite excited. At one point the door opened. Comrade Zhivkov showed up and welcomed us: "Come on, Comrades!" I do not know whether it was the voice or Comrade Zhivkov's bright smile, but my excitement disappeared immediately. A very informal atmosphere developed and we calmly reported on our work. At that meeting Comrade Zhivkov described his idea of setting up the forces of the Ministry of Transportation. He defined their main tasks which were the following:

The building of double railroad tracks and their electrification;

The laying of new main line tracks;

Most active participation in railroad track repairs;

Active participation in the operation of the railroads;

Training of performing and executive cadres for railroad transportation; and

Performance of our military duties.

We received our plan the very first day of operations. We mounted, so to speak, our attack on the run. We had difficulties in terms of living conditions and personnel problems. But is there an easy beginning to anything? In the course of the struggle to surmount them the troops matured. By decision of the BCP Central Committee Politburo, passed in 1976, they were organized in the present structure. Let me particularly emphasize that the troops of the minister of transportation are the heirs of the Railroad Troops and of their experience, traditions and successes.

Question: The creation of the troops of the Ministry of Transportation coincides with the start of the Seventh Five-Year Plan. How did the forces carry out their assignments?

Answer: Despite the objective difficulties related to the initial period of development of the troops, the Seventh Five-Year Plan was fulfilled. By the end of the five-year plan the transportat troops had become a powerful military-construction organization within the system of the National Transportation Complex. All in all, the plan was fulfilled 105 percent. One hundred five km of double railroad tracks were laid, capital repairs of 1,000 km of tracks and average repairs of 500 km of tracks were carried out. All economic indicators were reached. The profit plan was fulfilled 134 percent and the net output plan, 110 percent. These figures represent dedicated labor, a high feeling of responsibility and higher conscientiousness. During that period the forces were closely supervised by the party's Central Committee. The visits which Comrade Tano Tsolov, Ognyan Doynov and Army Gen Dobri Dzhurov paid to the troops had a beneficial influence on their dynamic development.

Troops and commanders will never forget their exciting meeting with Comrades Todor Zhivkov and Peko Takov last year. After long observation and discussion, Comrade Zhivkov said: "Splendid people are working in the transportation troops!" In the evening, after touring many sites, he stated: "Today you have made my soul and my heart full!" To us, the transportation troops, this is a high acknowledgement and an obligation to achieve new accomplishments.

Question: Comrade Major General, in accordance with the decisions of the 12th congress the party calls for the further development of successes achieved in the various sectors. What are the tasks facing the troops of the Ministry of Transportation?

Answer: Comrade T. Zhivkov pointed out in the accountability report to the 12th congress that improving the structure of the transportation system is of significance to our economy, giving priority to the development of rail transport. Transportation is of tremendous importance in the country's overall activities. This calls for paying greater attention to it, for upgrading the level of discipline and for improving the organization of the work. Hence the serious assignments facing our troops. Compared with the Seventh Five-Year Plan, their volume will double in the Eighth. We shall lay 210 km of double railroad tracks, carry out capital repairs of 1,800 km of tracks and medium repairs of 1,000 km. The troops will participate in the electrification of 200 to 250 km of railroad tracks and in the laying of the Khemus and Trakiya main highways. Capital repairs will involve the participation of 100 percent of the troops while 70 percent of the troops will be involved in medium repairs.

Question: Our country has already entered the Eighth Five-Year Plan. How was the first half of 1981 completed?

Answer: Today you will see for yourselves that with us every day brings something new, in the sense that every day new kilometers of railroad track and roadbeds are being laid. The semiannual results have been good. New double tracks have been laid, capital repairs totaling 110.2 km and medium repairs totaling 85.5 km have been completed. The semiannual plan was fulfilled 116 percent. These figures show that an indicative start was taken in the Eighth Five-Year Plan at a high pace. This is a secure guarantee for future successes. As the folk saying goes, the day is seen by its morning.

This is indeed the truth. We started with the idea of meeting the forces of the Ministry of Transportation, whose daily work creates labor exploits and updates the map of the homeland. Accomplishments, accomplishments, accomplishments! This party imperative has become the meaning and the content of the lives of the purposeful soldiers, a wealth which has physical measurements. It is found in the tracks laid and main automobile highways, the tireless efforts to provide the troops with social benefits, the training of specialized cadres, the daily intensification of the production process, and the mass study, dissemination and utilization of leading experience. Major General Kis'ov's story gave us a complete picture of inspired toil for the sake of the blossoming of our country, a toil filled with a spirit of innovation and creative zeal.

Patriotism of Transportation Troops

Sofia NARODNA ARMIYA in Bulgarian 21 Jul 81 p 3

[Article by Maj Gen Stoyan Seymenov, chief of the Political Department of the troops of the Ministry of Transportation]

[Text] Under the conditions of the troops of the Ministry of Transportation the problems related to the study, interpretation and implementation of the decisions of

Maj Gen Mit'o Kis'ov

Maj Gen Stoyan Seymenov

the 12th BCP Congress are being resolved with the necessary feeling of responsibility by political organs, commanders and party, Komsomol and trade union managements and organizations. A number of meetings with delegates to the congress and of primary party organizations, Komsomol and trade union meetings and meetings of aktivs were held. On the initiative of the political department, starting with 1 Jun 1981, on the example of the Soviet Army, a consolidated political day was introduced. In accordance with the decisions of the 12th congress, the command drafted and adopted programs on the following problems specific to us:

Development of the troops of the Ministry of Transportation on the basis of the concentration and specialization of basic activities; upgrading the quality of construction and installation work; reducing the share of manual operations and of heavy physical and unattractive work in carrying out construction and installation projects; engaging in engineering-applied and rationalization activities; most effective utilization of productive capital; material and technical support for construction projects; and social development.

The troop collectives and Komsomol organizations and societies took up a number of initiatives such as "Youth Fund for the Eighth Five-Year Plan," "Military Glory XII-1,300," "12 Shock Ten-Day Periods," "12 Shock Weeks of Safe Traffic in Operational Activities," "Komsomol Quality Guarantee," "Days of Komsomol Management of the Labor Process," and others. All this helped to raise the conscientiousness and activeness of the personnel in carrying out the construction assignments of the troops. In the first half of the year the troops fulfilled 51.5 percent of their annual program with overfulfillment totaling 6,265,000 leva; this includes 52.5 percent of the capital construction plan, with an overfulfillment totaling 3,093,000 leva, and 51 percent of the repairs plan with an overfulfillment of 2,136,000 leva.

Extensive and comprehensive activities are developing among the troops in celebration of the 13th centennial of the founding of the Bulgarian state. In this respect the meeting between party-political workers and Comrade Todor Ribarov, chief secretary of the National Coordination Commission "1,300 Years of Bulgaria," proved to be very useful. The coordination of the measures related to the celebration of the 12th party congress, the 1,300th anniversary of the founding of our state, the 25th year of the April plenum and the 90th anniversary of the founding of the party develops in the troops loyalty to the party, patriotism and an active life stance.

Extensive organizational and mass-political work is developing in the units. The necessary objective and subjective prerequisites for the steady expansion of such activities and the utilization of the rich ideological and emotional charge of the anniversaries have been created. They enhance the patriotic and international upbringing of the personnel and promote socialist competition for the timely and qualitative implementation of construction, operational and training tasks. The historical significance of the founding of the Bulgarian state in the year 681 and the basic stages and periods in its development and the military battles in which the heroism of the Bulgarian troops was manifested are explained to the personnel. The achievements of the material and spiritual culture of socialist Bulgaria are propagandized. The spiritual roots of the Bulgarian-Russian and Bulgarian-Soviet friendship and its role in the existence and social progress of the Bulgarian state and the nature of the policy of the BCP and the CPSU of the all-round rapprochement between our countries, peoples and armed forces are brought up.

On the eve of the celebration of the great national holiday the anniversary projects were completed: the doubling and electrification of the Mezdra-Strupets and Cherven Bryag-Pleven railroad sections, the completion of the administrative building of the command of the troops of the Ministry of Transportation and the doubling of the Strazhitsa-Asenovo railroad section.

Our many-sided party-political work contributing to the fuller and more profound description of the past, the present and the future, and to enhancing the socialist conscientiousness and further developing the feeling of responsibility of every officer, sergeant, private, employee and worker. With this we develop and enrich the communist moral features and virtues of the troops and their feeling for duty, national pride, socialist patriotism and internationalism.

Construction Troops' Life

Sofia NARODNA ARMIYA in Bulgarian 21 Jul 81 pp 1-2

[Text] Each railroad station or port marks the beginning or the end of a trip. It is a lively crossroads of excited people in a hurry, people departing and arriving, people who sent someone off or are waiting for someone. It is a crossroads of smiles, sighs and awaited meetings or partings. There is no difference between day and night, holiday or working day, as the high level of tension remains. Here everyone is "on the way," and everyone is in a hurry to reach his objective. It seems that precisely when a person is "on the way" that his character, his dreams and his aspirations are revealed most simply. Frequently it is at the railroad station or in a train that friendships are born. In such cases upbringing, love of man and comradeship find their best manifestation....

Central Station, Sofia. It is 10 minutes after seven. In about 10 minutes our group will take off in the wake of the "flaming traces" of the troops and commanders of the forces of the Ministry of Transportation.

Our conversation with Major General Kis'ov is already taking us through the years of the Seventh Five-Year Plan. The results of the work of the troops are bright spots on the great canvas of the homeland. They show the place and significance to our economy not only of their contribution but of the entire national transportation complex. All indicators of the Seventh Five-Year Plan were met.

We listened to the story of Major General Kis'ov and recalled the words of Georgi Dimitrov at the 5 December 1945 congress of Bulgarian railroad workers and seamen. At that time the leader of our people spoke with concern about the dislocation caused by the war and the problems which had to be resolved.

Almost 36 years have passed since that December day. As the saying goes, "Much water has passed under the bridge" since that time. The national economy was not only restored but made great progress in its development. The creation of the troops of the Ministry of Transportation are contributing to the even better solution of the problems in the field of transportation, problems which were created by our time, so that the "arteries" can be always reliable and safe....

"Sleepily, the tracks click in the darkness, and the joints ache from fatigue...," someone says. Sleepily? No!

The tracks are awake and gaily sing along with the wheels in this happy morning of our socialist homeland. We see this in the cheerful face of locomotive engineer Todor Simeonov. His silvery hair shows a long practical experience. It turns out that this wizened person is not only an excellent locomotive engineer but an excellent teacher as well. He teaches at the T. Kableshkov PZhI [Semihigher Railroad Institute]. He is, one may say, an "instructor" of the highest category. He has trained and sent along the steel tracks a large army of locomotive engineers.

Past Mezdra we are traveling "at our own speed." This is required by the circumstance that we must stop at various places, where the tracks are being rebuilt or else work on the doubling or electrification of the tracks is under way.

The first stop is also our first target. "This is described as the bridge of the year," perhaps because of the difficulties which accompanied its construction.... Anyway, since it is in the hands of the troops, it will be completed and delivered on time. Our hospitable hosts tell us that the application of the new economic approach and new mechanism have made a major contribution to the successful solution of the problems and that the brigade organization has made itself felt and has become a permanent feature of the labor process. We listen with interest about the four different directions along which scientific and technical progress is being applied, namely: maintenance of existing equipment; introduction of new technologies; improvements of technical facilities and industrialization of construction.... This is fully consistent with the requirements set by the 12th party congress regarding the Eighth Five-Year Plan.

We cross yet another bridge and meet more construction troops. We are traveling across one of the most difficult sectors, covered with bridges and tunnels. Together

with the railroad station complex, its length exceeds 10 km. Its delivery deadline is the end of the year.

Our next stop is the "trench" at km....

"That was a hard nut to crack.... This may be our most difficult project..."

Soon afterward we find ourselves in the very "fire of the battle." From above we can see the work best. Several earth-digging machines are removing rocks. Their thunder blends with the noise of the dumptrucks which take the crumbled rocks away. As is proper, the first meeting here is with the chief of the project. Information on the work follows the usual report. Senior Lt V. Naydenov gives us specific data: about 150,000 cubic meters of earth must be removed before the end of July....

We are standing above the huge ditch several hundred meters long and more than 14 meters deep. The resistance of the rock was indeed strong, but the rock has already "surrendered." All that remains is a thin "shield" which will soon crumble and the tracks of the new double section will be completed. With the help of the new bridge it will merge with the main tracks.

We have written many names in our notebooks. Two of them stand out: that of Captain Klisarov and his colleague Senior Lieutenant Naydenov, whose implementation of the planned norms never dropped below 100 percent for all indicators!

The thought that great accomplishments are achieved by courageous and strong people is proved here. Here we find them at each km along the way, dressed in uniforms or civilian work clothes. Their faces are burned by the sun and the wind, their hands are cracked and the fire in their hearts is blazing. Many examples of valorous service are found here. Let us mention briefly the family of Stoilka and Yordan Stoychev. They are excavator operators. They have earned the respect of the others with their work, patriotism and courage!

We reach the final stop, alight from the coach and climb into a bus which is taking us to yet another "point of fire." Our meeting with the detachment commanded by Officer Stoycho Panayotov is punctuated by a sudden fine rain...

"There was a steep hill here!" someone says, surprised.

Today this is a flat area of 25 decares. The roadway for the new twin tracks is being opened in its southernmost section. Beyond it a train of dumptrucks is pouring fertile chernozem on the ground. A wonderful, fertile field will be left behind and will be planted in crops this very autumn.

"Quite interesting!" we say. "Is this a new idea?"

"No, it has become our practice," the battalion commander added. "Some 10 km behind us we left another field of 40 decares..."

Darkness is falling, and the rain increases. We hasten to the elevation where a grand monument stands in honor of the fighters for the people's freedom in this area, whose immortal names will be glorified by grateful Bulgaria through the centuries... and, once again, we take off.

We forget the sharp and even clicking of the coach and our ears become attuned to the greater variety of noises in the bus. The morning is fresh and clear. The sunrise is rich like translucent grapes. We try to get a taste of it with our lips, our lungs and our pores. The day begins to ripen and becomes heavy with heat.

Once again we are on the tracks. In one of the sectors immediately after the Levski railroad station we are scheduled to see capital repairs along the tracks. This operation is known as "pairing," i.e., repairs of a specific section of the tracks (usually 500 to 600 meters), which must take place within a strictly defined period of time which is known as a "window" in the general traffic schedule.

The troops of the battalion commanded by Captain S. Stefanov are at work in this sector. The first person we meet is welder Private First Class P. Petrov, who puts the finishing touches to the work of the group which is removing the bindings of the old tracks. Here and there cut bolts and traces of the torch flames are visible.

A machine, the likes of which we frequently see in documentaries on the Baykal-Amur mainline, is slowly approaching us traveling along the tracks. The so-called track-layer (it literally lays an entire track section in a matter of minutes) is now removing the old bits of tracks and sleepers and loading them on a special work train. The bulldozer operated by Private First Class Kh. Mekhmedov starts work on the stripped foundation, known as the ballast lense. He evens up the crushed rock which will soon absorb the weight of hundreds of tons.

Lt D. Dimitrov, deputy commander for political affairs, takes us to the relatively biggest group of troops moving ahead of another track-layer. The iron arms of the machine extract a brand-new section of rail and smoothly drop it on the still-unfinished ballast lense. Immediately it is grabbed by dozens of young arms or, more specifically, by special levers in the hands of the troops who place and level the track. All this takes place very quickly and in an orderly fashion. The group commander, Jr Sgt F. Nedzhibov, is standing between the two new tracks. He is shouting something like "Hey-hop, hey-hop," and his comrades repeat after him, although their attention is entirely absorbed by the way in which the new track has been laid on the roadbed.

Our eyes focus on the hands of the young people who are performing miracles in front of us. They are calm, confident and firm in the course of their steady work. Everyone knows that in no more than a few hours the "window" will be closed and the first trains will pass over those tracks. It is true that the first of them will be traveling very slowly. This, however, is no relief, for they will be followed by trains crowded with people!

The new tracks are still not ready. Many of the features have to be completed. To begin with, a machine which removes the old ballast and sieves the soil shows up, doing its rather noisy work. After the cloud of dust has dispersed we can see how well it has done its work. This may be because it is operated by the Lilyana and Nedyalko Kirilov, young people who have not sought an easy life. One of our colleagues has already climbed into the booth regardless of the dust while the rest of us are satisfied with having seen truly unusual people!

New Labor Record!

....Two hundred meters ahead of the last machine we stopped to meet with B. Arkhangelov, the technical manager of the project, in charge of the most complex equipment. He is simply sitting on the track, which is still dark and rusty, and controls telemetrically the huge machine engaged in the most delicate operation. Electronically, the machine receives the orders for the final leveling of the tracks.

The horizon in the heat of this July morning is endless. Instead of sun, however, there is rain. It is fine, transparent but cool, leading to the next question: "What if it rains more heavily, what if it pours, what if it hails, what if there is a storm, what will happen?" Officer Georgi Karakekhayov answers simply and clearly: "Nothing. The work will go on."

We are nearing the end of our trip. The hyperdosing train is winding up this huge column of people and machines, moving with the dignity of a winner. It carries cars with fresh ballast and fills the cracks. Its work is complex, for in a strange way the machine determines where to drop ballast but in such a way as to make the road bed ideally smooth. Actually, this is the end of the operation.

The Levski railroad station appears in the distance. Soon the first train will come out of there. The time of the "window" is running short. At this point someone reports in a hurry that the norm will be overfulfilled and that instead of the planned 500 to 600 meters, the day's capital repairs will total 875 meters of track. We cannot watch the pleasure of the troops and commanders but we feel the pride in ourselves. This can be nothing other than the pride of having witnessed a new labor record!

Once again we are traveling, attacked by the summer heat. We are traveling to the Khemus highway. Before reaching it, we stop at one of the bases which supply all organizations building the new road with quarry materials. Officers Alipiev and Parapanov show us around the work areas and tell us that one-half of the investment funds have already been used and that the construction work is almost finished; the other half will be used mainly for equipment purchases.

Toward Khemus...

We quickly reach the highway. The hosts show us what remains to be built, the position of the new sections and the ready but "frozen" sections. Some two to three km outside Botevgrad we turn left and reach the Balkan mountains.

We are told that this is the most difficult sector. From this point on, through complex road installations, the mountain will be "pierced" with a tunnel near Vitinya in the direction of Yordankino.... At the point where we are the roadway will branch out in three directions leading to Sofia, Varna and Botevgrad. The "cloverleaf" is being built on three levels. Initially, the idea was to build bridges. However, a young creative collective came up with a plan which reduced construction costs by about one million leva.

There is restlessness here. It is as if the tension has reached its peak. Machines and more machines of all kinds and sizes are in operation and their thunder is like a giant battle, a battle for conquering the mountain. Meter after meter the level of a broad area is raised, making the implementation of the big idea possible....

We take the road back to Sofia. We shall now be crossing the old tracks. After the project has been completed in the second half of the Eighth Five-Year Plan travel along this sector will take considerably less time and, most importantly, will be safer and far more pleasurable.

COMMENTARY OF MADRID CSCE DELIBERATIONS NOTED

Warsaw GLOS PRACY in Polish 24-25-26 Apr 81 p 5

[Article by Eligiusz Lasota: "Not only Reflection"]

[Text] Another "pause for reflection" is the expression that has been applied to the holiday period with which is associated the three-week suspension of the deliberations of the Madrid meeting of the signatories to the Helsinki CSCE Final Act. This period is to be utilized for, among other things, consultations between the delegation members and their governments so that, after the deliberations are resumed on 5 May, the editing of the final document can be expedited.

When on 11 April 1981 the delegates left Madrid for their home countries, the formulation of the final document was in a state of impasse. Certain delegates--who, however, were in a definite minority--even expressed fears that such a document would not be agreed upon after the holiday break either, and were ready to end the meeting without expressing its results in the form of any document. However, a majority of the delegations has--despite the existing difference in the positions they took, especially between the representatives of the socialist countries and the Western countries--expressed cautious optimism. They judged that attempts to define further ways of detente in Europe should not be abandoned, especially as regards complementing political detente with detente in the military domain.

Following the final session prior to the holiday break, the delegations of the United States and Soviet Union organized press conferences at which their position and that of their political allies were once more enunciated.

The American spokesman declared that, among other things, the meeting has not yet reached an agreement concerning the convening of a European conference on the military aspects of security. The United States will support the convening of such a conference if it is recommended by a "balanced" document. This means a document which will adequately reflect respect for human rights, for fundamental liberties in the field of humanitarian cooperation, and also for the free exchange of information. The United States wishes to be certain that at such a future conference agreement will be reached on confidence building measures in accordance with the criteria proposed by the Western participants at the meeting.

In practice the American position means that the Madrid Document should include--and this is to be a precondition for convening the conference--all the accusations made by the West against the USSR and other socialist countries concerning failure to observe human rights, hindering the flow of information, and so forth, etc.

Such accusations have been made repeatedly especially by the United States, during the deliberations at Madrid so far. The countries of our community have not avoided discussions and ripostes on these topics, but they have, at the same time, stressed that if the Madrid Conference is to make headway on the issues of detente, it must offer a constructive program instead of confining itself to mutual recriminations.

The solution of all problems concerning the exchange of thought and information, as well as human rights and also economic exchange, simply ensues from the decisions of the CSCE to date and is contained in the Final Act of Helsinki, which should continue to be the guideline for the shaping of mutual relations among all its signatories. These issues are contained already in the Final Act, and harping on them in a new document to be based on the premise of the development of European cooperation would mean running in place, not taking a step forward.

That is why, during the press conference given by the USSR delegation, the Deputy Minister of Foreign Affairs L. Ilichev emphasized that he "had not heard anything" about any proposal which would aim at separating the proposed European Conference on military detente and disarmament from the CSCE process. (That is, from all the issues included in the Final Act.)

The Soviet minister called to mind once again that the USSR treats military detente and disarmament as being closely connected to the entire CSCE detente process. He also pointed out that the Western side has not yet responded to Leonid Brezhnev's proposal to broaden the zone of application of military confidence building measures to the entire area of the European part of the USSR. Ilichev expressed the hope that, following the break in the deliberations, which will be utilized as a time for reflection, the West will respond to that proposal.

Following the holiday break, the main battle in Madrid will continue to center on the issue of convening a conference on military detente and disarmament. It is a fact that the very idea of convening it [that conference] has the acceptance in principle of all 35 participants at the Madrid meeting, including also the United States. But the conditions put forward by the Western countries, which we have already mentioned, make this a continually controversial and open problem.

Poland, the USSR, and other socialist countries support the convening of a conference with such a program and in such a form--just as proposed in Madrid by the Polish delegates--in the name of all the states of our community. Speaking of that future conference, Vice Minister M. Dobrosielski stressed that it should be a forum for reaching agreement on steps which would make possible the strengthening of confidence among participating states. The conference should concern itself with coordinating political and legal-treaty steps aimed at reducing the threat of an outbreak of war in Europe and at strengthening guarantees for the security of the CSCE States-participants as well as moves aimed at reducing the level and "density" of military confrontation on our continent. Taken into consideration here also is the limitation of military activities and reduction of armed forces and armaments.

The Polish minister also confirmed the proposal by our government on the matter of holding the first stage of such a conference in Warsaw, suggesting that its deliberations begin on 20 October 1981.

The socialist countries also submitted an entire complex of proposals in Madrid concerning the most varied directions for European cooperation. The governments of Poland and the USSR proposed the convening of a high-level conference next year devoted to energy issues. A similar proposal was made at Madrid by Austria. Mention should be also made of the proposals by socialist countries to prohibit the inclusion of school textbooks concerning history and geography among materials disseminating distrust or hostility among nations, as well as the proposal on developing youth tourism. Specific ideas for developing cooperation in the field of information in order to strengthen confidence among nations also were submitted.

Madrid can and should become a forum at which a new contribution to the development of relations between East and West will be made. For this purpose, not only is the good will of all the states necessary--[already] declared, after all--but also a striving toward compromise and a desire to prefer that which unites--in matters of security and detente--over that which continually still divides states and nations.

VARIOUS ISSUES OF 'MYSL WOJSKOWA' REVIEWED

No 11, 1979 Issue

Warsaw PRZEGLAD OBRONY CYWILNEJ in Polish No 4, Apr 80 pp 63-64

[Text] Radioelectronic Warfare During Actions to Gain Control Over Large Urban Centers

In No 11, 1979, of "Mysl Wojskowa," Col [plk dypl] Stanislaw Lewandowski uses the example of the West German theater of military operations to discuss the question of radioelectronic warfare. He says that radioelectronic warfare is an integral part of each type of operation. The goal is to gain in the atmosphere an advantage which would create conditions suitable for use by friendly forces. Such warfare should be planned and organized in such a way as to make it possible to shift the effort from one direction to another. Urban land, built up with reinforced concrete, offers adverse conditions to the propagation of electromagnetic power. In addition, on the other hand, the adversary has great possibilities for hiding in such an urban center. In this situation it is possible for him to avail himself first of all of a stationary, well-protected system of line communications (telephonic and telegraphic) as well as a stationary line radiophonic network. The elements of these systems are exceptionally resistant to radioelectronic overpowering. To eliminate them it is necessary to use various sorts of fire power. Warfare with radioelectric measures located throughout regions and towns with a weaker screen of electromagnetic waves is somewhat different. Places of this type include low levels of development, parks, boulevards, and so on. In these places the conditions for radioelectronic warfare are easier, and it is in this sort of area that such warfare will largely be conducted. The undertakings of such warfare should be reviewed in their individual phases.

For example, while the armies are advancing, the main thing is to camouflage one's own radioelectronic facilities and correlate everything in this realm with direct, operative camouflage. During obstructions and offensives to control a large town, there is the detection of radioelectronic facilities and systems, air defense radioelectronic facilities are disabled, and the radioelectronic work of the radio communications and command systems are disorganized. At the same time, among our own

armies it is necessary to insure the free working of our radioelectronic facilities. The means for radioelectronic disabling should be developed most closely to the town, on the approaches to it.

Support for the Grouping of Armed Forces Over the Area of the Voivodship

Broadly-conceived defense of the territory of the country, according to Col [plk dypl] Jan Raban writing in an article with the above title, focuses many key undertakings carried out for the general purpose of preventing the enemy from operating or moving on Polish territory. One such enterprise will be to insure Warsaw Pact armies of the most rapid, coordinated access to the region of the combat operations. Basic groups of tasks can be listed in providing for such movements. One of them is keeping the armies on the move informed. An important question here is information on the situation along the path of march, about regions suitable for conducting complete special operations under stationary conditions or directly along the path of march, the possibilities for assistance in evacuating the injured, places of supply of liquid fuels, the military and civilian repair base distribution and capabilities, and water intakes.

The voivodship army staff should be the main center in the voivodship with the above-mentioned data. Civil defense bodies should also be a source of information. They can have data available on damage, contamination, and poisoning. Through instructions from the head of National Civil Defense they are required to pass on these data to the voivodship army staffs. Other sources of information might be the citizens' militia, the public roads region, the Polish State Railroads, and garrison commands. An important question is cover for the path of march, protection of transportation facilities, and antisabotage cover. In this area the Civil Defense formations and construction departments as well as the local population can play a special role.

They can be particularly helpful in reconstruction and repairs. Within the framework of planning defense undertakings (gmina civil defense plans) the transportation network should be divided up among the various villages and agricultural enterprises. In case of need, in the villages work parties can be set up which are able to make railway repairs. Civil defense formations, and technical emergency departments in particular, can be utilized to make a way through rubble. Road clearing should be directed by local civil defense bodies.

The military peace-keeping forces and citizens' militia will play the most important role in the realm of peace-keeping in areas of regrouping. The citizens' militia and the army traffic control system will handle detours in regions of biological and atomic contamination. Military, police, and civil defense forces are required to help in the reproduction of the combat capability of the regrouping affected units. The regions where the recovered armies come together cannot be arbitrary. They will be designated by the voivodship military staff, assisted by other army forces and

civil defense units. Next the author takes up the problematics of medical assistance to effected subunits, and fire and rescue operations, in which civil defense units also can and should play an important role.

Detection of Contamination on the Modern Battlefield

In his work Major Dr Michal Krauze considers the problem of the detection of contamination on the modern battlefield. Under the conditions of a possible future war chemical and radioactive contamination can exist. Usually the former encompass a smaller area. After nuclear explosions on the ground, contamination of large areas can occur. By linking the ground attacks with important natural boundaries like water obstacles, the enemy can create contamination zones which are barriers making it difficult or even impossible to carry out the tasks associated with the movement of the armies and the control of local boundaries situated further on. To ease the effects of contagion, various sorts of prophylactic measures may be employed. Among these are the preparation of the armies for operations in a contaminated region, the use of individual protection, the conduct of partial and complete special and sanitary measures, and the use of radioprotective preparations and antidotes.

The detection of the contamination is the most important undertaking. As the result of detecting the contamination it is necessary above all to establish the fact that a weapon of mass contamination has been used, the type of poisonous agent, the areas of chemical or radioactive contamination, the boundaries of the effected area and the way of circumventing it, and changes in the contamination situation with the passage of time. The detection should be continuous, a feat which may be achieved through a uniform, cohesive system, being outfitted with detection equipment which is modern and reliable for the detection of chemical and radioactive contamination, careful training of soldiers in the realm of carrying out tasks under conditions of radioactive and chemical contamination, organization of joint efforts within the framework of the system of contamination detection, accurate planning of the use of components of the system for detecting contamination, taking into account an assessment of the threat of attacks of weapons of mass destruction and the consequences of their use.

The basic role in the system of detecting contamination is played by the specialized army chemical subunits.

The detection may be performed in motion or may consist of so-called circulating observation. In the problematics of detecting contamination, it is especially important to be able to perform remote detection of contamination of the atmosphere under various conditions, which, for example, would make it possible to insure constant detection over a far larger area.

Equipment for the remote detection of contamination has greatly improved the process of sounding the alarm and notification concerning contamination.

To maintain continuous detection it is especially important that it be done skillfully, that private means of protection be used, and that proper procedures be followed in the contaminated area.

The need to insure continuous detection of contamination in combat operations follows from the danger that weapons of mass attack will be used against armies. It is possible to maintain continuous detection of contamination through the systematic organization of this process and its being outfitted with functional detection equipment for its components. Continuous detection of contamination may be assured through the maintenance of a multilayered, universal detection system.

Efforts should be made in the direction of outfitting specialized subunits for detecting contamination with modern equipment for the remote detection of atmospheric contamination.

No 3, 1980 Issue

Warsaw PRZEGLAD OBRONY CYWILNEJ in Polish No 9, Sep 80 p 47

[Text] Picture of the Battlefield of the Future

Nobody knows for certain whether a future war will get to the point where weapons of mass destruction will be used, or, if so, in what way or what the consequences will be. About one thing there can be no doubt: in the event such a weapon is used, the picture of the battlefield will be completely different from the past.

Writing in their article "Deliberations on the Subject of the Picture of the Battlefield of the Future," published in No 3, 1980 of 'Mysl Wojskowa', Col Dr Antoni Kowalski and Magister dyplomowany Jacek Pawlowski formulate just this conclusion, which is after all quite obvious, but the thing is not just this conclusion but the very interesting material before it too. The authors present various aspects of changes in modern weaponry, the availability of nuclear weapons, the continual search for new weapons (and in this connnection the progressive reduction of the "life cycle," or, to put it another way, the period of use of the new weapons systems.) Nuclear potential is no longer the sole threat, because now there is the neutron bomb, and attention must also be given to work on the laser "death rays."

Neutron radiation cannot be stopped by any shield except water. Eighty percent of the bomb's energy consists of streams of neutrons. The explosion of a neutron bomb with a nuclear charge of 1 kiloton will burn

a circle of earth several dozen meters in area. Life will be wiped out over an area of 1.5 square kilometers. Buildings and other installations will remain intact. As for research on the laser weapon, this work is being done to protect a given country from retaliatory nuclear attack. Military strategists are of the opinion that this will be possible by intercepting the enemy's rockets, but the speed of the antirockets are not adequate. Therefore, there was the idea of lasers. Laser rays, which have the speed of light, would be able to combat rockets flying at a speed of 12,000 meters per second.

The introduction of new weapons brings about changes in tactics, but this subject is very controversial. There are many views on the way to wage a battle, and they often conflict. For example, it is stated that the use of a nuclear weapon makes it easier to conduct combat operations, that it accelerates the rate of contact. At the same time, no less popular is the view that the use of a nuclear weapon can completely paralyze combat operations.

Even if no nuclear weapon is used in the future in warfare, according to the article the sides engaged in combat will still have access to firepower of great range and accuracy. In addition, modern detection equipment can detect even the best camouflaged objects. Under such conditions the speed of reaction will become a decisive factor concerning the outcome of the battle.

Our readers are certain to be interested in Antoni Kowalski and Jacek Pawlowski's reflections on the subject of the hypothetical picture of future warfare and the direction of changes on the modern battlefield.

Unspecified Issue

Warsaw ZOLNIERZ WOLNOSCI in Polish 3 Mar 81 p 5

[Text] The dynamic quantitative and qualitative rise in the air forces of land armies and their favorable impact on these armies creates the need to define the optimal forms of their joint use. In all armies there are various concepts for using this aviation arm, which makes possible the effective realization of the vital needs of the land armies.

One of the forms of joint combat operations of land armies and the air force of the land armies consists of ground-air strike groups commanded by a combined-armies commander, the groups being taken as separate forces and means temporarily comprising a ground and air organizational structure for the purpose of carrying out joint combat tasks.

The most recent issue of "Mysl Wojskowa" devotes one of its publications to these problems of strike groups considered in this way. I encourage readers to familiarize themselves with its content, despite the fact that

the author's deliberations and proposals are controversial. After all this is still justified by the innovative nature of this grouping component, because although among those interested in this problem there is the predominant view in nearly all armies that it is worthwhile to create such groups, on the other hand opinions vary concerning the composition, goals, and principles of their operation. Major dyplomowany W. Michalak attempts to find an answer to some of these doubts "Concerning the Use of Aviation in Ground-Air Strike Groups."

In the attack, aviation in coordinated action with ground echelons can carry out many fire, reconnaissance, transport, and specialized tasks. Among them a special role is played by fire tasks which are carried out by combat aviation and assault helicopters.

After breaking down the defense and during the waging of the attack into the heart of the enemy's defenses, combat aviation and assault helicopters can support the ground echelon, paralyzing the newly detected centers of fire and reserves, particularly on the boundaries of the development of a counterattack. In addition, together they can protect and hide the landing of infantry by paralyzing and destroying the air defense measures on a flight down a road and in the region where the landing is to take place. Then they can support the combat operations of the assault landing force.

In a meeting engagement, when there are limited possibilities for the development and utilization of the firepower of the ground echelon, aviation can be used to land and support the operations of a tactical landing force controlling convenient regional boundaries and crossing water barriers. It can also hamper the development of major forces and reserves of the enemy, delay the movement of columns moving along sensitive ground points, and disorganize the maneuvering of his armies. The combat operations of airplanes and helicopters are directly related to the conditions under which the meeting engagement is conducted, and their tasks will coincide with the operations of the ground echelon.

In pursuit the need for fire support and assistance from aviation will usually be very great. This is because of the imbalance between the rapid speed of the movement of the armies and the possibilities for support in the form of the artillery's firepower. Reconnaissance planes will focus their efforts on tracking the enemy's retreating armies and the sapper development of a new line of defense. Along with assault helicopters, combat planes will hamper the enemy's organized withdrawal.

In defense operations, aviation detects and delays the enemy's oncoming armies. At the moment of contact, assault helicopters will damage tanks and armored vehicles in the area of the breakthrough. Transport helicopters can participate in mining areas in directions threatened by enemy tanks and thereby create conditions favorable for their destruction by assault helicopters.

The next part of the article is devoted to a discussion of the principles of operation and coordinated action between the air echelon and the ground strike groups.

Besides this, in the above-mentioned issue of "Mysl Wojskowa" one can find a rich assortment of various tactical subjects. Among them, for example, are the following articles: "Properties of the Organization of Night Combat Operations, Especially Combined Operations" (Major dyplomowany E. Gwozdz); "The Organization of Tactical Operations Combined With Aviation" (Col Dr S. Piotrowski and Major dyplomowany W. Michalak); "Reflects on the Subject of Giving Attention to the Undertakings of Radioelectronic Warfare in Command Decisions and Intentions" (Col Dyplomowany S. Lewandowski); "The Influence of Centralized Command on the Effectiveness of the Operation of the Air Defense System" (Major Dr Engineer E. Kolodzinski and Cpt Magister Engineer T. Pietkiewicz); "Mines and Detonators Used in Remote Mining" (Col Rez Docent Magister Engineer K. Dorenda and Col Magister T. Wianecki); "Marine Reconnaissance of Certain NATO Countries" (Cmdr Lt Dyplomowany T. Marszalek); "On the Use of Poisonous Substances in the Vietnam War" (Lt Col Dr Engineer J. Nowak), and "The Development of National and Internationalistic Content in the Military Doctrine and Science of Socialist Countries" (Lt Col Dr J. Kunikowski).

In the "Organization and Information Science" section, Cmdr Lt Navig K. Gawron brings up an interesting problem which is current. The only trouble is that its form is so narrow and pertains more to the effects (not the causes). The title of the article is "An Assessment of the Course of Correspondence as an Element in the Struggle Against Bureaucracy in the Army."

In the "Economics" section, we find the following subjects: "The Disciplinary-Monitoring Function of Standards in the Military Economy" (Lt Col Dr W. Ciesielski); "Controlling the Quality of Military Technical Manufacturing and Operation" (Lt Col Docent Dr Habilitowany Engineer H. Sajecki); "Some Problems of the Measurability and Assessment of Scientific Research" (Col w st sp Dr W. Zalewski).

No 3, 1981 Issue

Warsaw ZOLNIERZ WOLNOSCI in Polish 1 Apr 81 p 5

[Text] The combined-arms section of the March issue of "Mysl Wojskowa" is devoted largely to the methods and forms of action of staffs and armies under various forms of combat under contemporary conditions.

Col dyplomowany T. Galeski writes about "Methods for Preparing Calculations for Marches During the Planning of the Regrouping of ZT Armies." The method proposed by the author uses an electronic data processing program and makes it possible to obtain the necessary computations relatively quickly, but the collection and preparation of all the data needed will require a considerable period of time. So too the functions related to the execution of the basic march calculations should be simple, and the results obtained should be quite accurate and prepared in time. The experience gathered in this respect shows that essential march calculations which are rather accurate can be obtained by using a simplified calculation method. It consists of the application of rather uncomplicated mathematical models.

Major dyplomowany W. Lodziana takes up "The Influence of Nighttime on the Organization and Conduct of the Attack." Because the attack is carried out at night, it is a tremendously difficult undertaking, and its planning as a component of continuous operations should take place in the course of daytime combat. Here consideration should be given to the following specific requirements: the need for appropriate independence on the part of the units operating in the first echelon, the command decentralization necessary in a given situation, the need to narrow the zones of attack and avoid tasks which are overly involved, effective action aimed at the heart of the enemy's defenses, extension of the time of operation of the armies of the first echelon and appropriateness of simplifying the maneuvers, assurance of conditions for building up the thrust before daylight, the provision for adequate forces and means to withstand the enemy's counterattack, the organization of lighting, and provision for marking the battlefield and blinding the enemy.

Col pilot dyplomowany J. Caputa presents "Ways to Use the Aircraft of Land Armies." The fire tasks of these aircraft are basically carried out by combat helicopters.

In the "Organization and Information Science" section, I should like to encourage readers to familiarize themselves with the article by Doc Dr habilitowany Engineer C. Ciaston, entitled "Some Pathological Phenomena in Organization." The item is very interesting and is good background for reflection, although it is a pity that the author, who after all is well acquainted with the military environment and its problems has focused his work on the theoretical without translating the content into the concrete conditions of the army, because such work would have greatly enhanced the item's usefulness.

The current which runs throughout the "Economics" section of this issue is effectiveness. I will call these two articles especially to your attention. The first is by Lt Col Docent Dr habilitowany Engineer H. Sojecki: "The Effectiveness of an Analysis of Values in the Armed Forces." In it the author shares the results of several investigations conducted recently on the subject of the use of analysis of values. The solutions obtained through the research, in his opinion, should be inculcated right away.

The second article is by Col (Ret) Dr W. Zaleski and is entitled "An Assessment of the Effectiveness of Research in Qualifying Proceedings and the Selection of Scientific Undertakings With a Full Cycle of Development." The author begins with the assumption that at present technical-economic analysis and assessment of the effectiveness of future research is the weakest part of the procedure of qualification and selection of subjects for the research and development plan, and he presents proposals to adopt a relatively simple model for conducting such analyses.

Another article in keeping with the main theme is an article by Col Dr Engineer T. Lojka: "On the Methods of Retrospective Assessment of Scientific Research in the Army."

Other items in this section are devoted to problems which are presently very sensitive ones in our country, questions of energy and power. Dr J. Krzyzanowski writes about "Small-Scale Power Engineering for Emergency Defense Needs," and Col Magister U. Staniszewski has an article on "The Principles of Energy and Their Utilization."

I should also like to call attention to an article of very current interest by Col Dyplomowany Magister Z. Golaba published in the "Military History" section. It is entitled "Electronic War in Local Wars." The author analyzes the course of operations during the wars in Korea, Vietnam, and the Near East and draws conclusions from them.

No 5, 1981 Issue

Warsaw ZOLNIERZ WOLNOSCI in Polish 3 Jun 81 p 4

[Text] Recent events in the country, especially the severe economic crisis we have been going through, bring home economic problems not only to specialists professionally engaged in these questions but also all those engaged in any sort of managerial or leadership function. They cannot be uninformed on subjects like economic theory, economic analysis, value analysis, cost-effect analysis, and so on, because the rational management of any organizational unit is impossible without a knowledge of the basic economic laws and principles. In all its implications this statement applies to the army as well.

In connection with the above I should like to call attention to an article by Col Docent Dr Habilitowany T. Kaminski published in the economics section of the May issue of "Mysl Wojskowa." It is entitled "Economic Analysis in the Operations of Economic Departments."

After discussing the purpose of economic analysis in military units and the types of such analysis, the author describes the features of proper analysis, including concreteness, objectivity, comprehensiveness, timeliness, and suitability.

Concreteness consists of making the scope of the analysis coincide exactly with the purpose of the research being conducted. Therefore, each time the purpose of the analytical research must be specified very precisely, because knowing the purpose makes it possible to establish the proper scope of the analysis to insure that it is as complete and beneficial as possible.

The principle of objectivisim of its very essence requires a straighforward examination of the facts being investigated. Here it is important at the same time that an equally honest assessment be made of both the negative and positive facts. This is particularly important for an economic department, because what is under investigation involves very complicated processes which are accompanied by favorable and adverse phenomena. Extracting them and making a proper analysis insure that proper use will be made of the information provided by the economic analysis.

In analysis complexity should apply to all the spheres of its application, (from the macro scale, the army economy, to the micro scale, the economic department). In conducting an analysis of certain operations or processes, it is necessary to remember their relationships to the surrounding environment and the possibility of influencing that environment. If the interrelationships are great and can influence the course of the processes, they should be examined. Failure to do this keeps the results of the analysis from protraying the objective state of affairs. In research complexity is indispensable for undertaking rationalizing actions, for seeking untapped reserves in all stages of training, economic process, and so on.

Timeliness is an unusual virtue in analytical investigations but especially in economic analysis. The information gained as the result of analysis should be helpful in making decisions to undertake action to improve an existing situation. Therefore it must be supplied to management or the command by a given time.

The suitability of the results of the analysis is directly related to the previous principle, but it is worthwhile to point out that suitability is related to the usefulness of the information. In order for the information to be useful, it must be concrete and usable under the given circumstances.

Against the backdrop of the principles to which the economic analysis should correspond, there is the problem of the essential source information needed to conduct the analysis, information which should be recorded in the economic departments. Most necessary to economic analysis is cost information, but this information is not fully recorded in the departments, and this fact makes it difficult to conduct analyses.

Economic analysis in the economic department should represent an essential component of annual analyses of training, management, and the general over-

all shape of the economic department's activity. Only then can it serve its purpose and contribute to more rational management.

This section is filled out with articles by Lt Col Magister B. Jedlinski, "Economics of Defense and Economic Upbringing -- Today," and by Col Magister Engineer E. Marszalkowski, "Modernization-Investment Policy in Military Construction."

In the general military section, each reader can find a problem of interest to him. This section contains the following papers: "Program of Peace -- Yesterday and Today" by Col Dyplomowany E. Wojcik, "Properties of the Conduct of Combat Operations at Night in Forest or Mountainous Terrain" by Col Dr A. Kowalski, "Some Comments on Warding Off Counterattacks by Enemy Reserves" by Major Dyplomowany T. Bogusz, "The Creative Work of the Commander" by Col Dr R. Urlinski, "Some Aspects of Centralization and Decentralization in the Command of Land Forces Antiaircraft Defense" by Col Docent Dr T. Mirowski, "Elimination of the Effects of the Enemy's Use of Weapons of Mass Destruction and the Recreation of the Armies' Combat Capabilities" by Lt Col Dr Engineer J. Pieta, "Scattered [narzutowe] Mining" by Major Dr Engineer J. Garstka, and "Electronic War in Western Countries' Navies" by Com Lt Magister Engineer K. Jakubowski.

There are three items in the Organization and Information Sciences section worth noting: "Decentralization -- Rights, Responsibilities, and Duties" by Doc Dr Habilitowany Engineer S. Gastonie, "Assessment of the Effectiveness of the Course of Carrying out Research and Design and Inculcation Projects in Information Science Bodies" by Cpt Magister Engineer M. Gnilka, and "Methods for Assessing the Utilization Parameters of Multiaccess Systems" by Lit Magister Engineer Z. Hrynkiewicz, Major Magister Engineer E. Kasprzak, and Major Dr Engineer M. Suskiewicz.

In addition, in the military history section we note an article by Lt Col Dr H. Herman about "The Alliance of Nations in the Fight Against Fascism During the Years of the Second World War," and in the section entitled "From Brother Armies" we can find summaries of articles by Lt Cand W. J. Slipczenki ("Development of the American System of Warnings of Nuclear Rocket Attack"), by Cmdr Lt H. Engelmann ("Operational Regime in the Marine Theater of Combat Operations"), and by Lt Engineer S. Nanasa ("The Technical-Material Provision for Training").

No 6, 1981 Issue

Warsaw ZOLNIERZ WOLNOSCI in Polish 29 Jun 81 p 4

[Text] Organization of One's Own Work

In undertaking each effort, intention, or task and in describing precisely the related goals, we should strive for rational, thrifty, disciplined implementation. It is a question of not dispersing efforts but focusing attention on necessary actions and achieving the best results

using the simplest methods. This is a scientifically proved view, which demonstrates the need for conscious organization of personal work and life.

This implies that in taking care of great problems and whole systems we should begin with ourselves, with a critical in-depth analysis and improvement of our own work, because practice shows that people in identical operations achieve different results. With some people, work is rhythmic and somehow "burns in their hands," while with others, despite good intentions, it is difficult for anything to get done. What are the causes, and what can be done about this?

In is June issue (6/1981), "Mysl Wojskowa" devotes one of the articles in the Organization and Information Science section to the problems of rational organization of personal work. The article, written by Reserve Col Z. Uszynski, is entitled "Selected Views of Rational Organization of One's Own Work."

At the outset the author presents the major causes which he believes to be behind inefficiency in one's own work.

The following are included among the most significant interior sources of inefficiency:

Sense of excessive personal responsibility in place of a logical division into responsibility and joint responsibility,

Lack of skill or desire to take advantage of professional advice and assistance of specialists and coworkers,

Overestimation and demonstration of one's own expertise (acceptance of jobs which are too difficult, those which exceed one's skill and knowledge),

The desire to take care of everything personally, going beyond the scope of one's jurisdiction, and the conviction that one knows everything better than anyone else.

The author lists the following external sources of inefficiency:

Imbalances between responsibilities and privileges (excessive responsibilities and insufficient authority for independent action) in the manner of operation,

Over-formalization of behavior and lack of necessary freedom,

Working style of superior (excessive centralization of decisionmaking),

Unplanned activity of superior and supervising institutions,

Too many centers of jurisdiction and excessive supervision.

After discussion the major causes the author goes on to certain sugggestions and proposals concerning preventive measures, among which are the following:

1. Proper organization of the work station. Here it is mainly a question of insuring logical consistency among the basic elements, that is, tasks, responsibilities, privileges, and duties.

2. Providing for operations in organizing one's own work. Here attention should be given to see that the group of tasks and undertakings performed are categorized as certain, expected, and unexpected. The first group consists of those tasks about which it is certain absolutely that they must occur in a given time and place. The second group contains those which are quite likely to exist. On the other hand, the third group is composed of all those which cannot be foreseen at all. Therefore, skill in predicting or successfully associating the signs and determining future actions are the basis for rational organization of work.

3. Rhythmic flow in one's own work. This is related to the repetitiveness of actions, that is, of those which are carried out at the same, fixed, regular time intervals. Under army conditions there are a relatively large number of repetitive tasks, but some depend on the preferences of certain persons and others do not. This means that the repetitiveness of the actions may be set in one's own area or imposed by higher echelons.

4. Motivation of one's own work. In summarizing the author's idea, we can say that the motivation of one's own work boils down to inspiring oneself to identify one's own interests with the purposes of the tasks being performed, of developing the proper attitude to the work in keeping with social expectations, and thereby deriving suitable satisfaction from the job.

In the second part of the article the author presents the basic methods and techniques for rational organization of one's own job with special emphasis on the planning, organization, and self-monitoring of one's own work.

In the same section is an article by Cpt Magister Engineer A. Stachny entitled "Problems of Estimating the Costs of Production and the Dimensions of Programming for SI."

Among the articles to be found in the general military section are the following: "Military Advantage the Basis of U.S. Foreign Policy" by Col Dyplomowany B. Kolodziejczak, "Shifting the General Military Tactical Union From Offense to Defense in Order to Repulse the Attack of Superior Enemy Forces" by Col Dyplomowany Retired Z. Wontrucki, "Conditions and Properties of Antiaircraft Defense of a Tactical Force Shifting from Offense to Defense" by Major Dyplomowany J. Glowacki, "Reconnaissance-Fire Groups" by Col Dr R. Urlinski, "Effects of Nighttime Conditions on the Operations of

Air Assault Forces and the System of Antiaircraft Defense" by Cpt Dyplomowany Engineer B. Zdrodowsks, and "Selected Theoretical Aspects of Diagnosis in the Realm of the Functioning of Spacial Structures of the Armed Forces" by Col Dr Z. Mondrzycki.

In the Economics section I should like to draw attention to an article which corresponds to a paper presented at the outset in greater detail: "The Improvement of the Organization of Office Staff Work Positions and the Processes of Military Training -- A Source of Economic Effectiveness" by Lt Col Docent Dr Habilitowany Engineer H. Sajecki, who presents the way in which staff offce work and training can be improved by using the values analysis method.

In the military history section, Col Retired Docent Dr Z. Stapor commemorates the 40th anniversary this July in his article "Armed Aggression of Fascist Germany Against the Soviet Union."

REVIEW OF B. LEWANDOWSKI'S BOOK ON U.S. RADIO PROPAGANDA NOTED

Warsaw SPRAWY MIEDZYNARODOWE in Polish No 3, Mar 81 (signed to press May 1981) p 150

[Review by (a.z.) of book "Propaganda radiowa USA. Zastosowanie radia w propagandzie na kraje socjalistyczne" [U.S. Radio Propaganda. Use of Radio in Propaganda Against the Socialist Countries] by Bogdan Lewandowski, Panstwowe Wydawnictwo Naukowe [PWN], Warsaw 1981, 279 pages]

[Text] Differentiating between ideological struggle and ideological aggression, the author writes that the former pertains to actions which affirm an ideology or a political system presenting the values of a specific style of life and justifying domestic and foreign policy of states. The socialist states conduct ideological struggle in this manner, as well as to a great degree, France. Ideological aggression, on the other hand, consists of organizing actions levelled at the internal affairs of other states aimed at maintaining or overthrowing the political system of a given state. In the first case, such activity pertains to those capitalist states where a potential exists for taking over of authority by the workers' class. The second case finds application in socialist states.

The main subject of ideological aggression is the United States, and the means for implementation are mass media, primarily radio. The author described the fundamental propaganda apparatus of the U.S., its history, aims, structure, sources, program, and methods (Voice of America, Radio in the American Sector, and others) as well as the special radio apparatus (Radio Free Europe and Radio Liberty) and then analyzed their programs on the subjects of anti-communism, anti-Sovietism, nationalism, and radio as an instrument for justifying American policy (Vietnamese conflicts, Middle East conflicts, disarmament, etc.).

CALL FOR INCREASED ATTENTION TO WORKERS' COMPLAINTS

Bucharest MUNCA DE PARTID in Romanian Jun 81 pp 7-10

[Unattributed article]

[Text] The continued development of socialist democracy, one of the basic goals of our party, particularly since the 9th party congress has recorded higher and higher heights with deep social-political importance. Actually, established through the decisive contribution of Comrade Nicolae Ceausescu, socialist democracy insures the unlimited participation of the workers in the leadership act and in the creative and revolutionary implementation of the party's policy in all areas. An expression of the broad rights which the working masses have and of their freedom of opinions and action, socialist democracy, at the same time, is the more fertile framework of the uninterrupted improvement in social relations, being one of the important means for strengthening and deepening of indestructible ties between the party and the people and for raising all activity to new levels of efficiency.

An eloquent argument for the broad opportunities which the workers have to participate directly in solving some of the most varied problems in a deeply democratic spirit is also the activity of resolving proposals, complaints and requests which they make. An entire system and an institutional framework for carrying out this activity have been created and important documents have been worked out, ones which specify the tasks and the factors required to fulfill them. In their spirit and the spirit of the indications expressed by the party's secretary general, who is constantly concerned with increasing the workers' contribution to improving the leadership and organization of our socialist society and with utilizing their revolutionary combativeness, experience and ability, the direct responsibility for the specific leadership of all the activity of examining and resolving the proposals, complaints and requests of the citizens has been entrusted to the first secretaries of the county, municipal and city party committees, to the secretaries of party organizations, ministries, and leaders of enterprises, institutes and public organizations.

A New Quality in Resolving the Letters, Problems Raised in Hearings

As a result of the concerns with insuring an optimum framework for resolving the proposals, complaints and requests of the workers and deeper involvement of the factors in resolving the problems raised, a more and more striking improvement has been found in the activity specific to this area, naturally bringing an increase in the masses' faith in the party and in the organs called on to resolve the letters and problems presented in hearings. Actually it is a question of establishing a new, superior

quality in this area, too, which is closely connected with the increase in the concern and responsibility of the party organs and organizations toward the people and the receptivity and interest they show for the situations which appear in their life and work and for the proposals coming from them. The workers' problems in more and more cases are being solved during the incipient phase,in the spirit of the provisions of party and state laws and decisions, below--in the units and communes--while the conclusions resulting from checks on the letters and complaints are being generalizedto a greater and greater extent and carried out in decisions of broader interest, through the application of which not only the resolution of similar situations is insured but, implicitly prevention of others' appearing.

For example, if we analyze the letters, complaints and hearings through the prism of their content, as Comrade Nicolae Ceausescu emphasized at the RCP Central Committee Plenum of 25 March 1981, they are more and more strikingly a form for the participation of the popular masses in exercising control and in resolving various problems in our activity. A very large portion of these letters, complaints and proposals refer to the general flow of life and work, to production, to the way that various enterprises and institutions are headed or to the way in which the communists and leadership cadres work, which clearly shows the masses' concern with carrying out activity appropriately, reflecting the uninterrupted development of a civic spirit and the people's wish to be deeply involved in the process of our continuous improvement. Thus, if we refer to the proposals and complaints from 1980 and the first months of 1981 regarding social-economic activity, we see that, on the average, nearly 65 percent of them proved useful and well-founded and of real use for improving work in the industrial and agricultural units, in construction, transport, health protection and other sectors. For example, in industry the criticism to a large extent proved to be substantiated which aimed at the failure to use certain machinery and equipment at their capacity, the failure of steady supply to the jobs, the irrational use of the stock of working time,acts of indiscipline and disorder, insufficient concern with using recoverable materials, delaying the introduction of new technologies, inventions and innovations into production, the waste of fuel, energy, raw materials, the fictitious reporting of fulfillment of certain plan indicators, the lack of exactingness and responsibility, the professional and organizational incompetence of certain cadres in the units.

In this context, what is strikingly coming out as vigorous assertion of worker opinion is the concern of the party organs and organizations and various forums in the economy and state administration with using the conclusions and measures resulting from the letters and hearings as a means for improving leadership in all areas and sectors. In this regard, the leap produced in the activity of more and more party organs and organizations is eloquent,places where , on the basis of the conclusions resulting from on-the-spot checks of the letters and problems presented in the hearings, they are organizing prompt intervention and taking measures to generalize positive experience and initiatives worthy of interest, at the same time taking action to hurry and eliminate the shortcomings which made the workers address various forums. However, it should be said that there still are some party organizations which do not utilize the letters and hearings to the proper extent as a means of becoming informed and of political analysis and they do not give enough attention to this aspect of their own work. We still encounter situations where intervention is not made effectively to the critical signals with a view to solving the problems on the spot and enough action is not taken to promote the collective methods of work and leadership and communist discipline and responsibility, while in some organizations, particularly the agricultural production cooperatives, there even is a certain passiveness toward disorder, which means the workers continue to ask the aid of the higher party organs. That is why

there is a stringent need for adopting some decisive measures in these cases and for improving their own style and methods of work in all the party organs and organizations with a view to the insistent use of letters and hearings as an efficient tool, as a support of information on the real states of affairs, as a source of new ideas and solutions in social-economic activity.

The rise in letters and hearings for 1980 and the first quarter of 1981 is capable of making graphic arguments to aid the new quality recorded in general in this area. For example, during 1980, around a 27-percent reduction in complaints about shortcomings in areas such as agriculture, communal management and so forth was found compared with 1975, with this being explained mainly by the increase in measures taken during the five-year plan years to improve the situation in these particular sectors. Among other examples, also significant is the nearly 30-percent reduction in the number of requests for pensions, particularly as a result of resolving the situations with much greater efficiency by the very organs entrusted with them and broader popularization of the legal regulations on giving pensions.

At the level of the first quarter of 1981, the activity for resolving the workers letters and problems raised with the party leadership in hearings brings out an emphasis on reducing their number. Compared with the situation existing during the first quarter of 1980, significant reductions were recorded in areas such as health protection and social aid (by 48 percent), internal party and mass organization life (by 38.2 percent), transport and telecommunications (by 19.4 percent), industry, design, innovations (by 12 percent) and so forth.

Actually, it is a question of a general phenomenon which shows convincingly the qualitative aspects of the work with letters and hearings. Its source lies in the party leadership's consistent concern with having the party organs and organizations and the state and public organs insure competent, principled and effective solutions to the proposals, complaints and requests of the workers.Half-yearly analysis by the Political Executive Committee and quarterly analysis by the Central Committee Secretariat of the activity of resolving the letters sent to the party leadership, the annual discussion at the RCP Central Committee plenum of the report on work with letters and hearings and the personal example of Comrade Nicolae Ceausescu in solving the workers' problems of work and life day by day , at all levels, have enlivened the activity in this area and sustantially improved it.

An Important Means for Maintaining and Strengthening the Ties With the Masses

In his speech at the 25 March 1981 RCP Central Committee Plenum, Comrade Nicolae Ceausescu pointed out that, along with faith in the party and the state organs hich the citizens have addressed themselves for the resolution of various problems, the existence of a large number of letters and complaints, at the same time, reflects a certain criticism being made of our party organs, our activity in general, and state organs, stressing that "if activity took place appropirately everywhere, there would no longer be a need for citizens to send letters and complaints." "For that reason," the party's secretary general continued, "we must draw the conclusion that we have to improve all our activity; in our daily work we should discuss directly the problems with the working masses, solve them on the spot, because it is better to do this right there rather than to wait to receive letters and then send people out to solve these problems."

The striking result is that the letters, proposals and complaints must be understood as ways to strengthen ties with the people and as means of having a dialogue, of actively cooperating with them to improve certain situations and eliminate some

shortcomings. In light of the criticism made by the party's secretary general, we must gain a new quality in this area , too, and continually improve ties with the masses. Of course, important steps have been made in this direction. Recently, the method has been extended to many counties of hearing citizens in the localities where they reside and at their jobs by the leadership cadres of the counties and municipalities. Also, the responsibility of the working collectives has been involved to a growing extent by discussions of the conclusions resulting from checks on certain states of affairs in the collectives and more and more frequently collectives coordinated by the leadership cadres are being organized with the right to make decisions directly on the spot when complaints are investigated which are of a more special content.

Understanding and using letters as a means of a link with the masses, at the same time, mean the existence of a lively dialogue with them and the requirements to answer any complaints and any signals coming from the workers. From year to year we find a rise in concern with resolving them within legal terms. For example, in 1980 the majority of counties achieved high percentages of solving letters on time compared with the preceding year. But, while the percentage rose from 83 to 98 percent in Iasi County, for example, and from 80 to 90 percent in Arges County, the percentage was lower than in 1979 in Vaslui, Vilcea, Teleorman, Dolj and Bihor. A unsatisfactory situation in effectiveness still persists at the Ministry of Machine Construction Industry and the Council for Socialist Culture and Education, which resolved only 66 and 72 percent, respectively, of the letters they received on time. Other times it happens that they are investigated superficially, in a hurry, without taking into account too much the person or persons behind the signature, or they are sent to be solved from above below, from step to step , with the particular factors declining their responsibility in an unpermissible way.

That is why we must curb such practices without delay wherever they are being demonstrated, we must strengthen control and responsibility in this area, too, and we must designate the most competent people, cadres invested with decision-making power in the leadership act for the activity with letters and hearing people who look after the proposals, complaints and requests of the workers in all seriousness. With the same goal, it is necessary to increase combativeness, to eliminate formalism, bureaucratic demonstrations and other shortcomings in the work with letters and hearings and to have complete respect for the laws, standards of socialist ethics and equity. In the base units and in the activity of the leadership cadres in enterprises and institutions--particularly in services which work with the public--more receptivity is required toward the proposals, complaints and requests presented to them, and they should be resolved with care and understanding , the direct effect of which would be to have a natural reduction in the number of citizens addressing the higher organs. Also, knowing that the party organizations, administrative leaders, trade union and UTC organizations in some enterprises and institutions as well as in some communes are not concerned enough with the people's personal problems by many times acting indifferent, we must insist on eliminating these shortcomings and discuss with citizens, have the workers commissions for letters and hearings in the party organization bureaus or committees be guided and checked appropriately.

At the same time, the workers' spirit of responsibility and combativeness must continually increase, and mass opinion should develop with a view to preventing deviations, and actions must be taken to have good knowledge of the laws and decisions and these are conditions of primary importance for gaining a superior quality for the activity in this area. Also necessary is intensification of concernwith creating the most

favorable possible atmosphere in all base units and organizations for utilizing the people's opinions so that they raise problems which can and should be solved then and there with more courage, on the spot. The optimum and responsible solution to the aspects of general interest together with the citizens contributes to deepening socialist democracy, to strengthening the tie of the party and the state with the masses, to mobilizing the workers to a higher degree to fulfill the party's decisions and raise our socialist society to new steps of progress and well being.

PROBLEM OF RELIGIOUS YOUTH EXAMINED

Bucharest SCINTEIA TINERETULUI in Romanian 27 Jul 81 p 2

[Interview with Mircea Boharu, secretary ot the Dimbovita County UTC Committee, by Serban Cionof]

[Text] [Question] Continuing our series of material in which we present the concerns of the UTC organs and organization in the complex process of the formation and affirmation of the youth's scientific materialist convictions, today our speaker is Comrade Mircea Boharu, secretary of the Dimbovita County UTC Committee,and Dimbovita is a county where positive experience has been accumulated in this direction.

For a start I would like to ask you to present several of the particular features of the religious phenomenon in Dimbovita County, of course, with a specific emphasis on the penetration and persistence of mysticism among the youth.

[Answer] First I would like to state that in our county the religious phenomenon has not had extreme forms of obscurantism or fanaticism. And this does not mean that we are not giving it the proper attention. So, I would say that it gives a certain specific nature to this activity in our county which consists not merely in combatting but, primarily, in preventing the particular phenomenon. With the aid of Prof Rozalia Ionicioiu of No 1 Industrial Secondary School in Tirgoviste and under the guidance of the county's UTC committee, we established a team formed of pupils which proposes to have a multidisciplinary treatment of the religious phenomenon among the youth. Specific investigations already have been made in the field, in communes such as Razvad, Gura Sutii, Produlesti, Vacaresti and others, investigations which have resulted in useful conclusions for our future activity.

[Question] Please give a concise presentation of several of these conclusions to inform our readers.

[Answer] A first conclusion is that the religious phenomenon persists particularly among the village youth through tradition, we might say; the parents or gra dparents attend church and the youth follow them. The main thing, however, is not only if a young person goes to church but, rather, what he gets out of it and the way in which what he has learned during the cult practices is confronted with the knowledge obtained in school and UTC organization activities and, in the end, exactly which ideas have the most powerful force of conviction. The fact that some religious theses find an audience among the youth also depends on the particular mental structure of each young person separately and their cultural baggage and desire to know as much as possible or a certain apathy, a "reserve" toward the effort at knowledge and self-clarification.

I have dwelled on the rural areas precisely because the majority of young people attending vocational schools or who are becoming qualified directly in production come right from there, speaking at the county level. But we have observed that, having reached the big industrial platforms, spread out not only in economic share but also from the viewpoint of the worker personnel, the youth with such tendencies are lost sight of easily, are lost in the mass of the collective and are harder to discover so that the UTC organizations can do some work of regular advice with them, man to man.

[Question] Since you referred to this work of man to man, I admit that from the information we have available up until now, we can conclude that it still is not enough and also used inefficiently in the direction of the scientific materialist education of the youth. The same thing cannot be said for the activity of proselytism carried out by the cults and sects, some even outside the law. So, how do you view the concrete possibility of using this means of knowledge and education, of work man to man available to our oganizations more efficiently?

[Answer] Given the fact that we are to launch individual discussions in the UTC organizations in the coming period, I have indicated to the UTC committees in the big economic units to also follow up on this aspect, ones such as in the combine for special steels, SARO, Romlux, the Oil Equipment Enterprises, all in Tirgoviste Municipality, in the assembly construction enterprise, in the Moreni extraction field, just to give several examples. Of course, seeking to find the reasons and causes. We intend to concentrate our attention more systematically on the dormitories for young people, where, by the nature of the work, there is the opportunity to have the proselytising phenomenon be demonstrated more intensely. For this purpose we will use the group of lecturers from the UTC county committee with a view to diversifying the actions of scientific materialist education, proceeding from the exact knowledge of the level of preparation, the cultural horizons of the young people. In the villages, of course in the period in which agricultural work permits a broader flow of political-educational ctions, we will send collectives of specialist young people to meet with youths on subjects of dialectical and scientific mat rialist education but only after we have already have an exact representation of the religious phenomenon and the tendencies and forms of demonstration but, in particular, the cults which predominate from one case to another. Because, let us admit it, if we wish to obtain the anticipated efficiency in the activity of scientific materialist education as an integral part of the political-ideological work of forming the new man, we must proceed from the premise that we need a differential approach, by subject, to the problems of religion and religiousness, being much more concerned with an investigation of the psychological particular features of the youth.

[Question] This spring the Central Committee of the Union of Communist Youth organized a symposium in Piatra Neamt on subjects of the scientific materialist education of youth. It permitted a useful exchange of experience and ideas and we expect that it will not remain a single initiative. With this prospect, what proposals and suggestions could you make, ones which could be retained for a future symposium of this kind?

[Answer] Undoubtedly, the symposium organized in Piatra Neamt was particularly useful and instructive. But I must say that many of us still operate with abstract, vague concepts, even with confusion which, of course, considerably reduces the productivity of our activity, despite the good intentions. I think, then, that it is necessary to provide well-based instruction of the aktiv in this area, presenting both the methods and techniques of investigation and discussing the conclusions of

the investigations made and discussing the practical solutions resulting from them and also making a broad and competent report on the position of religion in the modern world, the sectarian phenomenon, the causes and substrata, leaving once and for all the didacticist and schematic method which some materials of this so-called scientific-atheist education have. It is not merely a formulation of politeness but I want to say that the journalistic initiative of SCINTEIA TINERETULUI in devoting a special page to this very important area in the educational work is a useful tool for orienting the youth and I want to hope that it will appear more regularly and aided more by us, by the cadres in the area of political-ideological work and by the Union of Communist Youth organs and organizations.

INDULGENT PARENTS OF PARASITES REPRIMANDED

Bucharest SCINTEIA in Romanian 9 Jul 81 pp 1,2

[Article by Dionisie Sincan and Gheorghe Cirstea]

[Text] There still are people who do not work and, yet, they still have bread on their table. How could this paradox be accomplished in a society like ours, where the principle of "no work without bread and no bread without work" is a basic law? Who are these people who are a burden to their parents, their spouses, our burden the burden of everyone, those who with an effort of blamable imagination shirk from the highest purpose for man: honest work for the use of everyone and the entire community? When, where and how are these human eclipses produced,what are the factors of this evil abandon, at what point in the lives of these individuals--in the family or in society--is the educational break produced, forcing public opinion to firmly ask application of the laws in order to reestablish the necessary balance?

We are starting a new series of social investigations, proceeding from these questions, convinced that you, our readers, will participate with us in establishing exact answers.

The most painful tears are the ones which do not appear in the eyes. The most disturbing tears are the ones which do not run down your face, but the ones which drop--like drops of molten lead--within your soul, not even allowing a cry of atrocious pain to come out. I guessed there were such tears in Elena Rosioru's soul, listening to her talk about her son, Nicolae Rosioru, now 30 years old but for her, still a child.

"He was our sun," the woman says abruptly."One of our purposes in the world. We wanted to make a man of him. He always had our example, the example of his parents and we always helped him. And yet, he does not want to work."

"Even as an adult?"

"Even. I don't know what happened."

Affection. A psychological phenomenon of delicate complexity, concentrating noble feelings of love, attachment, special warmth, selflessness up to sacrifice. When they concern relations between parents and children, they bring up many feelings hard to describe, but identified, however, as the pillar of resistance of the family structure.

"Affection is kindness first of all," says Comrade Lt Col Gheorghe Scarlat, a man who knows Nicolae Rosioru well. "But kindness is demonstrated in a million ways. I am strict with my children but my strictness originates in affection. They feel the affection under the cloak of severity which, actually, is my responsibility as a parent. They warm to my affection and recognize in it the responsibility which I bear for everything they do and have to do. Affection does not blind me but it makes me clearer in evaluating their qualities and helps me not to overestimate them. They are "daddy's children," but they must be prepared to enter into society on their own feet."

"Do you give them everything they want?"

"I give them everything they need, not more, which is rational--to give a child so that he understands that what he getsis the product of work and does not come from unlimited wealth. So he understands that his work, both at home and at school, is a necessity, a natural tradition of man, the oxygen of his existence as a distinct personality. Probably the importance of this was not explained on time to Rosioru and others. They could not be told later, like I told my son when he was thinking about a profession for which I well knew that he did not have the necessary qualities: "Gheorghita, from now on the plant will raise you! And if qualities appear which you imagine, then the plant will send you to utilize them!"

"He never lacked anything," Elena Rosioru confessed. "He got everything he wanted."

It is astonishing how this argument is reapeated like a moral relief in all the cases of human failures, some dramatic. And you ask yourself: why should you give him everything all at once, without making him understand gradually that each thing given, each wish fulfilled means first work, striving responsibility? Giving him everything hinders him from penetrating with understanding the basic purposes of man--work, responsibility. That is, precisely those values which will help him become a whole man and use all of society.

The hidden cracks in such an education were sharply broadened in Nicolae Rosioru's case by the vicious gang he entered even in the 10th grade. He did not get enough money from home. As he confesses, "I wanted more and fast and I told myself that by giving up school and becoming a lathe operator I would get this money, like my free-time friends had , who were handy with the cards." Soon he gave up his trade, too, because the money obtained through work was measured according to his wisdom and striving. So, he breaks this balance--a law of honest life--entering a shady area bringing on the psychology of a parasite, the one to whom work seems to be a thankless job, while an easy life , won through lack of honesty, is the only goal. The hidden cracks in the faulty education thus become completely visible. There still is an anemic justification from the parents who see their hopes dashed: "I don't know when I lost him!" And again you ask yourself: Is there truly one distinct moment when you lose your child, when he gets away from parental control without being noticed or does the moral break begin its evil process together with unmeasured affection, where the dose of indulgence has lost its necessary balance?

"N.B. is 13," Lt Maj Stefan Florian of the Service for Criminal Investigation in the Pitesti Municipal Militia tells us. "His father is an engineer. And he has 'everything he wants'. And, yet, this child committed 30 infractions. The parents are desperate. And we are sad. 'We lost him,' they say, 'and he got in with a bad gang .' It's too bad because N.B.'s intelligence deserved to be guided in another direction. He is called 'golden hands' in the crime circles. What an irony! With

real affection, full of balance, N.B. could have given another meaning to the expression 'golden hands.'"

What a brutal deviation from an honorable life of work, where each child, each young person should embark with all responsibility, of course not lacking all the joys of childhood and youth but increasing their thrill of beauty with the proper dose of responsibility for their own future! This child is an extreme case at such an early age but, at the same time, he is an example of what can happen at the end of a slower evolution--not less poisonous--of being spoiled, as things stand with Rosioru, a man who has reached 30, a failure, fleeing work, going the expedient way, feeling the lower depths of life, crime. Or the case of other "old children," protected by their parents precisely from the joy of the well-done job, the one done by their hands and minds. "I worked hard so he could live better!" The sorrowful argument, heard a thousand times, a false path in life taken by some parents, at the end of which they embrace disillusionment and desperation. Sooner or later, as happened with Nicolae Rosioru's parents. "I'm sorry and I'm ashamed,"he confesses and, for a moment, you think of a happy awakening to reality. "You see," he continues thoughtfully, "I cannot work too hard." "You have a qualification, you are a lathe operator." "I was. But I have hepatitis. At one time I had hepatitis," he corrects himself. "Maybe it was a light case."

He was offered more than 12 jobs! What else can we say?

At the beginning of our investigation, we mentioned the changes in mistakenly understood affection and its consequences, damaging for all of us in the end. Due to this affection deviated from its natural meaning, its complex meaning, for years on end children are kept like in a greenhouse, having reached adulthood and still preparing for their college entrance exams. "Daddy's boy, mommy's girl." They are offered everything--a home, free board, with an increase in food and money for the necessary relaxation after"hard work," which never is produced in a positive way. But they keep on in this situation, with a sturbbornness worthy of a better cause and all kinds of "bad lucks" are manufactured, actually covering the origin producing failures, weak people, without will, people failing, people in blamable acts, when the parents' material source dries up or is exceeded by "the needs" of the children. And then those painful tears appear, those pathetic questions: "How could this happen to him (or her) when he had everything?" Precisely for that reason! Because he had and has everything without understanding that the values he is consuming must be rebought with the noble effort of work and responsibility. Protecting the child or young person from these efforts, we weaken his power of resistance to life, we ourselves are cu ting off his rise toward the achievement we desire, toward the completion of their personalities and we are creating for all of society an evil against which it must mobilize its energies. An evil which is hard to fix, which is hard to heal. "Daddy's boy, mommy's girl" are the undeserved and unexpected "gifts" thrown on the back of our society, where the principle of "no work without bread and no bread without work" is law. And the law must have its say firmly so that our life of honest work, free and creative, can keep its harmony and beauty undefiled.

CHURCH-STATE RELATIONS DISCUSSED IN WESTERN PRESS

Vienna DIE PRESSE in German 10 Aug 81 p 3

[Report by Christine von Kohl: "What Clerics Are Not Allowed To Sing--Yugoslavia's Unequal Church Policy"]

[Text] Belgrade--The profound unrest which has been noticeable below the surface of domestic political developments in Yugoslavia for some time has become particularly apparent in the relationship between state and church. Previously--that is, while Tito was alive--it was possible to observe an effort being made, by and large, to maintain a certain balance among the big religious communities. If, for example, the position of the Croatian Church was strengthened, or that of Islam--perhaps out of Yugoslav foreign political considerations--this also had a more or less automatic favorable effect on the other religious communities. Now this balancing system does not seem to be functioning any more.

In Croatia the party has been conducting a veritable campaign against the Catholic Church this year. The now no longer surprising verbal attacks by leading Croatian party officials have been complemented in the past few weeks by the sentencing--though only to fines--of three clerics. One of them is the editor-in-chief of the Zagreb weekly GLAS KONCILA.

They were indicted because, according to the court, the "socialist and national feelings of Zagreb citizens who were not believers had been offended" by the wording of church posters and brochures promoting the "250th pilgrimage of the City of Zagreb to Marija Bestrica." Since, according to the court, "Zagreb today is no longer the Zagreb of 250 years ago," the sentence--mentioned above--should have been amended accordingly. The court points out further that those responsible for the wording "are highly educated adult and intelligent persons who ought to know what they are doing and need not follow any kind of directives."

This was an indirect reply to a letter--which was not answered officially--by Zagreb Archbishop Franje Kuharic to the court. In it the prelate had stated that the wording which had been made the subject of prosecution had originated with him personally and that he was therefore responsible for it. He was not, however, aware of thus having violated any law.

If observers had been pretty much at a loss as to why this whole campaign was unleashed despite the fact--or because?--state-church relations in Croatia had

already reached a fairly relaxed stage, an indirect answer was supplied recently by as high a party official as Milutin Baltic. He stated publicly that the Catholic Church in Croatia should not think it could follow the example of the Polish church and make itself the spokesman or representative of the Croatian people, for whereas the Polish church together with the people had fought the common enemy in World War II, the church of Croatia had fought on the side of the enemy.

In other words, the Croatian party is reacting in its own way to the internal developments in Poland, which represent an important disquieting experience for every ruling communist party.

At the same time in Serbia just about the opposite kind of state-church relationship is developing--without a "polish" component but in the wake of the events in Kosovo, the autonomous province with an Albanian majority which forms part of the Serbian Republic.

The Orthodox Church in Serbia is leading a fairly retrograde, rather passive existence. Sometimes fairly frequently and sometimes more rarely, it is accused of advocating or supporting nationalist Serbian positions and maintaining contact with anticommunist emigre circles. The church and the regime know that the Serbs cling to their church for traditional patriotic reasons rather than out of actual religious conviction, and this very fact is the reason for the new situation in which the church finds itself in light of the tensions that have arisen in Kosov between Serbs and Albanians.

For every Serb, Kosovo, the seat of the patriarch at the height of the Serbian Kingdom, represents the source of Serbian consciousness. The fact that today more and more Albanians and fewer and fewer Serbs live there and that Albanians are allowed to "rule" there is almost intolerably painful to such Serbs--presumably the great majority of them. When a few days after the first demonstration a part of the old patriarchate in Pec was destroyed by fire in mid-March, it was a very dangerous moment. Eyewitnesses were sure that it was arson, intended as an anti-Serbian demonstration. Without being able to remove the existing suspicion of sabotage, an official committee after weeks of investigations cited a short circuit as the possible cause of the fire.

The church took a similarly equivocal stand in the matter. Church and political offices thus demonstrated their desire not to lend additional fuel on the Serbian side to anti-Albanian feelings. A visit by the patriarch in Pec to the site of the disaster received the attention of the mass media.

The most dramatic development, however, was Patriarch German being received by Prime Minister Veselin Djuranovic in Belgrade a few weeks ago. On that occasion the Orthodox ecclesiastical journal PRAVOSLAVIJA published a detailed list of the subjects discussed under the headline "The Church Is Concerned About the Safety of Its Faithful and Priests in Kosovo." The fact that the meeting was even covered in a brief television reportage was something of a sensation.

In addition to topical problems such as the migration of Orthodox priests and nuns from restive Kosovo and social questions affecting priests and seminary graduates,

the patriarch brought up the case of the two young clerics who had been given steep prison sentences in Bosnia a few weeks earlier. Their crime was to have sung so-called nationalist Serbian songs on the occasion of a family celebration. The sentence had caused great indignation in Serbian circles.

The meeting between prime minister and patriarch shows that at present--one may say, understandably--Serbian circles are also exercising great influence in the offices of federal authorities. The differences in the treatment now being accorded officially to the churches in Croatia and Serbia also show, however, that at present the centrifugal forces in Yugoslavia have become considerably stronger than they were a year ago. It remains to be seen whether this, over the longer term, means a step forward toward Yugoslav togetherness or a step backward.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

IMPROVEMENTS CITED IN ARMY'S ONE-MAN WEAPONS

East Berlin SPORT UND TECHNIK in German Vol 29 No 7, Jul 81(signed to press 4 Jun 81)pp 8-11

[Cover story by Ulrich Lange: "One-Man Weapons"]

[Text] In the past 3 decades there have been far-reaching changes in the military, so that it can be rightfully said that there has been a revolution in military science. Atomic weapons and rockets were introduced and also the effectiveness of conventional means of warfare has increased significantly. The system character of combat technology has become more and more pronounced—that means: the increasingly complex and at the same time more effective weapons systems, which can often be operated by collective groups of soldiers. One cannot help but think: does the individual soldier still play a role in this gigantic mass of weapons and weapons systems? Do his weapons, i.e. the machine pistol, the bazooka and machine gun still have a meaning on the battle field of modern war? Can he himself actually still accomplish something?

This thought is not easily dismissed, because many people, faced with a seemingly overpowering technology, think of themselves as being small and insignificant—a thought which can stifle initiative. The soldier is exposed to this more than any other. However, he must not hestitate even for a second on the battlefield, he cannot waver a moment. He must take the initiative, he must storm forward with his weapon, he must defeat the enemy--just as the Soviet soldiers did in World War II. That, he can do only if he knows: even today, it depends on him alone! He must know that his weapon is a highly modern, efficient weapon and that there are one-man weapons which enable him to destroy even powerful weapons systems of the enemy. And part of the knowledge of the high efficiency of his own weapon and its perfect mastery is the strong conviction that, above all, it depends on him, the motorized infantryman, whether or not the enemy will be defeated. The weapons of our NVA and of all allied armies are operated by such soldiers, who are courageous and trained to be able to stand their ground--who know why they do this, because they are loyal to socialism. They know that it depends on their ability to use complicated weapons systems as well as the simplest one-man weapons so quickly and surely that the enemy has no chance. To achieve this, however, it must be trained, continuously.

The Aerial Target in the Visor?

A paved depression in the sand of the practice area. A soldier, a motorized infantry soldier stands in it, his upper body extends over the concrete wall.

On the soldier's right shoulder rests the short tube of a one-man anti-aircraft rocket. Then the command resounds: "Aerial target." The soldier looks up, his eyes search the sky systematically. At the same time he plugs in the energy source of the rocket, a whistling sound is audible, the rocket is under voltage. Now a yellow-red glowing point races across the sky, it approaches. He adjusts the sights. Stay calm, stay calm, he tells himsllf, suppressing his excitement. I have to wait for the point of change, he thinks. So he waits two breaths for the moment when the approaching target becomes a departing target. A small green lamp flickers, indicating to the soldier that his rocket has registered the target. Now, check the guage for speed allowance and pull trigger. It explodes, smoke envelops the concrete depression. But it disburses quickly and the soldier sees how a glowing point pursues the small, yellow-red fireball, reaches it, hits. Then the soldier breathes deep and his tension lessens. It is done! He successfully engaged the aerial target with his one-man, anti-aircraft rocket.

The Pylon Is Also the Launching Ramp

This anti-aircraft rocket is a typical one-man weapon. It has been in service for a few years and, like most weapons systems of the socialist defense coalition, comes from the USSR. Its use demonstrates the role every individual aarrior plays in modern combat. Among the weapons which can be operated and used by one soldier are, of course, also older as well as more modern systems, systems which complement each other or the fire power of heavy weapons. The perfect mastery of these weapons demands from the soldier dedication and effort during training, it requires strength and endurance, as well as a high degree of technical and tactical knowledge.

During parades of the Soviet Army, the NVA and other fraternal armies, the most varied anti-aircraft rocket systems of our Air Defense were shown. In addition, there are anti-aircraft canons, anti-aircraft machineguns and interceptors. All of them are reliable means for engaging aerial targets of any kind. But one must not forget that NATO—with its concept of aggression against socialist countries—keeps an entire arsenal of planes on hand which, for example, are supposed to fly under our radar zone at lowest altitudes. Then, they would like to destroy tanks, APC's, SFL's and other vehicles with special means: the so-called surface weapons. The MBB enterprise in the FRG developed bomb coffers MN-1 for the F-4 Phantom II and Tornado, which handles up to 4,000 bombs of small caliber in 224 tubes. The one-man anti-aircraft rocket is an effective means against such aircraft or against combat helicopters. It can be carried along on any terrain vehicle, APC, tank or truck; it is quickly combat ready and needs no additional support. The pylon is at the same time the launching ramp.

With the Rocket Over the Attack Road

Before the soldier adjusts the simulator rocket on the aerial target at the conclusion of his training, he crawls and slides with it on his arm umpteen times over the ground until he has covered the entire attack road. With the more than 30 kg heavy transport box for the rockets, two soldiers pant through terrain, also through ditches, and water. A person has to be in condition! In the classroom, the soldier thoroughly learns all parts of the rocket complex--launching tube, rocket with infrared target-seeking guided warhead, external power source, pyto-cartridge, and launching mechanism. On the training field, the future anti-aircraft rocket

soldiers assume readiness posture 1 again and again, they bring the rockets from marching position into combat position: turn up sights, (circular foresight and slitted backsight), remove the breech, front and back, cock the weapon. If it has not become second nature, perhaps it cannot work in a real situation, and the aerial target would go unhindered on its destructive path.

The training equipment with which the rocket soldier practices picking up and tracking targets as well as operating the device is called planetarium by the soldiers. Here, the trainer can make targets suddenly appear and disappear, he can decrease and increase their speed, he can also program "errors" into rockers in order to simulate realistic combat situations. For these practices, not only good reaction ability are necessary, but strength, endurance and skill as well. There, the hard field training pays, because the practice rocket weighs approximately 15 kg, nearly as much as the original rocket.

One Soldier Did It!

The role of the individual fighter in combat has been significantly heightened in contrast to the time when the warrior fought with sword or lance. The step from muzzle loader to breech-loader was a big advance in weapons technology. Then followed the conversion to magazine rifles, which had five rounds in a magazine, as a rule. This significantly heightened the role of the individual soldier, he could now engage about 10 aimed shots per minute. Equipped with such rifles and carbines, the armies went into World War I and, in large part, into World War II. In the form of the carbine K-44, as well as the sharpshooter weapon 91/30, the NVA still had these weapons in its reserve in its founding year. They were at the time completely standard weapons. Of course, in NVA training in 1956 there were also one-man weapons with a higher rate of fire and greater efficiency than the carbines. There were, among other things, the submachineguns which, along with the carbine as well as the long rifle in various calibers and models, were used by all armies during World War II. The MPi Kalashnikov came into the NVA in place of the Soviet MPi 41 by 1959. It also replaced at the same time the K44 as well as the partially introduced self-loading carbine S, which is now only seen in parade units.

Today the Kalashnikov represents the standard weapon in the armies of the socialist defense coalition. The technical designer, Col Dr Kalashnikov, has repeatedly improved the original model AK-47. So emerged the KM and KMS, and from those the IMG-K (almost the same parts as in the MPi, only with longer barrel, 10 more rounds per magazine, 2 legs) and the PK/PKS heavy machine gun (with 2 legs or heavy 3-legged mount, shoots rifle ammunition.

Still, in World War I, five soldiers were needed to operate a machine gun. At that time the demand of the military grew for the construction of a light machine gun that needed two men for its operation. Two men were also necessary for the operation. Two men were also necessary for the operation of the heavy machine gun Maxim, which the Red Army deployed in World War II and which the NVA had in the beginning. Today's PK heavy machine gun, on the other hand, has a carrying handle and can supply a 100 round magazine instead of the 250 round magazine. One soldier can do that!

Also another one-man weapon belongs to the equipment of a modern army: the marksman's rifle. Here, the self-loading rifle SWD of Dragunov replaced the 5-round long rifle

91/30 in the socialist armies. After the first loading only the trigger needs to be operated. This makes it possible for the marksman to effectively engage several targets that pop up one after another: he no longer needs to load after every shot and now has 10 rounds in the magazine.

One Man Alone Against Tanks

It is interesting to compare once the armament and equipment of an NVA infantry squad of 1956 with that of a motorized infantry squad of 1981. At that time, the infantry squad consisted for the most part of an NCO and 9 soldiers. It was equipped with two machine pistols 41, one DP light machinegun, six 44 carbines as well as an RPG-2 anti-tank rifle. Today the motorized infantry squad consists of a squadleader and 8 soldiers. It has an armed armored personnel vehicle or armored personnel carrier, which is enclosed on all sides and protects against means of mass destruction. The armament of the squad consists of three machine pistols, one RPG-7 anti-tank rifle, one K light machine gun as well as four machine pistols.. The RPG-7, whose performance surpasses that of the RPG-2--one of the weapons developed after 1945, which was part of the NVA's initial equipment--serves as armor-piercing weapon.

The anti-tank rifle was meant for use against tanks from distances of approximately 150 meters, i.e. at close range. Its correct use demands from the soldier precise knowledge of the weapon and a lot of courage and skill. That, of course, is also true of the other means of anti-tank warfare, which are still just as efficient today as they were in the Great Patriotic War: mines, concentrated charges, bottle fire bombs. The anti-tank hand grenade, which exists in varied form and application, is still part of this. The motorized infantry has guided antitank rockets for anti-tank defense at greater distances. They can be placed on armored vehicles, but can also be used as portable complex. The specification provides that three men operate it together, i.e. jointly handle a knapsack with the distributor, and two knapsacks with the guided anti-tank rockets. But the rocket is guided directly to its target by one soldier only. He alone is responsible for hitting or missing the target.

Meanwhile here, too, development continued. Used in the socialist armies for some time has been a guided anti-tank rocket complex in which one tube serves simultaneously as transport container and launching ramp. The target and guidance installation were joined with the launching device--operation was simplified that way.

In a few socialist armies, rifle grenade devices are also used for anti-tank defense. It concerns an additional barrel head for the Kalashnikov machine pistol, with whose help small armor-piercing grenades can be fired.

There are also still flamethrowers, an effective weapon against fixed positions and bunkers, in the armed forces. Also, one man alone operates it.

The automatic grenade launcher AGS-17 from the USSR ranks with the newest one-man weapons. In contrast to the conventional grenade launcher, it is layed out as a sustained firing weapon. It utilizes the energy of the powder gases, which are released with the shot, for automatic loading. Soviet military literature designates the AGS-17 as a recoilless loader for short and long fire kicks as well as for continuous fire, with which the weapon combines the properties of a machine gun and of a grenade launcher in itself.

Hit With the First Shot

Every one-man weapon is of as much value as the soldier who operates it. The modern anti-aircraft rocket is of little use if the soldier does not use it at the right moment and in such a way that it has the greatest effect. On the other hand, a hand grenade can decide an action, if the soldier who throws it knows of this decisive strength and therefore acts daringly. It is not modern technology alone which ensures the high combat readiness of our armies and that of the fraternal armies, but the soldiers who master it, take care of it and use every practice in order to fully exhaust their deployment possibility--soldiers who know that the high combat strength of our armies makes peace more secure. Therefore, in all branches and units of the NVA, the combat collectives have made it their mission to master their weapons, their combat technology, and their equipment better and better. Their goal: hit with the first shot!

IMPROVEMENTS SOUGHT IN ARMY TECHNICAL TRAINING SYSTEM

East Berlin MILITAERTECHNIK in German No 3, 1981(signed to press 12 Mar 81) pp 118-120

['Education and Training' feature article by Lt Col Paulus: "Technical Training--Purposefully and Effectively Organized. Preparation of Instructors"]

[Text] The introduction of new weapons complexes of complicated design and significantly greater combat effectiveness also establishes new scales for the organization and implementation of combat training, increases the responsibility of each army member for performing his combat mission. The satisfactory operation and the effectiveness of combat technique depend increasingly on reliable actions of the group under the leadership of commanders, gun commanders or squad leaders. A prerequisite for this is an accurate knowledge of the internal, functional relationships and the beneficial conduct of tactics. Every instructor should be guided by this principle, even in his preparations for the training.

Technical training exerts a direct influence on attitudes and actions of army members. It must make significant contributions toward assuring constant tactical readiness. The object of this and several subsequent reports is to supply knowledge to inexperienced instructors used for technical training in the area of armored vehicles, and to give notes and instructions for the instructor's own training. The offered experiences should not be adopted schematically, but should all be adapted to the prevailing problem area. (Figures 2 to 6 of this article are found on the annex).

It will not always be possible to prepare the NCOs, sergeant-cadets or officers intended for armor training, in instructional methods, drills or courses of instruction by technical officers of the armor service in all planned training measures. Both the needed time and the organizational-technical expense will not permit it. Thus in practice, the individual or collective study of the instructor is the most important preparatory action.

The best sequence for proceeding corresponds in principle to the actions of a commander after receiving a task. The cornerstones are:

--posing the problem for armor training
--specification of training objectives
--fixing the training content
--working out the organization and methodic sequence of training
--direct preparation for training (Figure 2).

Even in the preparation phase, the level of training is generally specified. Thus, thoroughness, knowledge and resoluteness are needed.

1. Posing the Problem

In most cases, the instructor receives the training subject from his superior in accord with the training program and duty plan. Thus the subject, training time, primary training goals and content and possibly, notes on organizational and methodological structure, are specified. The problem should contain: Training personnel (number), special training status, location of training and provided armored equipment, any required "secondary instructors" (number, qualification, potential use) and scheduling (outline, confirmation, controls).

2. Specification of Training Objectives

According to Klingberg, personality development in the unit is founded on secure, scientifically founded and drilled knowledge, basic capabilities and socialistic convictions, properties of character and modes of behavior [1].

This applies in full force to armored training. Thus, each instructor should try to formulate a definite training objective in the initial phase of his preparations. Among this is: Objectives for information (knowledge, insights), development of ability (capabilities, abilities), development of qualities of conscience (attitudes, convictions) and development of conduct of trainees (customs, modes of behavior).

It is certain that qualities of conscience and conduct do not develop to perfection in only 45 minutes, but they can be influenced in that time. In this regard, information is the basic element. Only by means of knowledge can convictions and modes of behavior be engrained. Conversely, certain attitudes lead to refinement of intellectual abilities or to better, more active inclination to learn.

For example, how can the object be formulated for the following problem?

Subject of training: Tactical principles and tac-tech information on the 60 PB APC.

Objective:

The training shall provide an overview of the tactical potentials of the 60 PB APC in the GDR Army. The most important tactical and technical information shall be given. The general structure shall be demonstrated by using one such vehicle in order that the main parts, assemblies and systems are impressed on the trainees.

Organizational-methodological notes:

The subject stands at the beginning of armor training on the 60 PB APC.

The training is conducted at the Technical Training Center.

There are three 60 PB APCs with driver/auxiliary trainer available to support the instructor.

The training time is 90 minutes. The following outline is important for precise goal formulations:

...give...overview
...give...details
...demonstrate...structure
...impress...main components
...is at the beginning
...performed at the TAZ
...three 60 PB APC with drivers/secondary trainers.

Under consideration of the thesis that the training goal is a clear formulation of the intellectual, written, anticipated, desired, feasible result of training and instruction in the specified training segment, we can formulate the following:

The trainees know the tactical potentials, important technical and tactical information and can relate the information. They are able to name the main components of the 60 PB APC, its assemblies and systems and to point them out on the vehicle. The trainees know the significance of the APC as a primary fire weapon and combat vehicle of the motorized infantry squad. An interest develops in them for the technical design and use of the APC. They act in a disciplined manner and in accord with the instructions of the instructor. The trainees learn the first, most important safety regulations for handling this armored vehicle and they follow these regulations strictly.

It is visible that this training objective goes beyond the bounds of the problem description in its specifications on development of attitudes and conduct. But just this aspect of the training process is often inadequately planned in practice, thus it is conducted sporadically and inadequately. But for personality development, it is of equal importance as giving knowledge or abilities. Since consciousness qualities are internalized standards which determine the entire conduct and actions of man, they must be planned in each training segment and developed. One thus hears of so-called goals going beyond the subject or technical area.

3. Fixing the Training Content

By this, we mean everything that the trainee is to assimilate in the training process. The training content is a complex of pictures of objective reality. But in training, the content is also a needed information basis for the assimilation process. In this case, the training content forms the "training materials."

Parts of the training material are:
--facts, concepts
--laws, relations, theories, hypotheses, rules
--methods, techniques, algorithms
--principles, standards, illustrations [2].

The training material is the object of assimilation and forms the primary means for personality development in training. Like the overall training content, it is determined by the goal. Also belonging to the training content are: Motives,

goal-orientations, secondary goals which are given by the instructor for a useful organization of training; organizational and methodological instructions, guidelines and procedures for structuring the training into which the trainee is actively included, and preparation of estimations and evaluations both by the instructor and by members of the group etc.

In this regard, the training content represents the most important means of educating the trainee.

Proceeding from the training objective, the training content should be organized accordingly. The minor subjects or training questions should be fixed, and these can then be answered in detail by the training material. This organization must be simple, specific and in proper order. It should reflect the significant aspects of the training subject. The following organization could be used for the subject mentioned above:

0. Motivation of the training subject
1. Combat effectiveness of the 60 PB APC
1.1 Tactical principles
1.2 Tactical and technical information
2. Important safety precautions when handling the 60 PB APC
3. Design of the 60 PB APC
3.1 Main Parts
3.2 Assemblies and systems

Now the other elements of the Contents can be inserted until the entire training material is present. The instructor must compare the content with the training objective in order to close gaps or put items in proper order. At the same time, initial thoughts on organization and methodology of the training should be formulated. Additional items can be discovered by this method.

The training material for armor training is mainly contained in Duty Regulations and Instructions, or in the form of real equipment or mock-ups. In addition, each instructor should be familiar with other literature to have detailed or supplemental information. Included here are lexicons on definitions of concepts, including technical books and publications.

One possible way to work out the content of training question 1, the combat effectivenessof the 60 PB APC, is shown in figures 3 and 6. But they do not represent a complete Contents and are only examples for one possible manner for proceeding while showing the arrangement of training material. Consequently, the concepts, facts, relations etc. specificed in regulations and corresponding to the training goal, should be made visible and prepared for the training.

4. Organization and Sequence of Training

These are determined basically by the goal and content. The training goal specifies what is to be achieved, which personality properties are to be developed. The content specifies the object of training. The organization and methodology should specify under which external conditions and in which type and manner the training content is to be given and assimilated. Naturally there are reactions on goal formulation and content specification arising from the organization and methodology.

The methodological structure relates to the activity of the instructor and to that of the trainees (Figure 2). In [3] there is a detailed description of how to proceed in training preparations.

At our officer candidate schools, besides the organizational forms presented here, "Instructive-Methodological Training" (called ImA below) has proven very useful in armor training. With this method, the officer candidates receive maximum inclusion in the process of preparation and implementation of armor training and become able to act as trainers (station directors) in the subsequent, practical training. The officer candidates solve real, timed-study tasks; they repeat, reinforce and expand their knowledge and ability, become accustomed to their responsibility for themselves and the group, learn cooperation with tank or APC drivers/NCOs etc.

Preparation of ImA begins in the planning and organization stage by the instructor. The training objective, the content and sequence of subsequent practical training, e.g. a drill, must be viewed constantly. An example is presented below for the organization of ImA for a drill on: "The chassis of the medium tank."

Training objective (abbreviated form):

The officer candidate must:
- --possess knowledge on the design and operating principles
- --be able to estimate the technical condition
- --master algorithms for changing tracks
- --be able to perform assembly and disassembly
- --be able to act as instructors in armor training
- --be able to work in the group on tank mechanics
- --maintain security and order
- --be able to check and regenerate tactical readiness.

Training time:	ImA	90 minutes
	Drill	3 x 90 minutes
Technology:	ImA	four T 55 A
	Drill	six T 55 A

Our objective is to include each officer candidate through a real task for the drill. Thus, we select a special organization of a platoon strength of 25 officer candidates.

The following number of officer candidates is assigned to the six training questions:

Inspection and preparation of training areas -- 6
Disassembly of drive wheel and one road wheel -- 3
Disassembly of idler wheel and track tensioner -- 3
Assembly of road wheel and track tensioner -- 3
Assembly of drive wheel and road wheel -- 3
Inspection of status of track suspension and parking the tank -- 6
Drill director -- 1.

The "drill director" receives special instructions from the trainer.

His tasks are:
- --teaching the safety regulations, including working safety and fire prevention
- --assignment of crews (training groups) to the drill
- --preparation and implementation of a time plan for the drill
- --check the safety, order and quality of work on the tanks
- --organization of a competition between the crews.

At the beginning of training, only self-confident, capable and critical officer candidates are assigned this function in order that they act as an example for others.

In the ImA, preparation of the station director is on four tanks by using four trained and prepared instructors (preferably experienced tank drivers) who demonstrate the training questions to the officer candidates in the 90 minutes allowed.

Eight to fourteen days before the ImA, the officer candidates receive their assignments. They then prepare themselves through a study of the literature and by working out a rough outline for the ImA.

During the ImA, the instructors check and expand the knowledge of the candidates. The required abilities are drilled. Finally, the rough outline can be supplemented to become a complete training document.

The training questions are assigned to the four tanks as follows: Question 1; questions 2 and 4; questions 3 and 5; question 6.

As a rule, the ImA is performed 10 to 12 days before the "drill". The time in between is used for rewriting the hand copy, for checking it, for approval and evaluation by the technical instructor for armor training.

The platoon is broken down into six crews for the drill. For example, the first three crews may be assigned to officer candidates with questions 2 and 5, and the other crews to candidates with questions 3 and 4.

In crew A, the following tasks are performed by the four officer candidates:
- --inspection
- --disassembly of idler wheel and track tensioner
- --assembly of drive wheel and one road wheel
- --inspection of track suspension system.

At the half-way point of the drill, crews A, B and C give their dismounted components to crews D, E, F and vice-versa. This process continues on down the line.

This exchange is useful for the following reasons:

In a relatively short time (about 100 minutes), the idler wheels and track tensioners of three tanks, and the drive wheels with one road wheel each on the other three tanks, are disassembled (see training objective).

After the exchange, the candidates must repeat the sequence of actions for the new crew. They point out important items and refer to difficulties which they have had.

All dismounted parts shall be cleaned and placed aside in an orderly manner for the exchange (instructions in "order").

The crews bear full responsibility for the quality of work in the specified time; they must work in a planned and rational manner.

During the drill, the officer candidates/station director assigned to the tank are responsible for activities. The tank drivers help, advise, assure safety and evaluate both the activities of the station director as well as crew members according to the criteria specified by the driving instructor in accord with the training objective. This can be, for example: Adherence to safety regulations, technical accuracy of actions, military appearance of the station director, cooperation of crew members, order at the training area, discipline of the crew etc. The tank drivers receive evaluation cards for each crew.

In order to further enhance the educational effect of these drills, the officer candidates are assigned new study tasks before beginning the drill. These tasks arise from their training question and are to be solved in cooperation with the practical work and turned in the day after the drill. These tasks can be: Suggest a blow-up illustration of the chain tensioner, outline a blow-up (exploded view) of the attachment of the road wheel or the idler wheel bearing.

The primary objective of these tasks shall be to force the candidates into attentive observations when handling the tank. Like the hand copies, the evaluation cards and the estimates of the directing officer candidate, this work also forms a basis for evaluating the officer candidate for the drill "Chassis of the medium tank."

5. The Methodical Structure of the Logical Method

By "logical method" we mean the precise, well-founded, scientific thought process of the instructor and trainee. In armor training, primarily analysis and synthesis are applied. An example for this is the working out of main parts, components, systems, components and individual parts, the analysis of the armored vehicle by word and picture, and the subsequent thought synthesis in the consciousness of the trainee. This leads to knowledge or, in its highest form, to mastery of the design. It can be derived from tables and is also demonstrated in our descriptions of types of armored vehicles as chapter headings.

Application of the deductive method is more difficult, i.e. proceeding from the general to derive the specific. We use this method successfully in tank training, e.g. in the area of "Cooling and preheating system." For the officer candidate it is often complicated to recognize and remember the route of the often confusing cooling and preheating system of individual armored vehicles, e.g. the SFL 23/4 AA system. Even for the trainers, this is a methodic problem in spite of polylux pictures and roll-tables.

Deduction can help as follows: A general physical law states that liquids lose density when heated and expand. On cooling, the reverse occurs, and the volume decreases. In the cooling or preheating cycle, this process is supported by the particular coolant pumps. Consequently, stated simply: On cooling, the coolant is pumped from bottom to top through the cavities of the cylinder block into the

cylinder head where it is heated and flows as hot coolant from the top position of the engine out over the other components, through the lines and back to the coolant pump. It thus cools off again (especially in the water cooler or radiator), i.e. it gives off heat to the environment.

Now it is simple and reasonable to find all other coolant streams by taking the outlet point of coolant out of the cylinder head as starting point.

The preheating cycle can be handled in the same manner. This process can be supported by using a block diagram. Thus, by a simple display, the important items can be worked out. The officer candidates obtain simple, but useful relationships which are easily remembered.

6. Conclusion

The training level is determined by the preparation of the instructors. This preparation includes a clear objective, real, detailed contents and a planned organizational and procedural configuration which depend on the objective and training content. As a result of the preparation, the training document is produced. In order to have the most accurate information, the organization shown in Figure 4 is recommended.

Here, the different training points are just as important as the attendant action of the instructor, the trainee or the needed material means. Only when all data together forms a closed unit, can we speak of a didactic and methodically prepared training document.

JUNE 1981 ISSUE OF SED THEORETICAL JOURNAL REVIEWED

East Berlin NEUES DEUTSCHLAND in German 18 Jun 81 p 4

[Martin Quill review of East Berlin EINHEIT in German Vol 36 No 6, June 1981, signed to press 13 May 1981, pp 513-624: "Performance Increase of a New Dimension." Translations and/or summaries of articles by authors cited below, as well as by others, are published in pages following this review]

[Text] With the implementation of the decisions of the 10th SED Congress we have entered a new phase of our work to which the highest political standards apply. It is ever more obvious that solving economic problems is the central issue of the great class confrontation, of the struggle to further strengthen socialism, for the welfare of the people and for a secure peace. In this respect the GDR, as a cornerstone of peace and socialism in Central Europe, bears a particularly high responsibility. This is stated by Guenter Mittag in his article, "Combines in the Struggle for the Implementation of the Economic Strategy of the 10th Party Congress."

Explaining why the decision to continue the policy of the main task is of such great historic significance for our continued development, the author points out: "We have the strength and the potential, the opportunities and above all the militant determination to continue our very successful course of increasing our performance for the benefit of the people and for strengthening peace." Turning to the ten key points of our party's economic policy, Guenter Mittag declares that they outline a clear strategic concept that is in line with the standards of the 1980's and constitute the foundation of further work.

New work achievements that go far beyond the former targets are the convincing reply to the 10th Party Congress and a matter of honor for all trade union members, says Horst Heintze, a Presidium member and National Executive Committee secretary in the Free German Trade Union Federation (FDGB), in another article. The FDGB, he declares, is making an all-out effort to implement the strategic concept of the national economy's future development.

The most important task of political-ideological work is to familiarize all citizens of our country with the wealth of ideas broached at the party congress and thus trigger new initiatives to comprehensively strengthen the GDR, writes Klaus Gaebler, chief of the SED Central Committee's propaganda department. He emphasizes: "The unity of party and people in thought, intent and action guarantees our future successes."

NATIONAL FRONT'S STRUCTURE, SOCIOPOLITICAL ROLE EXPLAINED

East Berlin EINHEIT in German Vol 36 No 6, Jun 81 signed to press 13 May 81 pp 525-530

[Article by Werner Kirchhoff, historian, candidate member, SED Central Committee; vice president, National Council, GDR National Front: "Affirmation and Action of All Citizens for Socialism and Peace"]

> [Text] The constructive cooperaton of parties and mass organizations has borne rich fruit, as was impressively confirmed at the 10th party congress. Under the leadership by the workers class and its Marxist-Leninist party, the GDR people accepts the challenge of the 1980's with new initiatives for a great performance increase and with concrete actions for socialism and peace. Through its own work the GDR National Front helps turn the people's elections of 14 June 1981 into a convincing affirmation of our socialist fatherland and of the course and goal charted by the SED for future advances.

All our successes and accomplishments, as Comrade Erich Honecker emphasized in his central committee report to the 10th SED Congress, are the common effort of the workers class that leads our socialist society, of the class of the cooperative farmers, the socialist intelligentsia and the other working strata, which have formed a great alliance. "The formation and development of this alliance counts among the most important historic achievements of the SED. In this regard too we follow the universally valid laws of the socialist revolution in conformity with the concrete historic conditions in our country."[1]

In the GDR the political truth has been emphatically confirmed that the workers class can successfully fulfill its historic mission only under the leadership of a purposive, cohesive and militant Marxist-Leninist party closely affiliated with the masses. With the unification of the KPD and the SPD 35 years ago and the liberation of all society from exploitation and suppression, the cornerstone also was laid for this alliance policy which is reflected in the close cooperation of the parties and mass organizations in the democratic bloc and in the National Front. The continuity and vitality of this alliance have proven themselves again in the successful implementation of the ninth party congress decisions. Independent contributions to the implementation of the main task in its unity of economic and social policy, stemming from the constructive cooperation among the parties and

mass organizations, have borne rich fruit for all of society. And it conforms to the spirit of confident association that the important commitments and achievements by the members of the friendly parties and National Front committees received high tribute and recognition at the 10th party congress. Their activities through economic mass initiative and in the political-ideological and the intellectual-cultural fields, after all, attest to a high civic sense of responsibility and close bonds with our socialist fatherland.

Every citizen has ample opportunities to take an active part in the shaping of the developed socialist society. Through confident association, with dedication and energy, party members and nonparty citizens, members of mass organizations, workers and cooperative farmers, employees, scientists and artists, craftsmen and tradesmen, men and women, youths and senior citizens, and people of diverse world-outlooks and religious faiths are working on the development of a society that is committed to the welfare of the people and to socialism and peace.

Approving the Course and the Goal

Proceeding from the concrete-historic conditions for the development of our country, and relying on the positive balance-sheet for what has been accomplished, the 10th party congress has staked out accurately the concrete requirements for our continued successful advances in the 1980's. From the new dimensions and higher demands placed on the management and planning of this complex, multilayered and highly interwoven social organism and from the altered external conditions, the task arises for all citizens to make conscious and initiative-rich contributions to our coping with our complicated requirements in all domains of public life. The intent and optimism of the party members and of millions of working people who do not belong to the SED to accept the challenge of the 1980's through new initiatives and ensure a great performance increase became evident at the 10th party congress.

At the session of the National Council of the GDR National Front on 27 April 1981, the representatives of the parties and mass organizations expressed their complete unanimity with the goals of the working class party concerning the further shaping of the developed socialist society, as presented in the SED Central Committee status report. On behalf of their members they stated that the domestic and foreign policy decided on at the 10th party congress deeply conformed with the interests of all social forces of our people. From that they derived the obligation to help through their work turn this year's 14 June elections into a convincing affirmation of our socialist fatherland and of its continued all-round strengthening, wholly in the terms of the ambitious objectives of the 10th party congress.

What has been created in more than three decades, especially during the 1970's, in the GDR irrefutably proves: only the political power of the workers class and its allies guarantees the freedom of the people, living conditions for all citizens in human dignity, and the freedom of personality. Its further consolidation therefore is an overall social concern and a precondition for further successful advances. Our workers and farmers state truly is a people's power of deeply democratic character. The further development and perfection of socialist democracy is the main trend along which our state power will continue to develop.

Citizens participating in public organizations (1980)

340,000 citizens, including 103,000 women and 40,000 youths, are members of 17,500 National Front committees

51,769 citizens work as elected lay judges in kreis and bezirk courts

54,290 citizens were elected to work on 5,237 arbitration commissions in communities, residential urban areas and production cooperatives

229,829 elected working people on the 26,085 conflicts commissions in the enterprises take part in ensuring socialist legality

233,168 working people are members of commissions, boards and committees of the Workers and Farmers Inspectorate

102,930 mothers and fathers in 5,818 parents' advisory councils and 555,683 mothers and fathers in 105,537 parents' activist groups support the educational work and teaching activity and study at the general education schools

130,556 volunteer functionaries are working on 15,092 sales outlet commissions of the consumer cooperatives

---

In this it is the task of the National Front committees actively to help make the ties between the deputies, the tried and tested representatives of the people, with their voters still more intensive and vital, so that thereby the magnificent balance-sheet the 10th party congress was able to draw up gets still more effective and clear as the result of labor liberated from exploitation, as the result of what socialism can do. Through the status reports submitted currently by the deputies and the various forms by which candidates are introduced and thoroughly tested in the work collectives, important prerequisites are provided for further deepening the citizens' trust in their socialist state. This also deserves the greatest attention for the reason that the implementation of the social strategy decided on by the 10th party congress calls for a still broader involvement of all citizens in the management of social processes. That also implies a higher level of close cooperation between the National Front committees and the people's representations and councils, enterprises, cooperatives and institutions. Ideas, suggestions and the participation of ever broader circles of the population, after all, are required for the systematic improvement of working and living conditions, the measures of territorial rationalization, the efficient and economical use of all material and financial resources, the abiding by municipal and communal regulations, the beautification of residential areas, and the development of culture and sports.

Our socialist conditions provide the prerequisites by which all strata of the people can ever more effectively take part in solving overall social tasks. Led by its revolutionary party, the working class represents the basic interests of all working people. This precisely makes it possible to move ahead through the unified strength of all classes and strata. The identity of the vital interests of all the forces of the people acts as an important impulse for the citizens' commitment to the continued shaping of the developed socialist society in our country. Millions of working people are politically active on a volunteer basis and, in conformity with the proven principle in our Constitution, bear special responsibility for the whole.

Affirming the Main Task Policy

The unanimous SED 10th congress decision unflinchingly to carry on the main task course, the unity of economic and social policy, to ensure and gradually extent the people's material and cultural standard of living, has met with a broad and positive response in all social classes and strata. That the effort had already started of fulfilling that decision by high performance improvements could be glimpsed from letters from industrial and agricultural enterprises, science institutions and schools, the armed forces and security organs, and all other domains of public life, to the 10th party congress.

Still during the party congress, many National Front commissions and housing communities likewise addressed affirmative statements and new commitments to its Presidium. That reveals not only the deep confidence in the policy of the vanguard of the workers class and all the working people but also the great willingness to take an active part in the further progress of our society. The present election debate includes meetings with work collectives in the enterprises, cooperatives and institutions, in residential areas and houses, and with members of the intelligentsia, women, youths, craftsmen, tradesmen, veterans of labor, and representatives of Christian circles. Meetings between deputies and candidates and their voters demonstrate that a thorough familiarization with the ten key points in the economic strategy for the 1980's is an important starting point for mobilizing for high achievements in the economy and in other public domains.

The extension of the broadest people's initiative in the history of our country in the residential areas follows the example of the continuing socialist competition in conformity with the new criteria by the working people in many enterprises. The 10th party congress directive on the five-year plan for the development of the GDR economy, 1981-1985, offers many opportunities and conrete handles for the economic mass initiative of the National Front. Especially a broad public debate also will bring up new ideas and suggestions on how the traditional "Join-In!" competition in conformity with local economic plans can still more effectively help improve the working and living conditions in the residential areas. It has been found suitable in this regard to explain projects politically, economically and socially in the competition programs. Often has the social value of the results achieved, and to be achieved, through the "Join-In!" competition become especially clear in regular family conversations with the citizens.

The focus is placed on supporting the housing construction program as the centerpiece of our social policy. The unity of new construction, modernization and maintenance of buildings is becoming ever more important for solving the housing problem. From the fact that the proportion of construction measures for reconstruction and modernization has nearly doubled compared with 1980 and repair work for buildings is meant to be increased by circa 125 percent, the inference may be drawn that we should also considerably boost what the population can do on its own in maintaining apartments and taking care of small and minute repairs. To promote civic initiative, state organs, housing industry enterprises and other VEB's have further expanded their "Join-In!" centers or furnished them better or even set up new ones. Our republic at present maintains circa 3,000 repair workshops, a solid material base for the citizens' increasing participation in the economic mass initiative.

We must also still more effectively support the completion of appropriate communal facilities in the residential areas within the scope of our comprehensive housing construction program. Equal attention has to be given to assisting in the reconstruction and renovation of schools, kindergartens, nursery schools, hospitals, leisure-time centers, youth club facilities and sports arenas.

Craftsmen and tradesmen are making an essential contibution to that. Through their great dedication, cooperative and private craftsmen, innkeepers and tradesmen have managed to improve further, in scope and quality, the supply, service and repair operations for the population. That has been due, not last, also to the National Front committees and their working teams of craftsmen and tradesmen where many members of these strata do dedicated and effective political work. They take it for a fact that their own fine example is of great importance for boosting their colleagues' activities. Last year, for instance, they performed, above and beyond the national economic plan, repair, service and supply activities at a value of more than M 79 million, building repairs in apartment buildings and public facilities for almot M 34 million, and services through the "Join-In!" competition of nearly M 12.5 million. For 1981 they have assumed still higher extra accomplishments. At the same time they intend to improve the quality of their work, reduce material and energy expenditures, shorten waiting periods, and contribute to the development of rapid repair services. That is why the 86,500 craft enterprises have given a broad and affirmative response to the announcement in the central committee report to the 10th party congress that they should come forth with suggestions for getting better supplies in tools, means of rationalization and materials. Worthwhile perspectives become apparent here as does the growing responsibility for supplying the population with many different daily supply commodities and services.

Active encouragement also is warranted for the initiatives by the members of the Union of Small Gardeners, Settlers, and Small Livestock Raisers and other small producers who from their gardens and family farms provide the population with extra supplies in crop and animal products such as fruit, vegetables, rabbit and goose meat, honey and eggs. In 1980 alone, the members of that union sold to the state commerce, among other things, 162,106 tons of fruit, 114,192 tons of vegetables, 15,212 tons of rabbit and goose meat, and 1,8 billion eggs.

The work of the rural National Front committees embraces their support of socialist agriculture, such as their assistance in the reconstruction of old stables, the beautification of villages and help in the modernization and new construction of apartments, so that the planned increase of 10,000 rural apartments annually is accomplished. Greatly important is promoting the population's own initiative so that in the next 5 years the households of another 400,000 citizens get access to the central drinking water network.

Also toward meeting the raw material requirements of the economy the National Front committees are going to make a growing contribution, together with the state organs and the competent enterprises, by improving the collection, and deliveries to residential areas, of secondary raw materials. All these examples demonstrate that the socialist people's movement will make important contributions to implementing our economic tasks between 1981 and 1985 as best it can.

The sociopolitical component of our main task, as one knows, embraces our material and cultural living conditions. These are two aspects of one and the same thing, belong together, indeed condition one another. Therefore the development of a vivid intellectual-cultural life, the promotion of physical culture and sports, the improvement of recreational opportunities and meaningful leisure-time activity, especially for youth, are among the priority tasks of the National Front committees and have to be carried out in concert with the Culture League and other cultural organizations. Here efforts have to be strengthened still because in the intellectual-cultural sphere needs also are rising fast. Reflecting the grown interest in socialist communal relations, circa 8,800 house clubs and other communal facilities have been organized, mostly on the citizens' own initiative and primarily in new settlements, which constitute a noteworthy expansion for a diversified intellectual-cultural life. In this sense the "Join-In!" competition is also oriented to setting up more small sports arenas in the residential areas. Furthermore the National Front is behind all efforts to make a more imaginative and effective use of the material base of culture and sports available and to utilize all suitable facilities in the residential areas, regardless of their accountability obligations, for the search for health, joy of living, education, recreation, accomplishments and well-being. This shapes further socialist morality and the socialist way of life.

The SED has always paid great attention to the development of the National Front as a socialist popular movement. Starting from the National Council of the GDR National Front, which has 285 members, down to the local and residential area committees the composition of the National Front organizations genuinely mirrors the political and social structure of our population on all levels. Recently we have managed to recruit another 7,000 citizens for joining the organizations of this socialist popular movement. Of the 340,000 citizens from all population strata who are active today, 43.9 percent are SED members, 20.4 percent members of friendly parties, and 35.7 percent nonparty. If all other forms and organizations engaged in social activities, in the enterprises, cooperatives and residential areas, are added to that, it can be said that one out of every four citizens in our country is somehow working for the common good on a volunteer basis.

More than two thirds of all houses have housing community managements. Thousands were set up while the 10th SED Congress was in preparation. In the many new settlements further National Front committees and housing communities are evolving constantly. The development and formation of the social forces go hand in hand with the dynamic overall development of our country. The National Front is a living organism, a perceptible factor in everyday life. Every town and community needs capabable National Front committees for the good of their citizens, and each initiative of a residential area is of benefit to all society.

Peace--The Highest Good

Our policy for the well-being, freedom and dignity of man is a policy of peace in the deepest sense. Safeguarding it is and remains the most important for meeting our tasks. Due to this understanding, which for the older generation is reinforced by its own experiences, the citizens of all classes and strata support the 10th SED Congress declaration to the effect that we fully and completely support the peace proposals of the 26th CPSU Congress, which meet the interests of all peoples. The

tested fighting alliance with the Soviet Union and with all countries in the socialist community always has proven the guarantee for our peaceful advances. Our people welcomes the fact that the GDR continues to pursue a clear peace concept while also doing everything necessary for the military defense of our socialist fatherland.

The significant 10th party congress decisions on the further implementation of its policy for the good of the people and on the GDR's contribution to the safeguarding of peace also have received great attention and support among church dignitaries and in Christian circles. After all, that is a course that coincides with the highest maxim of Christian responsibility for peace and the happiness of man. They have in particular backed the statement in the central committee report that the proven policy on developing objective, constitutionally guaranteed and sympathetic relations between the socialist state and the churches is being continued, based on the principle of the separation between state and church. Church circles rate the confident talks between representatives of the state and of the church as an opportunity for and expression of their greater degree of affiliation. So the National Front committees and their Christian circles working teams find more favorable conditions for attracting ecclesiastic dignitaries to pursuing our humanistic goals too and to a greater commitment to the preservation of peace.

In political discussions of the election appeal from the National Front citizens have time and time again expressed the realization that their everyday efforts on behalf of socialism also amount to their actions on behalf of peace. The joint struggle for the all-round strengthening of the GDR and of peace, the firm trust in the domestic and foreign policy of the party and government leadership, the justified pride in the great accomplishments of socialism and the determination to defend them express our people's political-moral stability and at the same time act as strong impulses for deepening it further. We have all that is required to achieve a higher degree of overall social activity and to involve all the forces of our people still more effectively in the revolutionary process of political, economic, social and intellectual-cultural development. The elections for the People's Chamber, for the city-kreis assembly of our capital Berlin, and for the bezirk assemblies on 14 June will make an important contribution to it, once more demonstrate the unity and cohesiveness of our people and document our unanimous confidence in the National Front candidates. We shall do our best in every domain of our public life in following the slogan "High Performance Growth Through Increasing Labor Productivity, Efficiency and Quality--Everything for the Good of the People and for Peace!"

CAPITALIST, SOCIALIST CONCEPTS OF INDIVIDUAL FREEDOM CONTRASTED

West German Commentary

Bonn IWE-TAGESDIENST in German No 83, 5 Jun 81 p 2

[Report from Berlin: "SED Criticizes 'Alternatives.'" A translation of the East Berlin EINHEIT article cited below follows this commentary]

[Text] In its most recent edcition the theoretical SED journal EINHEIT (No 6, 1981) has criticized the "alternatives" in the West because they often sought to dodge the "anti-imperialist struggle." The "worst results of the imperialist application of the modern productive forces" were generally being blamed on science and technology, and "industrialism" and "corporate technology," in fact economic growth as such, were being held up as the root of all evil. At the same time, "alternative modes of life" were being propagated that supposedly would ensure the individual development and self-realization of man independent of the development of the modern productive forces or even in blind enmity to scientific-technical progress by means of an "escape into a petty bourgeois individualistic sphere of life." That was "reactionary utopianism" which would in fact weaken the "anti-imperialist movement" and subject working man still more to economic recklessness.

GDR Academician's Discussion

East Berlin EINHEIT in German Vol 36 No 6, Jun 81 signed to press 13 May 81 pp 578-585

[Article by Prof Dr Wolfgang Eichhorn I, member, GDR Academy of Sciences and GDR Academy of Pedagogical Sciences: "The Individual and Society in the Class Struggle of Our Time." A translation of an earlier article on the subject by the same author is available under the heading, "Development of Personal Freedom in Socialism Discussed," in JPRS 69293, 22 Jun 77, No 1404 of this series, pp 105-118, followed on pp 119-127 by an item published under the heading, "Personal Freedom Discussed in Light of Scientific-Technical Progress," by Prof Guenter Kroeber. For additional related information see translations published under quoted headings in the following JPRS issues of this series: "'Subjective Rights,' Personal Freedoms Essential to Socialism," 74723, 6 Dec 79, No 1744, pp 28-48; "Concept of Human Rights in Developed Socialist Society Discussed," 70919, 7 Apr 78, No 1520, pp 29-47]

[Text] The question about the place and development opportunities of human individuality in society is gaining increasing weight in the class conflict. Why is the deformation of human individuality a consequence of development of the productive forces under capitalism while their all-round development is a characteristic element of socialist society? What role does scientific-technical progress play in this? What does the tapping of all productive forces in the individual mainly amount to, and how is that being fostered by our party's economic and social policy?

The question about the place and prospects of the human individual within society has for centuries been the focal point of ideological party struggles, an issue that has become unusually exacerbated today, when the socialization of public life is advancing for everyone to see. What becomes of the individual now, of man's individual self-determination? Does a world with its dynamics and advancing rationality, shaped increasingly by science and technology, leave any room at all for human individuality and for lending a humanistic shape to life? Are under the conditions of accelerated social change any firm vital orientations left to the individual, are any secure and credible ideas of the sense of life possible at all any longer, or is there--as alleged in general by bourgeois ideologues today--a human "orientation crisis?"[1] What is the Marxist-Leninist view on that and what is its practical application in socialism?

By creatively applying Marxism-Leninism to the conditions in our country, our party program has worked out a scientifically sound, realistic and, at once, revolutionary orientation aimed at a practical implementation. It was confirmed and, at once, rendered more concrete at the 10th SED Congress--proceeding from what has been accomplished and from the requirements for the 1980's. Our party will carry on its proven course that unites its economic with its social policy and serves the well-being of the people, the happiness of the individual and, not last, an enriched development of his individuality. The emphasis is placed here on coping with science and technology and combining their advances with mass initiative to achieve the finest economic and cultural results. It is imperative to develop more rigorously, and prudently employ, the collective and individual creative capacities of the working people, their knowledge and skills, their training and dedication. "For the real wealth," says Marx, "is the developed productive force of all individuals."[2]

The development of the "productive force of all individuals" also marks the focal point of the competition movement by which the working people are picking up the course of the party congress and are heading toward great efficiency improvements through increasing labor productivity, effectiveness and production quality for the good of the people and for peace. Thus throughout our practical life, in labor, in the struggle for maximal scientific-technical, economic, sociopolitical and intellectual-cultural advances, a convincing answer is given to the question about the place and development opportunities and impulses for human individuality in socialism, about the ways into meaningful life for all members of our society.

Deformation of Human Individuality in the Power Sphere of Capitalism

How dismal, on the other hand, is the picture presented in the crisis-ridden world of capitalism: declining take-home wages, more and more social insecurity, prolonged high and rising unemployment, increasing crime and drug addiction mainly among youth, intellectual and moral disorder, material and cultural misery in many developing countries--these are the results of the profit economy and imperialist mobilization. All this confirms the following remark in the 10th party congress report: "The profit drive, and not love for men, is the vital element in imperialist modes of thought and conduct. . . . Imperialism is pitted against the democratic rights of the people, human dignity and intellectual freedom, like a dam."[3] How correct has Karl Marx been who showed, in "Das Kapital," that the capitalist production would, to be sure, economize the use of constant capital but at the same time produce, more than any other mode of production, "a waste of men, of live labor, not only of flesh and blood, but also of nerves and brains, and the most immense squandering of individual development."[4]

That then is the picture there of social realities and of the individual development opportunities for the working people. Yet the political and ideological spokesmen for that order continue to allege, year after year, that socialism stifles the individual by collective organization, constrains individual freedom and kills individuality--in complete contrast to capitalism, where purportedly the dignity, inviolability and freedom of the individual hold sway. That is the logic of an upside-down universe! Its pugilists keep trying to wear out that reversal of concepts by their opinion manipulation through which they seek to indoctrinate men with the notion that all their lofty concepts depend on the power of capital. What people experience, however, makes them more and more aware of the contradiction between social reality and the pretense expounded, disintegrates the ties with capital, especially among youth in the capitalist countries, turning them increasingly against that power.

While some who represent that power, the reactionary-conservative forces, respond to it with concepts pervaded with authoritarian political theory, if not with police truncheons, others are looking for social-reformist replies. Thus, in the early 1970's the SPD made great efforts to prepare a basic document meant to set down the prospects for the freedom of the individual through equitable conditions, for the free development of each in mutual responsibility and helpfulness, and for free decisions by people having equal rights in the time up to 1985. This "orientation framework 1975-1985" was adopted at the 1975 Mannheim party congress, accompanied with much propaganda noise, and translated into many languages. What now has become of this promise of free individual development? As Herbert Wehner stated, already in 1979, based on undeniable facts, the document had, as an orientation toward further developments, strictly speaking left no trace.[5] And recently, the members of the former orientation commission found themselves induced to state the text "had fast been forgotten." In terms of the practical politics of the party, the value of the document had been, "almost equal to zero--to put it plainly," having "no importance to FRG policy," and "no noteworthy influence" on government policy, and so forth. The paper had, however, not been completely forgotten: some SPD educational activities abroad had dealt with it, local party conferences had referred to it, and the SPD women's group had dealt with it "with some thoroughness."[6]

The vast waste of individuality Marx remarked upon has assumed gigantic dimensions in imperialism the more science and technology developed. It is precisely this constantly deepening antagonism in the development of the productive forces and human individuality that turns the surmounting of capitalist exploitation and social relations into a compelling historic requirement. As long ago as in 1845/46 Marx and Engels observed that the point had been reached where "the individuals must appropriate the available totality of productive forces, not only to obtain their own personal activity but to secure their own existence altogether."[7]

Only socialism can initiate this new, qualitatively higher developmental phase of human productivity and individuality. The 10th party congress once again made clear that socialism needs universally educated and skilled, talented, efficient individuals. The creative and expert work of all, their initiative, their education, their political lucidity and farsightedness, and their intellectual-cultural richness become the necessary condition in this social order for individual and social upward development--in conformity with the sense of socialism. It expresses that socialism is the humanistic order of the present era.

Social Foundations for Universal Individuality Development

Bourgeois ideologues, from the conservative wing down to the social-reformist forces, oppose this by telling us there are no eternally valid principles for the relations between the individual and society nor individual rights and personality values hovering above the struggles between the classes and social systems in our time. Yet life itself provides us with this evidence: the relationship between the individual and society is historic in nature. Each economic era, each social system, impresses this relationship, and thus the developmental opportunities, impulses and criteria of the individual, with its particular stamp. Each has its own image of man, its own personality ideals.

Naturally, everything that happens in society and history—except for natural disasters--under all social conditions ultimately results from actions taken by individuals. Men always make their own history. But this they do, as Marx put it, not at will, not under chosen, but under given and traditional circumstances.[8] In conformity with the development of the productive forces they form their production relations which in turn determine the social and class structure, the class interests and the prevailing political, philosophic, artistic ideas and the political institutions of society. This means that human individuality can form only in the historic process, through labor, the class struggle, and the development of science and culture. The creative capacities and capabilities, the knowledge and skills, the modes of thinking and conduct, an individual has, as well as the opportunities for using these individual capabilities and capacities, are, in principle, shaped historically by the development of the productive forces and the social structures, by social and class impulses.

Sure enough, individualy also depends on someone's physical and psychological traits, the particulars of his education and culture, his temperament, and his particular circumstances in his work and life. But that which fundamentally constitutes human individuality grows out of social development, out of the effects of social impulses, out of the individual's active participation in the historic process.

Over long historic periods man's individuality could hardly develop or only to a limited extent. The inane developmental and socialization level of the material productive forces and the narrowness of personal dependency, exploitation and servitude relations caused that. Material conditions for a richer, fuller and more diversified development for individuals only arose with the rising bourgeois order. The bourgeois revolution freed the individuals from personal dependency and servitude relationships. Enormous productive forces were created through social labor, production was socialized and internationalized, the narrow constraint of previous social development was broken. That was, however, an antagonistic development. Capitalism turned the material productive forces, which as such made possible a great and rich development of human productivity and individuality, into means of imperialist exploitation and power politics which in the outcome deformed and destroyed all their human individuality and comes into the broad daylight precisely during the current crisis of the capitalist system.

These constantly exacerbating antagonisms lead to one inevitable historic consequence: the free, rich, universal development of the individuals, which had first become economically possible and necessary in history because of the development of the material productive forces, becoming itself an ever more important factor in productivity development, requires the socialist revolution of the workers class and its allies. To the extent that society, led by the workers class and its party, takes control of the modern productive forces, uses them for the benefit of the people, and rapidly augments them, and to the extent that the workers class shapes the totality of social relations more and more in conformity with its class goals and also shapes the intellectual life of society in conformity with the principles of the Marxist-Leninist world-outlook, that higher developmental phase in the dialectics between individual and society assumes reality which Marx had described as follows: "Free individuality, based on the universal development of the individuals and the subordination of their communal, social productivity, as their social capacity . . . "[9]

Many discussions are carried on in the developed capitalist states in Western Europe about "alternatives" for the developmental trends of industry, science and technology occurring under state monopoly conditions. Their subjecting scientific-technical progress to the designs of the military-industrial complex and the multinational corporations produces more and more devastating effects threatening the natural and social life sources of the nations and, ultimately, human life and civilization as such. Thus, in the outcome of the imperialist aggressive and high mobilization policy, NATO's military expenditures rose to more than $ 1.5 trillion over the last 10 years. Simultaneously, for example, developments in the EEC countries were marked by an enormous intensification of exploitation and social decline, there being already 24 million unemployed in the capitalist industrial countries by the end of 1980. All that forces the workers class, the peoples, all of working mankind, ever more strongly into anti-imperialist alternatives and eventually, to fight for the transition to the socialist mode of production. The need for it is inescapable.

But often the discussion of alternatives hides the intention to dodge the anti-imperialist struggle. The evil consequences of the imperialist application of the modern productive forces are blamed on science and technology as such. "Industrialism, " corporate technology," in fact economic growth as such, are being held up as

the root of all evil. Thus, "alternative modes of life" are being propagated that are supposed to ensure the individual development and self-realization of man independent of the development of the modern productive forces or even in blind enmity to the scientific-technical progress in our time by means of an escape into a petty bourgeois individualistic sphere of life. That is reactionary utopianism that in fact weakens the anti-imperialist movement and subjects working man still more to economic spontaneity.

Scientific-Technical Progress for the Good of Man

The economic strategy laid down by the 10th party congress makes clear that, to us, the scientific-technical revolution and the enormous dynamics of the modern productive forces in its train in no way vitiate the rich development of human individuality. On the contrary, they are the necessary bases for this development as economics all-around is the main field for our continuing social advances. That conforms fully with the insights by the classic authors of Marxism-Leninism. Marx in his ingenious farsightedness grasped the penetrating changes in the system of the material productive forces resulting as the necessary perspective from his investigations into industrial development and the technological application of the sciences, and he said in this connection: "In this transformation it is neither the immediate labor man performs himself nor the time he puts to work, but the appropriation of his own general productive force, his understanding of nature and his control over it in his capacity as a social entity--or, in one word, the development of the social individual--which appears as the great cornerstone of production and wealth."[10] Marx foresaw a development which is assuming concrete shape today--through the broad application of microelectronics and robot technology and altogether through a rapid technological conversion of data into targeted basic research. He considered the control over the development of the productive forces by the associated producers, the workers class in power leading all of society, the crucial prerequisite for the all-round development of human individuality. It is this conception on which the economic strategy our party has elaborated, in conformity with out own conditions, is based.

None of this has anything to do with a blind and uncritical faith in technology, which the bourgeois side often alleges the Marxists have, nor with the notion that scientific-technical progress could lead by itself, automatically, to social progress and personality development. Our party's economic strategy is concerned with an overall social control of scientific-technical progress, its conscious and planned use as the basis for a unified economic and social policy, through which scientific-technical achievements unstintingly serve the good of the people and their advances ever more deeply affect men's ordinary life and steadily improve their working and living conditions. Uneasiness and anxiety about the rationalization and broad application of science and technology therefore are alien to the GDR workers class and its allies. The working people's basic experience with the economic policy of our party and government is that here the struggle for rationalization, for accelerating our scientific-technical progress, makes for a greater certitude of the future, greater stability and social security, the improvement in working conditions and a higher level of creativity in our labor and in our intellectual-cultural wealth, whereby also the happiness of persons and their families is enhanced. And that is a solid basis for forming strong performance motivations on the part of the individual workers and their collectives.

This does not mean there are no problems in making scientific-technical progress prevail in the dimensions charted by the 10th party congress. Already it shows where contradictions arise and new problems are ripening in it. The great dynamics in the development of the productive forces, which increasingly of course also affects occupational structures, and the increasing complexity of management and planning processes require, for instance, that an individual acquire new experiences and knowledge all the time and must develop the ability and willingness to adapt himself and work himself into new fields. That cannot be done without efforts or without conflicts, nor does it exclude personal failures. Furthermore--however clear we may be about the main features of the scientific-technological revolution in our country--we cannot always predict in every detail which problems this process will give rise to in the foreseeable future, it being so tempestuous and affecting the working and living conditions so deeply. That can come only through a generalization of the various experiences by the working people themselves.

The development of the material productive forces and of social labor as the most important sphere for generating socialist personalities thus shows that individual development does not take place in a harmonious sphere that knows no contradictions. Exploitation and class antagonisms are eliminated in socialism. The productive forces of social labor no longer confront the working people as alien and hostile forces. Yet developing into rich individuality remains a contradictory process. Only these contradictions--and that is what is crucial about them--are no longer those of waste and destruction but those of growth in individual and collective creative capacities. They are being resolved through socialist activity and socialist collectivity, through a joint struggle for an accelerated development of the productive forces, for improving the working and living conditions, and for consolidating our order of peace.

In contrast to the notion widespread in bourgeois literature that the role of the individual, of his subjective capabilities and his decision-making will diminish as science and technology pervade life, socialism in practice confirms the tested realization in the Marxist-Leninist world-outlook that man is and remains the most important productive force. Even under the conditions of the scientific-technical revolution the socialist cooperative efforts of workers and cooperative farmers with scientists and technicians, socialist competition, the skill and knowledge of the working people, and their initiative and dedication to their performance remain the chief creative capacity in socialist production. That is why the 10th SED Congress time and time again stressed the connection between scientific-technical progress and creative activity, skilled labor, and the higher demands placed on the initiative and capacity of the collectives and the individual working people.

Tapping All Productive Capacities of the Individual

The requirements for the 1980's also set new criteria for the struggle for the full development and use of the subjective elements in the productive forces. A solid foundation was laid for that under party leadership. The workers class has grown into a technically, politically and intellectual-culturally highly skilled force embodying an enormous production and progress potential. Almost 80 percent of all working people has completed training today. Circa 95 percent of the young people starting their work life has had vocational training. The proportion of university and technical school graduates has risen enormously in the economy.

Productive forces are growing up here the extensive, prudent use and maximal utilization and development of which acquire an ever greater importance for performance improvements, the boosting of labor productivity, and for scientific-technical and social progress.

This subjective productive force, which lies in training, in scientific-technical and economic education, in the cultural level, in the performance readiness and class-conscious discipline of the individual working people, as in their cooperation and collective competition, constitutes the inexhaustible growth and development source of socialist production. Its characteristic feature is that its proper use, conforming to the overall development of the productive forces, also amounts to its expanded reproduction toward qualitatively higher levels. The ability to take part in gaining science insights for future production and using possibilities of the scientific-technical revolution for economic performance and efficiency growth and for putting modern technologies into operation and so forth grows to the extent that it is called upon to be used. This makes clear what Marx had in mind when he said that the real wealth lies in the developed productive force of all individuals and that the full development of the individuals "being the largest productive force, affects in turn the productive force of labor."[11]

Yet even this vital productive capacity of our society can grow and become effective only through a lengthy process in which contradictions must be resolved and difficulties be overcome. Not all enterprises do as yet use all available training and educational potential effectively enough or stimulate its further growth in the interest of high achievements. There still are significant disparities between good and less good enterprise collectives. Discussions at the 10th party congress have brought out what has to be done to convey information on the plan tasks down to every single job, to involve the working people in considerations and decision-making and use their suggestions, while providing for a creative work atmosphere and high labor discipline, promoting working people initiatives and disseminating the experiences of the best workers in the competition. Especially the young generation must receive the necessary encouragement, and every young person must find the right place. It is especially important to spot gifts and talents at a good time and foster them systematically, noting that this as a rule involves personalities distinguishing themselves by a great wealth of ideas and thoughts, clarity about long-range matters, persistence in the solution of problems, stable interests and forming solid socialist motivations, through which they could become important models.

Important reserves for socialist society and the formation of a diversified individuality lie in the great opportunities for personality formation inherent in our society. They become effective when the people use them in what they are doing themselves. This greatly brings into play their insights, all their habits, feelings an inclinations, the mentality of an individual and his personal goals in life, and his concepts of the purpose of living. One must accept as a fact that this self-determination of an individual gains much greater and a qualitatively higher importance in socialism, for the social process as well as for individuality development, than ever before in history. That is inseparable from that socialism needs individuals and forms individuals who excel through productive capabilities, a genuine performance ability, technical skills, ideological firmness in the working class sense and a great variety of relations with the socialist order. Therein lies

one great advantage of socialism. "It becomes clear," the status report to the 10th party congress says, "what an enormous advantage it is for socialism to be able to rely on the conscious and voluntary initiative of the masses and their active participation in the exercise of power. That precisely is what clearly renders our socialist society historically superior to the capitalist."[12] The socialist character of our government and social order does not produce socialist modes of thinking and conduct mechanically. They must in the process that constructs the new society be consciously and puposefully shaped by the political-ideological work of the party organizations and all social forces on their side and by a politically responsible activity of all managers.

Individualism of any kind is incompatible with socialist modes of thought and conduct. That, after all, conforms to an attitude in life according to the saying that charity begins at home and to the desire to settle down in some hiding-place where one can indulge a nice living without doing any commensurate work for society, at the expense of others, an attempt to shunt oneself off from the demands of society and escape all social responsibility. Such a stance stems from the history, of thousands of years, of exploitation, thievery, private property, the ominous traditions of which the imperialist class enemy seeks to keep alive through all sorts of ideological influences. Thus it is all the more important effectively to promote the struggle for firm socialist modes of thought and conduct through fine management and planning in practice, the consistent implementation of the performance principle, the purposeful management of competition and the involvement of all working people, an effective labor organization and the further consolidation of the socialist legal order.

Real socialism in practice has provided our country's citizens with the experience that an individual can lend meaning, content and satisfaction to his life mainly by judging from the vantage point of the overall social importance of what he does and decides. To become active as creators and fighters, to take part where they are, according to their abilities, in having the advantages of socialist society take effect every more completely, to contribute their share to the coping with scientific-technical progress, augmenting the material and intellectual-cultural potentials of our society, and the strengthening of socialism and peace--in this, as demonstrated by our great competition movement, more and more working people in our country find the meaning of life in our era and our society. Such a position is worthy of a socialist citizen by creating mobilization capacities for great abilities and achievements, for a happy life rich in content.

ARTISTS TO FOCUS ON SED ECONOMIC STRATEGY, IDEOLOGY

West German Commentary

Bonn IWE-TAGESDIENST in German No 83, 5 Jun 81 'iwe-kultur' supplement

[Report from Berlin: "Worries About Young Artists' Ideological Loyalty." A translation of the East Berlin EINHEIT article cited below follows this commentary]

[Text] The SED is evidently worried about the ideological steadfastness of the young artists in the GDR. It could not be missed, the party organ EINHEIT (No 6, 1981) wrote, that quite some artists still had difficulties acquiring "productive rapport with reality and a Marxist-Leninist understanding of history." Therefore, "still more effective ideological work" among the young artists was necessary.

SED Culture Functionary's Discussion

East Berlin EINHEIT in German Vol 36 No 6, Jun 81 signed to press 13 May 81 pp 586-592

[Article by Franz Hentschel, deputy chief, Cultural Affairs Department, SED Central Committee: "Continuity of Socialist Cultural Policy." For various references to other items of related information see translations of previous EINHEIT articles by GDR Culture Minister Hans-Joachim Hoffmann and SED Academician Prof Hans Koch, respectively, published under the heading, "Aesthetic, Revolutionary Aspects of Socialist Culture Analyzed," in JPRS 78364, 23 Jun 81, No 1891 of this series, pp 48-62]

> [Text] Art and culture are inseparable from the economic and social policy aimed at the welfare of the people. In the closest interaction with a high economic efficiency improvement and with the formation of socialist personalities, demands placed on the quality and effectiveness of culture, art and art criticism are rising, the working people's cultural needs become more differentiated, art turns more to the questions of the value and dignity of man and his claim to happiness in socialism, a higher cultural level and a depicting of the workers class remaining key problems for further cultural progress.

As for all other areas of social development so also for the field of culture and art the 10th party congress has drawn up a balance-sheet and elaborated the next tasks for the further implementation of our party program throughout the 1980's. "It may be stated," the central committee report says, "that the cultural policy decided on by the ninth party congress is bearing good fruit. Art and culture are having an increasingly more effective influence on the development of socialist personalities and the molding of a socialist way of life. . . . By their achievements the creators of art and culture have a great share in that the values and ideals of socialism more and more permanently govern the thinking, feeling and conduct of the working people."[1]

The successful development of our socialist culture and art depends on our party's determined leadership in the struggle for the implementation of the main task. It therefore also is of fundamental strategic importance for our art and culture that the 10th party congress decided to carry on the policy of the main task in the 1980's even under more complicated conditions, to secure and gradually extend, that is to say, the people's material and cultural standard of living through high achievements. Ultimately the continuity of our party's cultural policy also is rooted in this strategic objective, this policy that is aimed at the welfare of the people.

Secured Positions

In puposefully carrying on the socialist cultural revolution in the GDR our party can proceed from secured positions. That includes above all that culture and art are more strongly understood and promoted as an inseparable component of the overall social processes in the further shaping of the developed socialist society. In the outcome of the ideological maturation process that has gone on since the eighth party congress and was strongly affected by the ninth, the party's responsibility has greatly increased for carrying on the socialist cultural revolution as part of the socialist revolution in the GDR. Of very special importance to it were the sixth central committee session (1972) and the Politburo resolution of 25 January 1977 on the Leipzig bezirk management report on the political-ideological management of intellectual-cultural life in Leipzig Bezirk. Their effective analysis has helped improve the quality of cultural policy management activity in party bezirk and many kreis managements. Good experiences have been gathered in the bezirks and kreises in the work with long-range conceptions for the development of socialist art and culture which now are meant to be continued for the 1981-1985 period.

The higher quality of cultural policy management activity is crucially responsible for a more substantial, diversified and stimulating intellectual-cultural life. Far-reaching impulses emanate from it which enrich both the personality development and the molding of a socialist way of life. In this, the interrelations between the management of competition and the promotion of intellectual-cultural life in the socialist work collectives have become far closer. Working class influence on the development of culture and art has grown further. There are many indications that the relations between ethics and aesthetics are assuming novel features under prevailing social conditions. Artistic discoveries and effects have become an irreplaceable component of intellectual life in our socialist society.

Through their works the writers and artists prove themselves reliable alliance partners of the workers class, conscious and creative coshapers of the developed socialist society. So the 10th party congress was able to state: "Our party's close ties with the writers and creators of culture are a precious good and the basis for the successful further development of our socialist national culture."[2] Life itself has confirmed this experience: nothing or no one can disturb, let alone destroy, this alliance. It has a long tradition and far-reaching prospects.

Among the secured positions finally also is that we have reached a qualitatively higher level in our cultural cooperation with the Soviet Union and the other fraternal socialist countries. This cooperation enriches our intellectual-cultural life and our creation of art, promotes the further development of the internationalist character of our socialist culture and art, and enhances their power of international radiation in the sharper class struggles of our time.

Higher Demands

Proceeding from a Marxist-Leninist analysis of the results achieved, the 10th party congress has emphatically pointed out that in the 1980's "the demands placed on the quality and effectiveness of our socialist culture and art will rise further."[3]

That follows, first of all, from our focus on high economic efficiency improvements. The economy constitutes the centerpiece in our party's social policy because there mainly the decisions are made on further advances in the shaping of the developed socialist society. So it is imperative to strengthen and deepen the understanding of the creators of art and culture of the requirements in our party's economic strategy for the 1980's. This above all calls for a deep understanding of the interrelations between greater economic efficiency and an improved quality and effectiveness of our socialist culture and art. For one thing, the material preconditions for culture and art can develop only in line with general economic performance improvements, because it is also true here that we can only consume what has first been produced. And then again, advances in culture and art in turn affect the tempo of our economic performance improvement. Much as economic performance improvement depends on the possibilities of our scientific-technical revolution, decisive is and remains man's creativity, his dedication and readiness to use these possibilities fully and combine them prudently with the advantages of socialism. And especially art and culture can help greatly "release the creative in man and enhance the pleasure of work and the working people's sense of well-being in socialist society."[4]

So it is a matter of shaping further the kind of cultured atmosphere in all public domains of our socialist society in which man can develop and prove himself as a personality. That includes the propensity for ideological education and technical training as much as popular cultural and artistic production, dealing with the arts, the appropriation and dissemination of our cultural heritage and the promotion of entertainment and sociability. Because, after all, this involves all of man, the entire wealth of his relations with nature and society in history, the present and the future. And in all this, higher demands for quality and effectiveness in our socialist culture and art also are due to the high educational level of the people in our country.[5]

The last five-year plan gave us 1,184,100 successful secondary school graduates. Each was offered an apprenticeship or an enrollment for studies. In the same period, 244,700 regular university, college and technical school graduates started jobs in the economy. There were 310,400 working people who acquired specialists' skills. and 75,000 specialists earned their foreman-credentials. More than 1.5 million working people took part annually in some form of advanced training. We are more and more dealing with educated readers, viewers and listeners whose rapport with art and culture is becoming more demanding, critical and sovereign. This again has nothing to do with elitist tendencies. Rather, the rising educational level gives rise to a greater differentiation in cultural needs which in turn becomes an impulse for the development of a diversified, substantive and stimulating cultural life.

Higher demands for the quality and effectiveness of our socialist culture and art also arise, not last, from the further exacerbation of the international class conflict in the 1980's. Experience demonstrates that culture and art have become a major battleground of the international class struggle. The ruling circles of the FRG, above all, constantly seek to use culture as a vehicle of their revanchist policy. Their thesis of a supposedly unified German culture merely expresses their efforts to keep the "German question" open. But nothing is any longer open in this regard. An imperialist culture rules in the FRG, confronted by elements of democratic and of socialist culture. In the GDR there develops the socialist German national culture, the character of which was defined by our party's Central Committee General Secretary Comrade Erich Honecker in his important speech during the conference with creators of culture and art on 22 June 1979 as follows: "It is shaped by the goals and ideals of the revolutionary workers class and is a culture of the whole people. It is rooted in the progressive traditions in the culture of our people and of all mankind. It is closely tied in with the cultures of the Soviet Union and of the other countries in the socialist community of states. And it is open to all valuable accomplishments in humanistic culture all over the world."[6]

The successful development and increased international radiation power of our national culture is a crucial factor in the struggle for safeguarding peace, which is and remains the most important thing. A rich intellectual-cultural life bolsters the superiority of socialism as a social order of deep humanity and human dignity, and the only one that can resolve the vital problems of mankind.

Unity of the Material and the Cultural

The 10th party congress has once again reiterated that it is an accepted fact to us that in harmony with the material standard of living we are also raising the cultural because we seek a meaningful and beautiful existence for all in socialism. It is always a matter of developing both sides. Neither must be neglected because only the targeted promotion of all conditions of life--the material as the cultural--can ensure the all-round development of the socialist way of life. Securing a material standard of living is and remains decisive, of course. As Friedrich Engels said in 1883, the developmental law of human history consists of the simple fact that "men above all must first eat, drink, have a place to stay and clothe themselves before they can engage in politics, science, art, religion and so forth, in as much as the production of the immediate material means of subsistence, and

any given economic development stage of a people at that, or of a historic period, forms the basis out of which the state institutions, the concepts of law, the art and even the religious ideas of the people concerned have developed."[7]

Securing the material conditions of life has always been the basis for human existence. Under the conditions of the worldwide class conflict between socialism and imperialism it becomes the political issue par excellence. It is the dynamics, continuity and efficiency of our economy from which the knowledge and sense of social comfort and the confidence in our future arise.

Securing and gradually raising our material standard of living affects the development and satisfaction of new cultural needs as, vice versa, the cultural standard of living likewise affects the development and satisfaction of material needs in life. That has become more and more visible above all in the fulfillment of our housing construction program. Since the eighth party congress, 1.4 million apartments have been newly built or modernized. Thereby housing conditions have improved in the last 10 years for approximately 4.25 million people. Housing and residential areas are gaining greater importance for our intellectual-cultural life. Every new apartment generates new opportunities for the development and satisfaction of cultural needs. That is reflected, if not solely, certainly also by the fact that the purchase of books, tape recorders, art objects and so forth has noticeably risen in recent years. During the last five-year plan the book trade turnover has risen by 32 percent, while our state's art trade has more than doubled. To be sure, a higher material standard of living leads not automatically, or spontaneously, as it were, to cultural needs and habits of life that conform with the socialist way of life. Their development calls for constant conscious and systematic promotion by our party, our state organs and all social forces.

Focus on the Workers Class

Our chief cultural policy task is to improve the intellectual-cultural prerequisites for higher performance and for the formation of socialist personalities further. For that reason our party pays special attention to raising the cultural level especially of the workers class and its achievements for the development of socialist culture and art. That follows from the growing role of the workers class in the process of the continued shaping of the developed socialist society. As the producing class that exercises power, it has a decisive influence, together with the other working people, on the progress of culture in the GDR.

Bookings in Culture and Club Houses According to Type

	1970	1975	1980
Total	317,348	461,805	558,479
Lectures, discussions and so forth	168,020	166,666	199,964
Art events	91,203	98,111	107,618
Exhibitions	4,234	6,171	6,692
Dances and social affairs	53,891	90,638	130,098
Other events	-	99,219	114,107

Attendants of Events in Culture and Club Houses in Terms of Subject Groups (per 1,000 persons)

	1970	1975	1980
Social sciences, politics, economics	4,259,9	4,869,0	5,136,6
Natural sciences	372,1	371,4	419,9
Art and literature	620,5	643,0	622,3
Other subjects of general education	2,658,6	2,277,6	2,581,1

That is especially reflected in the desire to work, study and live socialistically. In the struggle for the honorific, "collective of socialist work," high achievements by the working people through socialist competition combine with various activities in their intellectual-cultural life which complement and enrich each other. In many work collectives the need for ideological education, vocational training, cultured working conditions, meetings with art and artists, participating in popular culture activities, and interesting social experiences has already formed in a big way. The culture and education plans of the trade unions take care of that more and more. Holding enterprise festivals in cooperation with the given territories has been found useful. In recent years there have been more than 3,000 such festivals attended by more than 10 million annually. High points will continue to be the GDR's workers festivals, which have turned into exhibits for the creators of culture among the workers class.

An essential concern lies in further improving socialist work culture. This is a matter of lending cultural shape to working conditions, of creating the kind of atmosphere that encourages a broad spread of working class creativity. Through its firm alliance with the other working people, the GDR workers class is coming up with great achievements in socialist culture and art. That goes all the way from the dissemination of our scientific world-outlook to creating favorable conditions for developing culture and art. It embraces its own achievements in creative culture as much as its alliance with writers and creators of culture, public commissions and a masssive appropriation of works of art coming out of contemporary socialist production and from our progressive cultural heritage.

The Effects of Art

Considering that the arts occupy an indispensable and irreplaceable spot in the life of our society, the 10th party congress has further defined the role and tasks of art in socialism.

Art, as one knows, affects all of man, his ideas and feelings, his moods and passions, his social conduct and his creative imagination. "Art has the special ability, which differentiates it from science, to take hold of the whole person and enter into him even if he himself is not aware of it."[8] Our party respects and promotes art in its particular aesthetic quality and efficacy. That has often been emphasized in the resolutions, especially since the eighth party congress. And here it is mainly those works that are making an important contribution to socialist personality formation and the development of the working people's creativity which recognize and treat in an artistically accomplished fashion the processes, full of conflict, in revolutionary social development from realistic positions that are close to the workers class. Viewed that way, great ideological effects come from art, in particular from literature, which must still be more comprehensively used for our political, world-transforming tasks. Also in this respect we are in fundamental agreement with the decisions of the 26th CPSU Congress and of the most recent congresses of other fraternal parties in socialist countries.

The 10th party congress has paid high tribute to the art of socialist realism concerned with picking up and responding to moving issues of our time. Authors and artists have turned their attention to the whole breadth of vital manifestations in socialism. Their special interest lies in the questions of socialist morality and ethics. These are questions about the value and dignity of man and his place in society, about freedom and responsibility and the claim to happiness and the chances for its realization under socialism. The internationalist content of our art has become more prominent. An important aspect in our works of art is given to the historic experiences of our course. Socialist art also proves itself in confronting views and attitudes that are alien to our socialist society. That calls for firm socialist positions as points of departure. We shall always turn back resolutely any attempts at spreading hostile ideologies dressed up as art and aimed against real socialism and our party policy.

The builders of socialism expect intellectual stimulation and enrichment of art, impulses for coping with the demands of our time. In dealing with art we seek intellectual, moral and philosophic gains.

Depicting the workers class is and remains the key problem in the further progress of art. The aggregate of workers' characters has undoubtedly been enriched in our art of socialist realism in recent years. That is true of movies and television as of new novels and stories, for the visual arts as well as theater. And still much remains to be done for convincingly presenting the workers class in its most important sphere of life, in the exercise of its political power and the coping with the scientific-technical revolution.

The 10th party congress supports the desire of the artists associations to conduct the discussion of new artistic achievements more from the vantage point of the principles of socialist realism. "Party-mindedness, affinity with the people and content in socialist ideas are and remain the criteria mainly deciding the value of a work of art."[9] In this regard, literary and art criticism ought to become more effective. During the realization of the Politburo decision on the tasks of literary and art criticism, the ideological-aesthetic level of many reviews has undoubtedly risen. Much more, however, it should be worked out in literary and art criticism what the value of new insights and opinions is that are derived from new works of art. And here one should be quite frank too about weaknesses or mistakes.

It cannot be ignored that along with many outstanding achievements there are also some new works of art that do not live up to the high intellectual, moral and aesthetic demands of our time. Art needs a public, and so it also needs a frank and public literary and art criticism. That presupposes two things, of course: the artists' understanding for the complicated nature of the social processes, firm, party-minded and people-oriented positions in this struggle, and society's understanding for the complicated nature of the process of artistic creation and respect for artistic talent. "Artistic talent is indeed rare, and so it is and remains a firm principle of our party's cultural policy to deal carefully with it and encourage it attentively."[10]

That holds true in particular for the training and education of the young generation of artists. At present there are circa 7,000 artists below 35 years of age

at work in the various fields of art production in the GDR. The number of students at art colleges has risen to almost 3,000. Since the eighth party congress a total of 8,200 young artists has been trained. Many of them play already a considerable part in developing their particular fields of art. It must not be overlooked, however, that there are still quite a few young artists who have difficulties acquiring productive rapport with reality and a Marxist-Leninist understanding of history. That calls for still more effective ideological work among the young artists, whose best representatives already contribute an important part of the socialist realist art in our country.

A crucial condition for the further successful development of our socialist national culture is further deepening the leading role of our party, not last by consolidating the cohesiveness and strengthening of the party organizations in the artists associations and the cultural and art institutions. It will be an important task in following the 10th party congress directions further to elevate the level of intraparty life and of the political-ideological effectiveness of those party organizations.

'PROGRESSIVE' ASPECTS OF PRUSSIAN HISTORY ILLUSTRATED

East Berlin EINHEIT in German Vol 36 No 6, Jun 81 signed to press 13 May 81 pp 593-600

[Article by Prof Dr Helmut Bock, Central Institute for History, GDR Academy of Sciences: "About the Beginning of the Bourgeois Revolution in Prussia: On the Occasion of the 150th Anniversary of the Death of Reichsfreiherr (Baron) vom und zum Stein." For various references to other items of related information see translations of East and West German articles published under quoted headings in the following JPRS issues of this series: "Clausewitz Accepted as 'Reformer and Patriot' in German History," 77538, 9 Mar 81, No 1855, pp 10-21; "Prussian History To Be Accepted as Part of GDR 'Heritage'" and "Importance of National, Local Patriotism Explained," 76749, 3 Nov 80, No 1823, pp 16-34 and 35-39, respectively]

> [Text] Reichsfreiherr vom und zum Stein was the top head among those progressively oriented men who started a work of liberal reform in Prussia, against the resistance from the reactionary aristocracy, after the defeat by France and the Diktat peace of Tilsit (1807). Thereby they initiated the transition process from the feudal to the capitalist society. The historic distinction of the Prussian reformers like Stein, Scharnhorst, Gneisenau, Boyen, Clausewitz and many others is that they objectively helped the bourgeois revolution of the German people to break through.

From the bourgeois revolutions in England and France came that world historic change which first transformed all of Europe, and thus also the German states, from feudalism to capitalism. Along with many other famous contemporaries it made one man stand out who, in the age of the French Revolution, attested to the insight and adaptability of some Prussian politicians while also to the determination by those nationally conscious patriots to preserve their identity. Friedrich Engels recalled him when he judged the years 1808 to 1813 to have been the start of the "bourgeois revolution" in Prussia.[1] Nor was this man unknown to Lenin who praised "some handfuls of noblemen and some small groups of bourgeois intellectuals" making history among the German people at the time of Emperor Napoleon's predatory wars.[2] This is Karl Reichsfreiherr vom und zum Stein, whose work illuminates the historic experience that patriotic movements generated within the international field of tension of revolutions are committed to political and social progress.

The French Revolution and Haute Bourgeois Results

The Third Estate which rose in France in 1789 against the ruling class, the nobility and the clergy, upset the privileges of the right honorable and reverend sirs under the banner of enlightened reason and bourgeois freedom: all ideas, forms of life and institutions were to be placed before the judgment of reason either to be justified or to be thrown onto the trash heap of history. Superstition was to give way to eternal truth, injustice to perfect justice, servitude to assured human dignity. Reason, having recognized the equality, by nature, of all men, demanded a new social order where "freedom" and "equality" were to be guaranteed as inviolable human and civic rights.

The course and essential outcome of the French Revolution is known well enough. Late feudal absolutism had to give way to the constitutional monarchy, it, in turn, to the bourgeois republic, and that republic, again, radicalized itself into the Jacobinic revolutionary-democratic dictatorship--all these merely steps in rigorously enforcing a progress which under the objective conditions of that era could only produce the capitalist social order. On the wreckage of the feudal aristocracy and the bodies of the murdered Jacobin leaders there triumphed the bourgeoisie. The revolution, called the Great Revolution, ended with the coup d'etat by the Thermidorians,* the establishing of the haute bourgeois Directorate, and the military coup of General Napoleon Bonaparte.

How much had political reality departed from the hopes and promises of the Great Revolution in the first decade of the 19th century--only 15 years after the revolution had begun! The hereditary empire of Napoleon I scratched the concept of human rights from the text of the new French Constitution. He replaced a National Assembly for the whole country by the voting machinery of one man, the self administering organs of the revolutionary masses by the prefectural system of a bureaucracy militarily organized, and the civic equality of all loyal republicans by another hereditary privilege of the imperial merit aristocracy On the day of his coronation (1804) Emperor Napoleon, the military dictator or the haute bourgeois type, had the crown, sword and scepter of Charlemagne borne ahead of him. This abolition of the republic with all that it implied induced Ludwig van Beethoven to revoke with an angry stroke of his pen the dedication to the general of the revolution Bonaparte on the score of his Eroica symphony.

The German states became objects of haute bourgeois hegemonial politics. To ensure France's supremacy on the continent, Napoleon completed the annexation of the left bank of the Rhine and abused the larger feudal princes' greed for land as an axe by which to deal the brittle entity of the old German empire its fatal blow, because those princes canceled their fealty to their Hapsburg Emperor and joined, under Napoleon's protectorate, in the Confederation of the Rhine (1806). This protector then used the confederation of states in his competition with England.[3] Liberal reforms in the new French establishments, such as the Kingdom of Westphalia, the Grand Duchies of Berg and Frankfurt, but also in the principalities preserved in South Germany, were to help make available more and higher taxes, conscript soldiers and war materiel by way of abolishing feudal privileges and enforcing bourgeois equality under law. No one else there was but Napoleon Bonaparte to whom these

*Thermidorians--adherents to the counterrevolutionary change of 9 Thermidor (27 July) 1974 in the French Revolution, named after the month of Thermidor (heat month), the 11th month of the French Revolutionary Calendar.

state administration measures, bent on despoliation, yet pioneering in their way, could be traced, which also initiated the quality-change from feudalism to capitalism in Germany. They pushed ahead the solution of the main socioeconomic contradiction of the era. The military power and occupational bureaucracy of France brought with them the Code Napoleon. It also proclaimed to the Germans the articles of liberalism which settled the social relations among individuals on the basis of capitalist private property.

But as Napoleon, the supreme representative of haute bourgeois military despotism, exploited the people's broad working masses at home or bled them to death on Europe's battlegrounds, he subjected the foreign nations to semicolonial dependency. The weapons of his armies, spoilt by victory, were coercive tools of an oppressive and conquering power. The code of legal equality cast the shadow of bourgeois class power and alien rule.

Against it arose the growing resistance of many nations bent under the destructive economic warfare, haute bourgeois trade monopoly and military alien rule of France. Napoleon's troops soon no longer fought against cheap mercenaries and dull serfs of the feudal system, propped up by financial injections from the London government. Different than before, changed enemies now rose up against them who started to appropriate the liberal results of the French Revolution by reforms and also adapted its military innovations. National independence movements rose against the regime of a country that had rated as the birthplace of "freedom" and "equality" but had now reversed the great ideas of 1789 into insanity and inhumanity.

The Prussian State Crisis

Among France's neighbors Prussia was a land where already for nearly two decades an antifeudal unrest had been fomenting among the citizens and peasants, the lower middle class and the early proletarians. But not until the military defeat against France and the imposed peace of Tilsit (1807) were Frederick's state and Prussia's feudal society thrown into an acute disintegration crisis. Now the historic question arose whether a force could be found that would use the increased misery and the latent rage of the people's masses to force the country into revolutionary change.

The bourgeoisie was the historically appointed class to enforce capitalist progress and establish the liberal state. But because in this concrete situation it lacked the economic and political maturity of a leadership class, it also lacked the ideological and organizational ability to lead the people's masses against the tottering regime. Furthermore, it had drawn but consistently negative lessons from the French Revolution. Misinterpreting and rejecting, since the contemporary experience with the Jacobinic dictatorship, any people's revolution as an "anarchy" by destructive masses, the bourgeoisie, as a propertied and exploiting class, gave up any claim to any expression of revolutionary intent.

Yet one force there was, determined to initiate the bourgeois revolution in Prussia on moderate tracks: civil servants, officers, land owners, intellectuals who, in class terms, came from the progressively minded noblemen and members of the bourgeoisie and who made up that portion of the civil service, the army and the educational system which would provide the ruling class of Prussia with "the reason it

required to rule."[4] They understood the collapse of the old Prussian monarchy as a bankruptcy of outdated ideas and institutions, recognized the bourgeoisie and the popular masses as impulses for social development, but desired to be governed by an enlightened monarchy. Most of them regarded France as a country with too radical a political revolution whose proclaimed goals had furthermore been discredited by Napoleon's empire. So they looked for their model in England and favored the example there of a social transition from feudalism to capitalism which ultimately was brought about as a compromise between the noble aristocracy and the bourgeois propertied estate. The historically unavoidable transformation in Prussia was to come about by way of a reformist government policy based on the authority of the monarch with approval from the aristocracy willing, as these reformers wished, to look for libertarian consent from the citizens and peasants.

Bourgeois historiography makes a great deal of the fact that this reformist trend was allowed to come forth with some reform ideas even before the 1806/07 war, from people like Hardenberg, Stein and Scharnhorst, but it is as a rule most reticent in reporting on the policy of Frederick William III and his reactionary cabinet councils that let any genuine reform attempt die on the vine. This way the historic truth is hidden that it was only France's force of arms which became catastrophic for Prussia and confronted it with the need for a bourgeois revolution. In the Duchy of Warsaw and the Kingdom of Westphalia, Napoleon had bourgeois reforms proclaimed. Those were thus "two spurs he pushed into the flanks of the Prussian state,"[5] forcing Prussia itself to adopt reforms and the king, to appoint suitable top government officals for handling them.

The Strategy and Policy of Stein's Reform Ministry

In the summer of 1807 the King of Prussia charged new government commissions with his temporary government administration. Their members were primarily East Prussian civil servants whose views of the world had been shaped by bourgeois experiences in practice and theory: the early maritime trade of their province with England, the liberal free trade doctrine of the Scot Adam Smith and the Koenigsberg enlightenment ideas of philosopher Immanuel Kant as well as of the national economist Christian Jakob Kraus. They proposed to their monarch a reform of property relations as a crucial measure for promoting bourgeois welfare, increasing tax revenue and, thus, surmounting the government's financial crisis. The various bills had nearly all been completed when Stein arrived at the monarch's residence in Memel, on 4 October was appointed chief state minister and, through his personality, enhanced East Prussian liberalism by another element supporting the reform movement.

Stein stemmed from a baronial family with its roots in Nassau/Lahn for half a millenium which had lost its independence due to the policy of Napoleon and the Rhine Confederation princes. Baronial and imperial patriotic freedom ideas had kept alive in this minister as a sharp thorn against absolutistic princely power as much as against Napoleonic bureaucratism--but they merged here too with modern experiences and liberal insights. Those he had gained as a student at Goettingen University, which was strongly under the influence of English Enlightenment, on study tours through Britain and, above all, as the supreme president of the Westphalian chambers dealing with the commerce and mines of those Prussian lands. Stein advocated the freedom of personality. But in contrast to the East Prussian liberals, he did not absolutely adhere to the bourgeois-individualistic free trade

doctrine, particularly because he held the conviction that legal barriers should have to be erected, on behalf of the common good, to the boundless individualism and the selfishness of the propertied and educated.

Stein wanted to preserve the three estates of nobility, citizens and peasants as the principal pillars of a new order freed from feudal privileges. By means of sensibly reconstituting those electoral bodies that even back in the Middle Ages had represented the estates of a country vis-a-vis the princes, but also by means of reconstructing the urban and rural communal representations, free proprietors now were to learn to organize and administer their circumstances of public life under their own joint responsibility. Estate parliaments and self-administration organs, which would in part confine or complement, if not render superfluous, the activity of the government bureaucracy, were to establish the "harmony between the spirit of the nation, its views and needs and those of the government authorities." Stein's Nassau Memorandum (1807), where these ideas are set down, outlines a reform program meant to introduce the transition from feudal absolutism to a bourgeois constitutional state through a graded arrangement of representative corporate bodies: from bottom to top there were to emerge the free communities, the kreis assemblies, the provincial assemblies all the way up to the imperial estates for all of Prussia, and the final, still unclear, goal was the rebirth of a German empire.

Right after assuming office, Stein had to decide on the contradictory property reform bills. On 9 October 1807 there was issued for all of Prussia the "edict concerning an eased ownership and free use of landed property and the personal circumstances of the rural population." This "October Edict" proclaimed the "free disposition of goods" by releasing landed property from all feudal restraints on sale and purchase, allowing citizens and farmers to acquire estates but also the aristocrats to enlarge their estates or to move to town to engage in some bourgeois occupation. At the same time the institution of serfdom was abolished as of 11 November 1810. "After the Martini Day of 1810 there are none but free people," the significant statement says which was meant to mobilize the peasant masses for their fatherland's life-and-death issues.

In proclaiming the free mobility of landed property, the October Edict initiated the lengthy process of a social quality change which also in Prussia led from feudal to capitalist property relations. But in contrast to the French Revolution, which had expropriated the feudal lords, discounted indemnities for them and distributed the land, in lots, to free peasants, the reform edict established no revolutionary, democratic land reform. The land remained the property of landed proprietors, and the peasant, though "free" as a person in the formal sense of the law, who was settled and cultivated the land of the landed proprietors, had to continue his old statute-labor and dues for those proprietors for making use of the land. Furthermore the landlords retained their privileges of patrimonial jurisdiction and local police power because they rated as part and parcel of estate ownership. The land reform--the key issue of the bourgeois revolution--thus was introduced in Prussia by a legislation which did not destroy the economic and political power of the aristocracy.[6]

This outcome characterizes the opportunities but also the limits in the work of the reformers under the concrete conditions of 1807. Stein himself advocated economically strong small-scale farms by his estate-oriented reform ideas, and thus

a certain measure of peasant protection, especially as he had wanted to turn precisely these peasants through the land reform into tax payers for the state, corporate representatives of the planned representational organs, and patriots of the fatherland. But he had to yield to the liberal doctrine of his associates who, following their English model, sought a rationally operated agriculture based on estate ownership. All the reformers together were kept in check by the resistance of the reactionary landed aristocracy. It agitated especially against Stein as someone who through improved reforms intended to abolish the still existing dependency of the peasants, the tax rights of the nobles, patrimonial jurisdiction and the police power of the estate owners. From the October Edict to Hardenberg's Regulatory Law (1811), which justified the peasants' acquiring land, the reformers struggled against the tough resistance of the aristocracy in all Prussian provinces. It could not prevent the capitalist development of agriculture, to be sure, but forced it into a Procrustean bed, which Lenin termed the Prussian way,[7] the undemocratic mode of land reform.

By two other reforms Stein sought to realize his ideas more successfully. A new mode of organization of the civil service was to do away with the provincial fragmentation by centralization and subject specialization. So he set up, as the king's supreme organ, a government which--following the model of French constitutionalism--was composed of department ministers for interior, finance, justice, foreign affairs and war. The territory of the state was subdivided into provinces, and they in turn into government districts and counties, with their administrative organs structured accordingly. This reorganization of the state administration was ratified on 24 November 1808 by royal decree. Being a declared opponent to bureaucratism and the omnipotence of the state, Stein hoped to be able to supplement the administrative setup by populist counterweights. The civil service on all levels was to be complemented by corporate assemblies and communal self-administrations.

Only in the towns could this principle be enforced. Thus far the towns, the major tax sources, had been under the administration of the feudal state--the tax council and the garrison commander exercising their authority over the citicenry. But local self-government was introduced by the "Decree for All Towns of the Prussian Monarchy" of 19 November 1808. On the principle that a free community must be the basic form of political freedom in the state, municipalities were granted autonomy in matters of budget and taxation, welfare, church, school and health affairs. These legal requirements gave rise to a wealth of antifeudal innovations, such as the voting right for forming municipal assemblies and city administrations. The municipal order took over elements of the French municipal constitution--which therefore became Stein's most prominent borrowing from the French Revolution. In granting Prussia's bourgeois classes a communal policy under their own responsibility, it subsequently strengthened patriotic consciousness considerably.

Military affairs constituted a fourth field of reform. After the peace treaty the king charged a reorganization commission with the task to rebuild the smashed army. Its chairman became Maj Gen Gerhard Johann David von Scharnhorst, who had deduced the need for an army reform from the victories of the French Revolution and its heir Napoleon. Its central task was to place the people under arms on the basis of general conscription. That meant no less than a complete transformation of military affairs from Frederick's feudal army of bought mercenaries and drafted peasants into

an army of free bourgeois soldiers with all the innovations in army organization, war strategy and combat tactics. In the struggle for this conception which likewise had to be fought for against the obstruction by the reactionary nobility, Scharnhorst was joined by the equal-minded officers Neidhardt von Gneisenau, Hermann von Boyen, Karl von Grolman and Carl von Clausewitz. As the chief minister of state Stein took part in the deliberations and decisions of the military commission.

Although the king and the nobility opposed the introduction of general conscription, they had to approve the abolition of recruiting mercenaries, whereby the principle won that only Prussian citizens should henceforth be allowed to serve in the army. That created an innovation which, together with the other reforms, blew up Frederick's military system. For the October Edict implied two other consequences in military policy: first, the Prussian soldier, no longer either serf or mercenary, had to be considered a legally free person--which caused the abolition of the dishonorable practice of running the gauntlet and other physical penalties. Secondly, with the nobility's losing its privilege over landed estates, it in principle also lost the privilege to occupy all the officers ranks—an educated citizen now had to be legally admitted to officers careers. These innovations were introduced on the 3rd and 6th of August 1808 by royal cabinet orders.

The army reformers who took over the organization and combat methods of the Napoleonic army, saw in the French Emperor the main actor of a military despotism forcing the European nations under his tutelage and with it, driving them into a permanent war against England. Thus, by the side of Stein, they pursued the goal to regain the independence of Prussia and of all other German lands by means of the reforms. Theodor von Schoen, Stein's associate, documented these intentions as follows: "We were absolutely unanimous about having to shake off the French yoke and gaining independence and about our state having to abandon its rotted institutions and make adequate arrangements for progress and reviving the nation." Against Napoleon's conception of bourgeois progress and national suppression it was precisely here in Prussia where the counter-conception arose of bourgeois progress plus national independence.

Stein's Ouster and Historic Legacy

In the spring of 1808 the people's uprising took place in Spain, and now the national wars of independence began which ultimately brought about the ominous defeat in Russia (1812) and the "Battle of the Nations" at Leipzig (1813) through which Napoleon's hegemonial system collapsed. Spain was the signal that encouraged the Prussian reform party to get set for an uprising in all of northern Germany. Stein, Scharnhorst and Gneisenau in August that year harassed their monarch to adopt the policy of national liberation.

The most capable of them now turned out to be Gneisenau, who formulated a national policy alternative in opposition to Napoleon's Rhine Confederation policy under alien rule. In a magnificent memorandum to the king he fought for a conception which sought the formation of a German bourgeois national state: "It is proper and nationally prudent at one to give the peoples a fatherland if they are powerfully to defend a fatherland." That was the basic patriotic idea that grasped the connection between the social and the national question. By means of the bourgeois

reforms that had started, a "free constitution," a "more simply structured administration," a libertarian municipal setup and a new army organization were to come into force in Prussia, which also would make it desirable for other Germans to fight for the "liberation of their common fatherland" under Prussia's crown. This progressive objective was in line with an unequivocal rejection of any war of conquest. The national liberation struggle against Napoleon of France was to produce an international peace in which the nations could "prosper through their interdependence" and future wars be avoided.

Gneisenau's conception counted on a national uprising by vast popular masses under arms. Led by a nationally conscious and reform-minded prince, even revolutionary means were to be used ranging from a democratic solution of the land problem via the proclamation of a libertarian national constitution all the way to the overthrow of the prevailing Rhine Confederation dynasties. Ideas were effective here that stemmed from the experience in the French revolutionary period. They conformed with the objective tendency of the processes occurring in historic eras and intensified the confrontation between the class forces in Prussia. All reactionary nobility factions spotted in the upsurge of the patriotic movement the clear danger that the antifeudal measures of the reform party would become radical in case of a people's war of liberation. They concentrated their intrigues on the person of the chief minister of state and brought about events through which Stein's reform ministry was brought down: a bunch of letters, uncoded, ... in which Stein praised the Spanish people's struggle as a model for Germany and even gave details about preparations for the revolt in the Rhine Confederation states, was denounced to the French. They arrested the courier, found the compromising letters and sent them to Napoleon at once.

If King Frederick William III had been a monarch to have encouraged Stein and his reform circle as energetic excutors of his own state policy convictions as such, the Emperor's rage should not have intimidated him. Actually, however, he had only tolerated the reformers as a force he feared as much as he needed it so they would drag the state and the Hohenzollern dynasty out of the acute crisis. But now the contradiction split open between the king's interests, solely aimed at preserving his dynasty, and the bourgeois national consciousness of the reformers who wanted the liberation of the German people. Frederick William yielded to the demands from Napoleon and the reactionary in the Prussian nobility, had Stein submit his resignation and dismissed him from his office on 24 November 1808. Napoleon, declaring the reformer a personal enemy of France and of the Rhine Confederation, ordered him arrested. But Stein escaped into Austrian emigration. In 1812 he accepted an invitation from the headquarters of the Russian tsar where he, heading a committee for German affairs, also made a point of the pioneering deeds of Russo-German comradeship-in-arms in the struggle against Napoleon: the formation of the Russo-German legion, the signing of the famous Tauroggen Convention, the insurrectionist arming of the popular masses in East Prussia, and the signing of the Prussian-Russian treaty on the 1813 war of national liberation.

Stein's ouster and the isolation of many of his associates interrupted a reform project with goals far transcending the innovations already made. It was then up to Hardenberg and Scharnhorst to carry on the revolutionary change begun, a few years later. When Friedrich Engels later, looking at the totality of these reforms, spoke of a start of the "bourgeois revolution" in Prussia, he designated

the historic nerve center where the revolutionary development of capitalism ended in the lap of feudalism but the revolutionary qualitative change in Prussia's state and society began. The subsequent transition process that took circa six decades from the feudal to the capitalist order produced a bourgeois revolution starting with the liberal reforms (1807/13), the decisive battle of the epochal class struggles with the bourgeois-democratic national revolution (1848/49) and found its undemocratic conclusion with the "revolution from the top" (1866/71). The end cannot obscure the achievement of the beginning. Stein, Scharnhorst, Gneisenau and many other Prussian reformers were pioneers who objectively helped the bourgeois-democratic revolution of the German people to break through. Bismarck, on the other hand, fought for a "counterrevolutionary progress strategy" that was meant deliberately to prevent a recurring and, in that case, triumphant revolution of the popular masses. That is a differentiation that may be of service in paying tribute to the progressive heritage that entered into German history through the work of the Prussian reformers.

NEW INTERDISCIPLINARY SERIES REVIEWED

East Berlin EINHEIT in German Vol 36 No 6, Jun 81 signed to press 13 May 81
pp 616-617

["Scientific Communism--Theory and Practice"--Review by Dr Rolf Reissig, deputy director, Institute for Scientific Communism, SED Academy of Social Sciences, of first four issues (titles follow) of new series published since 1980 by Dietz Verlag, East Berlin, at request of Council for Scientific Communism: "Die entwickelte sozialistische Gesellschaft--Ergebnis und Aufgabe des Kampfes der Arbeiterklasse" (The Developed Socialist Society--Result and Mission of the Struggle of the Workers Class); "Die Lebensfrage der Menschheit" (Humanity's Vital Question); "Der Internationalismus der Arbeiterklasse" (The Internationalism of the Workers Class); and "Wissenschaftlich-technischer, oekonomischer und sozialer Fortschritt im Sozialismus" (Scientific-Technical, Economic and Social Progress in Socialism)]

[Text] "Wissenschaftlicher Kommunismus" is the title of a new series published since 1980 by the Dietz publishing house in Berlin. At the request of the Council for Scientific Communism it is being published by a collective made up of scientists of the SED Academy of Social Sciences, Karl Marx University Leipzig, Humboldt University Berlin and Technical University Dresden. Four issues have thus far come out. In preparation are: "Zum Gegenstand und zur Methodologie des wissenschaftlichen Kommunismus" (On the Subject Matter and Methodology of Scientific Communism) and "Die Arbeiterklasse in der Welt von heute" (The Workers Class in the World of Today).

The series is interdisciplinary in design--which conforms to its purpose. Even in the issues thus far, economists, philosophers and historians joined authors in the scientific communism field. Continuing the cooperation with representatives of scientific communism in the Soviet Union, noted Soviet authors will also be published in this series. The editors address a wide circle of readers, propagandists, circle leaders, functionaries, teachers of basic Marxist-Leninist courses and, above all, the rapidly grown number lately of teachers and students in the field of scientific communism and the history and civics teachers. In treating particular, relatively self-contained subjects, on the basis of the college textbook "Wissenschaftlicher Kommunismus," which is a systematic work that includes the main fields in this discipline, the series aims to improve the level of theoretical research and the uniformity and efficacy of teaching. It wishes to contribute to the further development of research in scientific communism and to its further political, theoretical and methodological delineation as a component of Marxism-Leninism. More

deeply penetrating the real processes in social development, picking up newly ripened issues, extending the empirical base, more accurate knowledge and systematic absorption of the results of the science disciplines that are closely aligned with scientific communism, and a target-directed search for advances in knowledge--these are the decisive interconnecting links for scientific communism to meet its higher requirements.

The basic substantive requirement is derived from the 10th SED Congress documents, the central research plan for the Marxist-Leninist social sciences in the GDR, 1981-1985, and the research plan of the Council for Scientific Communism that is based on it. In its long-term conception and proposed topics up to 1985, publications on the basic theoretical and practical questions in the continued shaping of the developed socialist society in the GDR under the changed conditions of the 1980's have first priority.

In preparation are studies on socialism as the real humanism in our era; the further development of the political organization of socialism; the political leadership and management of social processes in the process of the shaping of the developed socialist society; the relationship between individual and society in socialism; and the relations between social conditions and the development of the socialist way of life. We are looking for answers to questions like these: Which are the crucial inevitabilities and impulses for the further shaping of the developed socialist society and how can they be made still more effective under party leadership? Wherein lies the interaction between the internal development of socialism and the international class conflict in the 1980's? What tasks and consequences result for the further development and perfecting of socialist democracy? Which long-range effects does intensively expanded reproduction have on shaping the working people's condition of living and way of life?

Another major subject area lies in the contributions to research into the inevitabilities of the revolutionary world process and its chief currents under the changed conditions of the international class conflict, and into the struggle for consolidating the unity and cohesiveness of the communist world movement and its practical and theoretical effect in the struggle against imperialism and for peace, democracy and social progress. Much attention is warranted here to the creative application and further extension of the Marxist-Leninist revolutionary theory and an effective and convincing confrontation with misrepresentations and distortions in this field. One project, scheduled for 1982, for instance, will deal with how and by which means real socialism affects the further change of the international power ratio, and what model effects are derived from it today for the struggle by the broad popular masses in the nonsocialist world. Outstanding importance attaches to concretely working out the various consequences resulting from the fact that the struggle for peace and disarmament has become the cardinal issue of the international class struggle and the crucial condition for the progress of humanity.

A publication scheduled for 1984 will deal with the basic issues in the development of the Marxist-Leninist revolutionary theory today. This involves the following important practical and theoretical considerations which have not yet been dealt with much in the literature of our republic: What is the nature of the process that forms the sociopolitical prerequisites for anti-imperialist and socialist transformations in the nonsocialist world, and which consequences result from the

altered objective and subjective conditions for our struggle for the communists' struggling for unity of action in the workers class and broad democratic alliances? This also involves questions about the communists' strategy and tactics, the practical-political and theoretical relation between the revolutionary workers movement and the state and power issue, and about democracy and power concepts among the non-communist leftist and democratic forces in imperialism. That monograph will also pay attention to the connection between democratic reforms, the working people's struggle for antimonopoly transformations and the socialist revolution. Another publication is going to deal with the specific place of the national and social liberation movements within the revolutionary world process in the 1980's and the formation of revolutionary vanguard parties.

Deeper penetration of social practice and improving the theoretical level, quality and social efficacy of research, further elaborating our world-outlook of dialectical materialism and presenting it in its unity of scientific method and revolutionary spirit--these criteria, as set by the 10th party congress, are demands of the highest political rank for all involved in the series. Orienting all our further work on them is a decisive basis for helping clarify the inevitabilities on which our social development processes are based, militantly contending for Marxism-Leninism against any slanderous attacks from bourgeois, revisionist and ultra-leftist ideologues, and disseminating our tried and tested party policy in massive effectiveness and relevantly.

SUMMARIES OF OTHER MAJOR 'EINHEIT' ARTICLES

East Berlin EINHEIT in German Vol 36 No 6, Jun 81 signed to press 13 May 81 'Resumes' addendum

Resolutely and With Firm Steps

[Summary of article by Prof Dr Manfred Banascheak, department chief, SED Central Committee; chief editor, EINHEIT; pp 515-524]

> [Text] Tribute is paid, from the vantage points of the historic place this party congress occupies in the socialist revolution and of the political creativity of the Marxist-Leninist party, to the resolve by the 10th SED Congress to continue our general line, confirmed by life, even under more complicated conditions. Economic strategy as a scientific-theoretical achievement in creatively perfecting the socialist planned economy and the demands resulting from it for concretely organizing a great performance improvement and our mass-bound ideological work.

Combines in Struggle for Implementation of 10th SED Congress' Economic Strategy

[Summary of article by Guenter Mittag, SED Politburo member and Central Committee secretary for economic affairs; pp 531-542. A translation of this article is published under the heading, "Mittag Urges Combines to Economize, Raise Production," in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

> [Text] Through the economic strategy issued at the 10th party congress, our party has a cohesive conception that conforms to the criteria of the 1980's. Its purposeful implementation in industry and construction, transportation and communication demands of the combines that they fully exercise their economic responsibility. Which experiences have the progressive combines gained and how can they be used for tapping great performance reserves? Growing importance to the struggle for higher effectiveness in the future attaches to a still better theoretical and practical control of reproduction theory.

Competition Aimed at Highest Efficiency

[Summary of article by Horst Heintze, social scientist, economist, member, SED Central Committee; Presidium member and National Executive Committee secretary in Free German Trade Union Federation (FDGB); pp 548-553]

> [Text] New deeds of labor, far transcending all previous targets, are the working people's assured response to the 10th party congress resolutions. Under the new competition slogan they are struggling for performance improvements at new dimensions. Wherein is the variety of these initiatives found, and how are they aimed at continued intensification? How does one manage to combine the struggle for high achievements with the perfecting of working and living conditions? Initiative enterprises are presented with respect to this, and from what they have done inferences are drawn for conducting our competition.

Microelectronics in Our National Economy

[Summary of article by Gerhard Tautenhahn, member, department chief, SED Central Committee; pp 554-562. A translation of this article is published under the heading, "Economic Effects of Microelectronics Development Discussed," in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

> [Text] Based on a strategic conception by our party leadership, the GDR today has achieved efficient capacities in the field of microelectronics and, thus, good starting positions for further accelerating its development and application and reaching international top standards in selected areas. Which are the most important tasks in years ahead for employing microelectronics in their full breadth--while also, and particularly, rigorously developing and using robot technology--and for achieving through a purposeful management of the innovator processes an optimum economic benefit and social effects?

Topical Lessons From 22 June 1941

[Summary of article by Prof Dr Stefan Doernberg, director, Institute for International Relations, GDR Academy of Political Science and Jurisprudence; chairman, GDR Scientific Council for Foreign Policy Research; vice president, GDR Committee for European Security and Cooperation; pp 563-569]

> [Text] Proceeding from the war aims by German imperialism against the Soviet Union, from the world historic victory over Hitler fascism, and from the fact that our people--in picking up the antifascist traditions in German history--has learned the lessons of 22 June 1941, the article shows that the importance and topical relevance of the lessons of that day are increasing with respect to the struggle against

war preparations and for peace and security in view of the confrontation course by the most aggressive forces of imperialism which are striving for military superiority and are seeking to undermine the influence of the peace offensive by the Soviet Union and its allies.

On the Ideological Work After the 10th Party Congress

[Summary of article by Dr Klaus Gaebler, member, SED Central Committee; chief, Propaganda Department, SED CC; pp 570-577]

[Text] With the SED Central Committee report to the 10th party congress we possess the scientific concept for coping with the challenges of the 1980's, for the sake of implementing our general line, which is aimed at the well-being of the people and the safeguarding of peace. The most important concern of our ideological work is to familiarize the communists, the working class and all the people with the great theoretical-ideological wealth of ideas of the 10th party congress and to mobilize them toward strengthening socialism, mainly through actively and consciously coping with our economic performance improvements, and for the struggle against imperialism and the dangers emanating from it.

Bulgarian Communists Plot Course for 1980's

[Summary of article by Dieter Grehl, staff employee, SED Central Committee; pp 601-607]

[Text] Despite more complicated international conditions, the last decade became a fuitful developmental phase in the history of socialist Bulgaria. Proceeding from such a positive balance-sheet, the 12th BCP Congress, in the sense of the policy of Dimitur Blagoev's and Giorgi Dimitrov's party, which aims at the well-being of the people and at peace, has issued the tasks for the continued construction of the developed socialist society in Bulgaria for the 1980's.

World of Capitalism in Crisis

[Summary of article by Prof Dr Hans-Joachim Hoehme, economist, deputy director, main department, GDR Institute for International Politics and Economics; pp 608-615]

[Text] After the 1974/75 crisis, which marked a caesura in the development of the capitalist world economy and, due to being intertwined with manifestations of the general crisis effective long range, reversed itself but slowly, the imperialist countries have once again landed in another cyclical crisis, which is analyzed in the present contribution. Its social effects will be the most serious since the 1930's. The more long range contradictions and disproportions coming with it will harm capitalist economic development far beyond the effects of a cyclical crisis phase.

DIRECTOR OF ACADEMY INSTITUTE OF SOCIOLOGY INTERVIEWED

Budapest NEPSZABADSAG in Hungarian 4 Aug 81 p 4

[Interview with Kalman Kulcsar, director of the MTA (Hungarian Academy of Sciences) Institute of Sociology, by Denes Kovacs: "The Scientific Mirror of Society"]

> [Text] Sociology is among the newer social science disciplines. The activity of the Academy's Institute of Sociology has become consolidated after several years of searching for the right path--as a result of debates, often sharp ones, related to sociology--, and has become the center of domestic sociological research which has trained a whole line of young sociologists. Its research as well as its researchers have earned international reputation. It not only participates in internationally coordinated programs but also directs some of these. We talked with Kalman Kulcsar, the Academy's corresponding member and the Institute's director, about the results and problems of their work in the recent years, and about the tasks ahead.

[Question] Evaluation has recently been completed in the Institute. What is your opinion about the successes and shortcomings of the work done in the last 5 years?

[Answer] Our prime efforts in the last plan period were aimed at concentrating our research work on truly the most important tasks, and helping to satisfy the domestic social needs by the questions we pose, as well as by the results of our studies. I can say in general terms that the Institute's work satisfies these requirements at least for the most part, and that our researchers have achieved many results some of which are also suitable for practical application, by discovering quite a few phenomena in our society, not to mention the internationally recognized theoretical and methodological results of our research. Our studies have significantly contributed to being able to form a picture about the fundamental processes of Hungarian society, about the most important interrelationships of the class- and strata phenomena, about the nature and roots of some of the social problems, and about the conditions, limitations and opportunities of consciously shaping our society. This is so even if we ourselves are most familiar with the difficulties and shortcomings of our research work.

Our activity is closely connected to some of the main directions of long range research plans, such as the efforts aimed at laying the foundations for improving the government, researching the questions of the socialist enterprises, evaluating the

economic and social demands related to the public education system, research projects related to the economic policy, and the studies examining the various social conditions and consequences of scientific and technological development. Medium-range research projects such as, for example, examining the class- and stratum structure of today's Hungarian society, and the changes in the socialist way of life, also tied down significant portions of the Institute's resources; these projects were initiated by the party's appropriate organs.

[Question] These seven topics you listed--it seems--contradict the requirement of concentration in the case of an institute in which fewer than 40 sceintific researchers are working.

[Answer] Obviously, not only our institute is working on the topics mentioned, but a whole series of research facilities and researchers in close cooperation with each other and this also satisfies the requirement of being interdisciplinary. We--as the basic institution--have special roles in two topics: in researching the social interrelationships of technological progress, and in researching lifestyles. This means that in these two areas the institute organizes and coordinates the investigations conducted at various locations. However, it is one of the shortcomings of topic specialization that these fields of research include very broad areas, and thus each institute developed the areas of concentration it deems most important. Nowdays, when the interest in sociology includes that the cooperation of sociologists is requested more and more in the most diverse research topics--and not only in ones dealing with the social sciences--, it is harder and harder for our institute to concentrate the research projects. But there are not enough trained sociologists in the country for these requirements, and therefore this "pressure" can also be felt in the institute's work. But in spite of all this I must say that in comparison with earlier years we have made progress in specialization, thanks in part to the fact that we have greatly decreased the number of investigations the institute may initiate, and on the other hand we have attempted to organize our research projects in such a way that our findings could be utilized in several areas of research.

[Question] The improper utilization of social science findings and thus also of sociological research, is a constantly recurring problem in our scientific life. How do you see the difficulties existing in this area?

[Answer] The results produced by our institute take shape mostly in research reports, and in various publications and studies; that is, their use itself depends very little on us. But there is also a good example for direct use: in making preparations for the party's 12th congress, the results of our research on lifestyle were used in the congressional documents. But the conclusions drawn from facts we discovered can be recognized also in some important socio-political decisions: one such case is, for example, is the consolidation of the industrial branch ministries, and the concepts of long range planning.

However, the way the results are received can be disturbed by several circumstances. I will mention just two of these: in practical applications people often define the needs too generally, and the concretization by the institute, and later the results thus obtained may be directed at something else. Or: acceptance of the results is especially difficult if the research findings draw attention to negative social phenomena, or if they confront deeply rooted views which reality has already passed by. In any case, we also consider it a recognition of our work that recently the

Council of Ministers assigned us the job of working out the overall--unified--social policy concept.

[Question] Among the institute's areas of research listed earlier, one of the areas generating the most interest is the study of the lifestyles and the basic characteristics in socialist Hungary. What are the most important conclusions defined on the basis of this research?

[Answer] I must note here also that under the direction of our institute, in addition to our workers, several other institutes of the academy and other institutes, and many other researchers also participated in this study. The research work started out with two goals: on the one hand we wanted to provide a comprehensive picture of the way of life in today's Hungarian society, and on the other hand [we wanted to provide a comprehensive picture] about the place and role of those factors which influence and determine how style develops. We summarized the results obtained in both areas in a final report, and by using and analyzing the various data sources, new data collections and other documents we were finally able to show how Hungarian society lived in the second half of the 1970's. The research exposed, and the report did not circumvent the contradictions experienced in our society today, such as, for example, the one which exists between the ideal lifestyle which has developed and the demands that have arisen on the basis of it, on the one hand, and on the other hand, the opportunities corresponding to the level of development of the production forces. One aspect of this is that for significant groups in our society, it is not yet possible at the present time to fulfill the demands generated by the ideal lifestyle which corresponds to the accepted system of social values with the earnings paid for work done within the regular working hours and under regular employment circumstances. The contradictions are smaller in the various component areas of lifestyles, for example, in food consumption, and in the supply of durable consumer goods; however, the difficulties in obtaining separate apartments, or the deficient supply of health care hinder the consolidation and dissemination of certain characteristics of socialist life. The research has also pointed out that the shortcomings which exist in some areas also have an effect on the development of lifestyle as a whole, and this unfavorably influences the public sentiment, and causes some groups in society to behave in a manner contrary to the socialist standards.

[Question] How successful will we be in applying what we have learned from the experience of recent years to research plans begun this year of the Sixth Five-Year Plan period. How will our tasks change in the coming years?

[Answer] The character of our activity and the main areas of our research work will not change significantly in the future. But we will exert greater efforts to further concentrate our work and to make better use of our modest resources. In accordance with this we placed the research of such topics on our agenda for the 1981-1985 plan period based on previous research and which are included in the long range national research plans, and also such topics where the political and national government considers research an urgent and timely task. In this manner we will continue to participate in the comprehensive scientific study of improving public administration, or more precisely: within this we will conduct mainly organizational studies--the main goal of which is to research the interrelationships and reasons for the various bureaucratic phenomena--, and we will also study the effectiveness of statutory provisions.

We will continue our research into lifestyle, with particular attention to the effects of the economic changes which took place in the second half of the 1970's had on the way of life. For the most part, the selected topics have special significance in the development of lifestyle as a whole. For example, the study of health care services, or the research into lifestyles of those disadvantaged in more than one respect; we will also continue to deal with the effect housing areas have on lifestyle. Especially important is the investigation program I mentioned before, with the goal of developing a comprehensive socio-political concept and to clarify the principles related to this, as well as working out the organizational conditions. In addition to this, the new research assignment for which we laid the foundations in several respects in recent years is very important because it serves to examine the adaptive and innovative capabilities of our society and to discover the social factors which affect the community. This research work views the factors which appear on the levels of the individual consciousness, the organization and the aegis, the "macrostructure" of society, paying particular attention to their interrelationships.

In summary: I have emphasized several times that new requirements and conditions are appearing in the development of our society, factors which cannot be ignored and which must be taken into consideration in making decisions. We try to thoroughly familiarize ourselves with them, and we must consider that in a given case our analyses may question some other scientific findings or also obsolete ideological viewpoints. Only in this way can we achieve those scientific findings which can expose the phenomena of changes in our society's basic processes. Thus with the methods and tools of sociology we can more effectively promote scientifically founded concrete social, political and economic decisions.

DIFFERENT VERSIONS OF REPORT OF WRITERS UNION COUNCIL PUBLISHED

Party Press Version

Bucharest SCINTEIA in Romanian 2 Jul 81 p 2

[Abridged text of the Report of the Writers Union Council]

[Text] Appreciating right from the very beginning that the writers of the country benefit from the general climate of democratization of our society, in the report it stressed that the decisive political event that marked the period being analyzed, May 1977 to the present, and that will serve as the sign for the years to come, was the 12th Congress of the Romanian Communist Party. Of great significance for the lives of all our people, the report said, the congress also shaped the future of our culture, and implicitly of literature. Through the decisive contribution of comrade secretary general Nicolae Ceausescu, the congress also opened for the people working in culture and art a new stage in the process of creative work and in defining their role in the life of the nation. Together with all the people, the writers have firmly expressed their adherence to the Romanian Communist Party's Program for the revolutionary transformation of our society.

The socialist concept of humanism stands at the basis of all political, social and cultural actions. As a well-defined idea it also acquired the idea of socialist democracy as an expression of participation and involvement in the history of all the people. The path from idea to practice is, naturally, a path of contradictions and permanent clashes between the old and new, and is the path of creating a better, wiser, more sincere man devoted to fellow man. This is the path endorsed by the party's program.

There is no doubt that the statements in the conference's Theses and in the Program for the Development of Literature, as pointed out in the report, are also the very principles that have guided us and will guide from now on in our activities. From their point of view, we will review certain characteristic aspects of Romanian literature today.

Numerous contemporary writings have deeply penetrated public awareness. Many of their writers can today be proud of having produced a well-done work that has a distinct nature and forms the object of a variety of critical analyses, that

are themselves sought out and appreciated. A strong group of talented young people have come to strengthen the ranks of the writers. A good portion of the books written in past years is studied in schools and universities and instills in the young people respect for work, the truth and right, for culture, socialist patriotism and the high ideals of communism.

The report stressed that this fact is the result of the new, favorable climate created by the literary works of the party, especially after the Ninth Congress, releasing so much spiritual energy.

Emphasizing that truly up-to-date literature reveals still insufficiently explored aspects of reality, illuminates new situations in social and individual existence and points out the problems that are truly interesting to the people, the report continued that the effective current nature of our writings is verified precisely through their ability to be of precious assistance to the party in this direction. One cannot reveal the contradictions of life and one cannot usefully militate through literature, that is, through art, for their resolution without a high and generous ideal. The revolutionary spirit of literature is directly tied to the committment for the cause of the revolution and for the carrying out of communism, of the ages-long hopes of humanity for a better and more just world and of a militant artistic attitude.

Prose, the report pointed out, recorded important successes in past years, and is on a full and solid upswing. Clear proof can be seen in our historical prose, that is prose conceived and conducted on historical themes and the great events of the social and national liberation struggle. There is hardly an unimportant stage of this tragic and heroic accomplishment that has not found its way in past years into artistic versions. In our books, stories, novels and plays, the current nature of the themes and immediate structure and the efforts of the majority building socialist values are represented more and more substantially and significantly on the thematic, conceptual and artistic level.

As in other types of works, the report noted, in poetry there have been new elements, significant changes, deeper and richer activities during the last 4 to 5 years. At the end of this decade, we assisted in the appearance of certain poetic works of great significance written both by certain authors with a broad activity and by others with a mature background in poetry. A fact that should be remembered is also the appearance and molding of a new promotion of poets. Pausing upon the themes and means of expression in poetry, the report noted at the same time that love for the country is a noble and profound sentiment in poetry as well as in life, serving as an endless and rich source of inspiration for poets. Valuable patriotic poetry must be promoted with all our energies.

In the context of developing all of literature, the report continued to say, dramaturgy recorded a powerful problematical extension and an increase in modern expression. Man's thoughts are today presented in new plays with a remarkable

philosophical sense. Historical drama has had new achievements stimulated by the happy circumstances in the life of the nation, achievements which illuminate ordinary events and people from the perspective of the present and the sentiments of the present. In recent years, there has been an assertion of the category of political theater. There has been a diversification of dramaturgical forms, from chamber pieces to a social fresco, from ironic comedies to political pamphlets, from monodramas to ontological tragedies. Through the contributions of the writers from all the generations, of all nationalities and from all over the country and through the public's massive following and the new interest of the publishing houses, art institutions and specialized critics, we can state that our national dramaturgy is living a remarkable creative moment.

The report then referred to the literature for children and young people, which has in recent years experienced a clear increase in quality and its varieties in the direction of thematic areas and the most diverse age groups. Currently, a literary area is being formed worthy not only of the interest of the over five million young readers, but also of those of a specialized literary opinion. The interest for scientific research and the effect of this research have massively influenced the writings aimed at the younger generations.

Then referring to the translations of literature by other peoples, the report mentioned that the number of special successes in the field of translation regarding poetry, prose and drama is extremely great. Recently, fundamental critical and essay works have come to complete this imposing review, contributing to the process of raising the cultural level of the Romanian reader and giving him the opportunity to acquire high cultural values, a phenomenon characteristic of the complex formative process of socialist humanism. In the spirit of our party's policy, the translations tend to involve the entire map of world culture. We are interested in the cultures from every continent and we can state with satisfaction that we have brought into our culture the works of numerous worthy authors from Asia, Africa and Latin America.

In discussing the value criterion that must stand in the center of our writers' attention, the report said that through several imposing contemporary works our literature has attained an esthetically high level and everything that will be done from now on will naturally take these new high points into consideration. Unfortunately, there is still publication of poor literature, stories of irrelevant facts, commonplace findings in prose or compositions lacking emotion in poetry.

The free exercise of criticism, the report pointed out, and the confrontation of different evaluations permit readers to form their own opinions that are as close to the truth as possible and ease the triumph of literature. The important idea here is the responsibility in criticizing writings without any concessions to the interests that oppose the progress of our literary, political and social affairs. Our criticism must be, to a greater degree, present in the ideological-esthetic disputes of the contemporary world, promptly and argumentatively taking

positions against those concepts that tend to separate art from humanist ideals and to propagate social obscurantism and indifferentism. Through this combative statement on the field of the great confrontations of ideas, our criticism has the opportunity to contribute to the spread of the humanist message in Romanian culture beyond our borders.

During these years, there has also been an imposing development of the historiography and literary theory sectors. It is necessary to recognize the growth in the professional scientific competence in this field. Beginning with the theories of materialist historical esthetics and with the recommendations of the party documents regarding the criteria for the critical use of our literary legacy and amply and usefully combining the traditional methodologies with the modern ones, literary historiography has succeeded in creating valuable works that have resolved questions of great national scientific interest in a relatively short period of time.

The fate of the Romanian language is naturally in the hands of the writers, more than anyone else, feeling in a certain way responsible for its destiny. We writers have the duty to work, through our writings, for the development and improvement of the Romanian language, just as we have the duty of protecting it. This task was left to us by our great predecessors and moves us to create our books, promote our culture and love our country.

A distinct place in the report was held by the literature of the coinhabitating nationalities (Hungarians, Germans, Serbs, Ukrainians and in Yiddish). The evolution in recent years attests to the furthering of the effort to reflect the social-political life in our country, the common homeland, where the unrestricted affirmation of values contributes to the strengthening of fraternal feelings through spiritual closeness and mutual understanding and esteem.

In reviewing the different activities of the Writers Union during the period analyzed, the report stated that one of the fields in which there was a clearer expression of the tendency towards acquiring a new quality was that of communicating with all the categories of workers, communication achieved in the most varied forms with an unprecedented scope and a substantial increase in efficiency. The source of this welcomed upswing is found in the initiative of affirming the revolutionary humanism in our socialist culture for the current stage, an initiative representative of the profoundly original thinking of the secretary general of the party, comrade Nicolae Ceausescu, and expressed in the establishment of the National Festival of Work and Creativity "The Song of Romania."

The union council and bureau stimulated and sustained the participation of the writers in cultural affairs in factories, schools, cultural centers from the cities to the villages. Meetings with readers, under their different forms - literary clubs, symposia, discussions about their own books and conferences and discussions regarding literature and the process of literary creation - in response

to the urgings of the party leadership there were hundreds of writers taking part, totalled over 3,000 during the 1977-1981 period, involving over 9,000 writers presentations and over 500,000 lovers of literature. One especially significant form of integrating the writers into cultural activities is giving the writers union and associations the mission to provide competent and unified guidance for literary circles and clubs.

Our union's council and bureau tasked the operational group and the "Cartea romaneasca" [Romanian Book] publishing house to complete and publish anthologies containing proofs of the writers' attachment to the party's policies. Thus, in a relatively short period of time the following works appeared: "Presedintelui tarii - omagiul scriitorilor din Romania" [The President of the Country - A Tribute from the Writers in Romania], "Izvoare nesecate" [Never-ending Springs] - in which the poets pay tribute to the liberation of the country, "Perspective comuniste" [Communist Perspectives] the writers' pledge for the 12th Romanian Communist Party Congress and "The Romanian Communist Party - 60th Jubilee."

In the 4 years to which we are referring, the work of the elected organs was led in a collective and democratic spirit. There was an effort to achieve a democratic climate of high principles, collegiality and respect. As was pointed out in the Theses of the National Conference, in literary affairs disputes appeared that were generated, naturally, by different artistic views and by sometimes divergent critiques of published books and trends stemming from creative work. But, there was no useful contribution to literature made by unprincipled expressions, intolerant criticism, personal squabbles and slanderous campaigns against certain members of our group.

Numerous times and even in today's message, the secretary general of the party, comrade Nicolae Ceausescu, pointed out that the writers in our country, the members of the Writers Union must unite their forces in order to produce the great literature worthy of the times in which we are living. Disagreements have no place on the literary front in socialist Romania, a front where principled relations, collegial relations of mutual respect must provide the atmosphere we need both to produce our works and to ensure a worthy place for the creators of literature to hold in our socialist society. At a time when all the Romanian people are closing ranks around the Romanian Communist Party, its leadership and the secretary general, comrade Nicolae Ceausescu, the writers in our country cannot but unite their forces.

According to the directives issued by the party leadership and in the spirit of substantially democratizing our literary affairs in order to discuss the problems of creative work and to reveal certain concepts and trends stemming from a clash of opinions, conferences were instituted by type of literary work. Thus, there were conferences on critiques, dramaturgy, poetry, children's literature, translations and universal literature.

An area of great significance in the activities of our union's council and bureau, the report went on to point out, is the guidance and the analysis of the activities of the literary publications and the "Cartea romaneasca" publishing house. In the union's publications, in the central and local press and on radio and television, writers were continually present through poems, prose, articles and essays which showed their full involvement in public affairs.

Pausing upon some of the problems related to the editorial process, problems discussed in meetings organized with the directors of the publishing houses, as well as in working conferences organized with the secretaries of the writers , associations in Sibiu and Bucharest, the report stressed the need to improve the system for establishing the size of the printing run and to resolve other problems related to the editing of books.

In the area of international relations, the activities of the Writers Union in foreign affairs was directly on a priority basis towards achieving certain priority objectives: broadening the writers' areas of contact with organizations, cultural institutions and persons in this field and with publications in the socialist countries and in the other countries of the world for the purpose of a more active exchange of spiritual values; propagating and distributing Romanian cultural and literary values in order to contribute to an ever larger understanding and appreciation of the achievements made in this field by socialist Romania; and, easing contacts between Romanian writers and those from abroad.

At the same time, the Writers Union carried out a sustained activity to propagate, distribute and translate Romanian literature into foreign languages. Special issues were produced of certain foreign magazines devoted to the most important problems of our contemporary literature, and volumes of Romanian poetry and prose were published in popular languages.

In the report it was pointed out that, in a material sense, all the actions of the Writers Union were supported from the incomes earned through the work of the writers and through literary activities, in the spirit of the principles of self-management and self-administration.

Under discussion in our conference was the "Program for the Development of Literature in Romania During the Next Four Years." In this program, it points out that the Writers Union, its working organs and organisms and all the writers will dedicate their energies in the future to carrying out the party's policies in the field of art and in culture in general, filling and ever more active role in resolving all the problems facing them, in stimulating the writers to deal with the great themes of creative work and in urging fruitful discussions capable of contributing to the real progress of contemporary Romanian literature. It is necessary for the Writers Union to pursue and more closely guide the

activities of the publications that they produce, permanently ensuring a climate appropriate for fruitful work and giving the necessary importance to the sector dealing with criticism and to the discussion that are carried out and their ideological orientation, objectivity abd principled integrity. The Writers Union also has significant obligations with regards to the political and professional training of young writers and the development of these writers in the spirit of socialist ethics and equality.

Through all their works, the writers understand how to contribute to the education of all the people in the spirit of humanism and patriotism and limitless love for the country in which we were born and in which we work and live. This represents a lofty duty of patriotic and revolutionary awareness for us and all writers to respond to the country's and communist party's call through an activity at the peak of the era in which we are living and through works that reflect the beauty and inner richness of these people, people involved in the uninterrupted raising of the level of material and spiritual civilization of the people. Under the sign of this responsibility and beauty, we will unite our forces in order to serve the socialist present and the communist future of Romania.

Writers Union Weekly Version

Bucharest LUCEAFARUL in Romanian 4 Jul 81 p 2

[Abridged text of the Report of the Writers Union Council]

[Text] Pointing out that the decisive political event marking the period that has passed since the last National Writers Conference is the 12th Congress of the Romanian Communist Part, the Report began by emphasizing that together with all the people the writers firmly expressed their adhesion to the Romanian Communist Party Program for the revolutionary transformation of our society.

At the last National Writers Conference, the Report pointed out, in his speech comrade secretary general Nicolae Ceausescu stated: "The party, state and people are waging a consistent and decisive struggle for the continued improvement of all the facets of economic and social life. Art and literary creative work must accurately represent this struggle of the people in order to overcome shortcomings and contribute to their elimination. Criticizing and uncovering shortcomings and combating the elements of the old that might still be encountered in different areas of society and in the people's awareness, literature must express itself, by using its specific means, as an active factor in the struggle against all negative phenomena. It is necessary, however, for us to be careful in this field, like in all fields, that because of deadwood we will not see the great and healthly forests and how our country develops and prospers."

From the perspective of this balanced view, we can conduct a review with a deep analytical spirit and a feeling of self-criticism of our work at the writing desk and of the state of the Union and the entire complex of circumstances that lead to the writing of books, the publication and then their movement into the public awareness.

Contemporary Romanian literature, the Report said, has won its superior status today effectively and intensely stating the current situation. This is a notion that the fruitful experience of the past years asks us to conduct a thorough amount of thinking.

Is it perhaps just the fact that it appeared during these years, or does the simple fact of being the place of action during the last decades give a book its current relevancy? Absolutely, no!

Authentic current relevancy is a much more complex quality. It involves laying out the deep implications of the era in the intimate existence of individuals and the observation of the unmistakable manner in which current historical, social and moral circumstances are influencing people and even changing their mentality, behavior and language.

And, the writings inspired in the past have awakened a lively, non-archivistic interest, in cases where it has proven to be of current relevancy, through an original, contemporary approach in comtemplating history.

Genuine current relevancy belongs to a distinct problem type. Simple views of current life say too little as long as they are not illuminated by a reflection capable of making sense precisely of our meaningful human experience. Contemporary literature worthy of this name explores those areas where the specific problems of the era spring forth. It fulfills an irreplaceable civic task, showing with the great revealing power of art the deeds, behaviors and phenomena upon which society must focus its attention. Valuable, truly militant literature for the cause of improving socialist construction and building communism is not thanked for illustrating known things and for repeating in an imaginery form, no matter how shining the work may be, that which has been said in a theoretical form countless times and more precisely, more exactly.

Literature that truly has current relevancy uncovers aspects of still insufficiently researched reality, illuminates the new situations of social and individual existence, or, in a word, brings up those problems that people are truly interested in.

True current relevancy is the breath of the man who does not want to fall into a fixed type of writing, since he has endless variety in life itself. His identity with the world and our times gives him the fact that he is a constitutive part of this, and at the same time the author and his work and the problems of contemporary life closely and permanently involve him.

The manner in which this man, as an expression of the affirmation of a superior human personality, becomes a literary personage serves as the source for several imperatives of the contemporary literary effort and the literature that is today being written in Romania. First, it must be observed that the man of whom we are speaking is developed in time and space and lives during a certain moment of historical events and in a certain place in the world. He belongs to a grouping that exists for its part in spatial and temporal coordinates. He is part of a history and he has a country. He thus has roots that fix him within a certain framework and a generater of characteristic spiritual expressions. And, if the literature that we write wants to remain faithful to its fundamental realism, it cannot do this except by reflecting in many ways this necessary relationship.

The living presence of the patriotic sentiment in important lyrical poetry, along the lines of a great and consistent literary tradition from Mihai Eminescu, Tudor Arghezi, Lucian Blaga and Octavian Goga, is the result of the same natural roots of the true man in the world to which, through destiny, he belongs. Its common cause is in deep levels and it keeps in mind history, ethos, language and traditions in culture and civilization, with all this decisively working in our structure as individuals in our way of viewing and understanding the process of life. Since patriotism cannot be merely an experience mastered through the frequency of certain symbols that transmit externally the idea of country and national awareness, but rather is an internal calling and an intimate feeling pumped into our being through the fact of belonging to the world in which we live and to the people whose sons we are. Patriotism is defined by that which we have deeply and lastingly imbedded in us, since it expresses our identification with the ideals and beliefs that involve us not just as casual individuals, but also as the conveyors of a message of spirituality of a long-term value. Certainly, the past, the relationship to great moments and history in the major sense are naturally a presence in this sphere, but we must speak thoroughly about broadening the perspective, about the need to incorporate new elements and about what we could call the socialist dimension of patriotism. Living here and now, we adhere to the values of the present, and we are taking part in the building of a world that is ours and fully expresses us. Much has been done in our literature in recent years - in novels, poetry and theatrical plays - to put to use the significance of the past and to reveal those dimensions that place us in the perspective of a rich continuity. The fields of the present, however, have remained less explored, especially those elements of living that have the power to contribute proofs about patriotism as a current experience in a socialist country.

Further, the Report uncovered some characteristic traits of literary development during the recent period.

In years past, prose recorded important successes, and is now on a full and solid upswing.

One clear evidence is our historical prose, that is, the literature conceived and written on historical themes about the great events of the social and national liberation struggle. There is hardly an unimportant stage of this tragic and heroic accomplishment that has not found its way in past years into artistic versions and views capable of constituting a "parallel history" of artistic essence.

A good understanding is the foundation of remembering. At the basis of both, the prose of the previous years made a valuable contribution. Proof can be seen in the interest with which the readers have greeted these attempts to scrutinize the path travelled by our people, in a relation where "the truth of art" has precisely proven to be a reverse success for "the truth of life."

It is no less true that our prose is still clearly recognizing its duties, especially with regards to the closest segments of this same "contemporary history," those from which the present is created and through which the future is made. But, it would be wrong if we did not show the successes obtained by our prose writers in this important sector.

In our books, stories, novels and plays, the current nature of the themes and immediate structure and the efforts of the majority building socialist values are represented more and more substantially and significantly on the thematic, conceptual and artistic level. It is a phenomenon that is occurring under our eyes and it must be sustained by all means.

With regards to those forms, techniques and styles that the prose of recent years has promoted, we can note with satisfaction the presence of a great variety. This variety of forms and styles represents a significant advance for all our recent literature. It can be easily recognized in the "art of the Romanian prose writer," an art capable of proving the validity of the most diverse osmoses between real and ideal, common and exceptional, daily and fantastic, lucid and romantic, dry and visionary. And, what is worthy of being shown, in the realm of certain esthetic compatibilities, remains the opportunity for all these forms and formulas, styles and types - ultimately diversified in so many ways that personalities explore them and ise them - to be saturated with a political, social and philosophical substance capable of giving them socialist unity and Romanian uniqueness. The lively interest of so many readers for the "true stories" which our writers are capable of writing requires a constantly larger awareness and responsibility. Literature that is constantly confronted by a public so interested and exacting finds it appropriate to fully respect and to honor their attitude with greater and greater books.

As in other types of works, in poetry there have been new elements, significant changes and deeper and richer activities during the last 4 to 5 years. Certainly, such a short period cannot make claim to be characterized as a stage in the process of a so-called artistic renewal. And, nonetheless, the end of the eighth

decade conincided with several important phenomena within the makeup of current Romanian poetry and was left to outline a corner of the future lyrical poetry picture.

Any attempt, even if it is tenative, to characterize the current moment of literature, and therefore, also for poetry, must keep in mind before anything else the existence on the literary level of a natural and useful "collaboration" between generations. In literature, it is very natural for the voices of the poets from all the generations to meet on some common wavelengths. These wavelenghts are the feelings of belonging to a spiritual space and to an historical era. There does not exist today in Romania a single true poet who can ignore our national roots and the ancient traditions of poetry in this corner of the world, for whom the country and the land does not represent a spiritual matter capable of giving him the security and pride to participate in an original, specific world. Nothing that is from this land of ours can be foreign to the poet. At the same time, all poets are aware of the giant revolutionary changes that our country has experienced since its liberation.

At the end of this decade,we took part in the appearance of certain poetic works of great significance written both by certain authors with a broad activity and by others with a mature background in poetry.

One fact that should be remembered is the appearance and shaping of a new promotion of poets. Whether this promotion will be considered by future literary history as a new generation or not is not too important in the review represented by this Report. But, the presence of young and very young talented authors cannot leave us indifferent.

Good poetry, like, we believe, that being written today in our country, is judged through the prism of two main elements: the major nature of the concern and theme and the variety of the means, combining the courage for the new with a thorough understanding of local and universal traditions. With regards to the first element, it must be said that only a poetry capable of reflecting the profound and complete spirituality of man - man as such, but also man from these lands - meets the passing of time. Poetry in our country appears to us to be such a mirror. This fact does not mean the encouragement of a discrimination of the type which, fortunately during a now-dead era, divided the subjects of poetry into two categories: an appropriate one where the poets were given motives, regulations and even the expressions that their poetry had to keep in mind, while in the other one other motives, regulations and expressions were excluded. We state that love for country is a noble and profound sentiment in poetry as well as in life, serving as an endless and rich source of inspiration for poets. Valuable patriotic poetry must be promoted with all our energies. If today no one denies, in contrast to the years of dogmatism, that poetry about love, elegy, eclogue or idyll is a variety just as legitimate as a hymn and an ode, it is no less true that we could sometime find certain tendencies to disregard one type or another and to renounce quality.

In the context of developing all of literature, dramaturgy recorded a powerful problematical extension and an increase in modern expression. In a general way, factology and illustrativism were mastered and successes were obtained in dealing with current activities through means of broad generalization. The thoughts of today's man is present in the new plays with a remarkable philosophic sense. Historical drama has had new achievements stimulated by the happy circumstances in the life of the nation, achievements which illuminate ordinary events and people from the perspective of the present and the sentiments of the present. In recent years, there has been an assertion of the category of political theater, putting into discussion the relationships of the individual with society, the problems of power and the relationships between social classes and parties in today's world in other countries, as well as trends of thought. Some plays, through impressive constructions, express the Romanian point of view on certain moments of world history.

Significant achievements were made in summing up the current state of morale and the complex phenomena which go into building the personality of man during our times. Also due to the continuing changes, even if they are relatively slow, in the new talent, some of whom come from other fields of writing, there has been a diversification of dramaturgical forms, from chamber pieces to a social fresco, from ironic comedies to political pamphlets, from monodramas to ontological tragedies. We can appreciate that through the contributions of the writers from all the generations, of all the nationalities and from all over the country and through the public's massive following and the new interest of the publishing houses, art institutions and specialized critics, national dramaturgy is living a remarkable creative moment.

In referring to the problems of literature for children and young people, the Report noted:

The children and young people of today are being formed within a renewed framework of existence. Their imagination is stimualted by other elements of life that, not too many years ago, did not exist because the changes in the environment are truly extraordinary. The exploration of space, satellite stations and space ships sent to far-off planets are realities in our times. The five year plan of the technical-scientific revolution has produced a certain ambiance in which are children are growing up, and the means of audiovisual communications, right at their fingertips, puts them in direct contact with these amazing achievements. The interest in scientific advances and the effect of these advances on human relations have massively influenced the writings aimed at the new generations. In recent times, science fiction has gained great popularity and has taken all types of styles, from philosophical speculation to social satire, recording not just a few valuable works, including some awarded international recognition.

In the best works for children and young people, we abandoned old literary gimmicks and boring, childish plots that attempted to mime the children's language. The works that still use such "techniques" have not completely disappeared.

These should be continually discouraged, as well as cheap stories, shallow improvizations and ostentatious and annoying writings that have results contrary to the formative intentions that children's literature strives to have.

No culture can exist locked within the limits of its own national values. Contacts with other types of spirituality stimulate the creative forces of a people, opening to them the horizon of universality.

During the years of socialism, through planned activities we have produced cultural work that we can be proud of. Numerous writers who know well different foreign languages and have the gift to be able to translate - a true and precious talent, have allowed us to have today important works from the world literary treasury translated into a Romanian version.

The number of special successes in the field of translation regarding poetry, prose and drama is extremely great. Recently, fundamental critical and essay works have come to complete this imposing review, contributing to the process of raising the cultural level of the Romanian reader and giving him the opportunity to acquire high cultural values, a phenomenon characteristic of the complex formative process of socialist humanism.

In the spirit of our party's policy, the translations tend to involve the entire map of world culture. The public in socialist Romania has stopped being aware of just some literature that monopolized general concern at one time and dictated tastes and styles. We are interested in the cultures from every continent and we can state with satisfaction that we have brought into our culture the works of numerous worthy authors from Asia, Africa and Latin America.

Today's world is the theater of a powerful confrontation between the new and the old and that also occurs on the level of artistic ideas, motives and forms. Translation cannot ignore ethical, ideological and esthetic criteria that are appropriate to our ideals. Works will be brought into Romanian culture that for a long time and in every corner of the world have illuminated the flame of humanism, but we will reject writings that propagate a lack of faith in man, that hint at dissolvent ideas, that cultivate lowly instincts and that exalt barbarism, cruelty and obscurantism.

The report spoke about the penetration of current literature into the broad public's awareness and about the fact that this literature, especially in recent years, has acquired great credit among the ranks of its readers. This status is due to the most part to the artistic values, since in the absence of these values everything that we have pointed out that constitutes specific aspects would be uninspired work.

Through several imposing contemporary works our literature has attained an esthetically high level and everything that will be done from now on will naturally take these new high points into consideration. Unfortunately, there is still

publication of poor literature, stories of irrelevant facts, commonplace findings in prose or compositions lacking emotion in poetry. Very frequently these expressions of literary incompetency seek their justification in thematic opportunities and in the fact that they respond promptly to certain requirements of the moment. But, what opportunities can be found in art lacking quality, what other effect than the irreparable compromise of certain noble goals?

Due to the criticisms made we must carefully discern between value and imitation, between talent and non-talent, doing this in a clear and rigorously objective spirit.

Destined to be read since only in this way can it exercise its formative actions upon the minds and souls, literature is vitally interested in the esthetic level of the masses. This has increased considerably along with the vast process of raising the workers' awareness and with the general spread of the educational environment, the spread of culture to the villages and the modernization of all production activities through the mastery of the advances of the technical-scientific revolution.

The improvement of the quality of the literature that is published brings along with it an elevation of society's tastes. To an equal degree, as the esthetic exigencies of the masses increase so is literary production obligated to higher artistic achievements.

In order for this dialectic interaction to operate normally, the exercise of literary critique must not be obstructed. Intimidations, pressures, the monopolization of opinions and the division of praise and insults according to group interests tend to impose pseudovalues, negatively influence the public's taste and, in the end, bring down the level of literature overall.

The free exercise of criticism and the confrontation of different evaluations permit readers to form their own opinions that are as close to the truth as possible and ease the triumph of literature.

The important idea here is the responsibility in criticizing writings without any concessions to the interests that oppose the progress of our literary, political and social affairs.

The opportunities for the objectivity of criticism to grow and for imposition and improvization to find its difficult position are influenced by a serious strengthening of the bases that serve the judgement of values and characterization in literary works. Furthermore, we are living during an era of unprecedented prosperity for literary theory. World and Romanian criticism have reached important clarifications in this field and today benefit from more rigorous and more exact methods and means to examine literary works.

Our criticism must be present to a greater degree in the ideological-esthetic disputes in the contemporary world, promptly and argumentatively taking positions against those concepts that tend to separate art from humanist ideals and propagate social obscurantism and indifferentism. Through this combative statement on the field of the great confrontations of ideas, our critcism has the opportunity to contribute to the spread of the humanist message in Romanian culture beyond our borders.

During these years, there has also been an imposing development of the historiography and literary theory sectors. It is necessary to recognize the growth in the professional scientific competence in this decade. Beginning with the theories of materialist historical esthetics and with the recommendations of the party documents regarding the criteria for the critical use of our literary legacy and amply and usefully combining the traditional methodologies with the modern ones, literary historiography has succeeded in creating valuable works that have resolved questions of great national scientific interest in a relatively short period of time.

This effort must be continued with greater perseverence. It is appropriate that attention be directed upon the exegeses regarding today's writers, whose works have crystalized and require an encompassing analysis.

The fate of the Romanian language is naturally in the hands of the writers, more than anyone else, feeling in a certain way responsible for its destiny. The national language is a living thing, the plasma from which our creations take shape. It cannot but hurt us when it is mistreated, sometimes in the mass media (the press, radio, television) or even in certain literary books. We writers have the duty to work, through our writings, for the development and improvement of the Romanian language, just as we have the duty of protecting it. This task was left to us by our great predecessors and moves us to create our books, promote our culture and love our country.

Further, the Report dealt with the problem of the literature of the coinhabitating nationalities. Its harmonious, encompassing development is a natural result of our party's policy in the nationality problem. The active presence of all the generations of writers from the ranks of the coinhabitating nationalities, the variety of the literary types and styles and the affirmation of specific traditions have become possible only in the climate of democratization of political, social and cultural affairs in our country, which has given an equal chance to all citizens regardless of their language and nationality. Under this same revolutionary humanist ideal, the literature in Hungarian, German, Serbian, Ukrainian, Slovakian and Yiddish has constituted an incontestable historical reality. The evolution in recent years attests to the furthering of the effort to reflect the social-political life in our country, the common homeland, where the unrestricted affirmation of values contributes to the strengthening of fraternal feelings through spiritual closeness and mutual understanding and esteem.

Due to the inalienable right of the unrestricted use of one's material language and of the cultivation of one's own traditions, in addition to the known phenomena in the development of poetry, prose and literary history and criticism in Hungarian, German, Serbian and Yiddish, in recent years there has also been a gratifying development of Ukrainian literature, as well as the appearance, for the first time, of works by Slovakian writers in Romania. It should be noted that the period to which we are referring has represented for German literature in Romania an especially productive period in which, in addition to the older writers, an entire group of talented young writers have vigorously worked.

Recently, translations from Romanian into the languages of the coinhabitating nationalities have had a superior quality compared to previous production. Their selection is more judicious. A sustained effort is needed to further this noble action by returning to certain important works that have not been translated or that were part of a less successful version.

Despite the fact that the translation of works in the literature of the coinhabitating nationalities has become more systematic, both in the selection and translation by showing competence and exigency, it is regrettable that many of these valuable books do not get the attention of the critics. It would be desirable, then, for the translations into Romanian of the new written works in Serbian, Ukrainian and Yiddish to enjoy increased attention on the part of editors.

If we try to outline some of the characteristics of the literature written in the languages of the coinhabitating nationalities, we should first of all accentuate the depth of the ethic message of the most successful works, the committed, active humanism, the firm base in the social-political structure, the accentuation of human dignity and mutual respect between peoples and the cultivation of ideas of patriotism as an expression of the quality of the artist's work and his civic duty. It is certain that these realities will lead, naturally, to the affirmation of new talents and to the achievement of new valuable works and the opening, by consistently applying the party's policy, of new horizons in the development of the literature of the coinhabitating nationalities in the Socialist Republic of Romania.

Continuing, the Report presented broadly the expressions and actions organized for the purpose of an ever broader participation of the writers in the country's cultural and social affairs and in the carrying out of the National Festival "The Song of Romania" and the celebration of certain great events and personalities. Similarly, the Report also presented the administrative and organizational activities of the Writers Union during the last 4 years, as well as of the Writers Association, the magazines and the "Cartea romaneasca" [Romanian Book] publishing house. The Report then referred to the Union's foreign affairs and the distribution of Romanian literature abroad.

Reflecting the dynamics of revolutionary changes, the Report said in conclusion, the process of changes that have occurred in the people's awareness gives literature the job of contributing to the creation of a superior man, the creator of high civilization and the conscious and enthusiastic builder of the socialist and communist society in our country.

The writers, through all their work, know how to contribute to the education of all the people in the spirit of humanism and patriotism and limitless love for the country in which we were born and in which we work and live. This represents a lofty duty of patriotic and revolutionary awareness for us and all writers to respond to the country's and communist party's call through an activity at the peak of the era in which we are living and through works that reflect the beauty and inner richness of these people, people involved in the uninterrupted raising of the level of material and spiritual civilization of the people.

Literary creative work has been, is and will always be a profound act of solidarity and an action of man filled with revealing significance. To offer spiritual nourishment to a people, their fellow man and those who will follow after us, is not only a work full of responsibility, but also of incomparable beauty. Under the sign of this responsibility and beauty, we will unite our forces in order to serve the socialist present and communist future of Romania.

SATIRIC COMMENT REFERS INDIRECTLY TO RECENT EVENTS

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1596, 2 Aug 81 pp 70-71

[Commentary in form of mock letter to editor by B. C., presumably Brana Crncevic]

[Text] Letters to the editor, for one reason or another, have taken on a significant position in Yugoslav journalism. Hardly a week goes by without some reader showing his brilliance, jotting down some extraordinarily daring idea while professional newspapermen blush with shame. They, too, would have said that if they were readers, but--alas!--they are not. Their responsibility is heavier.

Here is what I would write, if I were a reader, under the initials B. C. (address known to the editors).

Esteemed Comrade Editor,

The question of crime and punishment has always attracted me, yet pondering about sin and forgiveness has often deprived me of time. I realized long ago that, in a happy society, crime is bound to precede punishment, for there is surely no justice where a penalty is first imposed and then a matching person and matching crime looked for.

So far as sin and forgiveness are concerned, my ponderings are still more muddled. Sin ought to precede forgiveness, of course, yet all sorts of things have happened in the marvelous history of the human race: in the main, the human flock has been forgiven for what it has not done--except insofar as this same innocent flock has been punished for one reason or another. Forgiveness has always been more popular than punishment. Traders in forgiveness (confessors) would soak up with inquisitive ears the sin that the believer confessed, whispering or choking, and would then prescribe some modest punishment (an enigmatic prayer with a secret connotation) before passing out forgiveness.

So people became accustomed to the forgiveness of sin. Even when people know that they are not blamable, they gladly stand in line for an indulgence. Far better to be forgiven, surely, than punished for an evil that you did not commit.

Yet when arrogant human beings rejected religion and God in person, when they took everything into their own hands, they were unable to reject--even if they had wanted to--crime and punishment or the still more muddled artifice of sin and forgiveness.

So far as sin and the forgiveness of sin are concerned, the ideological churches have muddled slightly further a matter that was already muddled. Confession, as an act, has remained but has lost its mysterious significance. The sinner does not confess to God's agent whispering and choking, he begs forgiveness not from God but from human beings who are as mortal and sinful as he is. If for the moment we substitute the term "self-criticism" for "confession," and refer to the old-fashioned term "forgiveness of sin" as "criticism," we shall find ourselves on the trail of the old, familiar story.

Public confession (otherwise a very good idea), or self-criticism, determines the degree of the guilty party's sincerity in the eyes of his temporary, human jury. If you admit all your weaknesses in front of some gathering--if in desperation, for example, you say "I am shit"--two things may happen to you. They may agree that you are shit and reject you as shit; on the other hand, they may tell you that you are not shit because you admitted that you were. Moreover, if the sinner is adroit, if he manages to affect his jury with some touching sentence from the depths of his soul, he may shift the consciousness of the gathering in the direction of total sincerity. Several other speakers will rise to admit that they have committed similar, if not identical, acts. Thus your confession (self-criticism) may be transformed into your triumph.

Man is mortal, and sinful, and fragile; various byways await man on every road. Today you sin, tomorrow I will; I forgive you that I may be forgiven.

And that does not bother me: it is hard for a person to run away from his nature.

What bothers me is the unnatural (therefore intentional, contrived, artificial) link that has been drawn between crime and punishment and sin and forgiveness of sin.

Crime may be transformed into sin (if you are adroit, if you confess at the right time and in public, if you are--in a word--self-critical), and since we are all--alas!--sinful, we are inclined to forgive the sin. Once we have transformed crime into sin, why not transform punishment into criticism, into the forgiveness of sin?

For example: those who were obliged to look were not looking! Those who were supposed to prevent things were not preventing anything! Those who were bound to be alert were surprised!

And, already accustomed to public confessions, we say: what can you do, the folks did't see, they didn't prevent things, they were surprised, that's no crime, that's a sin!

And none of your newspapermen, rebuked from this quarter and that quarter, dares any more (dear Comrade Editor!) to investigate the possibility that some folks might have seen something, that they might not have wanted to prevent anything, and that they were not surprised!

By the logic of things, the enemy is capable of anything except surprising us.

But if we are surprised, that is naturally no transgression, that is only a sin.

That is why, so as not to be guilty, so as to be only sinful, we are surprised.

And now we ask the enemy to be honest, to speak out honorably, decently: "I am your enemy, I surprised you!" Instead, we obtain answers on the order of "I am surprised too!"

I want to say that, as I read the latest news (in your publication and others), I have been considerably surprised. For that reason (eventually if not right away), an offense against the state ought not to be transformed into an ideological sin. And vice versa, dear Comrade Editor; and vice versa.

Respectfully, your reader B. C. (address known to the editors).

DECISIONS ISSUED ON CLOSING NINE CONSULATES

[Editorial Report] The No 43, 7 August 1981 issue of SLUZBENI LIST SFRJ, the Belgrade official gazette, publishes (pages 1124-1125) 21 May 1981 decisions "temporarily" closing the Yugoslav consulates in Luxembourg; in Marseilles, France; Calcutta, India; Izmir, Turkey; Goeteborg, Sweden; Karachi, Pakistan; Alexandria, Egypt; Ravensburg, West Germany; and in Linz, Austria.

CSO: 2800/331

BRIEFS

TETOVO SUBNOR OFFICIAL RESIGNATION--The main subject of the 5 August 1981 meeting of the presidium of the Tetovo Opstina Council of SUBNOR [Federation of Associations of Veterans of the National Liberation War] was the report on the political-security situation in the opstina. In Tetovo ideological-political action is increasing in the identifying and prevention of actions arising from Albanian nationalism and irredentism in which the veterans of this area are directly and actively involved. It was stressed that the enemy has become entrenched in certain areas and that there is a tolerant attitude in areas which are designated as the center of actions based on Albanian nationalist and irredentist positions. Also stressed was the need for greater commitment by all citizens and working people and especially SUBNOR members to accelerate the process of differentiation through concrete and personal example. The meeting unanimously accepted the resignation of Cemal Hajrulari, member of the Opstina SUBNOR presidium who, as a member of the presidium of the "Dzeladin Zekiri" cultural-artistic society bears responsibility for the removal from a bus of two pictures of Comrade Tito during the 1980 tour of this society around Albania and for changing the main program of this society's performance [there]. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

ANTONOV AN-72 AIRPLANE DESCRIBED

Prague LETECTVI A KOSMONAUTIKA in Czech No 9, May 81 pp 340-342

[Article by Jan Cech and Eng Tomas Hyan: "An Airplane This Is Being Talked About: the Antonov An-72"]

[Text] The "72" is the latest known design of one of the most renowned Soviet designers, Oleg Konstantinovich Antonov, who became 75 years old this year. Even as a student of 18 he built a glider, and he stayed with motorless aircraft for several years. By 1939 the Soviet Union had produced more than 5,000 gliders designed by Antonov, including sports, training, cargo and airborne assault models. They were also used to supply the troops during the Great Patriotic War: for example, during the second glider assault in Polotsko-Lepelskaya Oblast in 1943, A-7 gliders carried about 250 tons of materiel and 472 troops.

Later Antonov devoted himself to motor-powered aircraft, among the best known of which we may mention the Evergreen An-2, a multipurpose biplane which went through more than four versions and is still produced today; the An-24, An-26 and An-32 transports, the An-10, An-12 and mighty Antaeus An-22 freighters and the like. With the last-mentioned machine, Soviet fliers have set 22 world records for speed and ceiling with loads from 32 to 100 tons, while Aeroflot has used the twin-motor An-24 to carry more than 300 million passengers. This economical aircraft has been bought by carriers in 23 countries.

When in 1932 the Romanian physicist Henri Coanda applied for a French patent on his invention, in which the exhaust gases of a jet engine were blown across the wing section, no one paid attention. As late as 1949, the famous Czech designer Eng Pavel Benes called this patent "odd." The fact that in the 1970's both Oleg K. Antonov and the Boeing company resorted to it, in the An-72 and the YC-14 respectively, indicates what roundabout routes technical progress may take.

In 1979, Antonov's An-72 stopped at Ruzyn near Prague on its way to the Paris Air Show. We now give an account of this aircraft, which we had a chance to inspect.

The Antonov An-72 is the first turbojet aircraft from Antonov's design bureau and the first Soviet aircraft to use the Coanda effect. On first look, one's attention is arrested by the engines, which are unusually mounted on the upper sides of the wings. They are turbofan engines with a high bypass ratio, the first of their type to be developed in the Soviet Union. They are also used on the Yak-42 and

are designated the D-36 (designed by Lotarev). They have powerful thrust reversers which make up the entire rear part of the engine nacelle.

Now let us turn to the Coanda effect itself. The new generation of high bypass ratio engines, which produce large quantities of relatively cool, high-speed exhaust gases, brought back the idea of blowing these gases across the wing section and producing lift on it even when the aircraft has zero velocity. Antonov and the Boeing company both decided to use the Coanda effect in the same way: they placed the engines ahead of the leading edges of the wings on their short-takeoff-and-landing aircraft.

The An-72 is a high-wing aircraft. The wing has Fowler flaps divided into two sections (each with its own guides). The inner parts of the flaps, behind the engines, have two slots and can be controlled separately (probably only in the prototype). The outer flaps are three-slotted. The flap guides and controls are adopted from the Tu-154. The wing has a slot on the leading edge and is a multispar design, as in the IL-76. The aircraft has a fuselage of circular cross section ending in a loading ramp. The design is patented not only in the Soviet Union but advanced capitalist countries as well: the United States, France, the United Kingdom, Italy and Sweden. The ramp doors are hydraulically controlled and are similar to those on the An-26. The cargo area has seats for 32 passengers which can be folded against the walls. The floor will be quipped with a roller track for easy loading and handling of cargoes on pallets or in containers measuring 1,900 x 2,438 x 1,460 mm. The cargo space of the prototype has a crane track with four hooks. It is 9,000 mm long, 2,1000 mm high and 2,200 mm wide. The maximum payload is about 2,500 kg, but the cargo space can be modified to carry 21 patients with attendants.

The pilot's cabin has instrumentation for two pilots and a nose seat for the flight engineer. The instrument panel has the usual navigation instruments and engine gauges of an entirely new design which have never before been mounted on a Soviet aircraft for Aeroflot. The middle panel is taken up by columnar temperature, pressure and fuel gauges with cylindrical scales. The other engine instruments are of the usual types. The engine starting levers are on the central console between the pilots, which also holds the spoiler control at the captain's right and the controls for both flap sections and the slots at the copilot's left. This nontraditional arrangement can also be seen only in the prototypes. The onboard equipment also includes a weather radar screen, the antenna for which is located in the nose under a plastic cover.

The prototype which was in Prague and Paris is named the "Eksperimental'nyy" and is designated the SSSR-83 966 (this was the second prototype; the first was designated SSSR-19 774). The two prototypes differ considerably from each other. The first has a box containing a drag chute above the cargo doors and two stabilizers at the rear. In addition, the rudder of the second modification has been changed. The taper to the top of the tail surfaces area is different: it is now longer and slimmer. The engine nacelles are also altered. Some in-flight photographs of the first prototype showed a Pitot tube mount forward.

The aircraft has retractable undercarriage of the tricycle type. There are four main undercarriage legs, and each wheel, with a low-pressure pneumatic tire, is

mounted on one leg. Between the legs of the main landing gear, the SSSR-83 996 had a mechanical load indicator. This type of undercarriage enables the aircraft to operate from unimproved airstrips. In order to prevent foreign objects from entering the engines, they were mounted on the upper sides of the wings, which gave the design team the idea of using the Coanda effect.

The first prototype was flown on 22 December 1977 and the second a month later. At the time of the Paris Air Show, both had flown more than 1,000 hours in 300 flights, according to Oleg K. Antonov's statement at a press conference in Paris. But development of the aircraft has not yet ended. The Soviet flight organization Aeroflot plans to introduce the "72" into areas with difficult accessibility where its capability for short takeoffs and landing on unimproved airstrips will show to advantage. The Soviet foreign trade enterprise Aviaeksport recently included the An-72 in its export selection. The advertising material also stresses the ease of handling of the aircraft, which is said to be no more demanding then the An-24 and An-26.

Technical Data on the An-72

Wingspan	25.83 meters
Length	26.58 meters
Height	8.24 meters
Maximum takeoff weight	30,500 kg
Maximum payload	7,500 kg
Maximum cruising speed	750 kph
Engine thrust	2 x 63.8 kN
Ceiling	11,000 meters
Range	
with maximum payload	1,000 km
with maximum quantity of fuel	3,200 km

SOVIET ATS-59G IN ROMANIAN ARMY--The Soviet ATS-59G artillery tractor has also been introduced into the ground forces of the Romanian People's Army. Our photograph [not reproduced] shows Romanian soldiers servicing an ATS-59G on a wash ramp. The tracklaying artillery tractor weighs 13.75 tons, and can carry a 3-ton load and tow up to 14 tons. The vehicle has a diesel engine with 221 kW (300 hp) at 1700 rpm. Top speed with trailer on unpaved roads is 22 to 27 km/h; range with trailer is 500 km (also see issue 4/76, p 178). The forward driver's cab seats four soldiers. [Text] [Frankfurt/Main SOLDAT UND TECHNIK in German Vol 24 No 7, Jul 81 p 395] 8545

COUNCIL OF MINISTERS ISSUES STATUTE FOR YOUTH AFFAIRS OFFICE

East Berlin GESETZBLATT DER DEUTSCHEN DEMOKRATISCHEN REPUBLIK in German Part I No 36, 31 Dec 80 pp 369-372

[Official text of "Statute of the Office for Youth Affairs of the German Democratic Republic Council of Ministers--Council of Ministers Resolution--dated 1 December 1980," signed by W. Stoph, chairman, GDR Council of Ministers]

[Text] Article 1

(1) The Office for Youth Affairs of the German Democratic Republic Council of Ministers (henceforth referred to as Office for Youth Affairs), as an organ of the Council of Ministers, ensures the implementation of state tasks in socialist youth policy. It fulfills its tasks on the basis of the decisions by the workers class party, the GDR Constitution, the laws and other legal provisions, in close cooperation with the Central Council of the FDJ.

(2) The Office for Youth Affairs relies in its work on the decisions of the FDJ. It ensures coordination with the FDJ Central Council in preparing decisions for the Council of Ministers that affect the life of youth and in supervising the implementation of the GDR Youth Law and the state tasks of socialist youth policy.

(3) The Office for Youth Affairs aims its activity at the main concern of socialist youth policy, the communist education of all young people. To that end, it exercises an influence on the political-ideological work of the state and economic functionaries with youth, the promotion and development of economic activities of youth, its socialist cooperative work and scientific-technical creativity, its comprehensive participation in management and planning, its military policy education and training, and its military service preparation, including long-term provisions for new military career generations, and its intellectual-cultural and sports and tourist activities.

(4) The Office for Youth Affairs, as charged by the Council of Ministers, controls and analyzes the implementation of the GDR Youth Law and generalizes proven experiences of the state organs in the implementation of socialist youth policy. On behalf of a uniform solution of state tasks in socialist youth policy, it prepares appropriate decisions for the Council of Ministers. The Office for Youth Affairs submits suggestions for setting down youth policy tasks in legal regulations or decisions by the Council of Ministers.

(5) The Office for Youth Affairs recommends measures to the Council of Ministers for implementing the GDR Youth Law. It has the right to ask the competent central state organs and bezirk councils for recommendations and position papers on it. The Office for Youth Affairs exercises influence on the preparation of youth promotion plans and on conducting the Week of Youth and Athletes.

(6) The Office for Youth Affairs works together with the central state organs and the bezirk councils. It has the right to supervise the activity of the central state organs and the local councils in the implementation of the Youth Law and the preparation of decisions by the Council of Ministers. Exempted from that are state organs and their institutions as specified by the Council of Ministers.

Article 2

(1) The Office for Youth Affairs is directed by the head of the Office for Youth Affairs in accordance with the principle of individual direction upon collective consultation about basic issues. The head of the Office for Youth Affairs is responsible and accountable to the Council of Ministers for all the work of the Office for Youth Affairs. A staff is available to him as a consultative organ.

(2) The head of the Office for Youth Affairs issues orders and implementation regulations within the scope of his competency.

(3) The head of the Office for Youth Affairs is responsible for the fulfillment of the tasks assigned to him in the field of national defense including civil defense and internal order and security.

(4) The head of the Office for Youth Affairs, in conformity with the Youth Law, ensures close cooperation with the FDJ Central Council and coordination with the managements and boards of other social organizations, particularly the FDGB, the DTSB of the GDR, and the GST.

(5) The head of the Office for Youth Affairs has to inform the Council of Ministers and its chairman on basic issues in the implementation of state tasks in socialist youth policy. He has the right to make recommendations to the Council of Ministers about receiving reports from ministers, heads of other central state organs, and chairmen of local councils.

(6) Agreement from the head of the Office for Youth Affairs is required for legal regulations issued by the ministers and heads of other central state organs which contain stipulations for the implementation of state tasks in socialist youth policy.

(7) The head of the Office for Youth Affairs, in cooperation with the state secretary for physical culture and sports, ensures the direction and supervision of the bezirk council members and department heads for youth affairs in physical culture and sports. He has the right to give them instructions within the scope of his responsibility. With the local council members and department heads for youth affairs, physical culture and sports, and with concurrence from the state secretary for physical culture and sports, he arranges for advanced training and courses.

Article 3

(1) The head of the Office for Youth Affairs ensures that the state tasks in socialist youth policy are a component of long-range planning, of five-year planning and annual planning and of the accounting given for them. To that end, he cooperates with the State Planning Commission and other central state organs and the bezirk councils and submits appropriate recommendations.

(2) The head of the Office for Youth Affairs, upon concurrence from the FDJ Central Council, submits recommendations to the competent central state organs on including tasks and objectives in their planning. He assists the central state organs and bezirk councils in the planning of state tasks in socialist youth policy.

(3) The head of the Office for Youth Affairs, together with the State Planning Commission, the competent central state organs and the bezirk councils, prepares for the Council of Ministers the long-term plan for youth facilities and youth accommodation as an element of central planning.

Article 4

(1) The head of the Office for Youth Affairs, in concurrence with the FDJ Central Council, the FDGB National Executive Committee, the Presidium of the Chamber of Technology, and the central executive board of the German-Soviet Friendship Society, focuses on the fundamental tasks for the development of the movement of the Fair of the Masters of Tomorrow.

(2) The head of the Office for Youth Affairs directs the central working team of the Fair of the Masters of Tomorrow. He coordinates and supervises the activity of the central state organs developing the movement of the Fair of the Masters of Tomorrow and in preparing and conducting the Central Fair of the Masters of Tomorrow. To that end he cooperates with the central managements and boards of the social sponsoring organizations.

(3) The head of the Office for Youth Affairs is accountable to the Council of Ministers for preparing and conducting the Central Fair of the Masters of Tomorrow.

Article 5

(1) The head of the Office for Youth Affairs is responsible for assuming central state tasks in developing youth tourism. In concurrence with the FDJ Central Council, he ensures the measures necessary in support of the youth travel bureau of the GDR, "Jugendtourist."

(2) The head of the Office for Youth Affairs, in concurrence with the FDJ Central Council, sets down requirements for the development of youth tourism facilities. He directs, controls and supports the activity of the local councils in implementing state tasks in the field of youth tourism.

(3) The head of the Office for Youth Affairs ensures the registration of youth tourism facilities with the Office for Youth Affairs.

Article 6

(1) The head of the Office for Youth Affairs ensures the direction and control of the central state organs and local councils in preparing, correlating and funding the material, financial and personnel tasks for the development of youth tourism facilities as an element of five-year and annual plans and their implementation.

(2) The head of the Office for Youth Affairs is responsible for preparing and implementing the investments in the Office for Youth Affairs. The central organization staff in the Office for Youth Affairs handles the tasks of the investment applicants.

(3) The head of the Office for Youth Affairs, in cooperation with the competent central state organs, ensures the preparation of standards for the construction, maintenance and furnishing of youth tourism facilities. He exercises an influence on preparing model and standard projects and their application in youth tourism facilities.

(4) Studies and projects for the reconstruction and new construction of youth tourism facilities require the concurrence from the head of the Office for Youth Affairs.

Article 7

(1) The head of the Office for Youth Affairs coordinates the activities of the central state organs in preparing and implementing the vacation activities of pupils and apprentices. To that end he cooperates with the social sponsoring organizations, the FDJ Central Council, the FDGB National Executive Committee, the DTSB National Executive Committee, and the GST Central Executive Board.

(2) The head of the Office for Youth Affairs is the chairman of the central committee for vacation planning at the GDR Council of Ministers. In concurrence with the central managements and boards of the social sponsoring organizations and the heads of the competent central state organs, he ensures the direction for implementing the vacation activities of pupils and apprentices. He settles the responsibility and principles for the vacation planning committees under the local councils.

(3) The head of the Office for Youth Affairs analyzes the development of the vacation activities of pupils and apprentices and informs the Council of Ministers about results and experiences.

(4) The head of the Office for Youth Affairs, in concurrence with the FDJ Central Council and the competent central state organs, lays down the requirements for the development of central pioneer camps. He supervises the activity of the competent central state organs and local councils in developing the camps as an element of five-year and annual planning.

Article 8

(1) The head of the Office for Youth Affairs is responsible for the state management of youth research in the GDR.

(2) The head of the Office for Youth Affairs ensures the analysis of research results. He assists the central state organs and local councils in using the results of youth research.

(3) The head of the Office for Youth Affairs passes on the statute of the Central Institute for Youth Research as an institution within the Office for Youth Affairs.

Article 9

(1) The head of the Office for Youth Affairs is responsible for developing relations with the competent state organs of the socialist states in the field of youth policy.

(2) The head of the Office for Youth Affairs in cooperation with the competent central state organs ensures the exercise and implementation of the rights and obligations arising in the field of the state tasks of socialist youth policy from international law treaties and the GDR's membership in the United Nations and its special organizations.

Article 10

The head of the Office for Youth Affairs, in cooperation with the FDJ Central Council, submits to the chairman of the Council of Ministers, in conformity with legal regulations, recommendations for awarding youths and youth collectives and paying tribute to state and economic functionaries in recognition of outstanding distinctions in the implementation of the socialist youth policy. His responsibility, according to legal regulations, jointly with that of the FDJ Central Council and the FDGB National Executive Committee, is to examine the recommendations for state distinctions for youth collectives, youths and persons who greatly distinguished themselves in the communist education of youth.

Article 11

(1) The head of the Office for Youth Affairs is responsible, within the scope of his competency, for strictly abiding by plan and finance discipline and ensuring highest effectiveness in the placing of material and financial assets.

(2) The head of the Office for Youth Affairs is responsible for the planning of material and financial assets and the personnel requirements in the Office for Youth Affairs and its subordinate facilities and controls their effective use. He ensures the orderly preparation and implementation of the budget of the Office for Youth Affairs and the budgets of its subordinate facilities.

(3) The head of the Office for Youth Affairs passes on the job slots in the subordinate facilities of the Office for Youth Affairs and controls their being observed in conformity with legal regulations.

(4) In conformity with the FDJ Central Council, the head of the Office for Youth Affairs ensures the use of funds on the central account of young socialists in accordance with legal regulations.

Article 12

(1) The head of the Office for Youth Affairs has two deputies. The secretariat of the FDJ Central Council proposes their appointment to the Council of Ministers. The Office for Youth Affairs has a departmental structure. The structure and job slots in the Office for Youth Affairs are confirmed by the chairman of the Council of Ministers.

(2) The head of the Office for Youth Affairs is responsible for the rational structure of labor organization in his sphere of responsibility, for ensuring order and security, and for enforcing the socialist thrift principle. He is responsible for the direction and supervision of the executive associates subordinate to him and exacts accounting from them regularly. The head of the Office for Youth Affairs has the right to issue instructions to the executives and associates in the Office for Youth Affairs.

(3) The head of the Office for Youth Affairs is responsible for the selection, development, education and advanced taining of the personnel. He ensures the employment of the personnel in the Office for Youth Affairs and the formation of an employment reserve. He appoints and dismisses the executives in the subordinate facilities and starts and terminates the employment contracts of the associates in the Office for Youth Affairs.

(4) The head of the Office for Youth Affairs ensures the direction and supervision of the executives in subordinate facilities and has the right to issue instructions to them.

Article 13

(1) The Office for Youth Affairs is a juridical person and budgeting organization. It has its seat in Berlin, capital of the GDR.

(2) The Office for Youth Affairs is represented in legal matters by the head of the Office for Youth Affairs or, in his absence, by a deputy or a person delegated for that purpose by him. Associates of the Office for Youth Affairs or other persons may, by written authorization from the head of the Office for Youth Affairs, represent the Office for Youth Affairs.

Article 14

(1) This statute goes into effect on 1 January 1981.

(2) It supersedes:

--The 17 May 1962 decree on the statute for the Office for Youth Affairs (GBL, Part II, No 42, p 367); and
--the 8 May 1975 resolution on providing the head of the Office for Youth Affairs with juridical authority (GBL, Part I, No 24, p 434).

NEW EQUIPMENT FOR ARMORED FORCES DEVELOPED

East Berlin VOLKSARMEE in German No 29, 1981 signed to press 13 Jul 81 p 8

[Article by Lt Col W. Kopenhagen: "Purposefully Oriented Toward Main Tasks; Notes From the Innovator Conference of the Tank Services"]

[Text] The innovator conference of the tank services in mid-May 1981 was able to determine that the innovator movement in this area has continued to grow in the last 5 years. Thanks to numerous initiatives on the part of its members, the tank services have, for example, increased the number of exhibits at the formation fairs by 30 percent and for years have regularly shown eight to ten significant innovations in the exhibition section of the NVA [National People's Army] at the ZMMM [Central Fair of the Masters of Tomorrow] in Leipzig, which corresponds to about 15 percent of all NVA exhibits. Statistically seen that is an encouraging picture. Still, much more important is this: Most of these innovations are produced collectively according to plan, that is, purposefully oriented and concentrated toward fulfilling main tasks in training, utilization, maintenance and repair, as well as material and technical safekeeping.

Innovators also face a number of interesting and tricky problems during the next few years. In the future there will be no more training time available than now. More efficiency is needed to assure the mastery of a number of new systems and components. The innovators are to help guarantee that the latest findings of scientific and technical progress are very rapidly transferred into military practice.

What tasks result therefrom specifically for the task services? As before means and methods of purposefully improving technical and driver's instructions for tanks constitute a very extensive field of activity for innovation. In this regard the main consideration is to develop vivid and realistic means of instruction that will contribute to illustrating particularly complicated technical operations. Examples in this area are the driving trainers already introduced into training installations and work shops for BMP and tanks, the training stands and functional small tanks, along with a series of replicas and cut-away models for entire vehicles as well as individual components such as, for example, tank cannons and gas turbines.

Innovations with a direct benefit to training have also come into being in the units and the schools for noncommissioned officers. Included are devices for shutting off engines for driving instructors and training turrets for the SPW (armored personnel carrier)-60PB and the SPW-PSH.

All told the innovations have led to an increase in training efficiency of about 15 to 20 percent. A further focal point for future activity by innovators consists in perfecting the maintenance and repair processes in the units, in repair units in the formations and in the tank repair shops. Of concern in this regard is the organization and technological improvement of processes as well as the production and use of new methods and equipment. The goal is to increase work productivity and further improve job quality, further reduce the time required for maintenance and repair in the troop, and to make maintenance and repair work under field conditions even more economical and efficient. In recent years 56 percent of all suggested innovations submitted for the tank services dealt with improving the use and repair of tank technology or with increasing work productivity in the repair installations. Representative of the many innovations would be the set of special tools for mechanics developed by the collective of Lieutenant Colonel Hermann. In conjunction with the 1980 ZMMM this collective was recognized by the minister of national defense.

Such innovations as the welding table by Private First Class Pech and the engine block capable of disassembly by Sergeant First Class Pomowski and the civilian Kohl rationalize repair under field conditions. Both objects have been incorporated in the equipment.

These and other suggestions contribute to increasing work productivity at an annual rate of about two to two and a half percent. In this regard the collectives for innovation should continue to seek solutions, according to leading officers in the tank services.

An equally extensive field of activity for innovation consists in increasing the readiness for action of tank technology and in reducing the time required to achieve combat readiness. Many problems have already been solved in order to improve preventive measures guaranteeing the reliability of tank technology, in order to reduce the time needed to put away tank technology following troop exercises, or in order to assure an orderly utilization of armored vehicles.

To name just a few examples: The valuable ideas of several innovator collectives contributed to the development of testing equipment with which the compressed air system in tank technology can be tested installed. With the aid of this equipment valuable time can be saved that would otherwise be spent in disassembly and assembly of components along with their inspection at test stands. An innovation by the collective associated with Comrade Engineer Pohl for the electric transfer pump MZA-3 saves time and prevents TS losses. The introduction of compressed air start filling equipment as well as systems to aid in starting and extraneous current feed into the armored vehicles fulfill further prerequisites for decreasing starting time.

Many suggestions and proposals by innovators have gone into all of these measures. In the final analysis they led to a decrease of a total of 12 percent over the last 5 years in the time required to put tank technology into operation. In this area as well the innovators in this service can continue to contribute with their ideas and suggestions in fulfilling future tasks.

Another word concerning the prosessing time: Those responsible see in the more rapid forwarding of suggestions for innovation the point of departure for reducing this time by about 15 percent. But the innovator himself can reduce the processing time by providing complete and substantive suggestions which will make further inquiries and extra work unnecessary.

ACADEMICIANS ANALYZE SIGNIFICANCE OF PRUSSIAN HISTORY, CULTURE

Relevance of Prussian History Studies

East Berlin BERLINER ZEITUNG in German 19 Mar 81 p 9

[First of 14 articles of 'Prussia--Legend and Reality' series, by Prof Dr Horst Bartel, Central Institute for History, GDR Academy of Sciences: "Our Picture of History Has Sharp and Valid Features--Basic Outline Drawn by Our Classic Forerunners --Tasks of Today's Historians"]

> [Text] Beginning today BERLINER ZEITUNG publishes a series of contributions to the history of Prussia from the end of the 17th century to the dissolution of the Prussian state in 1947. The authors are scientists at the Central Institute for History, GDR Academy of Sciences. The introductory contribution deals with the theme, "We and Prussia."

Why are we dealing now so intensively with the history of Prussia?

That, or something like that, is the question that is often being asked. As an historian, one is tempted to respond, in amazement, with a counter-question: Have we dealt less intensively with Prussian history in previous years? Actually, it never was a side track in Marxist-Leninist historiography. Granted, dealing with Prussian history today is important not only for an historian but especially also for a broad public in connection with the question about our relationship with our historic heritage, and thus gains interesting and new topical aspects.

This issue has in recent times become ever more clearly subject to sharp ideological confrontation between the two German states. Many more people thus find themselves confronted with the topic of Prussia than some 15 or 20 years ago. There can, furthermore, be observed generally a growing interest in history in the GDR. Quite assuredly that has something to do with the process of penetrating intellectual-cultural changes taking place along with the further construction of the developed socialist society. That process makes possible--indeed, it demands--an ever more comprehensive creative-critical relationship also with the history of our people. Prussian history is part of it. On account of the place and role of Prussia, it is an essential component of that history.

Confrontation With Reactionary Prussianism

The direct confrontation with reactionary Prussianism was a very important task in the early postwar years in surmounting the fascist and militaristic ideology. But it was not only a matter of an intellectual reorientation. After 1945, the Junkers and monopoly capitalists were rendered impotent in the GDR territory, which destroyed the social pillars of Prussian-German militarism and of Prussianism. Through the antifascist-democratic transformation, the establishment of the GDR and the construction of socialism, a radical break was made from the reactionary past. That included the break from reactionary Prussianism. Precisely for these reasons we can today speak and write more leisurely about the history of Prussia, from the standpoint of socialism, which has taken deep roots among us in the GDR.

Part of Our Historic Legacy

Certain events and the attention given to the topic of Prussia in contemporary intellectual life induced some people to raise some questions. But the thesis propagated by certain circles abroad of a new image of Prussia in the GDR is pure nonsense.

We have no reason to revise the picture of Prussia as it was drawn in its sharp and valid outlines by Marx, Engels and Mehring. That image of history retains its validity in its basic structure.

But why should one not continue to reflect about one thing or another?

For a long time Prussia was the largest and most important German territorial state. Since the end of the 17th century it had a great influence on the history of the German people, even of Europe. And are we not confronted with the history of Prussia to this very day? Be it residues of history legends about the "Old Fritz," legends of bourgeois-reactionary coinage, or influences by Western propaganda or local traditions which are relatively prominent in some areas, mainly in the former Mark Brandenburg. Prussian history also confronts us in literature, in the works of Fontane and Kleist, for example. And what would our beautiful old Berlin be without the monuments of high artistic rank built under the regency of Prussian kings?

Many threads thus connect our present with the past, regardless of the way we look at it.

Prussian history is a part of our historic legacy. We are facing that legacy while the position we take is clear, of course, and unmistakable, that of the victorious workers class.

We accept as a fact that the history of Prussia is not identical with that of the Hohenzollern or of Prussianism. The issue taken with Prussia by Marx, Engels and Mehring--and by all other representatives of the revolutionary workers movement--always concerned the reactionary policy of the ruling classes and the manifestations suggested by the concept "reactionary Prussianism." We mean by that the reactionary domestic and foreign policy of Prussian Junkerdom and its representatives, the Hohenzollern kings, and the ideologially embellished basic stance by the

ruling class in Prussia, its effects also showing in the middle class, the peasants and other strata: pride of place, nationalistic arrogance and a spirit of aggression, submissiveness, blind utter surordination, cant and subjective devotion. All progressive forces in German history in bitter struggle opposed this Prussianism, which carried on despotically within and aggressively to the outside.

But there still was a "different Prussia." Our sharp indictment of reactionary Prussianism by no means makes us blind to the progressive elements existing in the history of that country. The at times rapid development of the Prussian state, its economy and its culture is inconceivable without the achievements of the people, the peasants, the lower middle class, especially the young workers class, the intelligentsia, and even parts of the bourgeoisie, even, indeed, of individual forces within the Prussian nobility.

The founders of our world-outlook never ignored the progressive propensities and tendencies in the history of Prussia. From our watch tower in social development, and furnished with the knowledge of many newly tapped historical sources, we can be still more discriminating in looking at our historic legacy without, while doing so, surrendering positions achieved.

Further Elaboration of the Image of History

The GDR historians consider it a necessary and interesting task further to elaborate the image of Prussia in history, while confronting in principle the history of the Prussian state and of its ruling classes. This they do, for example, by emphasizing the great progressive achievements of the popular masses, the cultural and scientific values accomplished and the at times especially rapid development of the productive forces in that country. This concern also applies to a more discriminating assessment of individual rulers or ruling classes and their representatives.

In this sense, the article series about Prussia starting today is meant to contribute to the further development of its image in history.

Promotion of Art, Militarism

East Berlin BERLINER ZEITUNG in German 23 Apr 81 p 9

[Fourth of 14 articles of 'Prussia--Legend and Reality' series, by Dr Hannelore Lehmann, Central Institute for History, GDR Academy of Sciences: "'Athens' and 'Sparta' in Conflict--Brandenburg-Prussia as Feudal Military Camp"]

[Text] In his "Memoirs of the House of Brandenburg," King Frederick II compared the reign of his grandfather with that of his father, the "soldiers' king," and wrote: "Under Frederick I Berlin was the Athens of the north, under Frederick William it became Sparta."

As in the ancient city state, general trade and architecture, art and science blossomed toward the end of the 17th century in the court and the capital. All that germinated under Elector Frederick William. It all blossomed under the aegis of Eberhard von Danckelmann, who came from a bourgeois Westphalian family, educated the elector's heir Frederick and, after he had come to the throne, became the chief statesman in Brandenburg-Prussia. Also the highly cultured wife of the elector,

Sophia Charlotte, encouraged Berlin's cultural rise. The Arts Academy was established there in 1696, the Society of the Sciences in 1700, and its first president was the great universal scholar Gottfried Wilhelm von Leibniz. In 1710, they started the Charite Hospital.

Elector Frederick III Becomes the King of Prussia

Berlin found a competitor in Halle which for a while became the center, way beyond the empire, of progressive doctrines and aspirations through the university founded there in 1694 and the Francke Foundations, a large-scale pedagogical and commercial enterprise of progressive-religious provenance. There were close relations with Tsar Peter I and his circle. Noted artists and scholars, such as Brandenburg-Prussia could hardly produce itself at the time, came to these towns, finding places to work and shelter from religious persecution. The ingenious architect and sculptor Andreas Schlueter was in Berlin from 1694 till 1713 where he adorned the court of the armory with 21 highly expressive masks of dying warriors and created the equestrian statue of Elector Frederick William, the central part of the Charlottenburg Palace and many other outstanding works.

Students rushed to Halle to hear the jurist and philosopher Christian Thomasius. He gave lectures, not in the customary Latin but in German, and fought in words and by his pen against the practice of torture. Still more famous was the mathematician and philosopher Christian Wolff, who in his works promoted the spread of the early enlightenment through large parts of Europe. The Enlightenment was an all-European emancipation of bourgeois thought from the fetters of the feudal ideology. It took hold in Brandenburg-Prussia, initially on soil alien to it, but even in its early phase left inerasable traces.

For Elector Frederick III, the arts and sciences hardly meant anything more than means to satisfy his superficial ostentatiousness. His supreme desire was to adorn himself with the royal title. Danckelmann, who rejected that plan, incurred displeasure and was confined in the fortress. In 1701, this personally insignificant ruler, with the Emperor's agreement, crowned himself the king of Prussia in the capital of his sovereign Duchy. He thus did not become the king in the total area of the Hohenzollern territories, but could add this high-sounding title to his other titles and, manipulated by a parasitical clique of nobles, started a waste out of all proportion with his revenue, which invoked a state crisis. For the successors of King Frederick I the new title became a dangerous spur for stronger power politics.

King Frederick William I in 1713 rigorously stopped the court's wastefulness but also the promotion of the arts and sciences. Goethe's great-uncle Johann Michael von Loen, visiting the court of Berlin in 1718, praised its good manners and thrift. In view of the accumulated funds, he wrote, with reference to the monarch: "What still matters now only is what he is going to do with them. They are the best means to provide blossoming prosperity for his ample estates and to improve the meagre acres by his lush dung, as it were."

Reality, however, left no doubt in this visitor either that those treasures were chiefly intended for army concerns.

Berlin--as Frederick II wrote in his "Memoirs"--had turned into a "Martian camp." No longer did it remind one, in its sobriety and military cut, of Athens, but of the ancient military state of Sparta. All of Brandenburg-Prussia resembled Berlin. In 1714, at the end of the Spanish War of Succession, army strength was up to 40,000 men. It was not reduced, which was against all custom. On the contrary. The soldiers' king quartered his recruits in the country and furthermore started a wild coercive recruitment to enlarge and improve his total strength. Terror and resistance spread through the population. The king had to become delicate about it but held to his line. When he died in 1740, army strength was up to 81,000 men.

Finally it had come to the point that Brandenburg-Prussia had, next to France, Russia and Austria, the largest army in Europe though in terms of land area it ranked the 10th largest and in terms of population, only the 13th largest.

This extreme army strength could on the long run be maintained only if one placed on the people, in addition to material burdens, the burden of military service which would only end at old age or through disability and was feared and hated because of its cruel penalties and degrading drill methods. That was done by means of the so-called canton system.

Every regiment was assigned a certain area (canton) for recruiting, made lists of the peasant lads and enlisted them as soon as they were old enough. Because the native nobility, in obedience to the will of the king, had to provide the officers' caste, the hostile contrast between commanding and whipping manorial rights and reluctantly obeying submissive peasants was reproduced in the army in the relations between the officers corps and the enlisted men. That put a mark on militarism in Brandenburg-Prussia that was exceptionally reactionary.

Double Burdens on Obedient Subjects

Uniform organization, constant drill and a targeted introduction of military innovations turned the Prussian army into a highly functional and dangerous machine. During the lifetime of its creator it hardly ever went into operation, however.

Frederick William I concentrated on domestic policy. His idea was to conserve the prevailing social order as a basis for a taxation and defense setup and to stabilize it through further population growth and reforms. That was served by municipal and guild reforms, edicts against the expropriation of the peasant proprietors, the settling of religious refugees from Salzburg and Bohemia, the letting of domain lands, the protection and monopolies for manufacturing enterprises, canal construction, amelioration, the setting up of chairs in economics and so forth. A reorganized civil service apparatus, accurately calibrated, served these measures importantly.

With the stick and with pious maxims the absolutistic state brought up obedient subjects eager to serve and pay taxes. They bore the twofold burden of reaction and restricted progress.

Power Politics of Frederick the Great

East Berlin BERLINER ZEITUNG in German 30 Apr 81 p 11

[Fifth of 14 articles of 'Prussia--Legend and Reality' series, by Prof Dr Ingrid Mittenzwei, Central Institute for History, GDR Academy of Sciences: "A Conservative Pays Homage to the New--What Were the Aims of Prussian King Frederick II?"]

[Text] About no other Hohenzollern king are there as many legends as about Frederick II. The reasons for that are likely to be found in the contradictory nature of that monarch, who was a military man and an aesthete at once, as well as in the later development. Liberals as well as reactionaries referred to the king. The liberals, because they thereby sought to protest against the intolerance in matters of the "freedom of the mind and of the press" that started under Frederick's successors. The reactionaries, because the power politics of Frederick II offered them many handles for their own aggressive intentions. One must penetrate all these legends to find the actual core in this tradition if one wants to deal with the person, politics and effectiveness of this Prussian king.

Through Annexation Into a Big European Power

Acceding to the throne in 1740, the 28-year old monarch staked out the whole range of his future policy in the first half year already of his reign. Willingness for reforms domestically, as long as the boundaries of the prevailing order remained untouched, came coupled with a clearly aggressive foreign policy program. "I move from land to land, from conquest to conquest and, like Alexander, always plan to conquer new worlds," he had announced.

The death of Emperor Charles VI, and the conditions of the Hapsburg lands in disarray, induced the young prince, who tended to make hasty decisions, to invade and conquer Silesia, which was part of the Austrian monarchy at the time. Thereby Frederick II started the War of the Austrian Succession which lasted until 1748 and involved, in addition to England and France, still other teritorial states which, like the Prussian king, sought to benefit from Maria Theresa's inheritance.

The conquest of Silesia raised the rank of the Prussia of Frederick II to that of a big European power, even though the smallest of them. What his predecessors had sought to achieve in vain, this glory-craving Prussian king accomplished at once. Not only his people and his country had to pay a high price for it.

Stirred by the act of aggression form this "upstart," a "grand coalition" was formed (of France, Austria, Russia, Sweden and Saxony) intending to partition the Prussian monarchy and reducing it to the scale of the Mark Brandenburg. In 1756 Frederick II dealt a preventative strike by which he sought to bust the "grand coalition" and make his own aggressive aims prevail. The Seven Years' War (1756-1763) led Prussia to the brink of disaster. It extracted immense sacrifices from the people in the Prussian provinces but also in the other states overrun by the war, mainly Saxony, Bohemia and Moravia. Settlements destroyed, human lives snuffed out, an economy in ruins and social misery was the price for holding on to Silesia.

The consequences of the Prussian act of aggression ranged into the far distant future. Brandenburg-Prussia maintained its supremacy. Its population, territory and financial income increased by circa one third through the annexation of Silesia. That altered the power ratio in the Empire. The Hapsburgers now had to face an equally strong rival, in Prussia. The Prussian-Austrian dualism resulting from that continued into the late 19th century. It affected the urgently needed solution of the national question. But that Frederick II never thought about when making war because his thinking was dynastic, not national in concept.

Only when one starts with the aggressive foreign policy of Frederick II, the next victim of which was the Polish state in 1772, can one properly assess the domestic development of Brandenburg-Prussia between 1740 and 1786. The monarch wanted to strengthen Prussia, turn it into a country whose name other nations would pronounce with respect and fear. But that he could only do if he did not close himself off from innovations in the economic and cultural field, which emanated from more developed countries, the Netherlands, England and France.

And so a phase in the development of the state began in Europe with Frederick II which French contemporaries would call enlightened despotism and later historians, enlightened absolutism. They thereby pointed to some new manifestations in the policy of absolutistic rulers, an increased willingness to adapt to new inevitabilities coming in with manufacture capitalism growing strong in Europe.

Frederick II lived in a transitional period. When he came to the throne there were already two social orders in Europe. He himself became an "eye-witness" of the American Revolution, and 3 years after his death the great revolution of the French initiated the era of capitalism. The change in preparation did not fail to have its effects on the feudal world. Europe's crowned heads reacted to it, provided they were sensitive enough, like the Prussian king, to perceive the changes.

Attempts at Adapting to New Developments

First the monarch's answer to the new manifestations was ideological. He absorbed suggestions by Germans and Frenchmen of the early Enlightenment and developed his conception of the state with reference to the history of the Netherlands. In 1739 he had expressed his intention to make his people "happy." A "contented people will never think of rioting, a happy people fears the loss of its ruler." To strengthen Prussia's power politics, accommodate it to the new developments and to reign in such a way that no cause for revolt arises--that was the goal the monarch had adopted.

Frederick II was a thoroughly conservative man who wanted to "conserve" what existed. That he could no longer do, however, without paying tribute to what was new. This he mainly did in the fields of culture, science and jurisprudence. His reviving the Academy of Sciences, the brief suspension of censorship for some Berlin newspapers, the loose handling of censorship later in cases not affecting the vital interests of the state, the moderation of the penal code, the abolition of torture, except for lese majesty, the tolerance in religious matters, which his predecessors had already practiced, and the codification of existing law, limited though all that was, did win him the sympathies of many progressive representatives of the bourgeois intelligentsia. Already hopes were being fed that it should be possible to make social changes with the help from enlightened rulers.

Protecting the Privileges of the Nobility

But ultimately those hopes were deceived. Frederick II, to be sure, on behalf of his power politics, sought to strengthen Prussia economically, for which reason he encouraged manufacturing, not always through effective means, and at times enforced innovations in agriculture against the will of the nobility. But he curbed his own endeavors by simultaneously doing everything to preserve the prevailing order. Frederick II protected the privileges of the nobles; let them keep the land monopoly and thus the right to exploit the peasants in feudal bondage.

When he died in 1786, Prussia was a military power feared by others. Commerce and manufacturing flourished, the middle class grew strong. Yet the country still was in a crisis. Absolutism, even the enlightened variant of it, could no longer meet the demands of the new era.

People's Role in 1813 Uprising

East Berlin BERLINER ZEITUNG in German 4 Jun 81 p 9

[Eighth of 14 articles of 'Prussia--Legend and Reality' series, by Dr Heinz Helmert, Central Institute for History, GDR Academy of Sciences: "The Revolt and the New Start of 1813--When the People Took Up Arms Against Napoleon's Foreign Domination"]

[Text] A Cossack detachment under Colonel Tettenborn, coming from Pankow, had entered Berlin on 20 February 1813 but, being fairly weak, could not hold out against the French garrison--Berlin was under French occupation--and had to withdraw again the same day. Impatiently the Berliners were waiting for the arrival of stronger Russian forces.

In January the news had spread of an agreement which General Yorck, commanding a Prussian auxiliary corps of the Napoleonic army, was said to have negotiated with the Russian General Diebitsch in a mill near Tauroggen near the Russo-Prussian border. Men and women were convinced the hour had finally come for Prussia and the German people to rise up resolutely for their national liberation. Their hatred aimed against the yoke the French Emperor Napoleon had imposed on them after the defeat of the Prussian army at Jena and Auerstedt and the peace of Tilsit in 1807.

"Now again the time has come," General Bluecher in those days wrote to General Scharnhorst, the military head of the reform party, "to do what I recommended in 1809, to call the whole nation to arms, and if the princes do not want it and oppose it, to chase them all out together with Bonaparte."

As a matter of fact, the liberal reformers around Baron von Stein and Gerhard Scharnhorst had been working since 1808, and especially since 1809, for an uprising by the Prussian monarchy against Napoleon, the whole people behind it. To achieve success they were not afraid to use Jacobinic measures, while they were of course also seeking a war alliance with the Russian tsar, the Austrian emperor and the British cabinet.

Only a People's War Could Break Napoleon's Power

Favorable circumstances resulted from the raids against Napoleonic power by insurgents in the kingdom of Naples, Portugal and Spain, which had started there in 1806, 1807 and 1808 with uprisings against Napoleon's governors. Austria too, after hasty reforms in military affairs and the government administration, sought to regain the territories it had lost in its conflict with France by a war in 1809. The attempt was popular enough. After all, Beethoven had dedicated his military march in F, No 1 (which later became well known as the Yorck March) to the Bohemian militia. But the Austrian strategy lacked all dash and fire. The Austrian monarchy gave up even before all forces assembled had met the enemy in a concentrated fashion. The resurrections sparked by that war in Tirol and northern Germany failed because of it and because of being so isolated. It became evident in 1809 that that Corsican's immense power could be broken only by a people's war.

Attack on the Tsarist Empire Ended in Helpless Flight

To consolidate definitely his sway over the largest part of the continent and, at once, deal a fatal blow against his capitalist competitor, Great Britain, Napoleon Bonaparte in the summer of 1812 attacked the tsarist empire with his Grand Army. He had put up half a million soldiers, many Germans, Italians, Netherlanders and Poles among them. Almost against the will of the tsarist court the Russian people and army turned the war against Napoleon into a patriotic war, dismissed any thought of surrender when he nonetheless occupied Moscow and finally forced him to withdraw. The resolute pursuit by Field Marshal Kutuzov's troops and partisans turned that into an unholy rout. Puny remains of Napoleon's Grand Army returned, among them the Prussian auxiliary corps under Yorck's command, undefeated.

Napoleon fled to Paris to make plans, in the Tuileries, about continuing his war because he did have strong reserves through which his losses could in part be made up. Also between the Oder and the Weser and in the states of the Confederation of the Rhine considerable forces assembled covering the French deployment and taking part in the counter-offensive. That lent the Prussian provinces a strategically decisive position.

In Prussia the resurrection against Napoleon spread slowly but all the more surely. Brandenburg villages put up a militia of their own, volunteers followed the Russian troops, and in March 1813 Russian troops, with Prussian troops following them, liberated Berlin and many other places. The Prussian court was terrified, to be sure, obstructed the popular uprising and delayed the cooperation of its own army with the Russians, but it could not dispose of the insurrection once it had started, since even army leaders were calling for war against France. Scharnhorst and his fellow-combatants enforced long overdue reform measures they needed for the approaching uprising by the people's forces against Napoleon.

The Court and the Junkers Used the Victory for Their Own Ends

Young men and mature men, peasants, craftsmen, pupils, students, wage laborers among them, volunteered in hurrying to the assembly points. Enlisting, equipping and training them, the whole mobilization in fact, took place under the most difficult circumstances, which could be coped with only through the voluntary sacrifice of all of one's property. In spite of all that the Prussian and Russian forces

remained small, considering the tasks, even though they were supported by popular uprisings and guerrilla detachments between the Elbe and the Rhine. The allies suffered two defeats, at Grossgroeschen and Bautzen, during their spring campaign, which required their withdrawal to the Oder and advised a truce with Napoleon early in June.

Gradually the enormous efforts, which were still increased, made themselves pay. Reserves joined the Prussian field army, among them mainly the militias that had been formed in all parts of the country and impressively embodied the people under arms and the popular resurrection which the people itself had insisted on. With respect Franz Mehring wrote that its 1813 uprising had been "a struggle conducted with incomparable heroism" which to commemorate the workers class had every reason. At the same time, however, the 1813 fall campaign also started as the war of a coalition of reactionary monarchies which, in addition to Russian and Prussia, was also joined by Austria and Sweden, and which would exploit all victories for its own end. The campaign had its ups and downs until the allies won in mid-October in the Battle of the Nations at Leipzig. Napoleon's power declined and disintegrated in 1814 and 1815 in France as well.

Prussia had liberated itself outwardly. The court and Junkers, however, used the people's victory to restore their feudal domination and suppress the people once again.

Prussia Cult and Nazism

East Berlin BERLINER ZEITUNG in German 23 Jul 81 p 9

[Thirteenth of 14 articles of 'Prussia--Legend and Reality' series, by Dr Klaus Scheel, Central Institute for History, GDR Academy of Sciences: "Iron and Blood in New Form--The Potsdam Marriage of Fascism With Old-Time Reaction"]

[Text] At 12 o'clock sharp on 21 March 1933, the glockenspiel of the garrison church in Potsdam sounded its tune, "Ueb immer Treu und Redlichkeit" (Abide by Faith and Honesty). That day it tolled for an act of state which propaganda minister Joseph Goebbels had staged. Even the choice of the date had been carefully considered. On 21 March 1871 Otto von Bismarck had summoned the German Diet for its opening session in the Prussian House of Deputies in Berlin. "Iron and blood" were the midwives of the second German Reich. They also fathered the Third Reich on 30 January 1933. Potsdam was to make evident that it was all over with the "spirit of Weimar."

In a speech in April 1932, Goebbels had offered the Nazi party's allegiance to "Prussianism" and affirmed without reservation: "Prussian militarism! Prussian utter subordination! Prussian discipline!" Now the "Day of Potsdam" was to set a marker for mass agitation. The town was wrapped in a sea of swastica banners and black-white-red flags of the Empire. Only a few days before they had become the flags of the Reich, doing away with the black-red-gold flag.

The Spectacle in the Garrison Church

In the garrison church, above the vault of the Prussian kings, there sat, in the uniform of an imperial general field marshal, Paul von Hindenburg, officiating for the last 8 years as president of the Reich. Next to him, the former corporal and now Reich Chancellor Adolf Hitler, the "Fuehrer" of the Nazi party.

Hindenburg invoked the spirit of Prussia in his speech. He glanced at the Hohenzollern box, where an armchair was being kept vacant for William II. The former emperor had sent the former crown prince in his stead, however. Hitler's speech praised the splendor of the olden days and lamented the disintegration of the Reich. Now, however, Hitler exclaimed, "the marriage was performed between the symbols of old greatness and young strength." By "young strength" he meant the Nazi party which had been handed the power on the insistence of the most aggressive segment of German finance capital.

An expression of this "marriage" was that Prince August William of Prussia had reported in the brown uniform of an SA upper group leader, while the Hohenzollern Princes Eitel Frederick and Oscar of Prussia stood there in field grey, in an honor company, ready for full marching order. The parade in front of Hindenburg brought units of the army, the SA and SS, the police and the "Stahlhelm" together.

Seizing Power by Murder and Terror

Recalling "Prussia's gloria" was meant to help consolidate the fascist dictatorship. For weeks a pitiless terrorist campaign had been raging against communists and honest antifascists. The strong parliamentary faction of the KPD had been disbanded in violation of the Constitution. The conservatives readily supported that demarche and on 23 March 1933 voted for extraordinary powers to be given to Hitler, in the Diet. But he, even then, frustrated their hopes for reintroducing the monarchy, declaring that intention to be out of consideration entirely. In the course of the elimination of all local opposition, Goering was appointed Prussian Prime Minister and then the Prussian ministries were merged with those of the Reich, and the provincial diet was put out of action. The eagle on Prussia's code of arms got a swastica attached to his breast.

When some high SA leaders were shot on 30 June 1934, some conservative politicians and the generals von Schleicher and von Bredow also were murdered. The SA leaders around Ernst Roehm wanted more power and had to die for the benefit of the alliance of the Nazi leadership with the army general staff. To get rid of the SA leaders competing with them, the generals had given their blessings to the murder operation in good time. The monopoly bosses likewise, for the sake of bigger armaments business, approved the bloody action against those the regime had found unaccommodating. SS leaders of the Prussian nobility held an exposed position during the strike against the SA. Among the victims as well as the murderers there were men who claimed to be Prussians. As noisily as the Prussian "virtues" were being propagated--they did not mean a thing to the reactionary forces when it came to more advantages, power and profits.

KPD Fought Against Reaction With Fortitude

The KPD fought resolutely against the disastrous policy of fascist German imperialism. In his article, "Germany Under the Spell of Blood and Iron," Wilhelm Pieck wrote in 1936: "Fascism is leading the German people toward war, driving it into disaster."

There were only few in the ruling class with any scruples about the adventurous nature of the war course and the barbaric subjugation and exploitation policy. Only few made their way toward struggling alongside the vanguard of the workers class.

The turning point in World War II, gained by the Red Army in 1943, and the setting up of the Free Germany National Committee, on KPD initiative, became important road signs to a better future. The National Committee was also acknowledged by generals and officers of the Prussian nobility and the middle class who had come to recognize while in Soviet captivity the need for the struggle against fascism. They devoted themselves actively to the preservation of the progressive Prussian traditions and recalled, e.g., the spirit of the wars of liberation and the German-Russian comradeship-in-arms.

Ready to Cooperate

The great-grand-nephew of field marshal Helmuth Count von Moltke, Helmuth James Count von Moltke, met in his mansion with anti-Nazi officers and politicians. Some of these members of the Kreisau Circle were ready to cooperate with the National Committee and the KPD. Other men too, from the progressive wing of the 20 July conspiracy, took that course. Yet the reactionary wing around Col Gen Beck and Carl Goerdeler only wanted to preserve through Hitler's overthrow the class domination by German imperialism.

The Cult of Prussia Sacrificed Millions of People

After the conspiracy against Hitler on 20 July 1944 had failed, fascist terror raged. Its victims as well as its perpetrators included men whose allegiance was with Prussianism. Field marshals like Rundstedt and Keitel and tank general Guderian were members of a "court of honor" that kicked the conspirators of 20 July out of the army and had them decapitated or hanged. Famous names of members of the Prussian nobility were among the victims of Nazi justice, while others remained loyal to the criminal regime. Also the glorification of the spirit of submissiveness and the obedience to duty, "to the last drop of blood," remained important elements of Nazi propaganda to the end of the war. The deliberate kindling of the cult of Prussia made millions of people lose their lives.

The destruction of fascism opened a way to a definite settling of accounts with Prussianism.

Prussia's Dissolution, Legacy

East Berlin BERLINER ZEITUNG in German 30 Jul 81 p 9

[Last of 14 articles of 'Prussia--Legend and Reality' series, by Dr Siegfried Thomas, Central Institute for History, GDR Academy of Sciences: "Prussia Ceased to Exist--Allied Conctrol Council Decided on Dissolution--But What About the Old Spirit?"]

[Text] Almost 2 years after the end of World War II, on 25 February 1947, the Allied Control Council, the supreme organ of the four-power administration in Germany, passed its law no. 46. It dissolved the state of Prussia, its central government and all its subordinate authorities.

At the first glance this Control Council law seemed a superfluous act to many. The state no longer existed anyway, and even as a geographic concept Prussia had ceased to exist in 1945. The area from which it had once derived its name and the eastern territories its rulers had conquered in the 18th century had been given to Poland or the Soviet Union. Their loss came at the expense of the power politics of German-fascist imperialism which had its own roots, not last, in the reactionary Prussian military state.

Bitter Experiences Urged Measures

Laender had arisen out of what had been left as provinces in Germany--Brandenburg, Saxony-Anhalt, in the east, Lower Saxony, Schleswig-Holstein, North Rhine-Westphalia, Rhineland-Palatinate, in the west.

The dissolution of Prussia the Control Council had decreed was, to be sure, more than just the legal fixing of a fact. There should never again be a Prussia because that state--as the preamble to law no. 46 put it--"always has been the base of militarism and reaction in Germany." Its dissolution proclamation was among those measures by the four occupation powers that were meant to serve the preservation of peace and the democratization of Germany. It was an aspect of the policy decided on in Potsdam for the demilitarization, de-Nazification and democratization of Germany.

Incidentally, there were representatives of the western powers who during World War II had most persistently called for the territorial dismemberment of Prussia. At the "Big Three" meeting in Teheran in 1943, the British Prime Minister Churchill called Prussia the rotten core of Germany, the notorious trouble-maker and destroyer of the nations. Quite that strong also was the anti-Prussian bias in Roosevelt and the head of the provisional government of France, General de Gaulle. So it was no coincidence that the designs contemplated by Britain and the United States for a complete dismemberment of Germany also focused on the territorial disintegration of Prussia. Responsible West European and U.S. politicians were not unfamiliar with the realization that there was a close connection between reactionary Prussianism, German militarism and fascist power politics.

That understanding contributed not a little to finding a common basis for dealing with defeated Germany among the main anti-Hitler coalition powers.

Contra Prussia--Or With Ulterior Motives

As far as Prussia was concerned, however, the Soviet partner in Teheran, Yalta and Potsdam needed not to be persuaded about the ominous influence of its reactionary traditions on the policy of fascist Germany. As Marxists, the statesmen of the USSR were thoroughly familiar with the particulars of German imperialism, its Junker-bourgeois and military character. In its negotiations with the Western powers, however, the Soviet side started from the conviction that the dismemberment of its territory could not prevent further German aggression. They favored eliminating the evil with its roots, as it was finally set down in the Yalta and Potsdam resolutions.

There was no one in occupied postwar Germany in 1945 who would openly have said anything in favor of Prussia. That name had become discredited too badly. Even in the newly established bourgeois parties, a pronounced anti-Prussianism was de rigueur as an expression of antifascism. Not a few bourgeois ideologists and politicians, outspoken representatives of the interests of the monopoly bourgeoisie among them, came forth with resolutely anti-Prussian protestations.

Thus Wilhelm Roepke, one of the founding spirits of the FRG, found the roots of the deformation of the German national character and of the formation and political and economic structures that had eased fascism's way to power in Prussia and the Prussianization of Germany. Konrad Adenauer likewise regarded the Prussian-German Empire as the precursor of the fascist dictatorship. But both at the same time rejected any responsibility for that development by the monopoly bourgeoisie. As early as in 1945, the demand for a dismemberment of Bismarck's empire came combined with the call for forming a federal or confederate state which originally was intended to be confined to the territory in the Western zones of occupation.

The proponents of a federalization of Germany, by and large identical with the advocates of a separate West German state and opponents to a centralized united state of Germany, finally argued that only a federal state structure could guarantee a genuine democratic development for Germany and would ensure the security of its European neighbors.

But this was all only talk. In truth, as KPD Chairman Wilhelm Pieck disclosed as early as in early 1946, these people wanted to sneak away from the bankruptcy Hitler had left behind and "save forces of German imperialism from destruction at least in parts of Germany."

Already in 1947, the United States together with Great Britain and France began to fashion a German state out of the three Western zones of occupation. Doing so, they endeavored to make the impression as if that policy still conformed with the Potsdam resolutions and the state they projected had nothing in common with its precursor, the imperialist German empire and its traditions.

The official text makes it appear that something entirely new in German history was created in the FRG. Not rarely one can read the opinion that the FRG actually is the antipode of the authoritative Prusso-German state.

The Old Spirit Behind a New Facade

At the first glance the FRG has little resemblance with the German Empire of Bismarck's coinage. But if one takes a closer look, the continuity becomes unmistakable. Behind the state's bourgeois-parliamentary facade the same class forces have the say-so as before 1918, 1933 and 1945. The power structures remained unchanged, only the forms of government were switched. With a reorganization of social conditions failing to materialize after 1945, and with the swiftly starting restoration of the imperialist system of government, it turned out that there are by no means few reactionary features of the past that are giving shape to the state and society in the FRG. This is most evident in the continuity of the state's power organs--the bureaucratic apparatus, the police, the legal system and, especially, the FRG army. Especially the early decision on remilitarizing the FRG led to a quick revival of militaristic traditions and chracteristic features which go back directly to the Prusso-German past.

The Prussian state has been dead for more than three decades. Prussian spirit and Prussian traditions, however, have survived in that part of Germany where, unlike the territory of the GDR today, the evil has not been eradicated from its roots. The FRG's more than 30 years of history and its domestic and foreign policy visibly demonstrate that the Prusso-German passed, never coped with properly, is still fairly alive.

NEW LAW ON RESIDENT REGISTRATION STIFFENS PENALTIES

West German Commentary

Bonn IWE-TAGESDIENST in German No 111, 29 Jul 81 p 3

[Report from Berlin: "GDR Increases Fines for Violations of Compulsory Registration--Penalties for FRG Citizens Are Being Doubled." A translation of the East Berlin GESETZBLATT decree cited below follows this report]

[Text] The East Berlin Council of Ministers has drastically raised, partly, the fines for violations of compulsory registration. According to the new decree, that goes into effect on 1 September, a fine up to M 500 (thus far: M 300) can be levied on someone who fails to report an apartment move to the police or who, as owner or caretaker of a house, "neglects his duty to keep the house registration book." In addition to residents, GDR citizens who stay longer than 3 days with relatives or friends also have to enter their names in that kind of registration book. Persons entering the GDR, FRG citizens for example, have to register that way within 24 hours. Otherwise they incur a fine the upper limit of that has been doubled, to M 300. (GESETZBLATT, Part I, No 23, 1981)

Text of Law

East Berlin GESETZBLATT DER DEUTSCHEN DEMOKRATISCHEN REPUBLIK in German Part I No 23, 22 Jul 81 pp 281-287

[Official text of "Third Decree on Resident Registration in the German Democratic Republic--Registration Order--29 May 1981" signed by W. Stoph, chairman, GDR Council of Ministers, and Dickel, minister of the interior and chief of German People's Police. This decree, which explains the changes in registration procedures and requirements, is followed by the text of the entire new version of the law, incorporating these changes into the registration decrees of 15 July 1965 and 15 June 1972]

[Text] In amending the 15 July 1965 GDR registration decree--registration order--(MO) (GBL, Part II, No 109, p 761) in the version of figure 7 in appendix 1 of the adjustment decree of 13 June 1968 (GBL, Part II, No 62, p 363), and the second, 15 June 1972, GDR registration decree--registration order--(MO) (GBL, Part II, No 39, p 443), the following is decreed:

Article 1

Article 2 section 1 figure 1 is amended to read as follows:

"1. Aliens who have diplomatic identification, consular identification or other identification documents issued by the GDR Ministry for Foreign Affairs."

Article 2

Article 3 section 3 is amended to read as follows:

"(3) Heads of communal accommodations in enterprises, universities, colleges, technical and engineering schools, and schools in enterprises and state institutions are authorized to register persons who stay in such accommodations, in conformity with articles 7 and 8."

Article 3

Article 7 section 4 is amended to read as follows:

"(4) Persons obligated to register can, for reporting in or out, be represented by a member of their household, who must identify himself, or by the person who keeps the house registration record book."

Article 4

In article 11 section 1 the last sentence is deleted.

Article 5

(1) Article 14 section 3 is amended to read as follows:

"(3) Persons charged with keeping the house registration record book in terms of section 2 are entitled to have deputies keep the house registration record book and must submit their names to the competent registration bureau of the German People's Police or People's Police kreis precinct and exercise influence on the house registration record books being kept in proper order."

(2) In Article 14, the following section 4 is inserted:

"(4) When the obligation to keep the house registration record book is transferred to some other person, the book itself has to be handed over to such a person. If that is not possible, the house registration record book has to be handed over to the competent registration bureau of the German People's Police or the People's Police kreis precinct."

(3) In Article 14, the previous sections 4 to 9 now become sections 5 to 10.

Article 6

(1) The heading of Article 16 is amended to read as follows:

" Staying in communal accommodations"

(2) Article 16 section 1 sentence 1 is amended to read as follows:

"For persons who have registered in accordance with article 7 and stay in communal accommodations of enterprises, universities, colleges, technical or engineering schools, and schools in enterprises and state institutions, up to one year, the heads in these communal accommodations have to register them in or out within 3 days."

(3) Article 16 section 2 is amended to read as follows:

"(2) If the stay extends above one year, the registration obligation falls under the regulations of articles 7 and 8. This registration can also be made, in accordance with article 3 section 3, by heads of communal accommodations."

Article 7

(1) Article 17 section 1 sentence 2 is amended to read as follows:

"The registration forms, when filled in, must be checked for agreeing with the data in the personal identification card or a passport authorizing entry or residence, or other personal documents."

(2) Article 17 section 2 is amended to read as follows:

"(2) Aliens who have not yet been granted the right to stay in the GDR or who have no registration receipt or indication that they have registered from the protocol department of the Ministry for Foreign Affairs must present their passports or other personal documents to the German People's Police when they present the registration form of the places in which they are accommodated."

(3) Article 17 section 2 is amended to read as follows:

"(3) The German People's Police must be informed immediately when the presentation of a passport or of other personal documents, or the filling out of the registration form, is refused."

(4) Article 17 section 6 sentence 3 is amended to read as follows:

"Aliens who have a document made out by the GDR Ministry for Foreign Affairs must fill out registration forms of the places in which they are accommodated."

Article 8

(1) In article 28 section 1 the last two lines are amended to read as follows:

" . . . may be given a warning or fined from M 10 to M 500."

(2) Article 28 section 2 is amended to read as follows:

"(2) He who deliberately avoids being entered or signed out in the house registration record book within the registration time frame may be warned or fined from M 10 to M 300."

(3) Article 28 section 4 is amended to read as follows:

"(4) In minor law violations in accordance with sections 1 and 2, the authorized members of the German People's Police, and in violations in accordance with article 23 section 1, also the authorized members of the local councils, have the right to issue warnings with fines from M 1 to M 20."

Article 9

The Minister of the Interior and Chief of the German People's Police is authorized, on the basis of this decree, to promulgate a new version of the registration decree with its changes in designations in the GESETZBLATT DER DEUTSCHEN DEMOKRATISCHEN REPUBLIK.

Article 10

This decree goes into effect on 1 September 1981.

Decree on Resident Registration in the German Democratic Republic --Registration Order--(MO)--15 July 1965 (GBL, Part II, No 109, p 761) in the Version of the Second Decree of 15 June 1972 (GBL, Part II, No 39, p 443) and the Third Decree of 29 May 1981 (GBL, Part I, No 23, p 281)

The following is decreed on the reorganization of resident registration:

I

General Provisions

Article 1 -- The Range of the Registration Obligation

(1) Persons residing in the GDR have to be registered in accordance with the provisions of this decree.

(2) Housing management regulations are not affected by the fulfillment of the registration obligation. From the fulfillment of the registration obligation no claim can arise to be provided with housing.

(3) Housing in the meaning of this decree is any place used for dwelling or sleeping.

Article 2 -- Exemption from Registration Obligation

(1) Exempted from the registration obligation are:

1. Aliens who have diplomatic identification, consular identification or other identification documents issued by the GDR Ministry for Foreign Affairs;

2. Aliens who show an indication in their passports that they have registered by the protocol department of the GDR Ministry for Foreign Affairs.

(2) The Minister of the Interior and Chief of the German People's Police can order other persons also to be exempted from the registration obligation.

(3) A boarding-school type residence in barracks and schools of the armed organs of the GDR is not subject to compulsory registration.

Article 3 -- Persons Who Must Register

(1) Registration must be made in person unless deputation is authorized in line with the provisions in this decree.

(2) For children up to the completion of their 14th year of life, parents or guardians, for persons declared legally incompetent, their legal representatives have to fulfill the registration obligation. If such persons under registration obligation are not at the place where the registration has to be made, or if they are prevented from registering themselves, their landlord has to do so for them.

(3) Heads of communal accommodations in enterprises, universities, colleges, technical and engineering schools, and schools in enterprises and state institutions are authorized to register persons who stay in such accommodations, in conformity with articles 7 and 8.

(4) If the person authorized to deputize in accordance with the provisions in this decree cannot provide the information required for meeting the registration obligation, it may be demanded that documents be presented or that the person under registration obligation appear in person.

Article 4 -- Meeting the Registration Obligation

(1) Registration must be made in the precincts of the German People's Police as referred to in this decree.

(2) The Minister of the Interior and Chief of the German People's Police can order the registration obligation to be met also in other official places.

Article 5 -- Presenting Documents in Meeting the Registration Obligation

(1) In meeting the registration obligation, a personal identification card or a personal document authorizing entry or residence must be presented.

(2) If the fulfillment of the registration obligation is deputized to others, the documents for the persons under registration obligation as referred to in article 1 must be presented.

Article 6 -- Receipting the Fulfillment of the Registration Obligation

The fulfillment of the registration obligation in accordance with articles 7, 8, 9 and 10 has to be receipted by the German People's Police in the personal identification card, the personal document authorizing entry or residence, or in a supplement to such documents or by some other receipt.

II

Reporting In and Out

Article 7 -- Primary Housing

(1) When someone moves into an apartment, he has to register within 7 days at the German People's Police registration office or the People's Police kreis precinct in his place of residence.

(2) Newly born need not be registered if after their birth they are accepted into their parents' apartment.

(3) When someone moves out of an apartment, he has to report out at the German People's Police registration office or the People's Police kreis precinct at the latest on the day he moves while announcing his new apartment or future residence.

(4) Persons obligated to register can, for reporting in or out, be represented by a member of their household, who must identify himself, or by the person who keeps the house registration record book.

(5) When one moves within the area of a People's Police kreis precinct or the capital of the GDR, it is not necessary to report out.

(6) The German People's Police must report persons out who have neglected their obligation to do so in accordance with section 3.

Article 8 -- Secondary Housing

(1) Persons registered in accordance with article 7 who for reasons of vocational training, their occupation or their studies acquire secondary housing must register at the place of their secondary housing unless the provisions in accordance with article 16 apply.

(2) Persons who are registered in accordance with article 7 and use a summer residence as secondary housing, must register at the place of their secondary housing. The summer residence rates as secondary housing if during the summer it replaces the primary housing as principal residence. In cases of doubt, the German People's Police will decide whether one must register in terms of this provision.

(3) For moving into our out of secondary housing, the provisions of article 7 apply.

Article 9 -- Visitors

(1) Anyone registered in accordance with article 7 who visits relatives or friends for more than 30 days who do not put up guests in line with their business, must register his visit within these 30 days at the German People's Police registration office or, if there is no such registration office locally, with the Sector Agent of the German People's Police, and report out before he departs.

(2) In reporting in and out, a visitor under such registration obligation may be represented by a person who must in turn identify himself.

(3) If a visitor stays longer than 6 months, the registration obligation in accordance with article 7 applies. If housing is being kept, a special point of that has to be made in registering.

Article 10 -- Registration Obligation for Persons Who Enter the GDR

(1) Persons who enter the GDR and are not registered in accordance with article 7 must personally register with the People's Police kreis precinct at every place they stay within 24 hours and report out before they depart.

(2) GDR citizens who have their permanent residence abroad and aliens not registered in accordance with article 7 have met their reporting in and out obligation when they report in at their first place of residence.

(3) For persons entering the GDR on an invitation from state organs and institutions or social organizations, or as tourists, the registration obligation can be fulfilled by the state organ, institution or social organization inviting or taking care of them.

(4) For persons staying in commercial or social places of accommodation (e.g. hotels, inns, tourist homes or guest houses) and at facilities of religious congregations, the registration obligation may be met by the manager of such places of accommodation.

(5) If the visit lasts longer than 6 months, the registration obligation in accordance with article 7 applies.

Article 11 -- Registration Obligation at the Time of Military Service

(1) Persons summoned or enlisted in active military service or organs that make up for such active military service have to report out by showing their draft order, enlistment receipt and service certificate and report back in within 7 days after the end of their military service.

(2) If at the time of reporting out for military service or during that service the premises of article 7 apply, the obligations resulting therefrom have to be met apart from reporting out for military service.

Article 12 -- Registration Obligation for Inland Navigators

(1) For inland navigators and the members of their household, who have no housing on land, the vessel rates as their housing.

(2) For inland navigators and the members of their household who do have housing on land and are registered there in accordance with article 7, the vessel rates as secondary housing in accordance with article 8 section 1.

(3) Inland navigators and the members of their household can meet their registration obligation also at the German People's Police registration office closest to their docks.

III

Special Registration Obligations

Article 13 -- Secondary Registration Obligation

(1) In addition to the persons under the obligation to report in and out, a secondary registration obligation exists for

1. Proprietors, owners and caretakers of a house, for all residents of the house who have a lease;

2. Landlords, for all persons who reside in or visit his place;

3. Heads of communal accommodations, for the persons accommodated there.

(2) A person under secondary registration obligation has to check, when time frames for registration have ended, whether there is a receipt from the German People's Police for the fulfillment of the registration obligation in accordance with article 6. When such a registration obligation has not been met, the competent office of the German People's Police has to be informed within 3 days.

(3) A deputy can handle the secondary registration obligation if the person so obligated is prevented from doing so or cannot meet it personally because of the volume of his registration obligations.

Keeping House Registration Record Books

Article 14

(1) House registration record books have to be kept for every apartment building or communal accommodations.

(2) Keeping house registration record books is the duty of proprietors, owners or caretakers of apartment buildings. In communal accommodations, it is the duty of the manager of such accommodations. Through agreement with the housing community, a delegate named by it can also be charged with keeping the house registration record book.

(3) Persons charged with keeping the house registration record book in terms of section 2 are entitled to have deputies keep the house registration record book and must submit their names to the competent registration bureau of the German People's Police or People's Police kreis precinct and exercise influence on the house registration record books being kept in proper order.

(4) When the obligation to keep the house registration record book is transferred to some other person, the book itself has to be handed over to such a person. If that is not possible, the house registration record book has to be handed over to the competent registration bureau of the German People's Police or the People's Police kreis precinct.

(5) The chiefs of People's Police kreis precincts can arrange with local councils that in communities with fewer than 1,000 inhabitants a joint house registration record book is kept by the mayor or a person delegated by him for all or several apartment buildings.

(6) In communities other than the ones referred to under section 5, the chiefs or the People's Police kreis precincts may authorize the keeping of a joint house registration record book for several apartment buildings.

(7) As house registration record books only the printed forms are to be used that are published by the Ministry for the Interior. In communal accommodations a file may be kept in place of the house registration record book which has to include the same data as the house registration record book.

(8) The house registration record books have to be presented only, upon request, to the security organs and other authorized persons. Unauthorized persons are not entitled to receive information in the house registration record books. The German People's Police can confiscate house registration record books temporarily.

(9) The competent local councils are entitled to check that the house registration record books are properly kept and may temporarily confiscate them in concurrence with the chiefs of the People's Police kreis precincts.

(1) A loss of house registration record books must immediately be reported to the German People's Police.

Article 15

(1) In the house registration record book must be entered, by presenting the documents referred to in article 5:

1. Persons under registration obligation in accordance with articles 7 and 8, within 7 days;

2. Persons reported in accordance with article 7 who stay longer than 3 days with relatives or friends who are not commercially accommodating guests, or visit them, within the first 3 days of their visit;

3. Persons who have entered the GDR, within 24 hours.

(2) The newly born likewise have to be entered in the house registration record book.

(3) When one changes housing, the new address has to be entered in the house registration record book.

(4) When a person has his name changed, his new name must be entered in the house registration record book.

(5) The persons entered in the house registration record book have to confirm those entries by their signature.

(6) Persons under the obligation to be entered in the house registration record book may let themselves be represented, for doing so, by their landlord.

Article 16 -- Staying in Communal Accommodations

(1) For persons who have registered in accordance with article 7 and stay in communal accommodations of enterprises, universities, colleges, technical or engineering schools, and schools in enterprises and state institutions, up to one year, the heads in these communal accommodations have to register them in or out within 3 days. The heads of communal accommodations can appoint deputies for taking care of this registration obligation when they are busy or cannot take care of it personally because of the volume of registration obligations they have to handle.

(2) If the stay extends above one year, the registration obligation falls under the regulations of articles 7 and 8. This registration can also be made, in accordance with article 3 section 3, by heads of communal accommodations.

(3) The chiefs of the People's Police kreis precincts have to announce how, when and where registration has to be made at a German Poeple's Police bureau.

Article 17 -- Staying at Lodgings

(1) Managers or owners of enterprises that are commercial or social places of accommodation (e.g., hotels, inns, tourist homes or guest houses) and the managers of facilities of religious congregations are obligated to keep a guest record on the persons accommodated and report them to the German People's Police on the registration forms of their places of accommodation. The registration forms, when filled in, must be checked for agreeing with the data in the personal identificaiton card or a passport authorizing entry or residence, or other personal documents. The report has to be made within 12 hours after the guest's arrival.

(2) Aliens who have not yet been granted the right to stay in the GDR or who have no registration receipt or indication that they have registered from the protocol department of the Ministry for Foreign Affairs must present their passports or other personal documents to the German People's Police when they present the registration form of the places in which they are accommodated.

(3) The German People's Police must be informed immediately when the presentation of a passport or of other personal documents, or the filling out of the registration form, is refused.

(4) Persons obligated to register can delegate the fulfillment of their registration obligation when they are too busy or cannot do so personally because of the volume of registration obligations they have to handle.

(5) The chiefs of the People's Police kreis precincts have to announce how, when and where registration has to be made at a German People's Police bureau.

(6) For aliens who have a diplomatic or consular identification document, made out by the GDR Ministry for Foreign Affairs, no registration forms from their places of accommodation are required. All that is needed for such aliens is to be recorded in the guest registry. Aliens who have a document made out by the GDR Ministry for Foreign Affairs must fill out registration forms of the places in which they are accommodated.

(7) Room referral directors are under registration obligation in accordance with sections 1 to 6 in providing private accommodations. The lessor of rooms has the duty to keep the guest registry.

(8) The chiefs of the People's Police kreis precincts may also extend the disposition of the registration obligation according to sections 1 to 6 to other persons who accommodate travelers or vacationers.

(9) If a visit exceeds 6 months, registration obligation according to articles 7 or 8 applies. If the previous apartment is kept, a special point has to be made of it when registering, in accordance with article 7.

Article 18 - Registration Form for Lodgings

(1) Registration forms for lodgings have to correspond to the model in the appendix.

(2) For every person a registration form has to be made out. For couples, a joint registration form suffices. Children below the age of 14 are to be entered by number on the registration form of the person they accompany.

(3) Persons accommodated have to sign the registration form personally and identify themselves by the document referred to in article 5. In the case of couples, the signature of one spouse suffices.

(4) For the accommodation of tourist groups the participants of which are registered in accordance with article 7 and are escorted by state organs, institutions or social organizations, it suffices that the head of the group makes out the registration form for himself and lists the other participants by number. The same entries have to be made in the guest registry.

Article 19 -- Guest Registry

(1) The guest registry is to be kept in the form of a book, notebook, ledger or file and has to supply the data called for in the registration form for lodgings (Appendix).

(2) The guest registry is to be presented for inspection to the security organs on their request. Entries have to go back 3 years.

Article 20 -- Staying in Vacation Homes and Youth Hostels

(1) Heads of vacation homes of the social organizations, state organs, institutions and enterprises and youth hostels and other accommodations serving tourism, sport and hiking, are under the obligation to keep a guest registry on all persons accommodated, in accordance with article 19 section 1. The same applies to the contractual partner of such facilities.

(2) In hikes by the Ernst Thaelmann pioneer organization it is sufficient for the pioneer leader to enter his personal data.

Article 21 -- Boarding Schools

The directors of the schools of parties and mass organizations must keep a registry on all boarding pupils, in accordance with article 19 section 1. Students that are non-boarding have to register in accordance with articles 7 or 8.

Article 22 -- Staying at Public Health Facilities

(1) Heads of public health institutions must keep a registry on all persons staying in them such as explained in article 19 section 1.

(2) Persons above 14 years of age who have no valid personal identification card of the GDR must immediately be reported to the German People's Police.

(3) Heads of public health institutions can have deputies take care of their registration obligation if they are too busy or cannot take care of it personally because of the volume of registration obligations they have to handle.

Article 23 -- Staying on Camping Grounds

(1) Persons coming to stay at camping grounds have to report at once, at the latest before noon of the day subsequent to the day of their arrival, to the person put in charge of the camping ground by the competent local state organ. Some other person, who must identify himself, can take care of this registration obligation for them. The competent local state organs have to make sure that the registration can be made on the camping ground or near-by.

(2) The local state organs in charge of the camping grounds have to keep a guest registry in accordance with article 19 section 1, into which are entered all persons under registration obligation as per section 1 who stay on these grounds in tents, motor vehicles, trailers or other accommodations.

Article 24 -- Registration Obligation for Persons Who Move in Vans From Place to Place

(1) Persons who move from place to place, in circus enterprises, or persons and their employees traveling by van in their line of business, must immediately, no later than at noon on the day subsequent to their arrival, report to the registration bureau of the German People's Police in charge at their place of stay. The registration form calls for the data required for lodgings (Appendix). The next place they intend to visit must then also be announced.

(2) If there is no local registration bureau of the German People's Police, one must register with the Sector Agent of the German People's Police.

(3) The registration obligation as per section 1 can also be carried out by a member of the household, properly identifying himself, or by the head or owner of an enterprise or establishment, for the persons employed by him.

(4) Irrespective of the registration obligation called for in section 1, the persons must be registered in accordance with articles 7 and 10.

IV

Transfer of Control Authorizations for Abiding by Registration Provisions

Article 25 -- Rights of Delegates of Housing Communities

Housing community delegates are entitled:

1. to inspect the house registration control books in the apartment buildings belonging to their housing community;

2. to exercise control over the fulfillment of the registration obligation and inspect the German People's Police receipts, as per article 6, on the fulfillment of the registration obligation;

3. to ask persons who have failed to register to do so at once;

4. to procure information from the competent registration bureaus of the German People's Police on the status of the registration obligation of the persons who reside or stay in the apartment building.

Article 26 -- Controls by Authorized Persons

(1) The chiefs of the People's Police kreis precincts are entitled to authorize persons to ask to be shown the house registration record book in supervising an orderly handling of the registration obligation.

(2) The authorization must be made out in writing and be shown before the house registration record book is presented for inspection.

V

Measures in the Case of Infringments of the Registration Order

Article 27 -- Arrests

The German People's Police may arrest persons who have failed to take care of their registration after being asked to do so in writing as per articles 7, 8, 9, 10, 23 and 24.

Article 28 -- Penalty Provisions

(1) Someone who deliberately or negligently

1. fails to comply with his duty to reporting in or out as per article 7 sections 1 or 3, article 8, article 9 section 1, article 10 section 1, article 16 section 1, article 23 section 1 and article 24 section 1,

2. as a proprietor, owner or caretaker of a house or as head of communal accommodations fails in his duty to keep a house registration record book or fails to report the loss of a house registration record book to the German People's Police,

3. as the manager or owner of enterprises serving commercial or social accommodation, as room referral director or a private lessor of rooms, or as head of facilities of religious congregations

(a) keeps no guest registry or does not enter persons accommodated in the guest registry, though he is committed to keeping such a guest registry,

(b) fails to submit to the German People's Police the registration forms of lodgings within the time frame set down after the arrival of the guest,

(c) fails to inform the German People's Police immediately about facts as per article 12 section 3,

may be given a warning or fined from M 10 to M 500.

(2) He who deliberately avoids being entered or signed out in the house registration record book within the registration time frame may be warned or fined from M 10 to M 300.

(3) The administration of the penalty procedure is incumbent on the chiefs of the German People's Police bureaus.

(4) In minor law violations in accordance with sections 1 and 2, the authorized members of the German People's Police, and in violations in accordance with article 23 section 1, also the authorized members of the local councils, have the right to issue warnings with fines from M 1 to M 20.

(5) In the administration of the penalty procedure and the levying of penalties, the 12 January 1968 law on fighting against law violations--)WG-- applies (GBL, No 3, p 101).

VI

Final Provisions

Article 29 -- Reducing Registration Time Frames and Setting Down Other Measures

When required for the maintenance of public order and security, the Minister of the Interior and Chief of the German People's Police may

1. reduce the registration time frames for certain regions, kreises or communities;

2. make the signing out in certain areas by the police or the signing in at such areas by the police dependent on a special authorization.

Article 30 -- Implementation Regulations

Implementation regulations are issued by the Minister of the Interior and Chief of the German People's Police.

Appendix to the Present Decree

Day of arrival	REGISTRATION FORM FOR LODGINGS	Room No.
Day of departure	Lodging:	

Name (also maiden name) First name Occupation

Date of birth Place of birth Kreis Family status

Citizenship Place of residence, Kreis, Street No. Country (if foreign)

Personal identification/Passport No. Place of issue Date of issue

Given name of accompanying spouse First name Date of birth

Place of birth Kreis Citizenship

Personal identification/Passport No. Place of issue Date of issue

Number of accompanying children: _____

Signature

Data in the registration form can also be printed in Russian, English and French

TRAINING FOR AIR DEFENSE RADAR PERSONNEL DESCRIBED

East Berlin MILITAERTECHNIK in German No 4, 1981 signed to press 14 May 81 pp 175-176

["MT introduces" feature: "Franz Mehring Officers' College of the Air Force/Air Defense Command, Radar Technical Department"]

[Text] The radar technical troops are a branch of the service within the armed forces section air force/air defense of our National People's Army, which is responsible for assuring radar control of combat actions involving all service branches of its armed forces section. Members of the radar technical troops solve this problem in close cooperation with their Soviet comrades-in-arms. In small collectives they perform a very important job. They continually observe the air space over our GDR, register all moving flying objects on their viewing screens and identify them. They are rightfully called the "watchful eyes" of the air defense of our country and the other socialist countries. For this responsible mission the radar technical troops were equipped with the most up-to-date radar stations and with automated directional and guidance systems.

The radar technical troop section of the Franz Mehring Officers' College is responsible for the training and further development of officer cadre, who receive solid political and specialized knowledge in the instruction areas "officer for panoramic radar stations and altimeter" and "officer for automated directional systems." Together with their collectives, our graduates are able to locate and continually follow or convey and process all necessary data for flying objects within the covered area. They can also describe the aerial position for timely and effective action by fighter pilot forces and antiaircraft rocket troops. They work at the control levels leader or station engineer in a radar technical company. Thus they begin their carriers as officers at a radar station or automated directional and guidance system.

Solving the problems in an on duty air force/air defense system requires more from an officer than just mastery of combat technology. To be station leader at a radar station or officer at an automated directional system is inseparably associated with the recognition of his responsibility for the protection of our air space. It includes constant striving for political and military mastery and requires great mental and physical endurance. Therefore, training in politically responsible thinking and action is the center of the entire training program of our section.

Consequently, only he can become an officer of the radar technical troops who:

--equipped with an extensive and practical knowledge of Marxism-Leninism instructs the soldiers and noncommissioned officers of his crew in being class-conscious, resolute fighters in the defense of the socialist fatherland,

--is able to use his military, military tactical and technical knowledge and ability to operate, most favorably utilize and maintain the most up-to-date radar and automation technology under all combat conditions,

--based on his political, educational and psychological knowledge and ability knows how to develop, shape and lead combat collectives as commander under all combat situations.

That also shows clearly that during the 3-year instruction period both officer candidates and instructors must live up to high standards.

Requirements for the acceptance of students in the department for radar technical troops are a secondary school diploma and completion of professional training in the area electrical engineering/electronics. Candidates having completed study at an all-round poly-technical secondary school with a corresponding certificate as specialist are brought up to the university level in a 1-year course of instruction.

As preparation for his troop service the officer candidate receives extensive instruction in the social sciences and military sciences (tactics, gunnery and defensive training). He also receives instruction in mathematics and natural sciences, technical principles, languages and sports in accordance with his specific military activity.

The teaching staff of the radar technical troops department gives the officer candidates the special knowledge of a tactical and technical nature necessary for their later mission, with emphasis on the second and third year of instruction. The line of training "principles of radio location" deals with the various procedures for locating flying objects [missiles], and with the construction, working principles and the general cooperation of radar stations. The same applies to the line of training "principles of automation and arithmetical technology" with reference to automated directional and guidance systems. In the subject "tactics of radar technical troops" the officer candidates learn the most appropriate forms and methods of combat service, in order to be able to prepare and lead actions by their units.

Instrument theory provides them the required knowledge of the construction, the interplay of components and phases, and the physical mode of operation of the controls of a radar station or automated directional and guidance system, where they begin their work as officers in the troop. In the line of training "engineering technical control" the officer candidate acquires the needed skills in the operation, maintenance and repair of radar stations or automated directional and guidance systems.

Knowledge and ability in all tasks for future officers of radar stations and automated directional systems is imparted in the area of training "combat service."

Here the future officers acquire the skills to command as commanding officers of their station crews during reconnaissance of air space and to establish radar control during combat operations by fighter pilot forces and antiaircraft rocket troops. They learn and practice the proper use of the working systems of their combat technology, in order to be able to solve every combat problem under all conditions and to make the right decisions in the given aerial situation. This line of instruction also prepares them to train their noncommissioned officers and soldiers.

Training in the radar technical troops department takes place under the direction of qualified officers with experience in troop service. The department has an up-to-date training base with extensive teaching and classroom materials. It was created in a common effort by officer instructors and officer candidates. Numerous suggestions for innovations and rationalization went into it, and it is constantly being modernized and improved in accordance withggrowing requirements.

Most of the officer candidates take part in military science circles under the supervision of officer instructors. Here they examine independently selected subjects from tactics, combat action and engineering technical control. There are numerous opportunities for the officer candidates to practice useful operational sequences with combat equipment and in training areas. They use the aerial position simulators especially intensively, and they acquire further skills and abilities in judging the aerial situation and making decisions.

Summarizing I can say that during a three-year course of study the graduates of the radar technical troops department are taught and trained by the faculty officers in cooperation with the officers of the training companies, the immediate superiors of the officer candidates, to be well-trained military cadre and specialists in their wing section. That is verified by the progress of many former officer candidates of our department in the units and formations of the radar technical troops.

NEW MOBILE WORKSHOP FOR CHEMICAL FORCES DESCRIBED

East Berlin MILITAERTECHNIK in German No 4, 1981 (signed to press 14 May 81) pp 218-219

[Article by P. Kunkel, engineer: "Combined Radiological-Chemical Workshop Supports Troop Maintenance"]

[Text] The combined radiological-chemical workshop (KRCW) created a modern basis for the fulfillment of the increased demands, under combat conditions, on troup maintenance of special Ch technology, devices and agents of the Chemical Forces.

The KRCW can be deployed as a complex. It is operated by 22 men. Along with the development of the KRCW, various new types of equipment have come into existence. These elements can also be used in permanent maintenance installations.

1. Structure and Purpose

The KRCW has its own energy supply and a synchronized assortment of testing devices, tools, spare parts and maintenance materials. The easily manageable coffers (LAK II) are very useful. All pieces of equipment are arranged in order, clearly visible and easily accessible. The KRCW consists of 3 modified coffers (see Table 1). They are made of unsaturated polyester reinforced with fiberglass. They are divided into four 10 mm ring-shaped segments which are connected with each other and are attached to the frontwalls. The segments are strengthened with C-shaped bands. These consist of noncorrosive aluminum. Pieces of equipment, such as workshop furniture, tables, cabinets, separating walls etc. are attached to the bands. Doors and windows have been constructed in such a way that the inside of the coffers can be hermetically sealed.

The coffer floor consists of a wooden floor with a glued-on floor cover. Individual parts can be removed. At the lowest point of the coffer floor, a short feed pipe was installed, through which water or other fluids can be drained. In addition, there is a sucking device with which all fluids can be removed from the coffer floor.

The three workshop types are: the workshop for KC-clearing devices (WKCA), the workshop for protective equipment (WPSA), and the workshop for special Ch technology (WPsT) with Ch spare part storage.

The workshops can also be used as permanent maintenance bases. For this purpose, the coffer structures must be removed from the transport vehicles with proper means (those used for container vehicles), with the help of cranes. It is planned to introduce a separate releasing gear for the LAK II.

Each coffer is equipped with an FWUA-100 N-24 filter ventilation device. It is operated and monitored from inside the coffer.

Every workshop has a 4-kVA electric generator set. But the power can also be generated by a 20-kVA electric generator, i.e. it can be taken from the local power supply. In this case it is advantageous to connect the coffers of all workshops with each other with the appropriate cables, because the entire energy consumption can be covered by the 20-kVA generator, i.e. the local power supply.

The 4-kVA generator should, if possible, be operated outside of the coffer because vibrations and noise would interfere with the sensitive measuring and testing equipment, i.e. the maintenance process.

The difference in basic equipment can be seen in Table 2.

2. Advantages of Mobile Coffer Structures

Mobile coffer structures for mobile chemical workshops have proven themselves useful in practice. They have a number of advantages over the older type, permanently mounted structures. The following examples are to show this: when the carrier vehicle requires maintenance, the coffer can remain with the unit and can be used temporarily for maintenance under stationary conditions. The opposite is true for maintenance of the LAK II. The carrier vehicle can then be equipped with a replacement coffer, assuring continuous maintenance of special Ch technology under combat conditions.

The coffer's outer casing, consisting of unsaturated, fiberglass-reinforced polyester, lends great durability to the LAK II. Compared with past coffers, maintenance costs, above all, have been reduced. In addition, there is practically no corrosion with fiberglass-reinforced plastic.

3. Different Uses of LAK II

Workshop for KC Cleanup Devices (WKCA)

The individual WKCA can also be used as part of the combined radiological-chemcial workshop (KRCW). It offers room for 5 men inside, and for 2 men in the attached tent. Work done in the coffer consists primarily of measuring, testing and maintenance work on chemical clean-up devices, on nuclear measuring the electronic components and installations of CH special technology, as well as mechanical work.

Workshop for Protective Equipment (WPSA)

This workshop also is manned by 5 in the coffer and 2 in the attached tent. In the coffer, mostly the repair of protective masks, sewing, scanning and adhesion work are carried out. In addition to personal protective equipment, devices for special treatment, as well as canvas, bags and other equipment can be repaired.

Workshop for Ch Special Technology (WPsT)

The WSpT can also be used as individual workshop or in connection with the Ch replacement part storage, or as part of the KRCW complex. Spare parts necessary for maintenance must be entered centrally when used as individual workshop. The coffer has room for three men.

In the WSpt, working parts can be rotated, drilled or milled. There is also equipment for welding, cutting and soldering.

Ch special technology is maintained primarily out in the open. The dismounting or mounting of individual components can also occur in the attached tent. After maintenance and appropriate cleaning, it is possible to touch up the paint with a paint gun provided for this purpose.

Ch Spare Parts Storage

The Ch spare parts storage consists of a wagon with trailer and supplies the individual workshops and the KRCW with spare parts and maintenance materials. It requires one man for operation. The attached tent can be used for interim storage while loading and unloading.

4. Variations in Use

Different variations are possible for troop maintenance, thus increasing maintenance capacity. They can consist of several workshop complexes, individual workshops of one kind, or a combination of individual workshops with the Ch spare parts storage.

Figure 1 shows a standard variation for the deployment of the KRCW. It represents a nearly total ideal variation for organized technological maintenance. Should such a variation not be possible under combat conditions, a variation which assures maximal performance must be attempted.

The modern equipment of the combined radiological-chemical workshop, the greatest variations in maintenance work, but also the technology and equipment of the chemical forces, which are more complex to maintain, require qualitatively higher standards from maintenance personnel. These increased requirements must always be taken into consideration during training.

Table 1--Coffer Structures and Carrier Vehicles

Designation	Coffer Structure	Carrier Vehicle
Workshop for KC-clearing devices (WKCA)	LAK II A 1	W 50 LA/A/C
Workshop for protective equipment (WPSA)	LAK II A 1	W 50 LA/A/C
Workshop for Ch special technology (WPsT)	LAK II A 1	URAL 375 D/C/K
20-kVA electric generator type 662 6376/104	-	1-axle trailer, type Fl 51
Ch spare parts storage:		
Storage truck	LAK II C 1	W 50 La/A/C

MINISTER DISCUSSES STATE OF AGRICULTURAL EDUCATION

Budapest MAGYAR HIRLAP in Hungarian 2 Aug 81 p 5

[Interview with Dr Lajos Denes, deputy minister of agriculture and food industry, by Ivan Gador: "Theory and Identification"]

[Text] Dr Lajos Denes was born in Oroshaza in 1927. After completing the University of Veterinarian Science in 1960, he worked in that field as practicioner, then in 1965 he became a staff member of the Ministry of Agriculture and Food Industry [MEM]. In the meanshile he earned a specialty diploma in agricultural engineering and also graduated from the MSZMP's Political College. He has been deputy minister since 1978; he is in charge of trade education, research, animal health care and crop protection.

> The significance of higher education in agriculture can hardly be questioned, since the more and more specialized technologies of Hungarian agriculture increasingly require highly trained experts. The six universities under the MEM's control, and the six college departments of the universities, plus the three independent colleges each year graduate more than 1,700 students in the daytime programs alone. Another 3,200 professionals earn their diplomas each year in the evening and correspondence programs, and by working as special engineers. This sizeable organization has undergone a number of changes recently; the decentralization of earlier years was followed by centralization. Of course, simultaneously with the organizational changes a number of changes in contents were also necessary. Our reporter Ivan Gador talked aboutthis with Dr Lajos Denes, deputy minister of the MEM.

[Question] Why did the structure of agricultural higher education have to be changed twice in just a few years?

[Answer] Because we had to admit: good intentions alone are not enough. In earlier years the extensive process of decentralization took place practically spontaneously, and was greatly helped by the fact that the managements of a number of cities and smaller cities felt that in order to perk up intellectual life, it is indispensably necessary for the community to have an institution of higher education. One can hardly argue with this point of view. However, it is a fact that meritorious research work cannot develop without the proper intellectual background, just be repainting the sign on the front of the building. Unfortunately, little

else happened at most of the institutions of higher learning springing up all over the place like wild mushrooms, a few years ago since the teaching staff did not change at all, or only minor changes took place. There were some notable exceptions, but here--I am referring to the College of Veterinarian Sciences--which has an internationally recognized tradition of over 150 years supporting it.

[Question] These reasons seem so logical that one finds it hard to understand why they were ignored in the past?

[Answer] As I said before, basically this process was kept moving by good intentions. And, of course, there were also some positive aspects to consider. The college staff organized in Kormend, for example, attracted the area's young people. Since this higher school faculty was eliminated, we find it practically impossible to find students from that area, especially for schools in more distant parts of the country. Even though we made it possible after the mergers for several higher educational institutions to enroll students from the entire country, most of them are unable to take advantage of this opportunity. One example for this is that we are unable to enroll students from, let's say, Eastern Hungary, for Kaposvar where animal stock raising is taught at a very high level. The situation is the same in Sopron with the Forestry and Lumber Industry University, where there are hardly any students from Eastern Hungary.

[Question] Perhaps one reason for this is that there are very limited traditions of forestry management in the Lowlands.

[Answer] The forester is not a mountainist [sic]! I know that there is such a prejudice as you mentioned it, but let us finally acknowledge that a number of producer cooperatives and state farms operating in the Lowlands which manage forests, but whose primary activity is in the lumber industry. If there is any place where forestry management can and must be improved, then that place is precisely the Lowlands. And this requires professionals. People with a sense of obligation, who were born there and who will return to their native lands after graduating from the university. Of course, this is valid not only for forestry but also for all agricultural branches without exception.

[Question] I am told with regard to college dormitory spaces, the agricultural higher edication is doing pretty well. Perhaps more effective [recruiting] propaganda would help?

[Answer] Naturally propaganda is necessary, but unfortunately we cannot expect it to provide the solution because the reasons for this situation must be sought much deeper than from a few printed propaganda items or even a well-made film could change. There are agricultural universities in practically all regions of the country. Debrecen, Godollo, Keszthely, and Mosonmagyarovar, just to mention the four major university centers. We can provide good quality dormitory spaces for 70 percent of the students, and the institution even takes care of those who per chance could not get into the dormitories: they have a number of sublet apartments where they can place 3 or 4 students per apartment. Thus even this is no more expensive than the dormitory. I hardly consider it a tragedy for a child to be taken out of the family nest at the age of 18 or 19 years for 3 to 5 years, to join a community and learn some independence. I also do not think that this would place significantly greater financial burdens on the family than if the child were living at home during these years. And yet: most families choose the college or university the child should attend on the basis of proximity and whether he can commute.

[Question] So you also share the opinion that the family, and not the child, makes the career decision. Why is this so?

[Answer] Because it can be no other way in our present school system and enrollment system. That is, the child would actually have to decide at the age of 13, in seventh grade, what career he chooses. What an impossibility! Because it is not immaterial what kind of specialized secondary school he attends, since if he decides on the college or university of another area after high school graduation, he will start out with a big disadvantage in comparison with those who attended the specialized high school corresponding to the professional discipline. This is why most parents--at least the ones with foresight--try to send their children to general high schools. The time for decision can be postponed by this. To gain time!--this can be the only realistic goal. Because up to this day the convertible [highschool] diploma can be obtained only in a general high school. But most children are not given this opportunity. They attend a specialized high school, then an institution of higher learning corresponding to the area of specialization. And for many of them--for too many of them--the consequences are tragic. Perhaps what I say appears to be an exaggeration. But selecting the wrong career is the source of psychological and intellectual dissatisfaction, and of personality problems. I am not stating by this that most people finally do not find their places in society. But they pay a great price for it, too great a price. It is obvious that we have to modify the enrollment system.

[Question] What kind of modifications are you thinking of?

[Answer] We should concentrate much more on the basic subjects, on providing the students with significantly broader general education at the secondary school level. This way the acceptance committees could evaluate the level of general knowledge.

[Question] On this basis it can hardly be decided who is suitable to become an architect, and who for agricultural engineer.

[Answer] I know of no method by which this could be decided about an 18-year-old man within the framework of any entrance examination. Two theories have been in conflict with each other on this question for a long time. According to one of these theories almost no profession is taught during the entire time of university training, only general knowledge is disseminated at a higher level. In contrast with this, believers of the other theory would like to teach specialized professional information almost exclusively. We--since we are a small country--need people with flexible professional knowledge, thus we have to find our way somewhere between the two paths. General topics should be taught in the first 2 or 3 years at the university, and by then it can be decided which professional direction really suits which child. I also would not consider it a tragedy after 2 or 3 years the student transferred to another institution of higher learning because he discovered that he could not identify with the university's professional areas. Why should we be afraid of losing perhaps a year or two in this manner, when the alternative is perhaps 5 suffering years study, and then a dissatisifed life.

[Question] Of course, the question is whether the present educational capacity would be sufficient to do this?

[Answer] This is a false problem. If we made acceptance into the colleges and universities easier, if we accepted 20 or 30, perhaps 50 percent more students than we do today, then we would have an excellent opportunity for weeding some of them out after the first years, and even for changing careers if it became necessary. If this would open up the opportunity for good selection, we could even set higher and more differentiated requirements during the training. And while the young people were gaining high quality general education, they would be guaranteed of earning their diplomas to practice in a professional field to which they were suited, and with which they could identify.

[Question] Even today higher education is often accused of being too highly theoretical, and that the young diploma holder are unable to adjust to business life because they lack practical experience. Aren't you afraid that these complaints would be even more justified in the system outlined here?

[Answer] A basic distinction must be made between training a plant engineer in a college, and training engineers in universities. Naturally the plant engineers must primarily be taught practical information, trade, management know-how, since they will be the first-line leaders in the agricultural operations. But a different thing is involved at the universities. The entire future life and work of an agricultural engineer is determined by the depth of biological, life science, genetic, and last but not least, by the language knowledge he acquires. Because, if you like, this is the sole of the shoe onto which the upper part will be sewn later, with the acquisition of practical information. And it will be the upper part he needs for his work. Of course, in no case must it be expected of a fresh graduate to replace the experienced, older professional after only a few weeks on his new job. The apprentice system which has great traditions in agriculture should be revived on a high level.

OFFICIALS DISCUSS CRIME, POLICE ACTIONS

Comments of Justice Official

Warsaw KURIER POLSKI in Polish 3 Jun 81 p 3

[Interview with Docent Dr Habilitatus Adam Strzembosz of the Institute for the Study of Judiciary Law, Ministry of Justice, by Elzbieta Otefinowska: "Perhaps the Militia Is Working More Effectively"; date and place of interview not given]

[Text] We are confronted with two sets of papers: one containing alarming information concerning a 26-percent increase in crime this year, issuing from the Ministry of Internal Affairs and the General Public Prosecutor's Office as presented to the members of the Sejm; another containing a declaration by lawyers--and undersigned by 125 persons--questioning the reliability of the information given in the press on this subject. And still another text: the proceedings from a Sejm meeting of the Commission for Internal Affairs and the Administration of Justice. The delegates have judged us journalists severely. They criticize us for our failure to make a clear presentation of the problems of crime. They say that we leave them hanging in midair.

Thus, I was all the more eager to have the scholar, Docent Dr Habilitatus Adam Strzembosz of the Institute for the Study of Judiciary Law from the Ministry of Justice, grant us an interview to explain this discrepancy in the evaluation of the situation from his point of view.

[Question] Docent, as you read the press, listen to the radio and watch television, do you feel threatened by crime?

[Answer] I would feel threatened if I were not a criminologist who, by virtue of his profession, must know how to make use of statistics and must also know the machinery behind the making of police reports. It is a fact that selective information, the generalization of individual matters and the repetition of this subject all create a climate in which something of late seems suddenly to have happened to cause a manifold increase in the number of murderers, robbers and the worst kinds of scum of society. I do not contend that there has been no increase in criminality in certain categories of crime or that this phenomenon should be ignored. However, this is something incredible in all of these alarms.

[Question] Namely, what?

[Answer] Their tone: the random nature of data, the superficiality of evaluations and the sensitizing of people to danger, in a word: the way the issue is presented. You know if the number of criminal offenses increased 26 percent this year over the same period last year, that this is an important sign. But a year ago when the statistics showed an increase of murders alone by 27 percent in comparison with the first half of 1979, no one sent out an alarm because of this. It was evident that no one cared about it. But today, when the general data are given it is not stated that the number of murders for the period under consideration has decreased, although an honest evaluation of the situation should also present the positive facts. Likewise, the fact that a decrease of 16 percent has occurred in the number of inquiries held in conjunction with active assaults against public officials has been passed over. And these data are basic. They prove that the aggressive attitude of society toward the police has not at all intensified, as may seem to be the case in the light of official statements. Lawyers know these data. Thus their conviction that the statistics on inquiries may be used in whatever way one may wish, to serve one's immediate ends.

I do not mean to say by this that the situation has not become worse in any category of crime. I would even be surprised if this were the case. Every crisis--and our present crisis began before this year--must engender such a phenomenon. On the other hand, I would like to persuade you of the fact that the matter of crime is too important and too complex for one to throw out alarming statements without examining all of the elements of the phenomenon, without a factual, responsible commentary upon what is happening in this sphere.

[Question] And what else is happening that must be mentioned in conjunction with the publication of an increase in the general number of offenses?

[Answer] The type of offenses must be characterized honestly and the social background of the new manifestations of these phenomena must be carefully analyzed.

For example, it may become evident that, given our new sociopolitical situation today, MO [Citizens' Militia] functionaries, aware of the increased possibilities that their work will be checked, work better than formerly. Perhaps their more intensive efforts enable them to detect a greater number of crimes. Perhaps they have departed from the practice of not accepting reports of "uncomfortable" crimes.

[Question] Pardon me, what kinds of crimes ?

[Answer] Crimes where we may anticipate that the perpetrator will be really difficult to find, e.g., a pickpocket.

In the past, reports of such crimes went unrecorded. A case which does not conclude with the determination of the perpetrator of the deed encumbers the detection statistics and, in turn, the measure of evaluating the police. Thus, in many instances, it is explained to the owner of a cellar which has been robbed that the MO handles thefts committed from the first floor up, or he is clearly given to understand that the report will be accepted if the victim of the crime will eventually be able to identify the perpetrator.

If the police today do not so often refuse to accept difficult cases, then this makes the statistics look worse, even though the situation is not at all the worse from the point of view of society. It is also possible that, at present, more law-abiding methods are used to reach the truth. If, in the past, there were instances of beatings of suspects for the purpose of coercing them to admit their guilt, and today such practices are frowned upon, then, in spite of this, the decrease in detection due to this reason would again be a positive phenomenon from the societal viewpoint. As far as I know, such broad analyses of the problem have not been made.

[Question] Docent, your conception is based on the optimistic premise that the police are using more law-abiding methods.

[Answer] Because there are grounds for such an idea. The police feel that they are beginning to be supervised, that they are beginning to be subject to the workings of the law. Such an awareness brings about the limitation of reprehensible attitudes. As you know, citizens today who have the support of new mass social organizations, especially "Solidarity," feel more sure of themselves in the attainment of their rights. They confront MO functionaries with the demand that the MO operate within the framework of finding principles and that they meet their obligations with regard to society.

[Question] Docent, as I listen to you I still have mixed feelings. While I am clearly interested that no policeman should fail to consider that he should never violate the rights of any citizen, if however, under the influence of psychological pressure or out of fear of eventual reproach for the violation of these basic principles, he refuses to use brutality where necessary to capture a bandit, then I as a citizen do not feel at all secure. On the contrary, I feel threatened, if only from one side.

[Answer] Clearly, force used against criminals cannot be eliminated. And society, convinced that the MO respects law-abiding methods of acting, will not blame the MO for using severe measures sometimes when unavoidable. The criminal world is not always receptive to the use of persuasion. However, the fact of the matter is that this should occur within certain ramifications and it should have its limits which may not be exceeded. And it should be clearly stated, for example, with absolute certainty that the usurpation by the prosecuting apparatus of the right to mete out punishment is only a step in the direction of impunity. And such practices have been observed. I have encountered them personally.

Once I called a policeman over to a drunk who was creating a scene. At first he reacted appropriately, sharply lecturing the man and warning him. Then, when the facts were determined, he very unceremoniously asked the man being held: "Well, which will it be, the banana [billy club] or the college [hearing before one's peers]?"

"The banana!" said the drunk. "But only once, Officer."

And perhaps this was a less painful punishment for the hooligan, but such a practice is dangerous when those who do not have a calling to the meting out of justice are in this position. Society does not approve such practices, nor do these practices create the proper foundation for building confidence in the prosecuting apparatus. Such trust is indispensable for the suppression of crime.

[Question] Docent, as a criminologist, what are the tasks that you deem indispensable for the attainment of this goal?

[Answer] A whole array of tasks if necessary.. Together they must establish the conviction among the people that the law is the law, always and for all people. They must inculcate the idea that those who are called to protect society against lawlessness themselves likewise act according to obligatory rules and prohibitions. And something else: the implementation of these tasks must bring about a situation in which behavior which is out of line with the law will universally be taken as blameworthy and deserving of censure because it is not in accordance with obligatory legal standards and...with the conscience of man. Then, it will not be necessary to place a guardian of public order behind every citizen as some would like. But here I would also like to express the conviction that our society as a whole has shown proof of its exceptional self-control. Throughout all of the troubles which have fallen upon us, despite empty stores and long lines even though rationing cards have been introduced, despite the price increases which have, in fact, come about and the resultant reduction in the living standard, not to speak of continuing political pressures, we have maintained peace and equilibrium.

[Question] In concluding our conversation I would like to ask you a personal question. You are a lawyer. You know the contents of the lawyers' statement. Would you sign their statement?

[Answer] I already have.

Comments of Defense Official

Warsaw KURIER POLSKI in Polish 19-21 Jun 81 p 6

[Interview with Col Dr A. Slowik, deputy director of the MO Criminal Bureau Main Command, by Wlodzimierz Slowinski: "Are They Our Whipping Boys?"; date and place of interview not given]

> [Text] Some say that the number of crimes has suddenly increased of late, while others hold that the increase is the result of the manipulation of statistics and propaganda. Some consider the MO [Citizens' Militia] to be immune, while others feel that their job was never so difficult as it is now. We are speaking about these issues with the deputy director of the MO Criminal Bureau's Main Command, Col Dr A. Slowik.

[Question] What is you estimation of the value of the propaganda campaigns in the press and on radio and television disseminating the information that crime is on the upsurge at nearly a daily rate, and we find ourselves in the very eye of a hurricane. The provocation of such stresses and fears among society, which has reasons to feel threatened in other ways, is dismaying. Both as an ordinary television viewer and as an expert who knows what underlies these matters, what is your opinion of these things?

[Answer] Can this be called a propaganda campaign? In actuality, for a certain period of time several publications have appeared which present the current state of criminal offensiveness. On the other hand, there are published items, such as the one entitled "Perhaps the Militia Is Working More Effectively" (KURIER POLSKI, No 108) in which the subject of your interview places particular stress on the fact

that there is a specific tone associated with the threatening state. We have thrust upon us the presentation of randomly selected data and superficial evaluations as well as an increasingly dangerous situation. Then again, other publications, except for printing dozens of captions and slogans, do not contain any legitimate arguments. There are many such publications. At the same time, the reliability of statistical measurements is being shaken, but nothing real and objective is proposed in their place.

[Question] How, then, do we measure the threat?

[Answer] There must be some sort of gauge, at least to arouse prosecuting officials to better, more effective work. In our circumstances this is represented by the statistics on crime. They are not, as some say, police reports and statistics; they are police-prosecutor's office statistics. May I remind you that several years ago a joint order from the Ministry of Internal Affairs and the Office of the General Prosecutor was issued concerning the keeping of statistics on crime. There is also another kind of statistics--judicial statistics. But using such statistics in order to evaluate the current crime rate may be fallacious. The total volume of such statistics often includes acts which were committed much earlier (than the related case reached the courts).

It is a shame that no more objective measure has been developed to date. In this regard I am of the opinion that we should not rely exclusively on statistics; we should also poll public opinion and study the basic feelings of society in this domain. It has happened, after all, that the statistics have been excellent and yet in a given region there was still a perceptible threat of banditry or hooliganism. We likewise are confronted with the accusation that recently there has been a flood of information associated with situations that threaten.

[Question] And is there something to all of this?

[Answer] The truth is that, in reality, prosecuting officials, including the police, now have more possibilities for presenting data, including unfavorable data.

[Question] Why?

[Answer] First, because there was not such a great need in the past. At least it seems so to me In the past, I did not encounter so many people who were interested in the state of crime as I have of late.

However, we should not accuse the police, and particularly the Criminal Bureau, with "manipulation" of statistics on the state of crime. I would like to note the fact that in 1979 the Criminal Bureau of the MO Main Command made a "Report on the State of Criminal Offensiveness and Methods for Battling Crime." We based this report on many years of research encompassing the past 18 years. I know that this report reached people who influenced the policy of penal prosecution. The report reached the government, the Central Committee, the general prosecutor and the organs which administer justice. Even then, in 1979, we warned of the development of negative phenomena and trends. These prognoses of ours are proving true--and much more violently than we predicted--because they are occurring within a specific societal situation.

[Question] The report was known in 1979. As far as I know it was opened in secret. Revealing its contents today, in my opinion, smacks of manipulation, since our society is already in enough unrest as a result of the situation of our country. This additional information serves definite propaganda arguments.

[Answer] I brought up the matter of the report for two reasons. First, I wanted to prove that our disquiet goes back much further than recent days. But primarily I wanted to point out that the notion of the exclusively random, fragmentary presentation of data is just not true. Furthermore, those who make mention of such practices are the ones who are guilty of such behavior.

But to return to the report--we revealed such fragments as applied to the specific topics taken up by the means of mass communication. Are there more such fragments to be published? Yes, but the climate is such that in many fields of social and economic life there now arise issues having a negative connotation (vide licensing and investments decisions and the like). We have still not published the whole report. I could give many examples of sexual murders and their lurid details. Many subjects have still not received an objective explanation. I refer to the curses of alcoholism, drug abuse and the lack of proper security for public property.

[Question] Colonel, let us be honest--has crime increased, or not?

[Answer] On the basis of our raw statistics and working with data from 4 months of this year, we have ascertained a marked increase in criminal offensiveness by more than 26 percent. For more serious crimes (murders, rapes, robberies and serious break-ins into public and private buildings as well as theft of these buildings), the increase is still higher.

Sex-related murders have also increased, but let us keep in mind that, to a certain extent, the situation in rapes and prostitution also has an effect on this increase. For this reason, I cannot agree with the position that makes light of the meaning of these acts, as did a journalist in ZYCIE WARSZAWY. We also ascertain an increase in accidentally caused deaths (over 22 percent) and an increase in bodily injury by more than 12 percent. Moreover, the number of individual and group actions of rowdyism have also increased. I can give you numerous examples.

[Question] Colonel, your academic title is proof of the fact that you do not believe that crime has suddenly shown a phenomenal increase that grows daily because we have all suddenly had a desire to play at being policemen and thieves. You must realize that this is the result of many years of demoralization and of putting blinders on society in order to limit their access to ideas which truly serve human development. Today we are manifesting the consequences of this and we tend to forget its causes. Do you agree?

[Answer] Yes, I think so. Too little is said about the genesis of crime, its etiology. And we almost never speak of how we should go about coordinating our efforts to counteract crime. No one talks about what we should do. Show me some published materials of any value which state that scholars and practitioners are deliberating jointly on what should be done. We should coordinate the efforts of prosecuting officials and officials who administer justice. But not only this. We should indicate what every citizen can do in his own self-defense. I am not calling

for the police to be replaced. But just look at other countries (the United States, the FRG, the USSR), how much emphasis they place on matters associated with the self-defense of citizens, with the protection of children and with the security of property, automobiles and the like.

[Question] For all of this we need the cooperation of the police and society. When I was witness to the happenings in Otwock, I saw--although I was already aware of it--just how isolated the police are and how poorly society regards them. And it is not only a question of Otwock. This is the case throughout the whole country. We must think now what should be done in order to make such cooperation possible. What should we do to mend this rift which only grew and grew in 1968, 1970 and 1976?

[Answer] I think that for various reasons Otwock is not the best example of the idea you have set forth. I am not a politician. I have worked at my profession for 27 years. On the basis of my experiences I have the authority to say many things. I have been able to view various phases of my work. Keep in mind that I joined the MO before 1956. I experienced all of those important, in many ways, tragic dates on the calendar. The events of 1956 were critical for me, as were those of March 1968--I was in Warsaw at the time. I lived through the events of 1970, and those of Krakow in 1976. I must say that one thing surprises me, and I say this from a professional point of view. At this time we have conditions which are more unfavorable for work than any other time. It is a puzzling thing--I suspect that by now we are experiencing the cumulative effect of certain factors which have piled up over the course of many years and many happenings. Hence the especially intensive character of what is now occurring...

[Question] But before this time was the crisis never so profound as now in other fields of life?

[Answer] No, as you are aware, in the respect that it is particularly disturbing that when the facts of the perpetration of a crime are evident--and I could give many such examples of late--the police are unable to summon the support of the people for their actions at the moment of their intervention. I find it absurd that Zielenski says in ZYCIE WARSZAWY (despite the many other solid arguments in his article) that a policeman who desires to hold a malefactor must first conduct practically a whole judicial proceeding on the street. Zielenski says something to the effect that: "The citizen will offer support to a policeman--if he is convinced that the suspect is really guilty." Try to imagine such a pressing situation on the street...

[Question] Nonetheless, I believe that the policeman must have the trust of the citizen. Then things will not develop into such a situation. The citizen must have the sense that the profession engaged in by the policeman serves his interests. And he doesn't feel this way. And we constantly have examples of cases in which the militia is the tool and the object of manipulation of enigmatic political forces. Take the Bydgoszcz affair, for example. And the arson in Bialystok and many other places. This, instead of building confidence, builds up higher walls. Sometimes I think that the leadership of the militia is made up of people who are working toward their own detriment. And this is likewise irritating because they thereby work toward my detriment, toward the detriment of the citizen who will be left defenseless against hooligans on the street because of a militia made powerless due to the lack of confidence of society in them.

[Answer] I can only tell you this: that we, MO officials are fully aware of the need for societal support and trust. We are also interested in the ultimate clarification of all of the matters of which you spoke. We believe that this would clear the air considerably, but by chance do not examples of several other marginal matters excessively cloud your picture? Please remember that in the course of a year we conduct several hundred thousand criminal proceedings. We undertake hundreds of thousands of instances of intervention of various kinds. If, in our work, there are also incidental matters to which we have an unequivocal attitude, then how can you immediately pose the idea that the militia in general does not operate in a law-abiding way?

[Question] But regardless of what you or I want, such a consciousness does exist as a social fact and we here, as we sit at this table at the MO Main Command, cannot help that attitude.

[Answer] Let me tell you something else, even though what I say may smack of bitterness.

[Question]...I'd be surprised if you had none...

[Answer] But please observe what is happening. There are discussions of the subject of law and order among the proper commissions in which the militia is spoken of, often without a familiarity with the facts and without the presence of an MO representative. They speak of people engaging in a certain profession--and I do consider this a profession--not taking into account whether this profession is engaged in well or poorly, but the one whose interest is in the profession does not participate in the discussion. And perhaps we would have a persuasive argument. Isn't this possible?

A concept should be developed which would reconcile the fundamental principles of the work of our service with the interest of every person. The following matters are essential here: one's being disposed to be a policeman, the issuing of orders, work adaptability and the like. Society expects us to act. The planned law concerning trade unions includes the statement that certain professions may not organize and strike. We are mentioned, among others. There are also various conflicting statements in other regulations.

[Question] Today the laws are not unshakable...

[Answer] They are not unshakable, that is true. However, the militia is a paramilitary institution. Each of us has some rank and we are bound by the element of the issuing of orders and leadership. And this would have to be taken into consideration.

I should also add that, in recent times more than ever before, there arises the need to protect the official himself. Policemen, even local policemen, work under very difficult conditions (I am glossing over certain matters here, of course, which are of a degenerative character). Officers in the criminal service are in a state of constant readiness. They work odd hours, on holidays and on days when others are off. They are often in danger of losing their lives and imperiling their health. From this viewpoint, we must consider combining the elements which are characteristic of the trade union with the elements which issue from the specific nature of policework.

[Question] Colonel, at this time I notice another phenomenon which perhaps has contributed to your embitterment. That is, that the political and administrative officials to whom you are subordinate are being purged whether to bring about a change in personnel or a change of face as well, and you become the whipping boys. Hence ther is much bitterness and unrest within your ranks. Perhaps it seems paradoxical, but is the militia beginning to be left defenseless?

[Answer] The often occurring bitterness, it seems to me, does not issue from the fact that someone has been purged, that personnel have been replaced, that a change of faces has been made. Among valuable militia employees, it is the consequence of the lack of appreciation of their work and their efforts, and likewise of the good results of their detective work. It is the consequence of the lack of support of their useful service and of the general censure of all of them because of their ostensible lawlessness. I have also perceived--and I have had years of experience--that here, as in other areas, we need certain organizational-structural changes to streamline our work. But these changes should be effected quietly and with due consideration. With regard to the expressed fear of defenselessness, I can assure you that we still have available the means of which no one has dispossessed us.

[Question] Means--in what sense?

[Answer] There are legal means. There is also the human potential of people who are well prepared, who take their profession seriously, who have good morale and who are effective in their actions against criminal offenders. But for these means to bring about the anticipated societal effects, they must also have the combined support of citizens and state officials.

[Interviewer] Colonel, thank you for the interesting conversation.

ERRORS IN WEST GERMAN ARTICLE ON ROMANIAN HISTORY CITED

Bucharest REVISTA ECONOMICA in Romanian Jun 81 pp 1176-1182

[Article by Ligia Barzu: "Several Explanations Regarding the History of the Romanians as Reflected in Foreign Publications"]

[Text] The FRANKFURTER ALLGEMEINE ZEITUNG is publishing a series of articles regarding the origins of the Romanian people written by Dr Andreas Jonas and professor Donald Mckay. Normally, such articles would not deserve, immediately, a response within a scientific magazine. The prestige of the newspaper within which these articles are appearing, the groups being addressed and the scientific and academic titles of the two authors presented to the public, as well as the circumstances that their ideas are not missing from more recent allegedly scientific works, constitute sufficiently serious reasons for discussing the opinions they have formulated. The main idea that runs through the three articles is the south-Danubian origin of the Romanian people in a restricted area around Lake Ohrida. From there, as a result of the nomadic migrations of Vlachian shepards, the territories were occupied that, later, yielded historical records of their presence.

The arguments that are used are known as part of the arsenal presented by R. Roesler and those who follow his ideas:

1) the existence in Romanian and Albanian of certain common words;
2) the presence of certain Romanian geographic names in the Balkans;
3) south-Slavic words in Romanian
4) the absence of Old Germanic words in Romanian;
5) the non-Romanian origin of names for important cities and rivers in Transylvania;
6) archeological digs have not confirmed the north-Danubian origins of Romanians;
7) the Romanian's dependence, until 1767, upon the jurisdiction of the bishop of Ohrida, and so forth.

In addition to these ideas, which eventually can be brought into the limits of a scientific discussion, there are a series of phrases whose aggressiveness do not need to be emphasized. We are speaking of "the theory-dilemma of the Daco-Romans, through which the Romanians hide their Balkan origins" and of the "story" about the "Daco-Roman theory" which "has always been rejected by scientists as unfounded." One also reads a phrase from Stadtmuller in which we are reminded of the "exacerbated infantile chauvinism" and so forth.

What is shocking, first of all, in the arguments of these two is the fact that they feel they can avoid any responsibility by invoking names and ideas that they list in an over-elablorated disorder. Historians of the modern era (S. Dragomir) and linguists who have never for one moment shared the thesis of a south-Danubian homeland (Alex. Rosetti) are quoted in a manner that clearly aims at throwing off track the unwary reader. In this same category, we also find the allusion to the "careful recording by the Byzantine chroniclers" of the migration of the Vlachs from the middle of the Balkans towards the Danube.

They also try to obtain a favorable impression by mimicking up-to-date information, quoting from recent editions of certain works that appeared either at the beginning of the 20th century (D. Densusianu) or during the inter-war period or at the beginning of World War II (Al. Rosetti, G. Stadtmuller).

What also is surprising is their failure to mention a single historian or linguist who has taken an opposing position. This is probably because people like Th. Mommsen did not appear to them to be important enough. First of all, we can note Romanian historians such as D. Onciul, A. D. Xenopol, N. Iorga, V. Parvan, N. Banescu, G. Bratianu, S. Dragomir, I. I. Nistor, C. C. Giurgescu, C. Daicoviciu, R. Vulpe, Gh. Stefan and I. Nestor, who in summaries and studies have demonstrated the continuity of the Romanians north of the Danube and the unfounded nature of the arguments regarding their Balkan origins.

Not all foreign historians have declared their acceptance of the thesis of a south-Danubian homeland, as Mr A. Jonas claims. We have already mentioned the name of Th. Mommsen.

To this, one can add other names, such as L. Ranke, V. Duruy, J. Jung, J. L. Pic, V. Chapot, Franz Altheim, F. Lot or R. Paribeni. Furthermore, shocked by the very contradictory points of view of certain neighboring historiographies, F. Lot was to state "Where else could you locate the Daco-Romans? The Hungarians, Serbs, Bulgarians and Greeks all agree that not under any circumstances in Transylvania, in Serbia, in Bulgaria, in Macedonia or on Mount Pinde.

"Nevertheless, they did not fall from the sky or spring up from hell. These unanimous feelings against the Romanians urge one to adopt the thesis of Daco-Romanian continuity north of the Danube" (RHSEE, XX, 1943, p 52).

And, R. Paribeni concludes volume I of this work "Optimus Princeps" with the following statements: "The minting of money bearing the inscription Dacia Provincia in the year 112 reminds us that at that time the vast program was largely completed. Through this program, Trajan managed to establish a Latin civilization in Eastern Europe, just as Julius and Augustus Caesar had established one in the West. So vivid and profound was the imprint of Romanism that the course of many centuries and changes did not succeed in destroying it. The Roman occupation of Dacia lasted a little more than a century. However, the intensive Roman culture in Moesia Minor

did not last much longer, only three or four generations in all, yet, despite centuries of unheard of misery, disgraceful servitude, brutality, reversion to an uncivilized state, the end of every source of life and richness, destruction of culture and intellectual pursuits and the loss of contacts, even religious ones, with the ancient motherland, it maintained the noble flame of its Romanism in a vivid and intact manner, finding in it the final defense against perishing. From a vague memory of having been a Roman state, faced with Slavic, Tartar, Hungarian and Turkish violence and having restored national dignity among a diverse group of Slaves, even today in the Danubian lowlands and in the mountains of Transylvania, Roma Aeterna, the grand, powerful and benificent motherland, is acclaimed with trembling passion" ("Optimus Princeps," I, in the Storica Principato Library, Messina, V, 1926, pp 339-340).

With regards to the main arguments upon which their position is based:

I. 1) The problem of reconstituting the pre-Latin substrata of Romanian is not so simple. The main reason is that we do not have direct documents that allow us the understand the maternal language spoken by the people on both sides of the Danube during the period prior to the Roman conquest. Illyra did not leave us a single written document and Thrace only a single short inscription (Ezerovo) that can be understood only from a phrase made up of three words, with two of them representing proper names. Anthroponomies, toponymies and hydronymies of Thracian or Illyran origins do not offer sufficient elements to understand the structures of these languages. This situation is not unique. It is also a phenomenon in other cultures where the Roman civilization was superimposed over the native one (for example, Gallia and Comata).

This simple finding shows that the categorical statements made in this field of research are always risky.

2) On the other hand, the research of numerous generations of linguists (Fr. Miklosich, H. Schuchardt, G. Meyer, C. Treimer, Th. Capidan, S. Puscariu, Alex. Grauer, I. I. Russu, Vl. Georgiev and so forth[1]) has allow us to arrive at certain conclusions with regards to approximately 160 to 170 Romanian words that stem from this substratum. The first important achievement is separating the common Romanian and Albanian words (approximately 70) from those that belong solely to the Romanian (approximately 90 to 100 words). The second important finding is that these 70 common words to Romanian and Albanian are not exchanges resulting from a Romanian-Albanian coexistence on the shores of Lake Ochrida, but very probably stem from a source common to both languages - Traco-Daco-Moesic or Daco-Moesic (Em. Petrovici, Vl. Georgiev, I. I. Russu, I. Coteanu).

It is also a significant fact that, in comparison to Daco-Romanian, some of the dialects spoken by the south-Danubian Romanians contain a smaller number of common words with Albanian, despite their more frequent and longer contacts with them.[2]

3) Finally, one cannot ignore the fact that the Romanian language has a large number of words from the pre-Latin stock that cannot but come from the Daco-Moesic substratum and that are not in common with Albanian.[3] Their existence in the language has no other value than to stress the individuality of Romanian among the romance languages, since after a period of Daco-Roman bilingualism Latin eliminated the Dacian language from use, taking a small number of words that it transformed in accordance with its own phonetic laws.[4]

An explanation must be made that the archeological research during the post-war period has made fundamental contributions in proving the two phenomena that are responsible for the particular structure of the Romanian language: the continuity of the Dacians in the provinces and the Daco-Roman symbiosis. There is no need for too numerous details, since it is sufficient for us to point out the circumstances that 87 villages have already been identified as belonging to the Daco-Roman population, with many of them containing older settlements from the pre-Roman period. A significant number of cementeries were examined containing the remains of the Daco-Roman population, such as, for example, the cemeteries at Locusteni, Enisala, Soporul de Cimpie, Obreja and so forth. Similarly, proof has been given of the existence of Dacians in Roman camps and settlements of an urban nature. Already, in nine Roman camps and eight urban centers numerous and important proofs have turned up attesting to the presence of a Dacian population. This reality must be correlated with written information (Ptolemy, the Peutingerian Tablet) that mentions an unusually large number of settlements whose names are undoubtedly of native origins. The 27 toponymies of pre-Latin origins, including 22 that are surely of Dacian origin, can only be explained by the Romans' acceptance of these from the local people.

Finally, there is at the moment a sufficient number of archeological discoveries that attest to the continuity of the Dacian substratum in the provinces in the Brata-type complexes, in cemetery No 1, Sighisoara "Dealul Viilor," Harman, Verbita and Gropsani, until the fourth to fifth century A. D.

The identification of the cultural complexes belonging to the free Dacians, as well as the analysis of the impact of the Roman conquest and the intensification of the influence of the Roman civilization, are, likewise, exceptional achievements of post-war archeology. The research by R. Vulpe at Poienesti, Gh. Bichir at Padureni, Poiana Dulcesti, Matasaru and Scornicesti and so forth, and by I. Ionita and V. Ursachi at Valeni, where the most extensive cemetery was discovered (over 1,000 graves), by S. Morintz at Chilia, M. Constantiniu at Militari and Straulesti and by I. H. Crisan and S. Dumitrascu in the region of the free Dacians in the west, as well as the appearance of certain summary works, such as that by Gh. Bichir regarding the Carpic culture, which has also appeared in an English translation in London, have substantially modified the understanding of the Romanization process.

Faced with such a reality, the statement that Donald Mekay uses to conclude his letter to FAZ appears ridiculous: "At the current level of linguistic knowledge, and from archeological digs, the western Balkans and not the former Dacia (Transylvania and the Banat) are the country of origin of the Vlachs (the Romanians)."

II. The explanation for the absence or extremely few words of Old Germanic in the Romanian language must be sought, first of all, in the form and duration of the early German settlements north of the Danube:

1) Recent archeological research corroborated with literary or epigraphic sources requires us to reconsider concepts of the 18th and 19th centuries regarding the fate of Dacia after the Aurelian withdrawal.

a) The Visigoths appear to have settled between approximately 313-319 (when the military power of the free Dacians in Moldavia was eliminated)[5] and 332 (the date of concluding the foedus with Constantin).[6] They primarily settled in compact groups to the east of the Siret and in the east half of the Wallachian Plain, and pressed up against the Danube.[7] We do not know of settlements or cemeteries in the former Roman Dacia (Transylvania, the Banat and Oltenia) or to the west of the Transalutan region,[8] with the exception of a small group that infiltrated, perhaps in 350,[9] into the upper Mures Valley.

They moved en masse to the south of the Danube in 376-377, while in 381 the traditional group led by Atanarich departed.

b) The Ostrogoths, archeologically shown to be present between approximately 420/430 and 488, appear to have represented a very weak leading stratum.[10] They abandoned their settlements in Pannonia in 488 and moved into Italy.

c) Like the Ostrogoths, the Gepidae had their political center to the west of the Western Carpathians. The settlement of certain more important groups of the Gepidae in Transylvania took place after approximately 568. Monuments belonging to them stop being erected between approximately 630 and 650. This movement did not affect the Banat and the extra-Carpathian regions.

Therefore, in Transylvania the only more significant Germanic group was the Gepidae.

The picture drawn earlier results from separating the material cultures representing the diverse Germanic waves (Cerneahov for the Visigoths, the series of royal monuments for the Ostrogoths and the Bandu-Bratei group and cemetery No 3 for the Gepidae) from that of the native, Daco-Roman population (Bratei, cemetery No 1,[11] Harman,[12] Verbita[13] - Gropeni,[14] Baleni, [15] Costisa[16] for the fourth and fifth centuries, and Bratei[17] - settlement, Sighisoara, [18] Ipotesti-Cindesti-Ciurelu-Botosana II [19] for the fifth, sixth and seventh centuries).

2. The contacts between the two population groups were, without a doubt, made difficult by"

a) The closed nature of the Germanic communities, organized according to their own laws and traditions;

b) The different level of social-economic development, political organization and spiritual traditions;

c) Although reciprocal contacts and influences were made,[20] the early German's resistance to assimilating the material aspects of the Roman civilization, among other things, and the adoption of the Arian rite Christianity[21] did not favor a Daco-Roman-Germanic symbiosis and, as a result, the exchange of language components.[22]

III. With regards to the toponymic and hydronymic arguments, they have doubtful value, especially since they generalize certain realities that are valid for Transylvania for the entire Romanian region.

D. Mckay forgets or does not know (although he is an expert in the history of Central Europe) that the lack of continuity in the names of certain cities in Transylvania is explained by:

a) The end of urban life at the beginning of the fifth century and the complete ruralization of life in the former province;

b) The reforming of urban life in Transylvania was late and closely tied to the progress of the authorities of the Hungarian crown and the Saxon colonization;

c) The refounding of cities, as a result, produced new names;

d) This situation is not identical in the extra-Carpathian regions where we do not have a Hungarian or German colonization and where we encounter typically Romanian city names.

For the rest, it has been long demonstrated,[23] beginning with chancery documents, that a great many Hungarian names merely represent a simple translation of certain older toponymies.

Furthermore, microregional studies have proved that in the names of localities the Romanian stratum is the oldest, most important and most stable, which demonstrates that the Romanians are the creators of these toponymies.[24]

2. With regards to hydronymies, without a doubt, despite the difficulties in reconstructing the exact stages of phonetic evolution,[25] the Romanian language preserved the names of pre-Latin origins (accepted from the local people by the Romans and, later, the Slavs) for certain waterways, such as the Mures, Somes, Olt, Arges, Siret, Prut and so forth.

Undoubtedly, for D. Mckay these waterways are not sufficiently large to enter into the category in which he works.

IV. The dependency of the Romanian church upon the archbishop of Ochrida is an old Roeslerian argument whose value can be considered from two points of view:

1) The value of the information upon which this supposition is based. In this regard, it was long ago proven that the tradition of the 17th and 18th centuries, relative to such a dependency, deals with only certain south-Danubian relations[26] based on three novels from the chancery of Vasile II the Bulgarocton between 1019 and 1020, regarding the organization and jurisdiction of the Bulgarian church after the elimination of the czardom and the reestablishment of Byzantine rule throughout the Balkan Pennisula.

Furthermore, it is strange to bring back into discussion an argument whose inconsistency was emphasized in a series or works or studies[27] that appeared 40 years ago. In addition, a study that recently appeared[28] presents the current state of the problem, mentioning that the aforementioned tradition reflects a a reality of very short duration during the fifth decade of the 16th century. Moreover, with the approval of the Patriarchate of Constantinople, the two Romanian countries organized their own metropolitan seats in the 14th century, under Nicolae Alexandru in Wallachia in 1359 and, after long negotiations conducted by a number of musadins, under Alexander the Good in Moldavia in 1401. And, the dependency of certain churches in Maramures (the Peri monastery) upon the same patriarchal seat was recorded in 1391. In addition to this, we know of the support given to the Orthodox church in Transylvania by the rulers of the two Romanian countries and these two metropolitan seats.[29]

This dependency is clearly stated in the alliance treaty concluded between Sigismund Bathory and Mihai Viteazul on 20 May 1595: "And, all the Romanian churches under the rule of His Serenity will be under the jurisdiction and disposition of the Archbishop of Tirgoviste, according to the guidance of the church law and the regulations in this country" (I. Lupas, "Destituirea unui episcop roman din Ardeal la anul 1574" [The Dismissal of a Romanian Bishop in Transylvania in 1574], in "Studies, Conferences, Reports," I, Bucharest, 1928, pp 112-115).

One could even add that this tie between the Patriarchate in Constantinople and the metropolitan seats in the Romanian countries cannot be separated from the efforts to counterattack Catholic propaganda and, later, reformed beyond the mountains. At the same time, one cannot pass over the support given by the Romanian rulers to the entire Eastern Orthodox Church, support that went so far as to directly intermix in the affairs of the Patriarchate of Constantinople (Fr. Pall, "Vasile Lupu's Relations With the Eastern Orthodox Church and Especially With the Patriarchate of Constantinople," Balcania, VIII, 1945, p 66 and later). These data are sufficient to show Mr A. Jonas' integrity when he speaks of a dependency upon the Archbishopric of Ochrida until 1767.

Further, such a dependency is also disproved through the formal act of 20 March 1701, through which Anastasie broke any ties with the Ungro-Valachic Metropolitan: "From this day forward, I break all correspondence and exchanges through letters and friendship with the heretics and ruler and King of the Romanian countries, and I will have no answer for them from this time forward. Nor will I recognize any more my archbishop and bishop in Bucharest, and I, together with my entire synod, will submit to the archbishop of Estergom. He will be the bishop I recognize, this I can do, as a greater bishop than Vladicul, and I will listen to him. And, instead of showing writings to the King of the Wallachian countries first, I will show them to my theologian and my adviser" (I. Lupas, "The Severance of the Church of the Transylvanian Romanians," in the volume "Studies, Conferences, Reports," I, Bucharest, 1928, p 231 and later).

2) The value of the religious jurisdiction in judging an ethno-linguistic problem. It appears to us that the argument is childish because it is very difficult to presuppose an absolute tie between the country of origin of certain beliefs and the location of the head of the church. Beginning from such an argument, one can arrive at absurd conclusions of the type of the Italian origins of African Catholics by virtue of their dependency upon the papal seat or the Greek origins of all Orthodox members dependent upon the patriarchy in Constantinople.

V. There is not Byzantine text that speaks of a march by Romanians from the region of Lake Ochrida to north of the Danube. Here, Mr Jonas is telling a fable when he states that this movement was "carefully recorded." It is even curious how such a move, which involves a vast area (between Epir-Thessalia and the Northern Carpathians), is not recorded by the Byzantine chancery or the Bulgarian one or the Hungarian one. How is it possible that such a exodus of people not be recorded in any way, not even by the most bureaucratic administration, the Byzantines? Does this not appear to be reasons for meditation for these two supporters of the theory of "the long march?" Just as it is very curious that neither of these two experts of history of the beginnings of the Romanian people was struck by the fact that all the information that we have available, be it of Byzantine sources (Kekaumenos)[30] or of Western sources (Franscian Letters), it demonstrates to us that:

a) The Daco-Roman origins of the Romanians in the Balkans are not a secret, since the time it was recorded in detailed by Kekaumenos;

b) The direction of the Romanians' movement was from the north to the south, even from Pannonia towards the Balkans, and not the reverse;

VI. The supposition of the nomadic pastoralism of the Romanians is refuted by:

1. The 72 geographic names quoted by Donald Mckay, after S. Dragomir, attests to an existence for a long duration in the same place, which cannot be the case for certain nomads. Furthermore, it is especially known that nomads rarely leave behind

geographic names. The Romanians must have stayed there if they gave these geographic features names and these names were preserved over the centuries.

2. Chancery documents and other sources mention villages that have existed for hundreds of years, as well as the presence of Romanians in communities of an urban nature.[31]

3. The archeological discoveries made throughout Romania and which date back to the fourth to fifth centuries and the 10th to 11th centuries show us a population having a mixed economy, not a pastoral one.

4. Ethnographically speaking, among the Romanians there are only those who moved with their flocks of sheep, not nomads.[32]

5. Clearly, no one is contesting the historical reality of certain important movements of peoples in the Balkan Pennisula. Merely that these migrations have no ethnic value. They were caused by great invasions or by the progress in the process of feudalization and affected, to an equal degree, all the peoples in the Balkan Pennisula.

6. Finally, it is very difficult to quietly ignore the fact that three independent sources - Moise of Choreni's Armenian Geography,[33] the "Oguzname Turkish Chronicle"[34] and the "Chronicle of the Anonymous Notary" - note the existence to the north of the Danube of certain Romanian political formations during the ninth and tenth centuries.

VII. With regards to the region of the formation of the Romanian people, no linguist or historian reduces it to the current borders of Romania. The presence of Romanians to the south of the Balkans is explained by this reality and through the "long marches" made from the north to the south.

It is very probable that the events that took place during the seventh century (the penetration of the Slavs and, later, of the proto-Bulgarians) broke the linguistic continuum that tied together the groups of Romanized peoples on both sides of the Danube. From this moment, one can speak of a parallel, but independent evolution of the two Roman peoples. The continuity of the Romanians north of the Danube is proved not only by archeological discoveries, but also by the wealth and variety of folklore traditions.[35] Just as the breaking away of the southern branch and its different historical evolution explains the absence in the Aromanian folklore of such a characteristic element as the doina.[36]

VIII. It appears that Mr Donald Mackay forgot that we are named Romanians and that our country is called Romania. Other people named us Vlachs or Valachs, and, over time, the term has begun to take on a pejorative nuance. For a specialist in the

history of Central Europe, the failure to understand or take into consideration this distinction appears even more than surprising. And this is even more so since throughout the entire article he did not forget to place the name Romanian in parentheses. He probably forgot that one of the complaints of the Romanians, expressed on the Field of Liberty, was for no one to any longer address them by the name of Valachs.

It seems to us that two things need to be mentioned in concluding these observations:

1. Mr A. Jonas considers the Daco-Roman origins of the Romanians to be a dream. If this refers to the beliefs of the authors of the Supplex and the Memorandum that they can find good will by knocking at the doors of the empires and supporting their cause with historical arguments, then we can agree that we are speaking of dreams. Because history has demonstrated that righteousness is not on their side, but on that of Horea and Avram Iancu.

2. The result is that the level of scientific information and integrity is not always directly proportional to the stated scientific and university titles. Some people with opinions have even had the intelligence or prudence to hide these two defects behind a pseudonym.

HISTORIAN OBJECTS TO REVIEW OF HIS BOOK

Bucharest REVISTA DE ISTORIE in Romanian Jun 81 pp 1193-1196

[Article by Tahsin Gemil: "Several Explanations Regarding a Review"]

[Text] It is known that a worthy evaluation of an object, done responsibly and on the basis of certain solid specialized knowledge with regards to certain scientific requirements, has significant effects both for the improvement of the object in question and for the progress of the research involved in the problem under discussion.

Unfortunately, Radu Constantinescu's review was not carried out from such an objectively scientific position and with such constructive intentions, as published in REVISTA DE ISTORIE, No 1/1981, regarding my book "The Romanian Countries in the International Political Context, 1621-1672" (Academy Publishing House, Bucharest, 1979, 231 pages).

Keeping in mind the broad audience of this prestigious publication in which the review was published, I feel obligated to give several explanations with regards to R. C.'s observations, especially to make things clear for those readers who did not have the opportunity to consult my book, which was published in a reduced number of copies.

Although R. C. feels that the book "represents undoubted progress," "a serious work" and even "a model for the chapter on general foreign policy" in a "future book" on Romanian history, nonetheless his observations demonstrate a superficial reading and a surprising misunderstanding of the problems dealt with in this book.

The review begins with the statement that the book's title is "deceiving," designed, in R. C.'s opinion, "to attract." The reviewer ignores knowingly, however, the fact that the first page of the Introduction states that the book deals with the political configurations in Eastern and Southeastern Europe. Furthermore, the initial title of the book was "The Romanian Countries in the International Political Context in Eastern and Southeastern Europe (1621-1672)." I decided not to use the final part of it for editorial-technical reasons, having been considered too long.

In this same introductory portion of the book, I also explain as clearly as possible the fact that the political situation of the region, and implicitly the international position of the Romanian countries at that time, was determined by the evolution of Ottoman-Tatar-Polish relations. Emphasizing that the foreign political orientation of Transylvania and the Romanian countries was tied on a priority basis to the Habsburg Empire, when "Moldavia sought - until the end of the 16th century - the necessary support on a foreign level, first of all, in the power of Poland" (p 12), I clearly pointed out that "Moldavia was vitally interested in the evolution of relations between the Ottoman Empire and the Royal Republic and was, at the same time, much more involved than the other two Romanian countries in carrying this out... This is how we also explain the fact that our main attention was directed upon the explanation of Moldavia's position in the international political context during this time, without this meaning that it could be viewed as isolated from the other two Romanian countries. On the contrary, the emphasis on the organic correlation between Moldavia, Wallachia and Transylvania constitutes a constant factor in the entire book. This is even more true since the 17th century brought forth a clear development of a unity of ideas of the three Romanian countries" (p 12).

Actually, an objective and informed reader can easily see that the book brings to light both the key points of Moldavia's international position and the Eastern and Southeastern European dimensions of the political initiatives of Transylvania and the Romanian countries. The new elements brought into discussion and the multilateral view of the analysis reveal not only the unity of action between the three Romanian countries, but also clarifies a series of problems that had remained unsolved or erroneously evaluated until now regarding the international political situation of Moldavia, Wallachia and Transylvania. For that reason, I feel that R. C. avoided or purely and simply did not understand exactly the political context in which the Romanian countries evolved during this period, since otherwise he would not have been able to propose modifying the book's title to read "The Moldavian-Tatar Relations During the Era of Turkish-Polish Balance of Power, 1621-1672."

The book does not follow the policies or foreign affairs of the Romanian countries, but tries to fix the place and role of the Romanian countries in the complex evolution of the international situation in the region. And, with the key points (without going into further detail) of the political configuration in Eastern and Southeastern Europe during this period not being appropriately revealed in historiography, it was first of all necessary to establish and reconstruct the international political directions, processes and events. Only in this context does the placement of the Romanian countries in the general context acquire a clarification absolutely indispensible to following the political developments. The view in dealing with these developments is not unilateral, as has been the case, especially up to now, but one constantly changing depending upon the interaction of the factors involved and in direct relation to the weight of these

factors in determining the general political status. Because of the movement of the main concerns of the great powers in other directions, the Tatar factor (and later the Zaporojean factor) played an especially important role in the evolution of the overall political situation in Eastern Europe during this time.

But, in R. C.'s view the Crimean Khanate is merely "a political grouping that is so lax that we can barely define it as an independent entity." R. C. thus proves that he is not up-to-date with the current stage of research on the worldwide level, which has already brought to light the real status of the Crimean Khanate regarding the Ottoman Empire. It is sufficient for me to note in this regard the evaluations of certain reputed specialists in this field who have recently published the valuable volume of documents "The Crimean Khanate From the Archives of the Museum on the Palace of Topkapi," the School of Higher Studies in Social Sciences, Paris, 1978: "In addition, through the consistent errors of dealing with the Khanate that have presented an 'Ottoman-centralist' view of a Tatar state that is a loyal and submissive vassal protege of the Ottoman Empire, with a sort of 'colonial' dependence, its institutions, ideology and foreign policies have been incorrectly and mistakenly reflected as those of the Sublime Porte" (p 1). Such errors, which are also made by R. C., persist because of prejudices and a failure to understand historical reality. They have impeded our historiography from making the expected progress in showing the place and role of the Romanian countries on an international level in the 16th to 18th centuries.

R. Constantinescu then states that "The book's bibliography, and even its Romanian one, is sufficiently weak, especially if we keep in mind that not all the works quoted were actually used." In the case of such a serious statement, the basic sense of responsibility requires R. C. to correctly indicate the sources and works that he has in mind. R. C. could not do this, however, since this book is based upon the entire existing bibliography referring to the subject under consideration. A simple perusal of the book is more than sufficient to reveal the gratuitous nature of R. C.'s statements.

In his attempt to slander a scientific work done in an honest manner, which required overcoming many difficulties, R. C. does not back away from stating, contrary to the evidence, that "since T. Gemil's linguistic abilities are practically reduced to only the Turkish language, his principal sources are Ottoman ones, especially neglecting Italian, German, Polish, Russian and Hungarian sources, written in Latin or the modern national languages." This objection of R. C. is not only gratuitous, but also denotes an inexplicable malice.

Since we are speaking of a political context dominated by the Turkish factor and keeping in mind that the Ottoman and Crimean documents were not used simply because the researcher did not have the "linguistic ability," it was natural for the author to stress these sources, which are basic to the study of this particular subject.

At the same time, the book is also based upon the use of all important European sources, a fact that can be easily seen by going through the introduction and the footnotes. Apologizing to those readers who can make this simple check, I, nonetheless, feel obligated to mention that in researching this subject I began with the systematic study of our monumental collection of foreign documents, known under the name of their initiator, "Eudoxiu de Hurmuzakai." As one who has returned many times to the documents in this collection, especially in completing the collection of texts that he recently published, R. Constantinescu knows very well that the sources in the volumes of "Hurmuzakai" are published in "Latin or the modern national languages." In order to write the book under discussion, I effectively used at least 10 volumes of the abovementioned collection, giving special attention to the diplomatic reports and the Italian and Austrian confidential reports.

Similarly, in addition to the known volumes of the documents published by N. Iorga ("Documents and Fragments...," "Studies and Documents...") in which, as is well known, there are many foreign documents published in their original language, my book was also helped by the massive collection of documents written by Polish historians: "Acta Historica Res Gestas Poloniae Illustrantia," Vol II-III, Cracow, 1880-1881; "Relacye nuncyuszow apostolskich i innych osob o Polsce od roku 1548 do 1690," II, Berlin-Poznan, 1864; "Elementa ad Fontium Editiones," Vol XXVIII, pars III - Vol XXIX, pars V, Romae, 1972, and so forth. At the basis of the book, at the same time, are the volumes of documents published by I. Hudita ("Report on the Documents Concerning the Diplomatic Negotiations Between France and Transylvania in the 17th Century," Paris, 1926; "Recall of the Documents Concerning the History of the Romanian Country Taken From the Archives of France, the 16th and 18th Centuries," Iasi, 1929), the renown collection of international treaties by J. du Mont ("The Worldwide Diplomatic Corps...," Amsterdam-La Haye, 1726-1739) and the Russian and Soviet historical works (Smirnoc, Kostomarov, Novoselski and so forth) in which documents from the Russian archives were used first of all, as well as the precious writings from the era of "Samovidet," Chevalier and Mezeray, as published by A. Veress, of which I used volumes IX, X, and XI. There is no need, certainly, to cite other elements from the bibliography which, according to the evaluations of specialists who had the good will to review this book right from the manuscript phase (see p 34), is especially rich and varied and nearly exhaustive.

If with regards to the form, structure and documentary base of the book, R. C.'s "criticism" os reduced to insinuations and unfounded accusations, when we turn to the books content the reviewer reveals not only his lack of knowledge of the subject being discussed, but also his misunderstanding of the basic characteristics of the relations between the Romanian countries and the Ottoman Empire.

Although the title of the book clearly shows that we are speaking of placing the Romanian countries within an international political context, R. C. pretends in a bizarre way to find "even here, roughly speaking, an evocation of the profound changes in the Moldavian agricultural and commerical structure." Then, he tries

to deny not only the demonstration and conclusion of this book, but also a proven historical reality of the overall documentary proof of the era. R. Constantinescu feels that in my book one encounters "the easy traditional explanations, unsubstantiated through arguments, which presuppose either a European policy for these rulers that are so subordinate to the Ottoman Empire or hegemonic trends, trends that were not, however, more than specific manifestations of the means of meutralizing certain military areas, yes even the unlikely (sic!) hopes for independence and other types of illusions of this nature."

It is truly strange to see R. C.'s attempts to minimize the history of the Romanian countries during this era and to annul through his pen the efforts made by these countries to preserve their political being and to reacquire freedom, at a time when even his recently published sources ("The Struggle for the National Unification of the Romanian Countries, 1590-1630. Foreign Documents," Bucharest, 1981, 384 pages) are making additional arguments in the direction of the results of my research.

Further, from the desire to disregard my book and, by extension, our entire specialized historiography, R. C. allows himself to make such worthy evaluations as: "Certainly, their foreign policy (the Romanian countries - T.G.) during this era remains a series of episodes of Ottoman or Polish politics, depending upon the countries' orientation at a given moment, with the only autonomous policy among the Romanians at that time being that made by Transylvania."

Thorough studies have demonstrated the uninterrupted validity of the principle of respecting the state autonomy of the three Romanian countries, and my book reveals, among other things, on the basis of documents of primary value, the strengthening of this principle during the 17th century (frequently even at the express wish of the Ottomans), up to nearly the point of independence, as it was for example during the time of Miron Barnovschi, Vasile Lupu and Gh. Stefan in Moldavia, Matei Basarab and Constantin Serban in Wallachia, and Bethlen Gabor and the two Gh. Rakoczi's in Transylvania. Only R. C. contests a unanimously recognized historical reality in its essential elements.

I admit that I did not understand what R. C. was actually pursuing, making such totally unfounded statements, just as I cannot explain to myself the purpose of this review, based entirely on gratuitous objections.

CRNOBRNJA NOTES GAP BETWEEN DECISIONS, IMPLEMENTATION

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1593, 12 Jul 81 pp 10-12

[Interview with Bogdan Crnobrnja, Croatian delegate to the Chamber of Republics and Provinces, by Aleksandar Novacic: "Against Federal Statism"; date and place not specified]

[Text] Bogdan Crnobrnja, revolutionary and veteran of the war, former ambassador to India and the United States, and for several years President Tito's general secretary and a member of the LCY Central Committee, is now a delegate of SR [Socialist Republic] Croatia to the Chamber of Republics and Provinces. For a time he was president of the Consolidated Enterprise of the Mechanical Equipment Industry in Belgrade (Gosa and Djuro Djakovic). This last post he held on a voluntary basis, heading enterprises of two republics (Serbia and Croatia), while he was at the same time professionally employed as a delegate from Croatia.

The immediate occasion for the interview was a statement he made in a recent session of the Assembly of Yugoslavia.

[Question] I would single out three things from your statement in the Assembly. First, you said that the Federal Executive Council bears "great responsibility, but is not the most responsible," second, that you are in favor of "federalism, but not federal statism," and third, that we have put too many things on the list of priorities, whereby you suggested that we ought to revise economic plans. Finally, you said that those who bear the greatest responsibility for the present situation are the people in the political structures, saying that this is true at all levels, and the reason you gave for this was the unfavorable balance of power. Can we begin the conversation with this last observation?

[Answer] We have been speaking about stabilization for 3 years or more now, and instead of stabilization, we have destabilization. This cannot help but cause a man concern. Does this mean that the leading political forces in this society are unable to carry out what we have all unanimously adopted? I think that this is what is involved, that our ineffectiveness in carrying out what we have agreed on is our main problem. It is clear that in this area the leading

political force, that is, the League of Communists, bears the greatest responsibility for that situation.

[Question] You mentioned the responsibility of the Federal Executive Council [SIV]?

[Answer] SIV's responsibility is clearly formulated in our laws and the constitution. It is their point of departure that the government must have a joint federal body with precisely stated powers, rights, obligations and duties. Nor are those minor duties. But that kind of atmosphere has been created; I even think that out of good intentions the Federal Executive Council has become excessively cautious in its behavior, since it is felt that this is politically necessary and opportune for our federal system to get on its feet. This has gone to such an extent that instead of being a political administrative body, the government has become another version of an interrepublic coordinating body. In that context things are not as they should be and there must be changes. I believe that we should and must unquestionably conduct consultations and reach agreement and that the opinion of every republic and province should be heard on an equal footing, but associated labor should get even more of a hearing. But everything has its limit. If an agreement is not reached, then the people should be changed. This slowness and ineffectiveness in reaching agreement cannot be tolerated, though the motives behind it be the very best, however much one desires equal and democratic cooperation, and so on. Experience shows that this must be subject to precise limits.

[Question] You opt for a stronger position of SIV?

[Answer] First of all, I opt for less statism, and then within the framework of the necessary role of the government, I opt for a more decisive role of SIV, set forth in the constitution and laws. If we are to tell it like it is, we must say that back last year the government proposed a number of stabilization measures, but there were difficulties with the republics and provinces and as a practical matter they did not accept those proposals. For instance, for a long time we were unable to agree on how much indebtedness to assume abroad. Nearly everyone wants to go further into debt. I hope that this will now come to a stop. So, the federal government should operate more decisively in the common interest than it has up to now. If it should fail to obtain support, let it take the political consequences of that, both it and those who do not agree with it. That also includes resignation.

It is my recollection that SIV has not been sending major pieces of legislation to the Assembly and that its bills have not been basically supported (as it is usually put) by all political forums. Consequently, all of this needs serious democratic discussion, and not hasty a priori attitudes and decisions.

I think that our true and greatest preoccupation in resolving all issues should be how to implement what we have agreed on. How to develop self-management. This is the dialogue we most need. There are certain preconditions for that. The first is that we must have more public and critical dialogue.

[Question] Don't we have too many discussions and debates?

[Answer] Yes and no. Our situation is contradictory in a certain sense. At certain points we do indeed have too much democracy, and at others too little. There is little democracy, for instance, when an individual or some forum needs to be frankly criticized. On the other hand many people can behave quite as they please, not only failing to enforce decisions, but even offering them direct opposition. And nothing happens. There is a lack of responsibility, both personal and collective.

We Have To Have More Public and Critical Dialogue

[Question] Do you feel that that is the central issue in the functioning of the system?

[Answer] Yes. Elected officials cannot be above criticism as is now our custom. During your period of office you can do little or nothing and not worry about it, and you can even disagree on an ideological basis, and once again there is enough laxity so that you will remain in office to the end of your term. When I say this, I am not coming out in favor of any witch-hunting campaign, but I favor opening up a public dialogue which will pinpoint rights and responsibilities for everyone. A few days ago, for instance, we listened to Comrade Dolanc on television. The burden of what he said was that we have adopted decisions on stabilization on some 20 occasions or so, and nothing has happened. What I wonder is this: How far can that go? How many more times can we adopt decisions that are not carried out? How many more times will political relations, our working class, and the working people tolerate this state of affairs?

[Question] What is the character of those decisions if they are not carried out? Perhaps those decisions are not good ones?

[Answer] I would not say so. We often adopt good decisions. For instance, we decided to set up an authentic federalism, and we did not stop with stating the principle, but we began to create even the material foundation for that kind of federalism. We initiated a process of normal institutionalization of the federal system of our government on foundations [original reads "dreams"] such as equality, and so on. Our aim is to institutionalize federalism and for self-management to be the foundation of that federalism. Matters, however, have taken a different turn. Self-management is developing a little, but government power at all levels--the opstina, the province, and the republic--is holding on tenaciously. Only in the Federation has government power become weak.

[Question] What is the problem?

[Answer] The problem, to put it simply, is that power is not easily let go. Our aims are very good ones, and I really do not see any alternative. I think that the federal system on a self-management foundation is by far the best strategy, but instead of that we today have federal statism on the basis of republic and provincial statisms.

[Question] Let us go back to the economic difficulties. You mentioned planning priorities....

[Answer] I feel that our medium-term plans, both those in the past and this present one, are one of the principal sources of our difficulties. These plans are overambitious. The way in which we adopt plans is detached from decision-making in the economy. The government adopts them autochthonously, bypassing the producers. For instance, we bid back and forth about high rates of economic growth, but we do not base them on objective material preconditions. A few days ago there was such a case, as we read in the papers, in the Assembly of Serbia. Vojvodina wanted a higher rate, the republic was proposing a lower one. I do not know what sort of arguments were presented by the two sides, or who was right, but the case itself is significant in and of itself, and I would say it is typical. That is the way it is when we draw up the federal plan. There is bargaining over the growth rate, but this is something objectively given.

Unrealistic Plans Should Be Amended

[Question] What causes lie behind this kind of planning? I assume that the people who propose and adopt the plans are aware of everything you are saying. Is it just a question of irresponsibility and not bearing the economic consequences?

[Answer] It is not a question of irresponsibility, though there is that, too. Not enough thought is given to personal, political and material consequences. Everything is more or less possible. But this is nevertheless a more complicated issue. First of all, we are a multinational country with regions at differing levels of development, and a greater desire on the part of the underdeveloped to move forward faster can be understood. The point is to keep this within realistic limits.

[Question] This presupposes more effective conclusion of agreements among the republics and provinces....

[Answer] Of course, but the republics and provinces must first feel themselves that this is in their interest. I think that the awareness of this is becoming stronger, and that soon there will be an end to unrealistic planning. Aside from that, there simply won't be the money. If we were to go on this way, our current production would begin to suffer still more seriously, and that is very dangerous in every respect.

Take our foreign economic relations. This is the weakest point of our present economic situation. We have been a bit slow, but still for a year or slightly more we have become aware of this, though to be sure, not all of us equally. The principal cause for this situation is our domestic economic policy, and economic relations toward the outside world are only the material expressions of what is happening in our country's economy. Our public is still not sufficiently informed about the real situation. Some people seem to think that it is more in the interest of the country if the full truth is covered up. This is an old habit, a behavioral pattern which should be overcome. But the situation is such that we are on the margin of liquidity. We must therefore support the efforts of the SFRY State Presidency and SIV to reduce foreign indebtedness.

[Question] What is the way out of this situation?

[Answer] I think that we can do this even more easily than it seems at first if without delay we undertake to modify existing planning targets and export everything that we think can be exported, be it goods or services. In this effort more responsibility should be placed on the decisions of the producers. Were we to firmly stick to the present plan, and tendencies to that effect still exist, as can be seen from the detailed report presented by Comrade Veselin Djuranovic, I think that we will not succeed in improving our economic situation, and specifically will not reduce the payments deficit and halt inflation.

[Question] To what extent does the system for disposition of foreign exchange represent an obstacle to a more up-to-date organization and to unification of forces toward larger sales on foreign markets?

[Answer] The way we now handle foreign exchange should be corrected. But at present there is a rather broad campaign to create what is referred to as a foreign exchange market. I am thinking above all that we cannot speak about any foreign exchange market so long as we have a situation of tremendous hunger for foreign exchange and the supply is too small. What kind of market can that be?

Against Recentralization of Foreign Exchange

In fact it is a question here of moving from the present market, which has its shortcomings, but also has its good side, and of taking away from producers their right to dispose of foreign exchange, of recentralizing foreign exchange, and then of sharing it out among the republics and provinces. I think that this is not a good strategy and that this is a very sensitive and delicate issue. We should stay clear of that. This could cause not only economic, but even political problems. Given this kind of shortage, who is the one who is going to be fair in sharing out the foreign exchange? What kind of fire will the republics and provinces be directing toward the center?

[Question] What sort of political problems are involved here?

[Answer] I think that in this matter we can even speak about a certain thrust toward self-management. And also about an infringement of federalism by insisting on that kind of so-called foreign exchange market. This is a profound question of principle: the question of self-management or that which is not self-management, the question of federalism or that which is not federalism. After all, there exist definite foreign exchange rights of the workers which the new proposals would in fact take away. I think that this is not the way out. It is not the location of the foreign exchange that is our problem. But the fact that we do not have enough foreign exchange.

What concerns me is that the tendencies to displace self-management seem to be getting stronger in our community, while in certain other countries the working class is right now waging a dramatic struggle for development of self-management.

[Question] Nevertheless, many people are criticizing the existence of the system of payments-balance positions of the republics and provinces....

[Answer] At present it is true that these positions are being sharply criticized, and I would say that this criticism is justified in large part. The practice followed above all by our self-managing communities of interest for foreign economic relations, but not only by them, has displayed quite a few shortcomings. This does in fact orient and push our economy toward parcelization and exclusiveness. What do I think should be done? Subject that practice to the most severe criticism and change those parts of it which are not good. Instead of insisting on elimination of the payments-balance positions of the republics and provinces, I favor changing a practice which is clearly displaying bad results, but I do not favor the liquidation of those positions.

The Delegates in the Assembly Should Be Politicians Who Think in Terms of Yugoslavia as a Whole

[Question] To what extent is the Assembly of Yugoslavia a place for agreements and reconciliation of differing interests?

[Answer] The Federal Assembly does not have enough influence in the Chamber of Republics and Provinces. I do not remember a single major piece of legislation offered by the Federal Executive Council being essentially altered or rejected. SIV proposes what has already been agreed on in what is referred to as the interrepublic coordinating committee of the executive bodies. This means that the proponents of measures are the administrative bodies and administrations, which have already obtained the support of the political bodies and leaders in their own republics. A political mechanism has not been created at the federal level nor is there the political influence and the balance of power so that people would adjust the proposals coming from the republics and provinces in the interest of the commitment to community, mindful of Yugoslavia as a whole.

[Question] What do you think is the way out of this situation?

[Answer] I think the way out is for the politically most responsible, honest and well-intentioned people in the federal government and in the Assembly to be prepared to act on behalf of self-management with deeds, to take into account the interests of the republics and provinces on an equal basis, but at the same time to be mindful of the common interest, which need not always coincide with the interests of the various republics. The person who sits in the federal government and the Assembly should be a politician who thinks in terms of Yugoslavia as a whole.

[Question] Does that collide with the delegate principle?

[Answer] No. This person should defend his position even when he goes back to the republic or province to explain it. If at that time he does not obtain political support, he should take the consequences, he should resign, and let other people take his place.

I have the feeling that we stand at an important crossroads. I think that a decisive political campaign lies ahead and that we will be confronting our own oversights and errors. We should spend more time talking about this and less about enemies, though they do exist and I do not want to underestimate them, but neither do I want to overestimate them.

DECLINE, PROSPECTS OF RURAL COOPERATIVES TRACED

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1995, 26 Jul 81 pp 19-20

[Article by Zaharije Trnavcevic: "Cooperatives on the Index"]

[Text] The chronology of domestic politics records that in recent years agriculture has often been a topic of discussion in top-level political and government bodies. Since we are now being pressed by high prices or occasional shortages of certain foodstuffs, the debates are becoming more frequent. The next one will be held after the vacation, in the fall, under the dome of the Federal Assembly. The delegates of the Federal Chamber will be taking up a text that at first glance does not seem so important--the proposed version of the Recommendation on Organizing the Self-Management of Private Farmers and Their Inclusion in the System of Associated Labor. The preparations of this document have taken nearly a year, the reason for this being the desire to reflect the situation in a compressed form, with few words, and to offer the delegates and the public a precise and inspiring text and the basis for the effort to form farmers' associations.

One Farm in Ten Belongs to an Association--A Million Farms Remain Outside the System

The reason for adopting this recommendation is that application of the Law on Associated Labor and the laws on forming farmers' associations adopted by the republics and provinces has not yielded satisfactory results to date. The recommendation, which is about to be delivered to the delegates, states that 240,000 farms now belong to associations, that 1.2 million are collaborating in various forms of socially organized production or, as it is put more frequently, are "cooperating." The figures of the last census have not been tabulated, so that we will be using the figures in the 1971 Census that Yugoslavia has 2,618,000 farms. It thus follows that today only one farm in 10 belongs to an association and that all of 1 million private farmers remain outside the system of associated labor.

The situation is bad and serious, especially if we bear in mind that in many countries of Europe the concentration and unification of small producers have proceeded considerably faster: Strong cooperative or private associations and corporations, large systems for food production, are being created. For all practical purposes in fact, no one conducts his business outside such systems.

Today we have fewer cooperatives and other organizations than a decade and a half ago. It is therefore worthwhile to ask with whom the private farmer is to enter into association and how he is to do this when the network of such organizations is so sparse. The decision was made in 1962 to abolish the Cooperative Alliance of Yugoslavia. At that time there were 2,618 cooperatives. When the alliance was abolished, the cooperatives themselves began to dissolve--many became part of agricultural combines. When the decision was made in 1972 to revive the cooperative alliance, there were then 813 cooperatives. Since that time, over the 5 years of a revival which is still going on, we have attained the figure of 1,941 cooperatives and other organizations of private farmers.

In Serbia today the average organization of this type "covers" 7.3 villages. Organizations of private farmers are more numerous in the plains, and there are hardly any in the mountains, and it takes the mountain people a day to walk from their houses to the nearest cooperative.

The Way in Which Cooperatives Are Established

According to a report of the Serbian Cooperative Alliance, two cooperative and 17 basic cooperative organizations have been established over the past year. If the revival continues at that pace, it will take decades to arrive at the optimum network of associated farmers. As shown by the experience of certain cooperative workers and rural activists, it seems that the first prerequisite for establishing a cooperative is that one be bold enough and willing to risk a disciplinary measure in the form of a party penalty. It seems that the cooperatives are being established more in the face of resistance of the opstina and its structure than with their support. Cooperatives established in this way wait a long time to be entered in the register of economic organizations, and various barriers are set up in their way when they apply for the initial bank loan for their business operation.

Behind these impediments there are differences in the attitude taken toward the form of association of private farmers. Usually the private farmers see the cooperative as the place for them. They feel more comfortable with its concept, they have at least some sort of experience from past years, and they still remember it as their "second home" and an institution that acted on their behalf. Reference is also made to cases of the few old cooperatives which are operating successfully and contributing to rural progress.

On the other hand, the conception held in the seat of the opstina is that of an opstina agroindustrial combine, an organization in which all the private farmers will also be included. In those conceptions the word "cooperative" seems to have been placed on the index, and it has been replaced by the conception of a basic organization of cooperators, in which the private farmers, once assembled, will have few opportunities to have an essential impact on business policy.

Thus the peasant's right to choose the form of his association, which is guaranteed by the constitution, the Law on Associated Labor and the laws on formation of farmers' associations, is being interpreted and applied in a manner which means--to put it mildly--a denial of that right!

Formation of Associations--A Condition for Stability

The authors of the recommendation indeed took these facts as their point of departure. It states that sociopolitical communities should "use their influence to correct certain inconsistencies, whether it is a question of imposing only certain forms for the organization of private farmers ... or a question of unequal material support only to certain forms of organization, unnecessary harmful restriction of activity."

In just a few pages the text presents a sound diagnosis and recommendations as to how the effort should be carried on in future.

A few days ago we talked to Jovica Lazarevic, delegate of Bosnia-Hercegovina in the Federal Chamber. He has, as he puts it, built up quite a lengthy term of service working on the problems of rural areas and cooperative affairs. He wrote the first version, and it was used as the basis for further work on that document.

"For a long time there has been talk in our community about how we have wonderful opportunities to increase food production and to resolve many present troubles. But little research was done as to why they were not being utilized. This is one of the reasons why this recommendation is being prepared. We think that aside from the inadequate investments in agriculture in recent years, another factor is poor organization, the fact that many farms have not been included in the system of associated labor. The peasant himself is not really responsible for that situation. As we see it, the root of the problem lies in the public sphere, and the recommendation attempts to say that the process of forming associations has been faltering in that area."

Milovan Zidar, an engineer and chairman of the Federal Committee for Agriculture and Forestry, who is a member of the LCY Central Committee, does not see "how we will achieve stability and preserve certain markets which were difficult to obtain if we do not organize ourselves better, if we do not create firm foundations in the form of a dense network of organizations of associated farmers linked to organizations of associated labor in the food manufacturing and the distribution sector."

"To achieve this," Zidar says, "we need to come forth with a 'package' of those things which are necessary to large-scale formation of peasants' associations. I am thinking of there being a store in the village easy for the peasant to reach, and a savings bank, and an extension service. We have to develop democratic life in rural areas and make it possible for the private farmer to have an influence over the division of income, including that portion which is used for development of the village itself and the rural environment. If those preconditions are not met, there will be no changes or progress."

Engineer Zidar also raised an important question in our conversation:

"I don't give excessive importance to the expression 'cooperative' and do not give it preference as the only and exclusive form of association. It is not the name that is the essential thing to success in this endeavor. Both the cooperative and the basic organization of cooperatives can serve as a good solution.

Much more important is the question of whether the peasant will make decisions on the realization and distribution of income or will become an implement of use and benefit to the staff of the cooperative or similar organization. If on the other hand the peasants want to have a cooperative, I don't see why we should stand in their way. However, I say once again that one must be cautious, since the people on the staff of the cooperative can also evade the oversight of the members of the cooperative and jeopardize not only their individual interests, but even the survival of the cooperative."

What Is Needed?

Legislators are well aware of the difference in weight between a law and a recommendation, that is, the difference in the strength they wield. Nevertheless, there are realistic assessments that the recommendation we have mentioned here could encounter a good response and bring about changes, though there are grounds for the suspicion that the recommendation may show more strength than the Law on Associated Labor or the laws on formation of farmers' associations.

It is sufficient for success in this case to respect the legal right of the citizen, in this case the private farmer, to form the organization that best suits him. To create various other associations as well, and not only cooperatives or organizations of cooperators. This is indeed fair, since the economic consequences of a bad choice certainly will be borne by them. In the past it is they who have had to pay the price for various misbegotten mergers, the closing down of cooperatives, the moving of various institutions from the village to the seat of the opstina, and it is they who suffered because the cooperative headquarters were taken away.

Opstina sociopolitical organizations have up to now rarely tried to pull or investigate the feelings of the peasants. Perhaps because of the mistaken idea that modern procedures like these are suitable only for organizations in large cities which have their own "Gallups," but perhaps also because they underestimate rural respondents. Rural public opinion ought to be surveyed before the recommendation takes effect in order to discover the true disposition of the peasants and the way they look upon its enforcement and the formation of associations.

In any case, the approach taken up to now has not yielded much. The foreign exchange balance of agriculture, instead of showing a sizable surplus, ended up at exactly zero last year, and this year will be appreciably upset because of the wheat which is to be imported and the reduced exports of meat. Instead of the expected 4-percent growth rate of output in agriculture, our progress in recent years has been 1.6 percent.

Consequently, we do not have much choice: In the years to come we must conduct our effort in a new way, with more political consistency and more respect so that what has been agreed on in the form of laws, accords and similar promulgated enactments--is adhered to.

Without that kind of consistency, neither this trouble, nor other trouble, can be corrected.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

EFFORTS TO DIVIDE SOVIET BLOC COUNTRIES DESCRIBED

Bratislava NOVE SLOVO in Slovak No 24, 18 Jun 81 p 11

[Article by Ivan Hlivka: "Subversive Actions as National Policy. Antisocialist Strategy and Tactics of Imperialism."]

[Text] Characterizing the situation with international relations at the 16th CPCZ Congress, the Central Committee Secretary General, Gustav Husak emphasized that "international imperialism is trying to weaken the unity of the socialist community and endeavoring to break loose particular countries from the bonds of the socialist family through the policy of differentiation and through interfering with the affairs of individual nations, as we have witnessed in Hungary, Czechoslovakia and now again in the People's Republic of Poland." He noted that "today reactionary forces have raised these subversive actions to the level of official state policy."

These words generalize the experience from both the past and the present. Everyday, everywhere, various international situations demonstrate that the world imperialist reaction, led by the ruling elite of the United States, is intensifying its attacks against the countries of the socialist community.

The question arises as to what are the causes. There are a number of them but the most important cause is the fact that the imperialist circles are becoming more scared by the apparition of the total bankruptcy of the capitalist system, which is becoming more obviously entangled in insoluble problems. With ever increasing fears concerning the fate of their world of exploitation, they watch the gradually growing class and political awareness of the people in their countries as well as the realities, which are reflected in the class clashes of the working people, which are more and more frequently directed against the policy of the capitalist system of state monopoly in both the internal and foreign policy areas. These circles are increasingly aware that these processes, so dangerous to them, are closely connected to the revolutionizing effects of the socialist model on masses of people.

"There is no country or group of countries, no ideological or political movement," remarked L. I. Breznev at the 26th Congress of the CPSU, "that does not feel the influence of socialism to some exte This is the reality of the 20th century."

This reality cannot be denied even by anticommunist ideologues. One of them, W. S. Schlamm from the FRG, confessed openly that "the inner meaning of the conflicts between communism and the West staggers the imagination in such a way that no one dares discuss it openly." According to him, this inner meaning of the conflicts

rests in the fact that "communism flourishes under peaceful conditions," and "triumphs" and "the West, on the contrary, if it does not want to perish, must wage resolute (ideological) war."

Other bourgeois ideologues write openly that "control over the people has loosened" in Western countries, that "a political movement of masses arises, which differs ideologically from the state and refuses to submit to it," and "thus a very serious crisis arises, which must be overcome at any price." They write that "to make it possible to continue with the vigorous and aggressive orientation of capitalist development, governments must make the people in their countries in some way return to previous conditions of passivity and obedience," etc. Such warnings and suggestions abound in the West and they are all a testimony of the deepening crisis of the capitalist system.

The purpose of the entire huge modern mechanism of the bourgeois world is to dull and retard the growth of the revolutionary awareness of the masses, to keep the working class in the captivity of ignorance and anticommunist obscurantism by a no-holds-barred slander of socialism, by distortion of the essence and meaning of the socialist internal and foreign policy and, what is even more loathsome, by inculcating ideological diversion in socialist countries.

"The reactionary forces," U.S. Secretary General Gus Hall, emphasized recently, "have a long-term strategy of destabilization of the socialist world, diverting individual socialist countries from their socialist path and removing them from the socialist community." Imperialism hopes for internal disruption brought about by external help.

Testimony of the fact that reactionary forces have raised subversive actions against socialist to the level of official state policy is the participation in these activities of even the highest representatives of the West, led by the American President, international organizations led by NATO, departments of war and commerce, espionage centers as well as state-financed scientific institutions. Radio stations have a special role in antisocialist diversion, among them principally Radio Free Europe and Voice of America, as well as others, which continuously spread their broadcasting into socialist countries; they are supposed to create internal opposition in every socialist country, to undermine the unity of society, party and people and to fan nationalist and anti-Soviet tendencies.

Within these strategies and tactics, modern imperialism supports various theories about national and regional variants of Marxism, about the "pluralism of Marxism" and various "models" of socialism. They support simply everything that could disturb the conviction about the unity of national interests within the world socialist community and communist movement. The first strategic task is to convince the public about the disparity of interests between individual socialist countries and the Soviet Union.

The "policy of differentiation," which was pointed out by comrade Gustav Husak, has been elaborately prepared in NATO headquarters mainly on the initiative of the United States. One of its variants, which preceded this type of policy, was President Johnson's so-called "policy of bridges." The present policy, however, is much more elaborate. Its theoretical basis rests on the "scientific" construction about a number of "models" of socialism. According to one of the variants, as George Sakwa,

professor at Bristol University, Great Britain, tries to persuade us in his book SOCIALISM AND DEMOCRACY IN EASTERN EUROPE, four "models" exist. The first is just being implemented in Yugoslavia, the second (defined as "moderate reformers") includes Poland and Hungary, the third is constituted by "conservative satellites"--Bulgaria, GDR and CSSR; the fourth is represented by "the independent supporters of the hard line"--Albania and Romania.

Apart from this, the imperialist reaction and its propaganda spreads a fabrication of allegations that democratic principles are being ignored in the mutual relations among socialist countries. The principles of socialist internationalism are said to be only a tool to enforce "Soviet hegemony" in the socialist community, which is contradictory to democratic, equal relations among the nations and makes them impossible.

The allegation about inequality and nondemocracy of the relations among fraternal socialist countries is absurd. As pointed out at the 15th session of the CPCZ Central Committee, life and experience from the cooperation among these countries have proved that socialism "has founded new morality, new principles of the relations among peoples and nations, new principles of equality, mutual respect, assistance and comradely cooperation. The fraternal socialist countries cement their indestructible bonds, develop wide cooperation and accelerate the economic and social development for each individual country and society as a whole.

These principles not only cover but far exceed the most important general democratic norms of international law. They not only declare but ensure international conditions for the existence, multisided development and cooperation of socialist states. This is an enormous and hitherto unseen achievement, when we realize the character of the relations among these countries in the presocialist formations in the past. It is well-known that the nations of the countries that now build socialism together, waged wars among themselves in the past, that the borders between them were often changed and cut off, that the citizens were brought up in the spirit of nationalism and chauvinism.

International imperialism wants to take advantage of this past. In the present period of vigorous and dynamic development of the socialist community, the imperialist strategists have begun to place their hopes on stirred nationalism. Nationalism is supported in order to disintegrate the unity and power of the community as well as individual countries; it is supposed to lure some of them into the bosom of the "free" West.

Endeavoring to attain their goals, the imperialist elites concentrate on destabilization of the socialist community through "rewarding" and "punishing" individual socialist countries--according to their distance from or nearness to the Soviet Union or whether they reinforce or weaken the uniformity of the foreign policy of the socialist community.

The development of the crisis in Poland is clear evidence of the "policy of differentiation" in practice. The imperialist centers of subversion try to make ill use of the influence of the church and of the level of religiosity of the population against world socialism, they use every form of nationalism, various degrees of dependency on the Western capitalist market, a different approach toward deepening cooperation and integration in CEMA, and the like. Everything is misused, every-

thing that is stigmatized by the errors of the party and state leadership in any country. Of course, these errors and shortcomings are enlarged out of proportion and misinterpreted according to their biases, in the spirit of anticommunism.

The policy of imperialism is based on the assumption that the countries of the socialist community, with regard to certain weak points in the leadership of some countries, are not able to prevent the differentiating effects from the West; that some countries of the community will welcome this policy, even though they may keep their obligations toward the community; that the internal difficulties will grow gradually in the community countries as a result of the deterioration in the relations caused by the imperialist nations; and that it will be possible then to lure some of them into closer economic relations with the West by providing certain "advantages" for them. They hope that at the same time it will be possible to combine the pressure on the socialist community with the attacks of the present Chinese leadership, and thus the policy if differentiation will create the elements of suspicion and distrust among the socialist states and will weaken their unity and solidarity in their course of action against the policy of world imperialism, in their struggle for peace and social progress.

That the countries designated as "conservative" by the imperialist strategy are the targets of continuous attacks of imperialist and reactionary forces demonstrates that the scheme of "models" is actually followed. With a flood demonstrates that the scheme of "models" is actually followed. With a flood of untiringly repeated lies, they try to create the atmosphere of distrust toward the present leadership of CPSU, CPCZ, SED, BCP and other parties and countries. Everyday without fail, further slanders about the communist leadership appear in the pages of the Western newspapers; everyday some insidious aggressiveness is ascribed to them.

Almost all well-developed capitalist countries show the attitude of refusal or restraint toward the development of political relations with Czechoslovakia, although they differ in their indications of some possible future cooperation.

Experience also shows the important place and role of economic relations in the policy of differentiation. Individual countries of the socialist community are granted various conditions for credits and interest rates with the intention of making them dependent on the West, stimulating their interest in so-called open relations with the West, in some autonomous attitude in the mutual relations. In this respect, even EEC and financial institutions are active.

The differentiated attitude of the West toward socialist countries is apparent in every other area--in ideology, culture, etc.

One of the important parts of the antisocialist strategy of the West is the church, which has recently become politically active. The Vatican urges the Roman Catholic Church to increase its activity, to form a political opposition in socialist countries, to support nationalist and antisoviet elements and to build a network of dissidents. It is trying to win mainly the youth and the intelligentsia, whom they want to "save" from the influence of the ideas of scientific communism and to isolate from active participation in the building of the socialist society under the leadership of Marxist-Leninist parties. The antisocialist ideological political orientation of the Pope and Catholic clergy has been evident in Poland. In one of his speeches, the Pope declared that for humanity the hope lies in the United States and not in socialism.

Attacks against socialism, strict differentiation in applying its policy with respect to the specific characteristics of the development in individual fraternal countries, the effort to set socialist countries against each other and, if possible, to endeavor to disrupt them by spreading and stimulating nationalism and antisovietism--these tendencies can be clearly perceived in the entire policy of the Vatican.

At the 16th Congress, the Communist Party of Czechoslovakia declared that it was necessary to reinforce the resistance against anticommunist campaigns of imperialism and its attempts to destabilize the countries of "real socialism." It concluded that "the efforts of the imperialist centers to misuse the problems of nationality and the differences between nations to separate socialist countries must stimulate us to pay extraordinary attention to the struggle against all forms of nationalism and anti-Sovietism."

Consistent fulfillment of this task will become a great revolutionary contribution of our party to enhance peace and socialism in the world.

BRIEFS

RECREATION FOR FOREIGN UNIONISTS--Over 2,700 trade union members are currently staying at 10 recreational facilities maintained by the ROH (Revolutionary Trade Union Movement) in the spa of Marianske Lazne. More than 500 of these trade unionists came from Belgium, Bulgaria, Italy, Hungary, Austria, Greece, the USSR, Australia, Syria, Vietnam and other countries. [Prague LIDOVA DEMOKRACIE in Czech 27 Sep 81 p 4]

UNIONISTS INVITED TO LIBYA--A delegation led by URO (Central Council of Trade Unions) Secretary L. Jasik left for Tripoli on 26 August. The delegates, invited by Libya's trade unions, will attend the International Conference on Solidarity with People of Libya and events commemorating the 12th anniversary of the Libyan revolution. [Prague SVOBODNE SLOVO in Czech 27 Aug 81 p 4]

SCHOLARSHIPS INCREASED FOR STUDENTS, APPRENTICES

Explanation of Changes

East Berlin JUNGE WELT in German 18 Jun 81 p 5

[Response by Elke Schilling to question from Klaus Sell of Rostock: "In the Report to the 11th FDJ Parliament the proposal was made to draw up a new scholarship law. Has this been done and what does it contain?" Translations of the new laws on scholarship follow this article]

[Text] Among our experiences as students is always to presume that FDJ proposals always get answered because our state always was a state of youth and will always be one. The word and deed and force that bears this state, the SED, stands behind it. That is the way it was put by Marion Landsberger, student at the Karl Marx University of Leipzig, at the 11th FDJ Parliament. Her opinion, proposed in the status report, also was to draw up a new scholarship law which would, among other things, grant all students a basic scholarship and provide for increased scholarships for recognized achievements. Marion and all of student youth in our country can now add another experience. GESETZBLATT Part I No 17, 11 June 1981, just published, shows that a new scholarship decree goes into effect on 1 September this year. It serves to further improve the students' living conditions and stimulate high achievements during studies and in social work. And the FDJ again shares in its responsibility on behalf of all youth.

What arrangements then are going to be made? All fulltime students at a university, college, engineering or technical school in the GDR get a basic M 200 scholarship per month. An additional M 100 stipend monthly goes to students who have an extended-term active military service behind them as enlisted men, NCO's or officers (cf. also Promotional Decree, GBL, Part I, No 13, 13 February 1975). For students who worked for at least 3 years as specialists prior to their studies the monthly subsidy comes to M 80. For students with the parental right to educate a child or several children the scholarship goes up by M 50 per child per month. Good and excellent school grades, great study discipline and active social work are rewarded by performance subsidies. They normally come, starting with the second school year, in monthly sums of M 150, M 100 or M 60. Students with outstanding achievements and high social activity can get a special scholarship, as in the past. The law also provides increases for them. The Karl Marx Scholarship is M 550 per month, the Wilhelm Pieck Scholarship M 500, and the Johannes R. Becher Scholarship M 450.

Further provisions can be looked up in the GESETZBLATT which is available in the study facilities.

Decree on University Scholarships

East Berlin GESETZBLATT DER DEUTSCHEN DEMOKRATISCHEN REPUBLIK in German Part I No 17, 11 Jun 81 pp 229-231

[Official text of "Decree of 11 June 1981 on the Granting of Scholarships to Full-time Students at Universities, Colleges and Technical Schools of the German Democratic Republic -- Scholarship Decree," signed by W. Stoph, chairman, GDR Council of Ministers, and Prof. Boehme, minister for university and technical school affairs, East Berlin]

[Text] The socialist state ensures all-round education and training for youth and systematically creates the conditions necessary for it. Studying at a university, college or technical school amounts to a high social recognition and demands a personal commitment from each student to socialist society, to acquiring high technical knowledge and skills and applying them, and to developing basic socialist convictions and attitudes.

For further improving the students' living conditions and stimulating high achievements in study and social activity, the following is decreed in concurrence with the FDJ Central Council and the FDGB National Executive Committee:

Article 1 -- Range of Validity

This decree applies to

a) GDR citizens,

b) citizens of other states or stateless who have their permanent residence in the GDR or enjoy asylum in the GDR, while they are in the GDR, and

c) citizens of other states or stateless whose parents or spouses have long-range work contracts with enterprises, official organizations or institutions of the GDR, while they are in the GDR,

provided they are fulltime students at a GDR university or college (henceforth referred to as college), engineering or technical school (henceforth referred to as technical school), and

d) GDR citizens studying in other states.

Article 2 -- Principles for the Granting of Scholarships

(1) All college and technical school students receive a basic scholarship for the duration of their studies.

(2) Students who have proven themselves before their studies in the armed organs of the GDR or several years of occupational work, students who have children, and students who, because of their social circumstances, need special assistance, get an increased basic scholarship.

(3) Students distinguishing themselves by exemplary performance in their studies and social activity receive a performance scholarship above and beyond their basic scholarship.

(4) Students with outstanding achievements in their studies and high social activity may be granted a special scholarship.

Article 3 -- Basic Scholarship

(1) The basic scholarship amounts to M 200 per month.

(2) The basic scholarship as per section 1 goes up for

a) students who have an extended-term active military service behind them as enlisted men, NCO's or officers after presenting the evidence mentioned as conditions for it in the Promotional Decree[1] by M 100 per month;

b) students who have obligated themselves to enlist in active military service, after their studies, as extended-term officers, career NCO's, warrant officers or career officers, once their obligation has been confirmed, by M 100 per month;

c) students who, before starting their studies and after concluding their vocational training, held a specialists occupation for at least 3 years, by M 80 per month; and

d) students with the parental right to educate one child or several children, for each child by M 50 per month.

Letters a) and b) apply also to students who have performed service under comparable service conditions that correspond to an active military service obligation or have obligated themselves to enlist in such service after their studies. If premises as to letters a) to c) apply simultaneously, the highest amount is granted.

(3) For students who because of their social circumstances need special assistance, the basic scholarship as to sections 1 and 2 may be raised by M 50 per month.

(4) The basic scholarship as to sections 1 through 3 is raised for students studying at colleges and technical schools in Berlin, the GDR capital, by M 15 per month.

Article 4 -- Performance Scholarship

(1) Any student can acquire a performance scholarship above and beyond the basic scholarship. A performance scholarship is granted in recognition of the following prerequisites:

-- very good or good grades in acquiring knowledge in the technical sciences and Marxist-Leninist principles and in the practical application of that,

[1]In effect at this time is the 13 February 1975 decree on promoting former NVA members after their discharge from active military service -- Promotion Decree (GBL, Part I, No 13, p. 221).

-- high study discipline and an exemplary political-moral attitude,

-- active participation in social work for the all-round strengthening of the GDR and the protection of the socialist fatherland.

(2) The performance scholarship amounts to M 150, M 100 or M 60 per month.

(3) A performance scholarship as a rule is granted beginning with the second year of studies.

(4) Performance scholarships are awarded annually starting in September for the duration of one year of study. They may be withdrawn during the school year if the prerequisites needed for granting them no longer exist.

(5) The decision on granting performance scholarships is made, in concurrence with the FDJ executives, at colleges by the dean for education and training or the deputy director for the education, training and advanced training department, and at technical schools, by the deputy director. The proposals on granting performance scholarships are submitted by the competent FDJ executives in concurrence with the college and technical school teachers.

Article 5 -- Special Scholarship

(1) As special scholarships are granted

-- the Karl Marx Scholarship,

-- the Wilhelm Pieck Scholarship, and

-- the Johannes R. Becher Scholarship.

(2) The special scholarships award the following amounts:

-- the Karl Marx Scholarship	M 550 per month
-- the Wilhelm Pieck Scholarship	M 500 per month
-- the Johannes R. Becher Scholarship	M 450 per month

(3) Special scholarships are granted in lieu of the basic scholarship as per article 3 section 1 and the performance scholarship.

(4) For special scholarships the raised amounts are paid as per article 3 sections 2 and 4, upon the presentation of evidence.

Article 6 -- Scholarships for GDR Students in Other States

GDR citizens delegated for study in other states receive scholarships within the terms of this decree. For the months of study in a different state, a foreign exchange scholarship is granted in lieu of the basic scholarship as per article 3 section 1.

General Provisions

Artice 7

(1) Scholarship payments begin at the month of immatriculation and end with the last day in the month of exmatriculation. Higher basic scholarship rates are paid beginning with the first day in the month in which the prerequisites for them apply.

(2) In cases of medically certified work disability due to illness, work accidents or illness caused at work, quarantine, during a prophylactic health, treatment or recovery therapy, pregnancy and maternity confinement furloughs or a medically certified excuse from studies to take care of a sick child, benefits at the rates specified in this decree continue in full. For the duration of reserve military service, M 80 of the military wages are applied to the scholarship per month.

(3) If scholarship benefits were not properly granted, there will be back-pay. Unjustified scholarship benefits received may be asked to be returned. The right to claim back payments expires one year after the termination of studies.

Article 8

(1) Working spouses of fulltime students, with a medically certified excuse from work for taking care of a sick child, receive social insurance benefits at the rate of single working people.

(2) Working wives of fulltime students, when presenting the proper documentation, receive social insurance maternity benefits at the rate of single working people.

Article 9

Students or persons with the parental right to educate children, in the case of minor students, can protest decisions about scholarship matters to the executive who has made the decision. The complaint has to be settled within 4 weeks. If the complaint is not, or not fully, honored, it has to be handed over within the time period for the decision to a superior executive for examination and decision. The complainant has to be informed about it. The superior executive decides within 2 weeks. Appeals against such a decision are settled by the college or technical school director within 2 weeks definitively.

Final Provisions

Article 10

(1) Special arrangements may be made for certain study phases, forms of study or the promotion of certain groups of persons by the minister for university and technical school affairs in concurrence with the competent ministers and directors of other central state organs.

(2) For colleges and technical schools of the armed organs, the special rules issued by the competent ministers apply.

Article 11

Implementation regulations for this decree are issued by the minister for university and technical school affairs in concurrence with the competent ministers and directors of other central state organs, and with the FDJ Central Council and the FDGB National Executive Committee.

Article 12

(1) This decree goes into effect on 1 September 1981.

(2) At the same time the following are rescinded:

1. Article 2 of the 10 May 1972 order on financial support for female students with children at colleges and technical schools (GBL, Part II No 27 p 321);

2. the 28 August 1975 order on granting scholarships to fulltime students at the universities, colleges and technical schools of the GDR -- scholarship order -- (GBL, Part I No 39 p 664);

3. the 23 February 1977 order no. 2 on granting scholarships to fulltime students at the universities, colleges and technical schools of the GDR -- scholarship order -- (GBL, Part I No 6 p 48);

4. the 6 July 1978 order no. 3 on granting scholarships to fulltime students at the universities, colleges and technical schools of the GDR -- scholarship order -- (GBL, Part I No 21 p 246);

5. Article 1 section 1, article 2 section 1 and article 3 section 1 of the 3 September 1976 decree on changes for the special scholarships -- Karl Marx, Wilhelm Pieck and Johannes R. Becher Scholarship -- (GBL, Part I No 34 p 419);

6. Article 41 section 1 letter b and article 46 section 3 letter b slash 1 of the 17 November 1977 decree on compulsory social insurance for workers and employees -- SVO -- (GBL, Part I No 35 p 3730; and

7. Article 60 section 1 letter b and article 66 section 3 letter b slash 1 of the 9 December 1977 decree on social insurance with GDR Social Insurance (GBL, Part I 1978 No 1 p 1).

Increased Payments to Apprentices

East Berlin GESETZBLATT DER DEUTSCHEN DEMOKRATISCHEN REPUBLIK in German Part I No 17, 11 Jun 81 pp 231-232

[Official text of "Decree of 11 June 1981 on Increasing Payments to Apprentices," signed by W. Stoph, chairman, GDR Council of Ministers, East Berlin]

[Text] For the material and moral recognition of the growing performance demands placed on vocational training, and of the learning and work results of the apprentices, in concurrence with the FDGB National Executive Committee and the FDJ Central Council, the following is decreed:

Article 1

This decree applies to youths in an apprenticeship situation.

Article 2

Graduate apprentices from the 10th grade of the general education polytechnical secondary school in a specified half-year of their apprenticeship receive the following rates of monthly wages:

1. Mining -- underground

Half-years of apprenticeship	1st	2nd	3rd	4th	5th	6th
Monthly wages in Marks	150	160	180	200	220	220

2. Mining -- aboveground, metallurgy, foundries

Half-years of apprenticeship	1st	2nd	3rd	4th	5th	6th
Monthly wages in Marks	130	145	175	190	200	200

3. All other areas and branches of the economy

Monthly wages in Marks	120	130	150	180	200	200

In enterprises of mining, metallurgy and foundries, these rates of wages are also paid to apprentices in the following occupations: typewriter specialists, businessmen, finance specialists, ADP specialists and ADP support technicians.

Article 3

Apprentices who have not graduated from 10th grade and apprentices in part-time training receive the following rates of monthly wages:

1. Mining -- underground

Half-year of apprenticeship	1st	2nd	3rd	4th	5th	6th
Monthly wages in Marks	135	145	155	165	175	190

2. Mining -- aboveground, metallurgy, foundries

Half-years of apprenticeship	1st	2nd	3rd	4th	5th	6th
Monthly wages in Marks	120	130	140	150	160	175

3. All other areas and branches of the economy

Monthly wages in Marks	105	115	130	140	150	150

Article 4

(1) Apprentices in need of extra subsidies because of their social conditions can be paid an extra M 50 per month.

(2) Applications for granting such subsidies are to be submitted through the enterprise with which the apprenticeship contract was made to the vocational training and counseling department of the kreis council handling that enterprise.

Article 5

Implementation regulations for this decree are issued by the state secretary for vocational training in concurrence with the FDGB National Executive Committee and the FDJ Central Council, and with the competent ministers and directors of other central state organs.

Article 6

(1) This decree goes into effect on 1 September 1981.

(2) It rescinds the 31 January 1974 decree on raising wages for apprentices (GBL, Part I No 10 p 85).

(3) As of 1 September 1981, the eighth implementation regulation of 15 June 1977 for the law on the uniform socialist educational system -- maintenance support for secondary school pupils and training subsidies for apprentices -- (GBL, Part I No 21 p 273) in the version of the ninth implementation regulation of 25 June 1980 -- amendment to the eighth implementation regulation -- (GBL, Part I No 22 p 226) no longer applies to apprentices.

High School Student Grants

East Berlin GESETZBLATT DER DEUTSCHEN DEMOKRATISCHEN REPUBLIK in German Part I No 17, 11 Jun 81 p 232

[Official text of "Decree of 11 June 1981 on Education Grants for Students in the Expanded General Polytechnical High Schools and in the Specialized Schools in the Sphere of Public Education," signed by W. Stoph, chairman, GDR Council of Ministers and M. Honecker, minister for public education, East Berlin]

[Text] The socialist state assures youth of all-round education and training and systematically creates the conditions necessary for it. Selection for training at the expanded general polytechnical high schools and the specialized schools means a high social recognition and invests each student with a personal obligation to socialist society for acquiring high political and technical knowledge and skills.

In concurrence with the FDJ Central Council and the FDGB National Executive Committee, the following is decreed:

Article 1

(1) For all students in the expanded general polytechnical high schools and the specialized schools in the sphere of public education, beginning in 11th grade, monthly training subsidies are granted for the duration of school attendance.

(2) The training subsidy comes in the following amounts:

-- for 11th grade students	M 110 per month
-- for 12th grade students	M 150 per month

Article 2

In justified exceptional cases, the training subsidies to be granted as per article 1 may be raised by M 50 per month for students who, due to their social circumstances, need extra assistance.

Article 3

Implementation regulations are issued by the minister for public education in concurrence with the heads of the competent central state organs, and with the FDJ Central Council and the FDGB National Executive Committee.

Article 4

(1) This decree goes into effect on 1 September 1981.

(2) Starting on 1 September 1981, the eighth implementation regulation of 15 June 1977 for the law on the uniform educational system -- maintenance support for high school students and training subsidies for apprentices -- (GBL, Part I No 21 p 273) in the version of the ninth implementation regulation of 25 June 1980 -- amendment of the eighth implementation regulation -- (GBL, Part I No 22 p 226) no longer applies to students of the expanded general polytechnical high schools and of the specialized schools in the sphere of public education.

(3) Article 2 section 1 of the 4 December 1975 decree on granting state child-support money and special subsidies for large families and single citizens with three children (GBL, Part I 1976 No 4 p 52) receives the following version:

"(1) State child-support money is granted for physically or psychologically handicapped children up to the end of their attending a 10-grade general polytechnical high school or the 10th grade of a specialized school, special grade or special school."

CONFERENCE DEBATES NATIONAL, INTERNATIONAL FACTORS IN WORKERS MOVEMENT

Budapest PARTELET in Hungarian No 8, Aug 81 pp 30-35

[Article by Laszlo Kovacs, chief of Central Committee Sub-Department: "National and International Factors in Today's Revolutionary Workers Movement"]

[Text] From the moment of its inception, the revolutionary workers movement has been characterized by traits which are unique to each country and class features which are identical everywhere, and its development has always evolved in the midst of a complex interaction of national and international factors. The weight of the national and the international side in the struggle for the liberation of the working class and society as a whole, and for the elimination of exploitation, is naturally not determined once and for all, but is constantly changing in the course of historical development. In the middle of the last century, the revolutionary direction of the workers movement clearly began to take on the form of an essentially international organization, which truly reflected the fundamental community of interests among the oppressed workers of various countries. The subsequent formation of independent workers parties organized on the national level, however, signaled a recognition of the objective necessity, that while it is true that the workers of the world pursue identical goals, their struggle must be launched within their national boundaries and they must organize themselves into a national class in order to take the power out of the hands of the bourgeoise.

On the one hand, it was their community of interests and goals, on the other, it was the internationalization of capital, the global presence of the bourgeoise, which has made it essential for the various national detachments of the working class to coordinate their struggle to some extent and in some form. It was this demand which led to the creation of the 1st and 2nd Internationals and later, following the organizational split between the revolutionary and reformist factions of the workers movement, to the establishment of the 3rd or Communist International. During the initial phase of the development of these new type of vanguard parties, it was the operation of the Comintern which had to inevitably ensure that the common goals of the communist movement were precisely reflected in the specific policies of the individual parties, and that the global cause of the socialist movement was not threatened by national isolation. At the same time, the existence of an international direction and decision center also meant that during the phase of the struggle the international side, i.e. the common interest had priority over the national or individual side. Another important feature of the situation during that period was that since there was only one socialist country, it was essential for the international

working class and communitst parties everywhere to do everything in their power, and to promote its consolidation. It was this necessary requirement that was expressed in the thesis according to which the criterion for determining one's commitment to proletarian internationalism was his attitude toward the Soviet Union.

For decades now, the international communist movement has not had a center, due to the fact that the development of the movement has made it both unnecessary and impossible. Today each party must independently determine its own policy and decide what road to follow and what methods and means to use, taking into account its own country's conditions and the given international situation, to achieve its goal, the successful completion of the socialist revolution. This could not be done any other way, since there are very significant differences in the specific conditions which characterize the struggle and activities of each communist party. Some of these parties have already gotten passed the initial steps of socialist transition, namely, the establishment of the rule of the working class and the laying of the economic foundations of the new society, and there are also those who are already in the process of constructing the advanced phase of socialism. Other parties are still only at various stages of their struggle to overthrow the class rule of the bourgeoise. But even beyond the diversity of their social systems, these countries greatly differ in their level of economic development, social structure, nationality make-up and historical traditions, just to mention a few; significant differences can also be observed in their size and geographical location. All of this constitutes a diverse system of conditions, which obviously mainly the communist party of the given country can see in its full complexity.

The considerable diversity which characterizes these conditions do not change the fact that the most fundamental interests of the communist parties coincide and that they all try to attain their common long-term goal, namely, the achievement of a socialist society, on the basis of the same ideological foundation, the teachings of Marxism-Leninism. While confirming in many respects the need for different solutions, socialist revolutions which occured under various sets of specific circumstances have proven in practice that the process of transformation from capitalism to socialism has inevitably prevailing, common and objective sets of rules everywhere. The interrelationship between the general and the specific unique features of socialist construction is also an indication that this diverse form expresses a fundamentally identical content.

The selection of the road to socialism, the creative application of common rules to specific conditions places a great responsibility on every communist party. They are responsible, first of all, to their own working class and their people for selecting ways and methods which bring certain results and require the smallest possible sacrifice. This responsibility, however, cannot be narrowed down to the national level, for the international workers movement is also affected by the successes and the failures which result from the struggle and activities of individual parties. Naturally, this relationship has two sides: it is not only the success of the struggle on the national level which affects the position of the movement as a whole; the chances of these individual parties' struggle to succeed are also influenced by the development of the international communist movement's positions.

How the specific immediate tasks facing the individual parties--including in the final analysis the very task of carrying out the socialist revolution--is solved, is greatly influenced by international circumstances.

The connection has been proven not only in theory but also in practice, that today it is calm international relations and peaceful coexistence between countries with different social systems which can provide the most favorable external conditions for the struggle of revolutionary forces to succeed. It is clear that such conditions can only be established by way of a joint effort by all communist parties, that is, through a united stand on part of the international communist movement. There is, therefore, an inseparable connection between effective representation of national interests and goals, and the most fundamental international interest, the preservation of world peace.

It clearly follows from the diverse positions of the various countries and from the different positions of each party, that the tasks which are directly on their agenda may also significantly differ. This, however, does not mean that there is even a single communist party which could do without the experiences learned by other parties in the course of their own struggle. In other words, the knowledge of the solutions which have been effective or perhaps unsuccessful elsewhere can save communists some unnecessary failures and sacrifices, and may even shorten and smooth their road to socialism. This is why regular consultations, finding out about and applying unique solutions for the earliest possible achievement of their common goals have given communist parties such immense power. Collective examination of newly arising problems, exchanges of opinions to enhance the search for solutions and joint analytical work are also essential--due precisely to the multiplicity, complexity and constant changing of conditions.

In May, the Central Committee of the MSZMP and the editorial board of BEKE ES SOCIALIZMUS, [Peace and Socialism], which is the collective theoretical journal of communist and workers parties, held an international theoretical conference in Balatonfoldvar, entitled "The Dialectic Relationship Between National and International in the Workers Movement." The goal of this initiative was--as that of several international party conferences held in our country during the past few years--to provide an opportunity for an intense exhange of ideas about a theoretical subject area which also holds some vitally important practical interrelationships for all communist parties, that is, for the movement as a whole. The comprehensive nature of the subject also provided an opportunity for delegates from 47 participating parties to bring up--in the two sections, dealing with the factors that influence the national and international consciousness of the working class and the problems concerning the shaping of international consciousness--virtually every possible theoretical-ideological and practical-political question, which today are subjects of debate within the international communist movement.

In addition to the parties which participate in the work of the journal, BEKE ES SOCIALIZMUS, some recently established or presently forming Marxist-Leninist parties were also invited to the conference as guests of the hosting MSZMP. For the vanguard parties which have evolved from national liberation movements, it is obviously useful to take part in international programs such as this, and it is illuminating for them to become thoroughly familiar with the views and positions of those communist parties which already have a great past behind them and thus have rich experiences to offer. Aside from these considerations, the presence of the Marxist-Leninist forces of Angola, Mozambique, the People's Democratic Republic of Yemen and Ethiopia received special attention at the conference. The reason for this was that they represented revolutionaries of countries for whom international solidarity and international support for social liberation struggles fought within national boundaries were decisively important in the past and represent a practical matter which is no less vital today. For this very reason, their fighting experiences were also significant contributions to the work of the conference.

During the three day conference there was complete concensus, that the dual tendency of world development--revealed by Lenin,--namely, that the role of the national factor is strengthening while at the same time the world is becoming more internationalized, continues to assert itself. The national consciousness and unity-strengthening and legitimate pride-boosting achievements of our work toward a socialist society-- in addition to the special interests of socialist countries which stem from their different levels of development,--the joint struggle of the working class and other social forces in the capitalist countries against international imperialism in the developing world and the intensification of the struggle for national and social liberation, all tend to point toward the growing effect of the national factor. All of this, however, is taking place in a world in which there are a growing number of ties stemming from political, economic, scientific-technological, cultural and other types of cooperation among not only those countries with similar social systems, but also those whose social systems differ and in which growing emphasis and importance is given to general and global problems affecting mankind as a whole, such as the keeping of the peace, the rational utilization of increasingly more expensive energy sources and raw materials, the establishment of well-balanced international economic relations, putting an end to the environment-destroying effects of industrial civilization and others. Also indicating a tendency toward internationalization are those integrational processes which are taking place both in the socialist and capitalist world, although with fundamental differences in content. A unique, but essential effect of internationalization is the globalization of the struggle between socialism and capitalism, and the merging of the anti-imperialist struggle by the main revolutionary forces of our times.

Among the views expressed concerning the main topic of the conference, namely, the relationship between international and national factors, some dissenting views could also be heard. Representatives of parties from some of the developing countries stressed the absolute priority of international over national interests, some other views expressed on certain specific questions, on the other hand, seemed to overemphasize the role of the national factor. The decisive majority of the participants, however, took the position that today the national and international aspects of the revolutionary workers movement are inseparably connected and mutually influence and complement one another. Specific examples were cited to prove that the revolutionary struggle of communist parties within national boundaries, the achievement and consolidation of national independence, the breaking of the rule of the exploiting classes and the successful construction of a socialist society always have international implications as well, for they serve the interests of the international working class and the common goals of socialism. This, however, does not mean that the momentary pursuits of these parties in specific situations always automatically coincide with the international interests of the movement as a whole.

Today the coordination of national and international interests is done among independent and equal parties without the help of a common organizational and decision-making center. In the course of the debate there were also a few remarks which in an overly appreciative manner assigned the leading role within the communist movement to the CPSU, and in general to the parties of the socialist countries. The majority of the participants, however, accepted the draft presented by the socialist countries' representatives, according to which the broader range of opportunities available to the ruling working classes only increases their responsibility in promoting the process of world revolution, and does not change the fact that the parties, or in the broader sense, the three major revolutionary forces, are equal.

Several of the participants also talked about the changes which may result from the lack of harmony between national and international interests, or from viewing one or the other side as the absolute factor. Thus they pointed out that a one-sided treatment of national considerations without taking into account their international connections will eventually lead to isolation and nationalism, and will also endanger the achievements of the national struggle. At the same time, they also stressed that those goals which are defined by giving absolute status to some abstract and general international considerations will inevitably remain detached from the existing national reality, and therefore are not suited for mobilizing and revolutionizing the masses, and in extreme cases they may even cause serious distortions.

The participants of the conference agreed that the national and international consciousness of the working class is shaped and formed by several various factors. Thus, they are affected by the given country's social and economic conditions, its historical traditions, as well as by the prevailing condition of the international situation, the behavior of the main forces of international politics, including primarily the weight and activities of the international communist approach was presented, which pointed out that during the initial phase of its movement the working class at first simply recognizes its class interests, develops its class consciousness, and it is only later that it also begins to call for national liberation. In contrast, the bourgeoise, while at the beginning of capitalist development still representing the national interest, gradually turns away from it and becomes increasingly an advocate of international monopol-capitalist interests.

Virtually every speaker took some time on their own to give a detailed look at the problem of nationalism. There were several delegates representing the communist and workers parties of the socialist countries, who stressed that while it is true that together with the new socio-economic conditions the objective possibilities of coordinating international and national interests are also established, differences of interests stemming from diverse economic potentials, but especially subjective reasons and external effects, may help sustain and from time to time even regenerate and strengthen nationalism. Delegates from the communist parties of capitalist countries suggested that the internationalization of capital not only helps to strengthen internationalism among the workers, but--especially under the conditions of the existing crisis and the intensifying competition struggle connected with it, and also as a result of the negative consequences resulting from the supranational character of capitalist integration--it also reinforces feelings of nationalism based on a sense of threatened national existence. This, however, makes it more difficult for the workers of different c untries to take a collective stand against the international monopoly capital and causes damaging tensions in the relations between the individual countries' own working masses and the guest workers who are there to work. Obviously, there are some additional unique features of nationalism which pertain to the developing world, where--as several delegates who came from there stressed--a distinction must be made between revolutionary nationalism which plays a positive role, and those racist distortions which cause divisions among liberation movements and thus serve the interests of imperialism.

At the conference, some of the most heated debates were centered around the relationship between national self-determination and international solidarity which is a unique and today especially timely, specific question concerning the connection between national and international factors. All participants agreed, that it is

the duty of those parties whose revolutions in their respective countries have already triumphed, to support the revolutionary forces of other countries. No participant contested the fact, that today's revolutionary changes, which are observed primarily in the developing countries, have objective and internal social motives which are not incited from the outside by the socialist countries or the revolutionaries of other countries. The imperialists, on the other hand, are doing everything in their power to bring these processes to a stop, just as they have tried to weaken and undermine the social order of those socialist countries which have come into being as a result of previous successful revolutions. The question which did bring out some differences of opinion had to do with the various possible forms and means of international assistance. There were some parties which questioned whether the extent of the danger of counterrevolution in the case of Czechoslovakia in 1968, Angola and Ethiopia in the mid-1979's and Afghanistan in December 1979, really justified the use of the military form of assistance, and there was even an opinion which held that such assistance is contrary to the principle of national self-determination. Those present from the countries in question, as well as the representatives of several other parties pointed out, however, that it is imperialist interventionism, and not the socialist countries' assistance which violates national self-determination, for it aims to destroy the accomplishments which have been achieved in the course of national and social liberation. These specific examples only prove that without the many-sided support of the socialist countries, the chances of the above mentioned countries' peoples to advance along a road of social development which they themselves have chosen, would have been jeopardized. Several people also pointed out that the concept of national self-determination is not just some kind of abstract, absolute or merely international category of law, but it also has a historical definition and a specific class content.

Behind the debates concerning the relationship between internationalist solidarity and national self-determination, there are essentially two very complex and theoretically not even fully explored problem areas with international implications which have come to the forefront during the past few years and decades: The question of periodically recurring crises in the socialist countries and the contradiction between the relaxation of tensions and specific revolutionary processes. Both express a complex, dialectic interrelationship between national and international factors.

The question of periodically recurring crises was analyzed--in addition to other speakers--by the representatives of the MSZMP. In the inaugural address, in the opening speech of the first segment and in other Hungarian presentations references were made to the subjective mistakes committed along our own historical path--namely, the overemphasis on the common laws of socialist construction and the subsequent deemphasis of the national factor, which was followed by giving the national side absolute priority--which made it easier for our domestic and external class enemies to launch an open counterrevolutionary attack against the people's power in October, 1956. The fundamental lesson of the period of consolidation that has followed the suppression of the counterrevolution was that only by waging a consistent two-front attack against subjective mistakes and distortions, and by taking greater notice of national peculiarities in asserting the common laws of socialist construction --or as it was put in the inaugural address: by showing simultaneous loyalty "to our nation's red-white-and green flag and to the red banner of the international workers movement"--can we provide the most important guarantees to ensure ourselves the kind of socialist development which while not entirely contradiction-free, is immune to more serious crises.

The contradiction between the process of relaxation and the revolutions which are presently taking place in the developing world, stems from the fact that the clash between imperialist intervention aimed at crushing those revolutions and the international assistance aimed at thwarting those attempts and ensuring their protection, causes inevitable tensions in the relations of socialist and capitalist countries, that is to say, it temporarily slows down the relaxation process. During the debates of the conference two viewpoints emerged in connection with this. One of these was that under the present circumstances it would be senseless and contrary to its own basic goals, to have a revolution that would lead to a world-war type conflict, and bring about the destruction of the entire human civilization. Looking at it from the other side, however: the imperialist circles are also unable to afford the risk of a thermonuclear world war, by trying to forcefully turn back the process of social development in a given country.

The organizers of the Balatonfoldvar conference did not intend, from the outset, to put coinciding views on record in the form of a joint document, or to come up with any legally binding resolutions. As in the case of the above mentioned earlier conferences, the goal was once again to use this informal exchange of opinions about an extremely important and timely subject area to help us clarify some views and familiarize ourselves with each other's experiences. Everyone agreed, that each participant party should decide for itself how it will use the things which had been discussed at the conference.

The tone of the debates, the honest and open way in which problems were raised, and the cordial and comradely atmosphere which prevailed from beginning to end even in the midst of some occasionally impassioned arguments proved once again: the communist movement desparately needs forums such as this, so that its parties can provide constructive, Marxist-Leninist answers to the complex problems or our changing world.

CAREER PROBLEMS OF YOUNG INTELLECTUALS NOTED

Budapest PARTELET in Hungarian No 8, Aug 81 pp 36-40

[Article by Janos Barabas, secretary of State Youth Committee: "Problems of Starting an Intellectual Careet"]

[Text] As we attempt to outline the characteristic problems of young intellectuals, we cannot avoid making a few comments concerning the intelligentsia as a whole. The great social movements which began following the liberation had a great effect on the composition of the intelligentsia. This development radically changed the outlook of this stratum and it contributed to the evolution of a socialist intelligentsia. Since the beginning of the second half of the 1960's--as the findings of studies and research indicate--this earlier rapid and large-scale restratification process has slowed down and the roads of mobility have changed.

One of the important questions regarding the direction of social development is how the recruitment of the intelligentsia according to social origin will develop. Studies show that while nearly half of the children of white-collar worker parents will become intellectuals, only 8 percent of the children of skilled worker parents, 3.5 percent of those whose parents perform physical agricultural work and 2 percent of those coming from unskilled laborer parents will end up to be the same. These data are an indication that the stratum is becoming increasingly closed and that the influx of people from the blue-collar classes and strata is gradually slowing down. Interesting observations have been made by researchers, who have found that starting from the 1930's this phenomenon, namely, that nearly one half of the children from white-collar worker families are also becoming intellectuals themselves, could be observed not only in our country, but also in the industrially most advanced countries of the world. As it is indicated by the statistics of the Hungarian development: the number of people who can become intellectuals from the other social strata or classes is determined primarily by the extent to which this stratum can increase. This fact is a further indication that the administrative regulation of advantages and disadvantages according to origin cannot be considered an effective method. The compositional transformation of the Hungarian intelligentsia has been brought about primarily by a growth in its total size.

The intelligentsia has clearly definable stratum-characteristics, but it is by no means a homogenous stratum. Significant differences can be revealed among various intellectual groups regarding their position in the social division of labor and according to the occupational structure. Differentiations within the strata may be

caused by differences in the level of training and in the prestige of the profession: a person who has completed university is in a more advantageous position than someone with a college degree; doctors are a step above teachers, etc. Empirical studies have also brought into light the fact, that within the hierarchy of white-collar careers the attraction toward professions of greater prestige is closely connected with social origin. For example, the medical community is more closed than any other intellectual microstratum. The percentage of children from blue-collar families is the lowest among medical students. We should note here, that the above mentioned differences can also be observed among all the various groups of young intellectuals; their effect can be especially intensly felt at the beginning of periods of work-place and social adjustment. And by pointing out that there are significant differences between young and older intellectuals, we have arrived at the essence of our topic. Despite the diminishing socio-cultural level-differences between villages and cities, a certain degree of isolation can be observed between the intellectual groups of the two types of settlements. There are some very significant differences between intellectuals in management and non-management positions. Also significant are the existing income differences. A so-called, "elite-intelligentsia" has evolved which includes segments of the creative, scientific and artistic intelligentsia.

Within the intelligentsia whose under 30 occupy a unique position, with a percentage of over 25 percent. Young intellectuals have several characteristics in which they differ from the other age groups of the intelligentsia, as well as from other strata of our youth. The most striking indication of our young intellectuals' unique position is that the time of their entrance into the social division of labor, and the beginning period of their career usually coincide with their desire to set up a household and start a family.

Those young people who select an intellectual career have to spend a significantly longer time in school, which also postpones the beginning of their career. (Under optimum circumstances, they spend a minimum of 2, and a maximum of 6 years in higher education.)

The university or college student enrolled during the day has no personal income, therefore, his living expenses are covered primarily through parental, family support and by grants and scholarships, which they supplement with income earned from occasional odd jobs. In view of these circumstances, and for all practical purposes, day-time students must be considered dependents. There is a kind of unique "status-inconsistency" which characterizes the situation of a university student: he spends several of his physically and emotionally mature, adult years without a properly awakened sense of social duty and responsibility.

After finishing university or college, upon completing his studies, the young person begins to wait for the opportunity to prove his abilities and preparedness. The beginning of his adult life and career, however, runs into quite a few difficulties:

1. The first great problem which a young intellectual encounters is finding a job and selecting a suitable place of employment. The way the large majority of these young graduates who are at the start of their careers go about finding a job is through competition. There are significant differences with respect to the availability of work in the various professions and fields. For most young technicians and economists finding a job is relatively less problemful. At the same time, these are the fields where the "discrepency" between academic training and the activities themselves is the greatest. The problem of finding suitable positions

for liberal arts and natural science graduates, whose major is something other than education, still has not been solved. Another area of concern is how to provide suitable positions for starting teachers which are in accordance with their level of training and their field of expertise. Finding a job is made even more difficult by the inflexibility and overspecialization of the university and college system, which even in principle is only suited to satisfy those professional manpower-needs which arise in today's structure of the division of labor, and is unable to take into consideration our changing short,-extended and long-term demands.

Changes in the economy, the transformation of our economic structure can be expected to cause further problems in the employment of young people. Despite our tension-causing difficulties to place people, which cannot be overlooked, we must make it clear that it would be a mistake to try to resolve these tensions by cutting back enrollment in higher education. In Hungary, 34 to 35 percent of our high-school graduates go on to higher educational institutions. This ratio, that is the number of students has not changed during the past few years. Compared with international statistics this student number is strikingly low. Only 9.2 percent of the 18 to 25 year-old age group receive higher education as day-time students.

2. The source of tension is discrepancy between the academic qualifications of career starting graduates and the requirements of the job they are about to fill. Right from the start, at least one-fourth of them begin to work in jobs which do not require an advanced degree.

This is evidenced by the fact that in the nearly 150 fields which require engineering training only 58 thousand hold advanced degrees, while at the same time 38 thousand technical specialists with university or college degrees are employed in non-engineering fields.

Various surveys have found that many young people are dissatisfied with their field work; they look upon their jobs as something which could be performed by somebody with less qualifications. According to some studies the majority of young intellectuals do not feel that their jobs have enough substance or that they encourage creativity. In their opinion they spend half of their working time doing jobs which do not require a degree.

Waiting for suitable work, performing tasks which have no relevance to their training has a retarding effect on the professional development of young people, leads to insecurity and bitterness and impels them to change their place of employment.

3. The process of adjustment to the job often entails conflicts. Many problems result from requirement differences and contradictions between university and college training, that is, education, and on-the-job training. The young person, though overspecialized, possesses a relatively high level of professional knowledge, while at the same time his practical experience is inadequate. Higher education does not place proper emphasis in all areas on mastering the skills connected with the practical application of theoretical knowledge. We must also admit, however, that there is not, and there can never be complete between university or college preparation and practical work.

4. Only 5 percent of our young intellectuals hold some type of, usually low-level, managerial positions. Among white-collar management the ratio of those under 30 is 12 percent. On the one hand, this may cause problems in the continuity of the succession process, and on the other, we must point out that those in white-collar management positions are significantly better off compared to white-collar employees in areas such as income, housing conditions and consumption. Looking at it from a different angle, some young people are put directly into positions of control, or are given assignments which also call for the administration of certain managerial tasks. When this happens, however, it soon becomes evident that most higher-educational institutions fail to prepare starting specialists for carrying out managerial functions. Having to learn, and learn to apply managerial know-how and skills only worsens the anxieties involved in starting a new job.

5. Young intellectuals consider their need for further training and professional development as natural requirements. More and more often, a young specialist will begin to work toward acquiring a specialized skill (i.e. economic specialist, economic engineer) shortly after the start of his career, more or less with the encouragement of his place of employment. The institutional system of vocational extension training, however, has only evolved properly in a few groups of professions.

6. The wages of young intellectuals directly upon entering work are relatively--in some professions not just relatively--low and slowly increasing. In a sense, the dependency status lingers on, since a large number of young people continue to depend on parental assistance. Wages depend not on the content or quality of the job, but primarily on the number of years spent on the job. Since they only belatedly join the social division of labor, young intellectuals are objectively unable to catch up quickly with other young people--of different professions--who belong to the same age group. According to the findings of a 1975 study, it is only at ages 30-35 that these young specialists begin to make as much as a group as those with only a secondary education, working in the same professional field. Not even by the time they retire are teachers able to eliminate the wage gap between themselves and the skilled workers, for example, which is created during the years they are in college. Looking at wages, we find that in the vocational fields requiring skilled labor there are essentially no wage increases according to age past the age of about 28 to 30. In the white-collar professions, however, such increases occur from beginning to end. If we make an international comparison we find that in our country age plays a far greater role in determining white-collar wages than it does in the developed capitalist countries.

The opportunities available to young intellectuals to enter into the second economy are considerably more limited, that is to say, they are also differentiated according to professions. All of this considerably changes the picture.

The key question regarding the social conditions of young intellectuals has to do with the prospects of solving the housing problem. Housing shortages may become the center of further problems: not having a home of his own, the young professional usually takes into account the proximity of his parents' home when selecting his first place of employment. As a result, disproportions may develop in the territorial distribution of certain professions.

In the country, in the villages the chances of finding housing are better than in the capital or in the larger cities. Offering housing in lower level settlements may enhance efforts to recruit and retain manpower. At the same time, it also

makes it possible for employers to meet the manpower needs of those branches which are considered less prestigious within a given profession. An apartment has great appeal, especially to those who cannot count on support from home, that is, to those youth who come from the more disadvantaged social strata. Today it would be hard to justify the continued granting of housing subsidies such as those enjoyed in certain settlements by workers of large-scale industrial state enterprises. By combining and simplifying the various different types of subsidies we could eliminate the basis of harmful conflicts.

In order to get an apartment, young people are forced to undertake financial burdens which are beyond their abilities, and as a result, career starting professionals are compelled to work on the side to supplement their income. It is in both our social and individual interest to ensure that such activities are socially necessary and that they increase income proportionately with their usefulness. At the same time, the undertaking of additional work also has an adverse effect on the direction of the young person's life precisely during the period when his intellectual habits and routines (self-education, refinement, language learning) are in the process of evolving.

The problems of young white-collar families are further aggravated by the limited possibilities for placing their children in nurseries or kindergartens. This is an especially great disadvantage to young women with advanced degrees, for the lack of spaces and the unavailability of family assistance forces them to stay at home. Being away from their jobs for an extended period of time means a significant setback for their professional improvement and progress.

"Intellectual" training--in addition to specialist training--is for the most part the task of higher education. Higher educational institutions do, more or less, provide young people with the skills and knowledge they need to become specialists, at the same time, however, they fail to adequately prepare them for the performance of intellectual functions. Another training deficiency is that young graduates generally do not possess adequate foreign language skills or well enough developed communicative abilities.

The fulfillment of intellectual functions--i.e. conveying cultural values, passing on knowledge and shaping the social consciousness-is an objective requirement. Therefore, it is important for us to know the direction in which our intelligentsia as a culture-conveying and opinion-shaping force is influencing the public opinion, political mood and the spiritual-ideological processes of our society.

Our society's interests demand that we create the necessary conditions--within the limits of the means available to us--which will enable our young intellectuals to live up to their roles stemming from the requirements of their intellectual being.

Starting a career and founding a family are sources of conflict for all young people. This is also true--especially in the above outlined areas--for the starting of intellectual careers. As they enter into the social division of labor, and into public life, young intellectuals become faced with various difficulties in their efforts to assume their role, which are further aggrevated by existentialist-social problems. At the same time, there are virtually no important, sociologically significant dimensions along which our white-collar workers and managers would not

be in a considerably better position than our skilled workers, for example. Therefore, perhaps it is not a mistake to point out that our young intelligentsia has far better chances to improve its lot than do the young people of other strata. In addition, only some of the conflicts related to starting an intellecutal career arise inevitably. Unnecessary and unjustified tensions can be resolved through conscious social effort.

In order to achieve this, we must transform the instructional system of higher education--as outlined in a recent political decision--in such a way so that the existing functional disorders can be eliminated. We should also think about increasing, as an incentive for and as a result of significant improvements in our economic efficiency, the number of students enrolled in day-time higher education. In addition, clear measures will be needed to resolve the presumably temporary tensions which are expected to arise in white-collar employment during the next few years. We must accelerate the perfection of new types of professional training which are more flexible to scientific-technological and social changes, and which instead of attempting to provide a complete professional knowledge, offer a kind of broad profile, basic professional training which can be continually expanded. The realization of intellectual functions, taken in the broader sense of the word, demands a higher level of general education, usable language skills and better developed communicative abilities. For the preservation and renewal of existing skills we need to establish a well-organized system of differentiated institutional extension training.

When first starting out in a job, it is especially important to put the young person in a position which is commensurate with his training, and to provide him with assignments which give him a chance to do some real work and to prove his abilities. The way this can be accomplished is not by separate measures, but primarily by making it the very source and also the result of vigorous improvements in social and economic efficiency.

Young intellectuals are rightfully complaining that performance is not being given primary consideration in the determination of wages. The realization of a wage-system which reflects performance, and which proportionately rises with its improvement, is a necessity which affects not only young intellectuals. In addition, there is another often heard point that deserves examining, according to which a more clear-cut wage differentiation should be introduced between blue-and white-collar employees, in the latter's favor.

An important element of the demands connected with the activity structure of young intellectuals is the need to become involved in community projects and to assume a public role. The openness of their views, their sensitivity to problems, their readiness to implement changes may serve as a tracting force for social organizations and movements, both at work and in their home communities. This, however, can only be attained by entrusting the young person with clear public duties and by assuring him that he can expect realistic interest representation. In this connection, we must take greater notice of one of the age-group characteristics of young people, which is that they can only undertake and identify with those tasks which are unfinished, incomplete and imperfect, or at least seem to be that on the surface. And our society is neither finished, complete or perfect; it can be continually built and changed based on our party's program and with the constructive participation of our masses. And this means plenty of clear and useful tasks for our young intellectuals, both in their professions and in public life.

ELZBIETA PORTYKOS, ONLY WOMAN ON KKP, DEFENDS SOLIDARITY

Stockholm DAGENS NYHETER in Swedish 15 Aug 81 p 9

[Interview with Elzbieta Portykos, member of the National Consultative Commission by Krzysztof Wyszkowski; translated to Swedish and edited by Maciej Zaramba; date and place unspecified]

> [Text] Elzbieta Portykos is the only woman on the 50-member KKP [National Consultative Commission], the highest leadership of the 10 million Poles who belong to Solidarity--Solidarnosc.
>
> She was voted in after the strikes in the fall and since then has helped make decisions on general strikes, political and economic reform proposals--everything that makes up Solidarity's balancing act between the expectations of public opinion and the "geopolitical realities."
>
> In a pause in KKP negotiations she gave an interview to the weekly publication SOLIDARNOSC which DAGENS NYHETER reproduces here in a somewhat abbreviated version.

[Question] How did you come to Solidarity?

[Answer] I took the events in 1956 very hard. Went to school then and felt ready for any sacrifices that were needed.

Elzbieta Portykos

The renewal in 1970 also involved me entirely, I believed in it and was prepared to send my private best wishes to Gierek and his group. But that involvement soon died down--in 1976 I went through an everyday hardship and had a child. As it then turned out many problems remained unsolved--and insoluble. I had a chance to really re-examine my involvement and my ideals. And I said to myself, never again. No one and no event will get me to become involved in another "renewal."

[Question] But August came and you were there again.

[Answer] I come from the Gdynia area. My father and one of my brothers are shipyard workers, the other brother is a seaman. So when telephone communications with Gdansk were interrupted I rushed there.

I was uneasy about them, I knew that something was happening and I remembered what happened in 1979. (See Footnotes)

And there I realized that this time it was an entirely different kind of people who were trying to bring about a change. Not those who had let me down the time before. I realized there really was a chance!

While I was in Gdansk a strike committee was formed where I worked. That had never happened before, there are no large industries in Koszalin. Now everyone was pulled into the new organization--and I was too.

[Question] And what is it like for you?

[Answer] My situation is unusual and harder than that of the others. I have a young child whom I raise alone. Just now, for example, he is with my mother. There was a time when I took him with me to Warsaw and the KKP meetings and left him alone in the hotel with his toys.

I am not employed by Solidarity, I still have my old job. This means I can take care of some of the union work on the job but most of the contacts with other job sites and KKP work must come in my spare time. The result is that I neglect my home and my child.

[Question] Is the big work burden women must bear the reason why you are the only woman in KKP?

[Answer] Undoubtedly. In our MKZ [Interfactory Founding Committee] there are some women Solidarity officials who have families, it is much harder for them than for the others. (See Footnotes)

[Question] Has KKP ever taken up the special problems of women?

[Answer] No, nothing except what came out of the August agreement, that is maternity leaves, retirement age, etc. (See Footnotes)

[Question] Do you feel this should be changed?

[Answer] I don't know. I represent an unpopular standpoint--I am opposed to special treatment for women. I feel no better and no worse than a man. I work like one.

[Question] But single mothers have it extra hard.

[Answer] Women always have more to do. Even if men share in the housework women have the extra burden of typical women's activities.

[Question] But lying on the couch and reading the paper after dinner is not a woman's job?

[Answer] Exactly. I don't even have time to read the paper, let alone thousands of other things. Most women don't have time for that kind of thing.

[Question] And is it really impossible for Solidarity to change that?

[Answer] The situation of women depends in large measure on the nature of women and the special culture in which we live...

[Question] And that special culture makes you the only woman in KKP?

[Answer] Yes. But is it Solidarity's job to change that? I don't think it's a matter of that but of freeing me from standing in line for hours so I have time for other things, such as reading.

Improving the economic situation is the most important thing. In addition Solidarity could take the initiative on institutions making it easier for women to carry out their most important job--rearing children. Our daycare centers are just babysitting services. Women have to correct a lot of pedagogic errors at home later.

And then there is health care. A solution to that problem would really make life easier for women. But that will take years.

[Question] The movement's program includes preserving the family, moral values, combatting alcoholism. (See Footnotes)

[Answer] Yes, these are issues that affect women more than they do men. Therefore I think an effort should be made to get more women actively involved even though in a sense this violates democratic principles. (See Footnotes)

But I am totally opposed to all kinds of quota systems, 5 percent women, 8 percent unaffiliated, 10 percent blue-collar workers, etc.

At the same time it is good to have women better represented in the organizations. They provide a complementary, vital voice.

[Question] If it's hard to make a mark in the Solidarity leadership perhaps one should create...

[Answer] A Solidarity women's union? Good for you--it's not a question of having a hard time making a mark. No one has put up any barriers for me.

In my opinion the poor representation of women is not due to external circumstances, I don't see any effort being made to keep women out of the leadership. Perhaps many women, as I once did, have decided never to get involved in politics again and have taken up knitting instead. It is less hazardous to your health, leads to fewer disappointments, you can unravel a piece and knit it up again.

[Question] Or knit the whole thing over as Solidarity has done in politics. Here women's sense of reality ought to come in very handy.

[Answer] Yes, it would certainly be good for Solidarity to have more women in the leadership.

During KKP meetings I sometimes have the feeling that I'm sitting among a bunch of boys who haven't finished playing with their toy soldiers and now at last have a chance to outbid each other with their clever phrases.

It is as if I were looking at my little son. One must bear with it for a while. Then one has to straighten them out. I do that. Even if I lose friends that way. That's the way I am.

Although people accuse women of fastening on details and exaggerating them I think some women--those with experience and a broad perspective--would contribute to clarity and objectivity in KKP discussions.

[Question] Things seem to be quite chaotic at KKP meetings...

[Answer] I think there are two reasons for that.

For one thing there is a lack not of training but of experience in public activity. One sees that in the way people talk and argue. For another some delegates think their personal experiences are identical with those of society in general. In that way they represent themselves, in other words their life experiences. Therefore we don't have good and efficient meetings.

[Question] Where does all the distrust of experts outside KKP come from?

[Answer] From historical experience. Distrust is a social disease created by deacdes of decisions made in our name by other people.

[Question] Now the leaders of Solidarity are making many decisions in the name of others.

[Answer] Yes and on matters that really call for special expertise where experts should be asked. It is also dangerous. In my opinion there are two kinds of questions; one of them involves universal issues--where all of us know enough to have an opinion.

There we should make decisions on the basis of public opinion.

In the specialized questions opinions should rest on the work of experts and KKP should be careful about questioning results arrived at by expertise. Otherwise we could be accused of the same incompetence of which we have accused the government in the past.

[Question] All of this is due to the fact that KKP is an entirely new and unique creation in Polish politics. (See Footnotes) Is it a good construction or do you think others are better suited to lead Solidarity?

[Answer] No. I believe in the good common sense of those who work, especially those from the working class. They are receptive to argument and capable of changing their views. I believe in their historic wisdom which does not come from books but from their own experience and from recent history.

[Question] What is Solidarity's most important task?

[Answer] To educate a new kind of person.

For me it is not so important how much a kilogram of pork ends up costing. But I am alarmed by the opportunism, the degree of moral decay our society is subjected to, even children. But I realize this kind of change is much harder to achieve than the changes that produce good contracts or free Saturdays.

[Question] Does the opportunism you speak of exist in Solidarity too?

[Answer] Yes. As soon as the movement started growing people turned up who began using it. One example. My car broke down on the way to a KKP meeting. Someone said: "Go to the state repair shop, POLMOZBYT, and say you are from the Solidarity leadership. Then you'll get your car fixed without having to wait in line and get it done for nothing too." That shows an opportunistic and dangerous mentality. People should be judged on their own merits not according to whether they have a brother-in-law working for the state or a father-in-law in Solidarity. But to avoid this kind of thing one must first have a functioning system of trade and services.

This involves a rebirth of respect and trust in human relations and in human ideas such as one now finds only in literature. The last 35 years have demoralized the nation. But a change of mentality will take many years, especially when the economic situation is so difficult.

It's easier to behave like a gentleman in a streetcar that isn't crowded, don't you think?

[Question] Many thanks. Say a little about yourself.

[Answer] I live in Koszalin, not a typical workers' city. I work as a business lawyer for the UNITRA-UNIMA vacuum technology plant. I'm quite new there, left

my old job because they violated the labor laws there. Have a 5-year-old son I am bringing up myself. A very intelligent boy. He'll certainly be a good union man, he understands my needs precisely.

For instance he'll say, "You have to go to the meeting, otherwise you won't know what happened." He answers the telephone and keeps track of people I am going to meet. He even understands political structures, including the Solidarity hierarchy. So he'll probably make a better official than his mother.

FOOTNOTES

In 1970 hundreds of striking workers in Gdansk were shot down by policemen who had been ordered out.

MKZ is a regional leadership within Solidarity.

The August agreement of 1980 was reached between the government and Solidarity.

Moral has a different sound in Polish than it does in Swedish. In Poland it refers to truthfulness, fairness, responsibility and an ethical attitude.

Democratic principles in this context refers to a current discussion within Solidarity based on not forcing anyone to participate in political life against his or her will.

KKP is made up primarily of workers, strike leaders from August 1980.

DECREE ON EXAMINATIONS IN FIELD OF CIVIL NAVIGATION

Bucharest BULETINUL OFICIAL in Romanian Part I No 56, 28 Jul 81 p 2

[Council of State Decree on Examinations in the Field of Civil Navigation]

[Text] The Council of State of the Socialist Republic of Romania decrees:

Article 1--Bookkeeping examinations and technical administrations and local bureaus for technical examinations, by experts or other specialists, according to the law.

In complex cases or those which are important for the national economy, examinations in the field of civil navigation can also be given by institutions of higher education, by institutes for scientific research, design and technological engineering, under the conditions stipulated by law.

Article 2--Extra-judicial examinations in the field of civil navigation, requested by Romanian or foreign juridical or physical persons, are permitted by captains of ports, if the law does not provide otherwise.

Article 3--The cost of the examinations in the field of civil navigation given at request or officially, for foreign juridical persons or physical persons, is determined and collected in hard currency, in accordance with the amounts specified in the annex which is an integral part of the present decree.[1)]

The fees stipulated in the annex to the present decree are minimum fees and they will be updated annually, at the proposal of the Ministry of Finance, the Ministry of Technical-Material Supply and Control of the Management of Fixed Assets, the Ministry of Foreign Trade and International Economic Cooperation and the Ministry of Transportation and Telecommunications.

For other naval examinations besides those specified in the annex, the fees in hard currency will be set by the Ministry of Finance, the Ministry of Technical-Material Supply and Control of the Management of Fixed Assets, and the Ministry of Transportation and Telecommunications, in accordance with the fees stipulated in the present decree and in accordance with international practice.

---

[1]The annex is being communicated to the institutions concerned.

The Ministry of Finance, the Ministry of Technical-Material Supply and Control of the Management of Fixed Assets, the Ministry of Foreign Trade and International Economic Cooperation and the Ministry of Transportation and Telecommunications will adapt the level of fees in hard currency, specified in the annex to the present decree, without going below their limits, in accordance with the evolution of the fees for examinations of the same type prevalent in the international sphere.

Article 4--The cost of examinations in the field of civil navigation given to foreign juridical or physical persons is deposited in or, according to the case, transferred to the Romanian Foreign Trade Bank, in hard currency.

The equivalent in lei, determined in accordance with the law, of the hard currency sums deposited in or transferred to the Romanian Foreign Trade Bank is transferred to the account of the financial administrations or, according to the case, to the account of the Central Bureau for Technical Examinations. From the sums deposited, the financial administrations and the Central Bureau for Technical Examinations will give the recompense due to the experts or the specialized institutions, under conditions of the law, and the difference will be deposited in the state budget.

Article 5--For services provided in the ports and the national waters of the Socialist Republic of Romania, at the request of foreign juridical or physical persons, the fees provided by law for these activities will be applied.

Article 6--The coordination, control and direction of the activity of examinations in the naval field will be carried out, for bookkeeping examinations, by the Ministry of Finance and for technical examinations, by the Ministry of Technical-Material Supply and Control of the Management of Fixed Assets.

DECREE ON EFFECTIVE USE OF SPARE SPACE IN CERTAIN UNITS

Bucharest BULETINUL OFICIAL in Romanian Part I No 56, 28 Jul 81 pp 1, 2

[Council of State Decree on the Use of Unused Spaces or of Spaces Which Are Not Being Used at Full Capacity, which Belong to State Socialist Units, Cooperative Units and Public Organizations, for Production, Small Industry, Services, Trade, or Small Handicraft Activities]

[Text] As a result of the measures adopted for the improvement of production activity, for the better circulation of goods and packaging, and for the elimination of intermediate storage areas, numerous areas have become available or are not being used to full capacity.

With a view to achieving an integral and effective use of these spaces for the development of the activities of production, small industry, services, trade, artisan, and small handicraft activities, the Council of State of the Socialist Republic of Romania decrees:

Article 1--As of the date of the present decree, unused spaces or those which are not being used to full capacity, which belong to state and cooperative units and to public organizations, identified in annexes 1-34 [1], will be given to units subordinate to the peoples councils of the counties and of Bucharest Municipality, the ministries, the Central Union of Artisan Cooperatives, the Central Union of Consumer Cooperatives, the National Union of Agricultural Production Cooperatives and the public organizations, so that they can be used for production, for small industry, for services, for trade, artisan and small handicraft activities, for the stated purposes.

The handing over and taking over of the spaces will be executed on the basis of an agreement concluded with the organs concerned, together with the entire inventory, the equipment and the workers, as of 1 April 1981. The personnel who go to the new units are considered transferred in the interest of the job.

Article 2--The ministries, the other central organs and the peoples councils are obliged to ensure that the units are properly equipped and put into operation immediately, for the stated purpose.

---

[1] The annexes are being communicated to the institutions concerned.

Also, they will ensure the proper use of all areas and equipment, under conditions of increased efficiency, for the continued improvement of the activities of production, of small industry, services and trade, for the purpose of increasing the volume of services and consumer goods requested by the people.

Article 3--The ministries, the other central organs and the peoples councils have the task of identifying, on a continuing basis, all the spaces which have become free or which are not being used to full capacity and of taking measures so that they will be used effectively for production, services, trade, for the development of small industry and of artisan and handicraft activities, for the purpose of satisfying the needs of the people at a superior qualitative level.

Article 4--The State Planning Committee, the Ministry of Finance, the Ministry of Technical-Material Supply and Control of the Management of Fixed Assets, together with the local and central organs concerned will submit, for approval, the modifications in the single national plan for economic and social development as well as in the volume and structure of the state budget for 1981 which result from the application of the present decree.

Article 5--Annexes 1-34 are an integral part of the present decree.

ROLE OF BUREAU OF BASIC PARTY ORGANIZATION REVIEWED

Bucharest MUNCA DE PARTID in Romanian Aug 81 pp 79-82

[Article by Ioachim Moga, first deputy chief of the Section for Party Organization of the Central Committee of the Romanian Communist Party: "The Bureau of the Base Organization - A Collective Organ"]

[Text] As the executive organ of the general assembly elected to lead all current activities of the base organization, the bureau has to carry out special tasks. It is called upon to organize and ensure the application of the decisions of the general assembly and the carrying out of the tasks stemming from party and state decisions, to judiciously distribute the resources of the base organization in order to cover all sectors, regions and problems, to constantly oversee adherence to internal party democracy and communist discipline, and to create all the conditions so that each party member will actively take part in all the activities of the organization. Similarly, it is also asked to organize all propaganda work and political-ideological training for the communists and to instruct and coordinate the collective's activities for agitators and editorial staffs of gazettes, satircal gazettes and radio stations. In addition, it prepares on-time general assemblies and exercises a systematic review in all fields of activity, promptly informing its superior organ about special problems.

This succinct presentation of the tasks clearly shows the complexity and importance of each bureau's activities. The fundamental condition for fulfilling them is the direct application of the principle of collective work, which, in addition to other principles and norms, ensures the full use of the experience, knowledge and initiative of the party organs and the communists.

Through the manner itself in which it is elected and formed and through the structure and functions that it carries out, the bureau of the base organization is ensured of having all the premises for working and leading in a collective manner.

How are these requirements stated in the affairs and activities of each bureau?

First of all, it is necessary for the bureau and each of its members to effectively contribute to the organization and review of the carrying out of decisions adopted by the general assembly. It is known that within its framework the members frequently

establish that which is to be done for the purpose of resolving those problems under discussion, as well as those for which they are responsible. At the same time, however, numerous proposals are issued and various observations are made in the assemblies. This is also the source of the necessity, after the assembly, for the bureau to carefully examine, whenever necessary along with the chiefs of the units, sections, workshops, working group, teams and so forth, the opinions that have been expressed and the suggestions advanced by the participants in the discussions, to establish measures for their implementation, to constantly pursue from day-to-day how the decisions are implemented, to give the necessary help to those who have to carry out diverse tasks and to promptly intervene to prevent any shortcomings.

Second, the bureau and each of its members must work to resolve the economic, social, organizational and educational problems that appear between meetings and to effectively organize the carrying out of the tasks stemming from the party and state documents, the directives given by the secretary general of the party and the decisions of the higher party organs. In such cases, without waiting for the next general assembly, it is necessary to establish precisely what is to be done by the base organization, the bureau and other social-civic organisms. But, this cannot be left solely to the secretary and the deputy secretaries, but it is necessary to have the thoughts and action of the entire bureau. Things proceed well in those places where, immediately after the appearance of a party document or certain directives or decisions of higher party organs, the members of the bureaus study them carefully, consult with other communists and then meet and decide how to take actions to implement the tasks.

Third, the participation of the entire bureau is absolutely necessary when future activities are planned. In many organizations, it has become the norm for members of the bureau, on the basis of their tasks, consultations with party members and the conclusions drawn from their day-to-day activities, to make specific proposals and to effectively participate in completing the annual list of themes. This list is to give priority attention to the quarterly work plan, being careful to ensure dealing with the most important and most pressing problems, to outline in the work plan precise, clearly expressed objectives with specific timeframes and responsibilities and to unite all forces to fulfill them.

Fourth, while permanently pursuing the flow of activities at each place of work, the bureau is called upon to take effective measures to generally spread all those things that appear that are new and valuable, as well as those methods and progressive initiatives that can be used to eliminate any shortfalls in achieving the plan tasks and to eliminate examples of a lack of discipline and deficiencies in bringing supplies to the worksites and in granting technical assistance. Similarly, the job of the bureau is to promptly intervene whenever it finds a waste of raw materials, materials, fuels or energy, the inappropriate operation of machinery and equipment, negligence in carrying out work tasks and so forth. The bureau is asked to effectively bring into discussion their valuable experiences and the means to spread these to others, and negative aspects and to call to task those work chiefs and any party members who do not conscientiously exercise their attributes and their tasks, to establish the necessary measures for the purpose of uniting all

forces to directly achieve the party's decisions and to permanently give the appropriate assistance and constantly exercise an exacting control.

Finally, beginning with the conclusion that the activities of the bureau of the base organization become more fruitful and more efficiency as a greater number of party members make their contributions, the bureau has the high responsibility of permanently attracting these people to the study, discussion and solution of the more important problems, the initiation and carrying out of certain actions and the preparation of the general assemblies. The practice of certain bureas has proven useful with regards to naming in the work plans those party members who are to contribute to attaining the outlined objectives, and to giving certain specific tasks to certain communists in order to fulfill the obligations stemming from party and state decisions, the directives of the secretary general of the party, the measures taken by the high party organs and the decisions of the general assembly or the bureau.

Some bureaus of base organizations still do not give full attention to the organization and implementation of their activities on a collective basis, with full responsibility for fulfilling tasks being left to the secretary. And, for one single person it is difficult, if not impossible, to resolve all the problems that spring up. Blank spots then appear in activities, which become sporadic and inefficient. The result? Such practices damage the work of the bureau, which then cannot succeed in expressing its active presence at the places of work under all circumstances and cannot promptly work to fulfill its tasks and eliminate shortcomings.

The principles of collective work and leadership must be understood not only in the sense of discussing problems and jointly elaborating a framework for carrying out actions, but especially in the sense of collectively participating in the management of all activities and the application of decisions. This is also the reasoning behind the assignment of specific tasks to each member of the bureau.

One of the first problems that arises deals with the need to encompass as best as possible the entire problem of party work, with each member of the bureau being responsible for a certain field of activity. The Statute of the Romanian Communist Party mentions that the bureau of the base organization elects the secretary and the deputy secretaries. According to the improvements made to the Instructions of the Central Committee of the Romanian Communist Party regarding the election of local party organs, after the application of the decisions of the July 1979 Plenary Session of the Central Committee, the number of communists elected to the bureau of a base organization is establishing depending upon the strength of this organization, generally electing one bureau member for every 10 communists.

For example, a base organization that has between 10 and 30 communists elects a bureau made up of 3 members. In those organizations that have a larger number of communists, according to the abovementioned norm, the number of people elected

to the bureau will, certainly, be greater, but not, however, exceeding 11 people. Base organizations that have less than 10 members elect a secretary and one deputy secretary. Depending upon the specific situation, smaller organizations elect one deputy secretary to the bureau, those with a larger number elect two deputy secretaries, while those that are even larger elect three deputy secretaries. In cases where there are three deputy secretaries, one will handle organizational affairs, one propaganda affairs and one economic affairs. Where there are two deputy secretaries, they will have responsibilities in organizational and propaganda affairs, with economic and professional affairs being handled, normally, by the secretary of the base organization.

With regards to the responsibilities of the other members of the bureau, experience shows that generally valid answers cannot be given since the specific conditions under which the bureaus carry out their activities differ and some have a large number of members and others a small number. What is important is for no area of party work to be left uncovered, which means in cases where there are only a few members some people will have to cover two or three problem areas.

Similarly, it is necessary for each member of the bureau to have precisely defined areas of responsibility. It should be remembered, however, that, in accordance with the principle adopted by the National Party Conference in 1967 which stated that overlapping and intermediary levels must be eliminated in the guidance of mass and public organizations, communists in the leadership of these bureaus are directly responsible for the manner in which the party line is introduced and applied. In cases where the president of the trade union organization committee, the organizer of the trade union group, the secretary of the Union of Communist Youth organization and the president of the women's commission belong to the bureau of the base organization, there is no need for other members in the bureau to be tasked with handling these organizations. The party directive must be kept in mind regarding the fact that the secretary of the base organization must be directly responsible for handling the activities of the youth organization.

Certainly, such a division of responsibilities in the guidance and control of mass and public organizations does not also relieve the bureau of the base organization from handling these areas. On the contrary, the entire bureau, bearing the responsibility for the proper operation of trade union, youth and other activities, is called upon to permanently supervise the manner in which these activities take place and to contribute to the uncovering and spread of positive experiences and the quick identification and solution of any type of shortcoming.

A second problem involves ensuring coverage of all places of activity by the members of the bureau and strengthening their responsibility for everything that happens in these places. This is also the reason for the care expressed by numerous bureaus to carry out such a distribution of their members so that they will be present at kep places of work, on shifts, in work groups, teams and so forth. Under such conditions, when each one is responsible for a certain place of work, it is not only natural, but also absolutely necessary to deal with all problems that arise at these places that are within the scope of party work so that nothing escapes from the view of the bureau and the entire organization.

The assignment of attributes and tasks must be done as rationally as possible, keeping in mind the experience, training and abilities of each person and, especially, the specific needs of party work. It should be remembered that, as outlined in the Statutes of the Romanian Communist Party, members of party organs, therefore also of the bureaus of base organizations, are responsible both for fulfilling the tasks in their assigned areas of work and for the activities of the entire organ to which they belong. The bureau cannot be indifferent with regards to how each of its members works. Along this line, in many organizations a strong atmosphere of mutual assistance has been created, with those members of the bureau with more experience helping those who are newly elected or those working for the first time in new fields to better understand and thoroughly organize their work in order to carry it out. Actually, the experience of many bureaus shows that activities become more fruitful as each bureau creates all the conditions necessary so that all the members can participate effectively and actively in all their work. These members, for their part, must work with the highest responsibility to carry out the mandate given to them.

Of first priority is the regular meeting of the members of the bureau in order to discuss and resolve certain problems. An especially important role is played by the bureau session. We should note the concern of an ever greater number of base organization bureaus for judiciously scheduling, within their work plan, those themes that will be discuss in the bureau, who is responsible for the proper preparation of the session and what will be done to this end. Experience shows that, depending on the problems that are to be discussed, it is good for some bureau sessions to be attended by invited persons and other communists and personnel from the leaderships at units, sections, workshops, work groups, schools and so forth, with many bureaus examining in these sessions how certain decisions and provisions in the work plan and party work in the economic-social, organizational and propaganda fields are carried out, listening to reports from the heads of work places, chiefs of mass and public organizations and so forth. No matter the problem is presented for discussion, each bureau session must be thoroughly prepared in order to be carried out in a strong work atmosphere and an atmosphere appropriate for the open expression of opinions, statements without reservations about criticism and self-criticism, and, especially, proposals and solutions for adopting certain more judicious measures.

It has proven effective for the secretary to consult with the other members of the bureau or a portion of them for the purpose of immediately resolving certain problems without postponing the application of the necessary measures and the reciprocal consultation between bureau members in workshops, sections, in the fields and so forth for the purpose of better carrying out certain tasks and eliminating shortcomings and difficulties. The secretary's regular briefing of the other members of the bureau regarding the demands that spring up, the tasks outlined by the higher organs concerning the manner in which it has worked to fulfill the established decisions and measures, the presentation of reports by members of the bureau regarding the concern for carrying out their tasks and

the systematic analysis of the flow of activities in diverse areas are other means which contribute to the strengthening of the nature of collective work and to the development of the responsibility of each member towards exercising their mandate.

Covering and fulfilling tasks under the best possible conditions and maintaining a dynamic, creative spirit full of initiative in all activities are supported by the collective participation of the members in all the bureau's work and the growth of responsibility of each member regarding his mandate, which make easier the achievement of all tasks with the best possible results by those who are in the staff of each base organization.

ENVOY TO ISRAEL ON BILATERAL RELATIONS, PLO

TA191923 Tel Aviv ITIM in Hebrew 1830 GMT 19 Aug 81

[Excerpts] Tel Aviv, 19 Aug--The relations between Romania and Israel are good and positive, the Romanian ambassador to Israel, Constantin Vasiliu, said in a news conference held today at the Romanian Embassy in Tel Aviv on the occasion of the 37th independence day of Romania.

The ambassador added that good relations also existed with the parties, economic organizations, artists, scientists and intellectuals. He noted that the Romanian president and foreign minister had sent their congratulations to the Israeli prime minister when the latter formed the new government. The ambassador emphasized Romania's desire to develop relations between the two countries and noted that all the conditions existed for cooperation in a friendly and constructive spirit.

Replying to a question regarding Romania's position concerning the PLO, the ambassador explained at length that Romania was taking into account the fact that the PLO was an existent organization representing almost all the standpoints of the Palestinian people--the PLO is an organization representing the Palestinians. However, nobody could guarantee that this organization would remain in its present form or whether it would remain the only organization in a Palestinian state to be. The ambassador added that the PLO held positions and goals which were not acceptable by Romania and many countries in the world. The PLO was also issuing extreme and nervous [as published] declarations. However, these were mainly for internal consumption. The ambassador noted that Romania advocates the establishment of peace among all the nations in the region and is opposed to military intervention in another country as well as to attacks on civilian population. Romania refrains from offering solutions to others but it supports the right of the Palestinians for self-determination.

At the beginning of the news conference the ambassador reviewed the economic situation in Romania which is affected by crises in the world. Romania tries not to expand development in order not to increase its foreign debts. It conducts a policy of thrift and looks for independent sources of energy.

Replying to a question, the ambassador noted that the relations between Romania and the United States were good. The relations with Poland were also good and Romania thinks that one should not interfere in the internal affairs of another country. Poland should be allowed to solve its problems on its own.

EFFORTS TO COMBAT RELIGION IN MEHEDINTI COUNTY

Bucharest MUNCA DE PARTID in Romanian Aug 81 pp 83-86

[Article by Maria Cozma: "The Continuing Flux of Materialist-Scientific Education"]

[Text] A discussion on the theme of materialist-scientific activities conducted with party cadre and other persons involved in the educational process at the different levels in Mehedinti County shows meritorious concern in this field.

Materialist-scientific educational activities occupy a separate, important place in the program of activities of the county council of political education and socialist culture. One of the directions of priority orientation in this work is, and rightly so, the dissemination of cultural-scientific knowledge, the explanation and mass popularization of certain physical, chemical, biologicalm geological, cosmic and historical-social phenomena and so forth.

To this end, a series of means of communicating with the workers is used, some being better known - speeches, discussions, reporting sessions, scientific encounters and experiences, question and answer sessions, book reviews, documentary films and so forth - and others ever more insistently taking their place among the efficient means in clarifying problems and convincing the masses, such as the lecture program with parents, the atheism and astronomy clubs created in schools like the "Stefan Plavat" High School in Orsova and the "Traian" High School in Drobeta-Turnu Severin, the dialogues on atheistic themes promoted by the Vinju Mare City Council of Political Education and Socialist Culture, a series of observations and meetings with astronomers and meterologists and so forth.

According to the directives of the secretary general of the party, comrade Nicolae Ceausescu, in recent times the education of the masses in the materialist spirit has experienced a clear intensification in the county. The Mehedinti County Party Committee is taking care to give this activity a quality adequate for the existing conditions and phenomena in each collective group. In this regard, at certain intervals we are undertaking studies, sociological research and tests to pursue the evolution of the mystic phenomenon and to understand its implications in social-economic affairs and the degree of political, scientific, cultural and professional training of the different categories of workers. One such study, conducted with the help of certain specialized personnel from the "Stefan Gheorghiu" Academy and the University of Craiova, institutes with which we systematically

cooperate in this regard, presented to the party organ, among other things, a series of data regarding the negative effects of the activities of religious sects in both urban and rural settings and of superstitions, which still persist, especially in the villages. A portion of village inhabitants, respecting religious holidays, also still believe in different superstitions - "it is not good to work grapes on Fridays," "three Thursdays and three Tuesdays after Easter the land must not be worked, otherwise hailstones will fall or a blight will come," "on the ninth Sunday after Easter, grain must not be disturbed or it will be blighted" and so forth. As a result, they do not work the fields, losing approximately 25 percent of the good working time each year. Some citizens still practice magic.

Knowing all this, therefore, the county committee is directing activities to disseminate cultural knowledge - by lecturers, scientific working groups, films, specialized books - depending upon the specific realities in each region, locality and place of work. Thus, the 42 scientific working groups, 8 mixed groups and 34 specialized ones, made over 200 trips since 1980 up to now in nearly all the county localities. The themes covered in speeches, answers to questions, experiences and practical demonstrations dealt with a broad area of ideas, from the explanation of certain phenomena in nature and society - lightening, thunder, hail, rain, earthquakes, dreams, hypnosis, diseases and their causes, the need for a good diet and the need to work the land under optimum conditions - to the open presentation of the party's position regarding religion, of the opposition between religion and science, of the key points of the materialist-dialectical concept regarding the world and life, and so forth. A number of documentary films were shown around - "From the Atom to the Crystal," "Us and the Sun," "The Genesis of Religion," "The Movement of the Earth's Crust," "The Origins and Evolution of Mammals," "Man on the Moon" and so forth. Also, 14 handouts were published: "Science, Research and Development," "Medicine Serving Life," "In the Spirit of the Law," "Population and Development" and so forth, which made a significant contribution to popularizing the advances of science and technology.

The county party committee is trying to place scientific activities for material education and combatting superstition and mysticism on methodological bases. To this end, periodical analyses are being conducted in bureau or plenary sessions regarding the carrying out of atheist education or other convergent facets, and exchanges of experiences and instruction sessions with responsible persons (deputy secretaries for propaganda, lecturers, propagandists and so forth) are being initiated. In this regard, one especially fruitful format is the information and reporting session organized by the county party organ each year, now in its ninth year. In these sessions, with the help of numerous leadership cadre from the county, city and town level, certain specialists and invited guests from other counties, a rich flow of information is achieved regarding the content, forms, methods and means of carrying out materialist-scientific education, bringing culture to the masses and rapidly transmitting certain good experiences in this field, with this constituting a thorough methodical instruction of all those who are called upon to carry out the educational process and increase political-social responsibility.

Promising Efforts Along the Lines of Secularizing Certain Customs and Traditions

Another direction in which the county party committee is concentrating efforts is that of promoting certain celebrations and customs of a secular nature and of secularizing the manner of marking important moments in the lives of the people. Measures were taken so, on the basis of certain scenarios and presentations of customs and traditions elaborated by the county center for guiding popular creative work, all educational factors at the county level can agree on the organization of certain traditional secular celebrations: the Celebration of the Lilac in the towns of Ponoarele and Nadanova, the Celebration of the Locust Tree in Hinova and Sisesti, the Celebration of the Linden Tree in Strehaia and Prunisor, the Popular Song and Dance Festival in Cosustei Valley, the Celebration of the Grain and Hard Work in Girla Mare and so forth. All these have become true moments for expressing the happiness and satisfaction for the fruits of the people's labors. Along the same line, efforts are being made to remove the so-called holy-days from under mystical influences, with the town and city party committees being helped in organizing broad cultural-artistic events, amusements and dances during these days.

In many places, it is starting to become a practice to celebrate birthdays, the age of majority, wedding days, seniority at work, retirements and so forth. Thus, conditions are being created to achieve an affective climate of friendship, comradeship, respect and esteem towards each person.

Communists - Active Workers for Imprinting Atheist Beliefs in the People's Conscience

In order for all scientific educational work and work for the formation of certain materialist beliefs and the liberation of all those still under the influence of mysticism to give the desired results, it is absolutely necessary for the activities coordinated and carried out by the county party committee to be actively sustained by each party organ and organization in the county. What can be said from this point of view?

Without a doubt, the municipal, city, town, enterprise and institute committees and the cultural centers are also organizing their own actions of the type mentioned above. Experience attests, however, that the efficiency of the educational process in general, and especially of those complex facets of rooting out retrograde ideas, mentalities and practices from the conscience and behaviors of certain people, and of forming materialist beliefs depend directly upon the means of dealing with the problems, in close relation to the situation encountered, from one case to another, with the necessary tact and firmness. We have encountered in some party organs such attempts to specialize as much as possible the educational process. For example, it is worth noting the measure initiated by the Orsova City Party Committee, together with the base organizations in the schools, to place children whose behavior and conscience are under the influence of mysticism into the direct care of each teacher. The Vinju Mare City Party Committee has,

in recent times, promoted popular meetings, from fall through spring, in which it develops an active dialogue with different categories of citizens of the city and more restricted groups - homemakers, cooperatists and so forth, regarding themes on the formation of scientific views about the world, the explanation of certain phenomena, and the unscientific nature of the superstitions that still exist in the region.

In this context, the party organizations, which represent the optimum framework for understanding and dealing with these aspects from one individual to another, certainly play a decisive role.

The majority of educational-formative activities carried out by the party organization at the Drobeta-Turnu Severin Clothing Enterprise are naturally directed at young people averaging 22 years of age who are faced with big decisions: starting a family and ensuring a certain, free and honest future. Not by chance, the most frequently dealt with themes have to do with happiness and love, with the manner in which these philosophical categories are viewed by science, religion and our party, and with the differences between socialists morals and religious ones. Great attention is given to strengthening work collectives, friendship and affection between people, with celebrations regularly being organized in work collectives for birthdays, weddings and retirements. In this manner, the collective in which organizations No 5 operates succeeded in removing the young girl A. M., who otherwise was a hard-working and conscientious person, from the influence of a religious sect to which her parents belonged, who would not permit her to marry anyone who was not of the same beliefs. Surrounded by the attention of her colleagues and parentally guided by her older comrades and by the secretary of the party organization, who pledged to help her start off on a good and sure path, the young girl soon married to her heart's content, completely breaking with religious precepts.

A series of situations demonstrates, however, that some party organs have not fully mastered all aspects of the mystic phenomenon and are not in all cases working systematically with the power of conviction and necessary effectiveness to block the path of mysticism and superstition and to arm party members and other workers with a thorough materialist-scientific knowledge.

As has been seen, certain citizens do not work a significant number of days each year, besides Sundays and in some towns there are signs of the existence of certain superstitions and unhealthy practices which, if they would be systematically combatted in a constant and convincing manner by party organs, communists and other educational authorities using the political means available, would have their sphere of expression restricted without a doubt. One step of great use in combatting these retrograde states of affairs would be the popular calendar of superstitions, which the county commission on the spread of scientific knowledge is putting together and which, when made available to the town organs, will provide specific data and calculations regarding the economic consequences suffered as a result of the people not working on certain days and will increase the efficiency of organized actions.

Generally, it is easy to pass over some facts and their frequently sufficiently serious results. In the town of Timna, the young girl of 22 years, L. G., having been subjected by her own parents to the exacerbated cannons of the "adventist-reformist" sect - operating outside of the law, was led to fast to a state of grave undernourishment, to a weight of 26 kg - just one step from death, a moment held by the precepts of the sect and considered as supreme happiness. Certainly, if the town party committee, communists and other educational authorities within the community had known and had been closely interested in each situation and each citizen, and if a sustained and rich preventative activity had been carried out to reveal certain mystical and inhumane concepts and practices, then such especially dangerous events would not have happened.

Such happenings must be completely excluded from our social life and in order to achieve this the party organs are called upon to express greater intransigence in the educational-formative activities they carry out and a better receptiveness to the situations that appear and the problems and needs of the people. We believe that this case, completely out of the ordinary and brought to the public opinion in the county by the local newspaper VIITORUL, and these degrading practices and rituals, which flagrantly infringe upon the idea itself of man, should constitute for both the Timna Town Party Committee and for all the other party organs and organizations in the county solid reasons for intensifying all activities dedicated to removing certain citizens from the evil influence of mystical and obscurantist prejudices. Unfortunately, too few of them have thought to discuss this event with the people.

Certainly, the majority of the educational activities that are organized include party members in their sphere of activity. But, this is not sufficient. In the base organizations and in the ranks of the party members, there is need for a much more insistent and more organized educational work. They must be clearly shown that our party's ideology and its revolutionary concept about life are in total contradiction with the appearance of one religious cult or another.

Comrade Nicolae Ceausescu maintained in the Report given to the 12th Party Congress: "It is an anachronism in the era of the great advances of the technical-scientific revolutionary and knowledge when the people are being affirmed as the conscious creator of all material and spiritual values, that there still are people, even party members, who believe in supernatural forces."

Discussion conducted with some cadre, like Elena Patrascu, the secretary of the party committee at the Orsova "Cazane" Enterprise, Sarlota Balaci, the deputy secretary of the party committee at the Drobeta-Turnu Severin Clothing Enterprise, Constantin Paris, the deputy secretary of the Sisesti Town Party Committee and so forth, show that party organizations are only very sporadically carrying out, and then only when certain more unusual situations appear, actions involving materialist education, stating the communist position regarding mystical concepts and forming atheist convictions. For that reason, it is no wonder that at any given moment one can find that some party members are also participating in the

rituals of certain religious cults. Such is the state of affairs with two party members in Sisesti who have selected the path of ignorance and mysticism. Certainly, if the party organizations would systematically carry out the activities designed to explain these problems and to help in mastering materialist-scientific concepts about the world and society and the concept of being a communist, such phenomena would no longer occur.

These facts raise problems of major significance for the county party committee with regards to taking further and spreading the positive experiences acquired in disseminating scientific knowledge and forming a materialist belief in the people and to bringing to all party organs and organizations a more permanent and systematic concern in this field and firmer attitudes against the damaging and retrograde manifestations that are contrary to the ethical profile of the builders of the new, socialist society.

THEORIES ON ORIGIN OF MOLDAVIAN HUNGARIANS

Bucharest FLACARA in Romanian 2 Jul 81 p 24

/Article by Constantin Beloiu: "Prof Dumitru Martinas and the Problem of the Ethnic-Historical Origin of the Moldavian Hungarians," introduced by an editorial note by Victor Nita/

/Text/ Some time ago we were visitied at our office by a man who brought us two typewritten volumes, each about 250 pages long. His name was Dumitru Martinas and he was a retired professor, and the two volumes consisted of a linguistic work written over an entire lifetime. In this work the professor wished to express his view of the origin of the Hungarians of Central Moldavia. What motivated him to scrutinize, in time and space, this lacuna in liguistics? Nothing but his desire to find the parents of a people about whom nothing could be previously determined with any certainty, although a good many efforts were made throughout history. And at the heart of this keen desire lay the impelling fact that he, Prof Martinas himself, was the son and descendant of an old Moldavian Hungarian family.

But Prof Martinas died before we began to read the two volumes and before we found the time to interview him fully. We had to learn from our contributor Ion Coja, university lecturer in the Faculty of Romanian Language and Literature, to whom we lent the work for study and analysis, that in all likelihood the late Prof Martinas' linguistic research and procedure would ultimately throw some clearer light upon the origin of the Moldavian Hungarians.

It was also Lecturer Ion Coja who suggested that we publish an article by Constantin Beloiu, a dear friend and close collaborator of Prof Martinas, before we present a summary of the two volumes. We accepted this suggestion as a starting point in our effort to show the courage of a man who set out to fill in this blank in our linguistics, namely the language of the Moldavian Hungarians.

A quite outstanding scholar, keen researcher, wholehearted patriot and accomplished teacher, Prof Dumitru Martinas dedicated his whole life to a point of self-sacrifice to a problem long considered an enigma of science, namely the ethic-historical origin of the Moldavian Hungarians, and thus filled in a blank page in the troubled history of the Romanian people. In nearly 50 years of field studies and analyses in more than 70 Hungarian villages and upon consulting over 170 papers, books, journals, studies and documents, Prof Dumitru Martinas succeeded in demonstrating that the

Moldavian Hungarians properly speaking, that is those who inhabit the Middle Siret basin, are an old Transylvanian Romanian population in origin who were once Szeklerized, became bilingual, and later emigrated to Moldavia in the course of the huge social-political phenomenon known in Transylvania as the profugium valachorum, the flight of the Romanians, in the 18th century.

And so Prof Dumitru Martinas with his profound knowledge of the problem of the Moldavian Hungarians, in addition to his birth (11 May 1897 in Miclauseni-Butea Commune in Neamt County) of peasant parents with ancient ancestors who were all Moldavian Hungarians, prepared a documented study of more than 350 typed pages on the origin of the Moldavian Hungarians.

Displaying a thirst for knowledge and a keen aptitude for learning from his very young boyhood, working hard and living in his lessons and preparations, he passed his higher school courses and then graduated from Iasi University, studying the Romanian language and literature, the Latin language, and philosophy. He lived through the horrors of World War I with all its disasters, fighting on the front. In the first years after completing his university studies he taught in various Romanian cities and then settled in Tirgu-Mures, where he founded his home and family and taught Romanian, Latin and philosophy in several high schools. His longest and most fruitful years (38) were spent at the Papiu Ilarian High School, where he functioned as a professor and for a time as director, being an accomplished teacher. During his teaching career he knew how to approach the pupils' minds and hearts and how to win their sympathy, affection and respect to such an extent that after 1962, when he retired on a pension, there was no 10th, 20th, 25th or 30th high-school class anniversary that he was not invited to attend, because the presence of this scholar was considered an honor and the figure of this distinguished teacher was indelible in the pupils' memories after decades of separation.

Prof Dumitru Martinas' curiosity was already aroused during his university studies by the problem of the Csangos (Hungarian Moldavians), whom he investigated and studied enthusiastically throughout his entire lifetime, devoting part of his intellectual life to that problem, collecting material, roaming through villages, listening to the dialect, talking with the oldest Csangos and correlating the material, although many of his colleagues considered this a "dead" problem. This scholar and researcher of rare modesty, less interested in material problems than intellectual ones, devoted all his moments of leisure to study, reading and meditation until the end of his life on 3 February 1979.

As a posthumous tribute of admiration, profound respect and high esteem for Prof Dumitru Martinas, I feel it a duty of honor to present some original aspects of the Csango phenomenon culled from the work of this scholar and learned researcher.

The question arises at the start, who are these Csangos? The author says that in the opinion of the Hungarian teachers Bernath Munkacsi in 1880 and Aladar Ballagi in 1888, the origin of the name "Csangos" is as follows:

a. Csangai: to interbreed, in the biological sense;

b. Csango beszed: speech that is interbred in the liguistic sense;

c. Csangomaghiar: an interbred Hungarian who speaks an interbred language.

Prof Dumitru Martinas found that the old Hungarian settlements in Moldavia between the 13th and 16th centuries were not colonies of Csangos but colonies of Magyar-Szeklers. The number of these Hungarian Catholics in Moldavia had declined almost to the point of their disappearance, either because of mixture with the Moldavians ("Ad valahos defecere," Bandinus wrote in 1646) or rather because of the terrible ravages of war (deportations, famines, epidemics) the country had suffered during the prolonged Turco-Polish wars for the city of Camenita and their consequences, which reduced the whole country's population by half. As for the fate of those Hungarian Catholics, the Italian missionaries' correspondence repeated notes "Tutti fuggiti," all fled to Transylvania.

The author goes on to say that none of the many documents of the period (13th-16th centuries) mentions the name Csangos because the Csangos had not yet appeared by that time in Moldavia with their broken Hungarian dialect. The Csangos properly speaking were a later product of the process of Szelerization of the Romanian villages in Transylvania, a process that was made official by the Szeklerization of the Romanian principalities of Bretcu and Vlahita as of 1495. Originally those Csangos were a Romanian population made bilingual by Szeklerization who spoke broken Szekler in a ridiculous fashion ("Ridicole et insulse," Samuel Timon wrote in 1733), but they also spoke Romanian and dressed only as Romanians, as the Hungarian missionary Zold said in 1766 (The missionary Zold was a native of Madefalau community, today Siculeni in Harghita County, which was then inhabited by Szeklers and Szeklerized Romanians or Csangos).

In the 18th century many Csango serfs of the Szekler country, overcome by poverty and the harsh oppression of the feudal lords, fled from the Hungarian counts' estates and settled in Moldavia. Because of this fact alone the Csangos escaped total Szeklerization and succeeded in preserving their old sibilant Romanian dialect and their Romanian dress and customs, in other words their national existence.

To illustrate this phenomenon more graphically, the author sums up the following conclusions:

"The present Csango population is a new stratification of a Catholic population from Transylvania ("E Transylvania egredientes") that colonized Moldavia, largely in the 18th century."

"This new population of Transylvanian immigrants included two religious categories: (a) Catholic Csangos from the Szekler country, largely Szeklerized Romanian bilinguals speaking both Romanian and Hungarian as the missionary Zold said, and (b) many Romanian Greek-Catholic Uniates belonging to the Bishopric of Blaj, as the Italian missionaries attested." "This new population of Catholic inhabitants, commonly called Hungarian Catholics, was not a Magyar population because the usual, familiar mother dialect of the great majority of them was the Transylvanian Romanian dialect (The Italian missionary De Giovanni wrote, 'Tutti parlano in lingua moldava') and they all wore Romanian dress ('Ihre Kleidung ist Walachisch,' Zold wrote). It is well known that the Greek-Catholic Uniates were all Romanians. This Catholic population's settlement in Moldavia is attested by many historical witnesses, such as Iezerski, bishop of Bacau, the missionaries Cambioli, Mauro and De Giovanni et al. Although the Moldavians called them Hungarians because of their religion, they understood each other's Romanian dialects. After these Catholics settled in Moldavia, they all abandoned the Hungarian dialect and continued to speak Romanian, not in the

Moldavian dialect because they had not yet acquired it, but in their dialect, which they still speak today. They abandoned their old servitude and lived by their traditional Romanian standards of language, dress and customs.

"Conclusion: The present Csangos in Moldavia were originally a Transylvanian Romanian population that emigrated to Moldavia in the 18th century, distinct from the old Magyar-Szekler colonies of the 13th-16th centuries ethnically and linguistically."

In support of this statement the author demonstrates the Transylvanian basis of the Csango dialect of Romanian as follows:

The following three phonetic traits characteristic of the Csango dialect distinguish it from other regional dialects:

1. The sibilant pronunciation of ş as s is an old trait, a remnant of the late pronunciation in primitive Romanian, when our language was merely a stage of the eastern Romanic idiom. In other words the trait is inherited from popular Latin, and it also occurs in the western Romanic dialects.

2. Palatization of the dentals t and d (+ e and i), which became ci and gi, is a characteristic Transylvanian Banat pronunciation of Western Slavic origin that entered our language in the period of Romanian-Slavic symbiosis (8th-10th centuries).

3. Preservation of the old palatalized l', which did not change to i. This palatalized l' appeared in primitive Romanian and disappeared about in the 16th century, when it changed to i. It has been noted that this trait persists sporadically even today in the dialect of some Csango villages, four centuries after it disappeared in Daco-Romanian.

I quote the author's conclusion about these phonetic traits of the Csango dialect:

"The Csango dialect, which preserves phonetic traits from primitive Romanian and the period of Romanian-Slavic symbiosis, proves that the Transylvanian ancestors of the Csangos spoke Romanian in a period long before the 8th century. The presence of the Csangos' Transylvanian ancestors in Transylvania back in the period of Romanian-Slavic symbiosis and in the period of primitive Romanian demonstrates the presence and historical continuity of the Romanians in the Carpathian area back in the period of the origin of the Romanian language."

The author also analyzes the vocabulary of the Csango dialect and reaches the following conclusions:

1. All the religious terminology of a popular, folk nature in the Csango dialect is identical with that of the Transylvanian popular dialects.

2. The linguistic isolation of some Transylvanian Csango villages in the valleys of the eastern Carpathians for centuries on end made it possible to preserve some archaisms of Latin origin in their dialect that are unknown in common Romanian or have disappeared from it. For example: (a) The common noun ler, lerul, lerule meaning "brother-in-law" is unknown today in common Romanian but used in the Csango dialect. (b) The common noun vintricel meaning "belly", used more in children's speech, is a diminutive of the Transylvanian term vintre, from Latin venter, ventris, "belly." (c) Or the terms pacurar from Latin pecorarius and corinda or a corinda (with r). The latter is inherited directly from Latin kalenda and is identical in meaning with the term colinda (with l) in common Romanian.

By scientific, complete and in-depth analysis of all the problems under discussion, the author finally demonstrates that "The Csangos are a Transylvanian Romanian population that once underwent a process of Szelerization in the Szekler country that was sometimes more profound and sometimes more superficial. Their Romanian ethnic characteristics (language, dress, customs etc.) are not due to any presupposed denationalization or recent Romanianization. They are the reflection of their ethnic and historical Transylvanian Romanian affiliation. Settled in Moldavia in a not very remote period, most of them have fogotten the Hungarian language, but they could not forget their old, regional, sibilant Romanian dialect brought from Transylvania, nor have they forgotten their old Transylvanian dress and customs." Quite rightly Dumitru Martinas concludes his valuable study by quoting Cantemir: "The language is an incontrovertible witness of this."

WESTERN COMMENT ON YUGOSLAVS, ALBANIANS IN BRUSSELS

Brussels LE SOIR in French 19 Aug 81 p 4

[Article by Jean-Paul Collette: "In Belgium, Yugoslavs and Albanians Are Living in Distrust, With Nostalgia"]

> [Text] A bomb at the office of the JAT [Yugoslav Air Transport] airline company, two cases of arson, in May and in August, at the Tourism Office, gunfire at the embassy on 14 July, the murder of the Serbian hotel keeper Boskovic, shots fired by Musa Hoti at two members of the embassy; in Belgium, violent news is primarily Yugoslav.
>
> These attacks, for which responsibility is sometimes claimed and which often go unpunished, are expressions of the stealthy war waged by the thousand and one factions on the Yugoslav chessboard both among themselves and against the current regime. Brussels seems like a maquis, where people go underground, where they infiltrate, where they liquidate.

A picture of the Yugoslav community in Brussels in this context? In theory, the idea is promising. In the field, it turns out to be a formidable challenge, a virtually impossible quest.

Because a Yugoslav community as such, in the image of the Turkish or Spanish communities, does not exist. Because nearly half of these Yugoslavs do not recognize themselves under that label. They are Serbs, Croatians, Albanians from Kosovo. Nationalists, royalists, irredentists or cominformists. The others, those who do not reject the Yugoslav nationality, make themselves inconspicuous.

Fear of the other clans, infiltrations, provocations: in Brussels, the Slavs and the Illyrians from the Balkans (let us be cautious) are not very active. On the surface...

Depending on the sources and the years, the number of individuals of Yugoslav nationality in Belgium is estimated at 10,000 to 12,000 (5,235 in 1970). The Albanian exiles themselves estimate their number at about 10,000, of which approximately 4,000 are natives of the autonomous province of Kosovo. But whether they are from Kosovo or not, they are registered as Yugoslavs: first headache! A balanced addition would lead one to conclude the presence of approximately 20,000 Southern Slavs and Albanians, who should obviously not be mistaken for one another.

For any other community -- the Italians, for example -- the directories and official indexes are teeming with cultural, sports and social associations.

One would expect to find within the Brussels urban area (headed by the municipality of Schaerbeek), where the majority of the Yugoslavs and Albanians are living, several dozen basketball or soccer clubs with suggestive names: Red Star, Beograd, Hadjuk, Zagreb ... Not at all: you can hardly find a single Partizan or a Dinamo within the 19 municipalities!

In Exile

However, there is a field in which Yugoslavs of all kinds run a prosperous business and even advertise their differences: the restaurant business. The Brussels agglomeration is rich in establishments where the excellent Balkan cuisine triumphs. Their names express well the complexity of that milieu: next to grographic references (Split, Beograd, Dubrovnik, Neretva, Plitvice, Skopje ...) and picturesque ones (Bosnia Mill), the signs reveal surprising nuances: At the King of Serbia, Serbia, and Old Serbia! References to the nation of today, such as the Yugo-Grill, are extremely rare.

A good number of these restaurant owners consider themselves to be or are representative. Once the ovens have been turned off, and with the help of the burning slivovitz, the dining rooms and kitchens become discussion centers for touching nostalgia and burning and exacerbated political passions. But very different ones, depending on the tendency! The sole common denominators in these small Balkan islands are called "cevapcici, djuvec, musaka, zilavka," for our greater pleasure ...

Alexander's Scepter

Before attempting to define the movements represented in Belgium, it is important to recall the major elements of the Yugoslav political puzzle. It is not enough to list the six republics (Slovenia, Croatia, Serbia, Bosnia-Herzegovina, Macedonia and Montenegro) and the two autonomous provinces (Kosovo-Metohija and Vojvodina), which form the current state of Yugoslavia, moulded in Titoism. The aspirations and resentments go back much further, for the most part to the Austrian and Ottoman rule.

First of all, nationalist resentments and aspirations, primarily among the Serbs, the Croatians, the Montenegrins and the Albanians.

The Serbs are nostalgic about regimes in which they played the primary role: supporters of the kingdom of Serbia, which in 1918 became the kingdom of the Serbo-Croatians and the Slovenes, are still numerous. Alexander, prince of Yugoslavia, born in 1945, son of King Peter II and grandson of Alexander I, who was assassinated in Marseilles in 1934, has tens of thousands of faithful subjects.

Most of the Serbian royalists also venerate the memory of General Draza Mihajlovic, the chief of the renowned chetniks, who was executed in 1946 by the Tito government. The chetniks had organized a resistance to the Germans in the hope of restoring the monarchy. The struggle between the two resistance networks was merciless.

It would be hard to be more fiercely nationalist than the Croatians. Whether they are orthodox communists (cominformists, favorable to Moscow), Tito communists, social democrats or fascists (the sadly well known Ustachi), all of them want an independent government in Zagreb, "free" of the tutelage of that detested Belgrade! During the years 1971-1972, the leaders of the Croatian Communist League, who had indicated their opposition to centralism, experienced serious difficulties: there were trials and firings.

Abroad, we sometimes have a tendency to mix up the Croatian exiles with the Ustachi. This is a dangerous mistake! All Croatians are not nostalgic for the free Croatian state, established in 1941 with Hitler's blessing, and led by the cruel Ante Pavelic. The terrorist acts committed in Europe by the Ustachi only succeeded in tarnishing the Croatian cause, much to the detriment of the democrats!

Let us also note that a few thousand Montenegrins in exile are hoping for the return to Cetinje (not to Titograd) of the monarchy represented today by Prince Michael Petrovitch Niegosh, grandson of the legendary Nicholas I.

Illyrian Imbroglio

The Albanian problem is altogether different still. The large majority of the Albanians from Yugoslav Kosovo, like those who are natives of the current Albanian territory, hope for the resurrection of "ethnic" Albania, which would bring together the Illyrians from Albania, from Kosovo and from Macedonia. Aside from this option, they tear each other apart over what regime would be installed in this new state.

The supporters of the monarchy want the descendant of King Zog or Zogu, who reigned from 1928 to 1939, to settle in Tirana. Aside from these, the whole political range is represented: socialist republicans, orthodox communists, social democrats, "irredentists" ... Depending on the groups, some exiled Albanians from Kosovo also desire autonomy for their region or the establishment of a seventh Yugoslav republic!

Some Serbs, Few Croatians

Phew... This quick overview -- which will certainly be contested and labeled simplistic -- allows us to place (more or less) the main movements represented in Brussels. The most numerous and the most active seem to be the royalist Serbs, such as, for example, Pierre Valic, one of their leaders who was killed in 1975, and the Boskovic brothers, both of whom were assassinated in Brussels at 5 year intervals. Miodrag, the antique dealer, was secretary of the Association of Serbian Workers in the Free World. He was also a member of "The Revived Serbia."

The Belgian capital could be considered one of the most important strongholds of the Serbian diaspora. There are also a few dozen communists favorable to the USSR, cominformists (they reject the 1948 break between Belgrade and Moscow), and often Stalinists.

On the other hand -- and the strong Serbian presence may well explain this -- the Croatians are much less numerous and more discreet. There are very few Ustachi in our country, unlike the FRG, Great Britain, the United States and Australia, where the fascists have deeply penetrated the Croatian communities. The main openly

represented movement in Belgium is the HDP, the Movement for Croatian Liberation, which is anticommunist and claims to be legalistic.

There is a small number of Montenegrins, who stay well away from the news spotlight.

The 10,000 Albanians in Belgium, on the contrary, have established with publicity a surprising range of political, cultural and "combatant" associations, which issue many communiques and position statements. Anti-Serbian, anti-Tirana, in favor of Kosovo, anti-Tito, royalist, republican ... Certain groups do not hesitate to take violent action, and several of the attacks committed against Yugoslav interests have been claimed by them (the arson at the Tourism Office).

Secret Struggles?

All of them agree on one point: for the most excited of these Balkan exiles and for mysterious secret agents, Belgium has become the field of a stealthy, often armed, battle ... In 1975, a "secret Serbian national organization" assassinated the leader of a chetnik group in Ixelles, Mr Blagojevic, a former companion of Mihajlovic.

Opponents of the Belgrade regime would add: a field of action for the Yugoslav state also. In those circles, the Tito regime is often accused of regularly sending agents (of the SDB, the criminal bureau, the KOS, the counter-espionage service, and the SIDI, the information service), whose task it is to infiltrate and to eliminate opponents. They also accuse the embassy of using the official cultural clubs, located in Brussels and in Antwerp, to the same end (the club in Namur and a second Brussels club had to close their doors).

As far as the official representatives of Belgrade are concerned, the sole aim of these clubs is to inform Yugoslavs about what is going on in their country, an effort at continuous education, activation through folklore ... And the Yugoslav state denies using illegal means to eliminate its opponents abroad as well as within its own borders. On the contrary, it would like Belgium to take measures against those exiles too eager to play with Molotov cocktails or guns.

The communities of expatriates and exiles produce a great deal of worry in Belgrade. Those in Belgium cause it to loose patience ...

Distrust and Hate

"In any case," commented a Serbian refugee, "as soon as an agent from the secret services or from the political police lands in Belgium and tries to penetrate a circle of opponents, we spot him and, sometimes, we eliminate him. We are organized and armed. And we distrust everybody."

This is probably the key word to apply to those Yugoslav communities in Belgium: distrust. The most politicized among these Serbs, these Albanians, and these Croatians live in the fear of being provoked, infiltrated, put out of commission to fight for their cause. Secular differences, if not hatreds, ideological conflicts, exacerbated passions -- as they can be in the Balkans -- set them against each other. "True," an Albanian from Kosovo told us, "we are fighting the Titoists. But first of all, we hate the Serbs."

Those who are not politicized try to be as inconspicuous as possible. And yet they are the most numerous. They came here to work; they are courageous and sound. Most of them regularly return to Yugoslavia. They are not opponents, and that alone, in the eyes of the exiles, makes them suspect ...

Afraid of association, of making a mistake: it is neither easy not reassuring to declare oneself a Yugoslav in Brussels.

WORK DISRUPTION AT TREPCA MINE DESCRIBED

Belgrade ILUSTROVANA POLITIKA in Serbo-Croatian No 1186, 28 Jul 81 pp 20-21

[Article written by Radivoj Kovacevic; photographs by Rade Negojevic]

[Text] Since they were not informed as to why their wages had been reduced, the miners refused to enter the mine shafts. This could easily have been avoided....

In the cool night below Kopaonik mountain, like some huge fireflies gleamed miners' lamps. By the movements you could tell that the lamps were being held by nervous hands. It was at the time when the third shift of miners at Stari Trg should already have been deep in the pit. That evening, the diggers had refused to enter the shafts. The scene was repeated the following day, on Saturday, July 11, and there was no change in the situation on Sunday morning.

"The Trepca miners are on strike!" "The nationalists cooked up the whole thing at Stari Trg." "There are many injured among the miners." The grapevine, like an avalanche, carried "the truth" about which the entire Yugoslav press kept silence. That is what the comrades in the LCY opstina committee at Kosovska Mitrovica decided. They did not order, but suggested that the refusal of the Stari Trg miners to enter the shafts on 10, 11 and 12 July was nothing serious, but was a purely "local matter" of this collective with 3,200 employees, among which 800 are LCY members.

Djina Sokolj, the deputy director for economic and general operations, tried to persuade us: "Comrade reporters, that is nothing. True, this is the first time anything like this has happened here, but remember, these are our internal matters. It is true that the miners refused to enter the pit because their pay envelopes for last month were thinner than previously, but after an explanation of why that was so, they went to work. What sort of strike! That was simple a little unpleasant episode. I would call it a misunderstanding."

As soon as it was learned that the miners of the third shift did not want to enter the mine with envelopes lacking the so-called incentive portion, for many amounting to half a million old dinars of child supplement plus yet another 16 percent, the very next day there were representatives of the sociopolitical organizations of Kosovoska Mitrovica and of the province at the entrance to the mine. After discussion with the miners, it emerged that the misunderstanding occurred because of lack of communication.

In recent months it has been very difficult for reporters in Kosovo province to obtain complete information. We found this to be true again at Stari Trg. Although we had arranged to talk with the mine director at this Trepca operation the previous day, it took several hours before we could speak with Sucrija Kelemendi for some ten minutes.

Vera, the secretary, explained that "in recent days the director is frequently in the mine, among the miners," thus giving the reason for his absence.

Sometime toward the end of the workday, Kelmendi appeared, and immediately let us know that it would be better to talk about the entire matter with "the comrades at the Kosovoska Mitrovica opstina committee." Nevertheless, he agreed to give us a 5-minute "interview, but with the condition that we also talk it all over with the miners as well.

Kelmendi told us: "None of this would have happened if the miners had been informed in time that they had worked poorly in June and that that would be reflected in their wages. The mine production plan was only met by 86 percent, for straight ore, and for so-called concentrate only 70 percent of the quota was produced. We worked poorly, and we distributed just what we earned. Therefore, wages were reduced by 16 percent. The shortage of funds in the federal child protection institute was also felt by our miners, for 300 of them did not receive the child support supplement."

They do not hide the fact that at Stari Trg June, July and August are poor production months. Most of the miners have one foot in the mine and the other in their fields. For years, absenteeism in June has increased sharply, because that is mowing time.

Many of the miners plainly told us: "How can we help but sacrifice 2 or 3 days of work in the mines so that we can cut the hay in the village. A day of mowing earns one 2,000 dinars, while a day's earnings in the mine is significantly less."

It is a striking fact that while in June, 46 percent of the miners were absent, even the half of the labor force that was on the job could not have worked better.

Aslan Foci, who has already worked for more than 2 decades at Stari Trg, told us: "We old miners did not work poorly. We old, dependable workers suffer because of these newcomers and loafers. They don't know how to do the job, and they don't work very hard either."

Later, in a conversation with the miners, we found out that through an error by an accountant, some 200 of them had lost a thousand dinars of incentive pay, which is paid to them for regular job attendance, to those who do not take sick leave on the fields, or come late to work. That hurt many of them. Despite the fact that the income of the Stari Trg miners is the highest in the Trepca complex, averaging more than 10,000 dinars, nonetheless the loss of even a single dinar hurt these people severely.

We were assured by Predrag Milosavljevic, secretary of the Stari Trg LCY action conference, that "none of this would have happened if the miners had been informed of the real reasons for their thinner pay envelopes. The bitter cup overflowed with the news that the province and opstina had recommended that directors use only 15-20 days of their annual vacation, while workers at the more difficult jobs should use their annual vacation. The supervisors and shift foremen did a poor job of transmitting this decision to the miners: they said that the miners as well should use only 15-20 days of vacation time. The miners took this to mean that their annual vacation time was being reduced. Somehow, all of these things accumulated just at the time when the reduced wages were being paid.

From conversations with miners whom no one from the mine administration selected for us, and with representatives of the workers' council and the LCY organization, we became convinced that the July protest of the Trepca miners could not in any way be regarded as a strike or a work stoppage. It is true that on Friday the third shift workers, on Saturday the first and second shift, and on Sunday the first shift miners refused to go to work until it was explained to them why there was less money in their pay envelopes. Then the majority went to the mine shafts.

Mine technician Danilo Jaksic, who has been working at Stari Trg for 13 years, told us that only the non-workers refused to go to work. He continued; "Despite the fact that they were told that the accounting error and the shortage in incentive pay and child supplement would be corrected and paid with their July wages, a group of workers did not want to go down into the mine. Nevertheless, most of us went to work after an hour or two of waiting in front of the mine entrance."

Many miners whose child supplement had been deleted (and many receive as much as 5,000 dinars and more) have had to live on excuses and promises this month, in the hopes of receiving that money at the beginning of August. Could that error have been corrected so that they could have been paid that money from current funds these days? We could not get an answer to that question at Stari Trg.

Aslan Foci told us: "Well, when I came to work that Friday, I received an envelope and I saw that I was short fully half a million (old) dinars. I saw that people were not going into the mine, and so I didn't want to go either. My comrades told me that they did not want to work until they got an explanation as to why they had received so little pay. Afterwards, when they had explained it to us, we got together and went into the shaft."

We heard the same story from 30-year old Rahim Smolja, who has been working in the mine for 7 years. Smolja said, "when they explained why we had earned less, no one protested any more."

Nevertheless, it is interesting that the mine directors regard 38 of the miners, including 5 communists, to be alarmists and troublemakers. The disciplinary commission will determine the magnitude of their contribution in persuading the miners not to go to work, because the misunderstandings that arose could have been resolved in a peaceful manner, by honest, open discussion.

The attempt to connect the three-day events at the Stari Trg mines to actions by nationalists obviously is fruitless, for everyone says that the only fault was the lack of communication with the workers.

As Predrag Milisavljevic stressed: "We must keep in mind that, from our mine, only 3 workers participated in the demonstrations, and that every fourth employee is a member of the League of Communists, so that therefore, we are such a mighty fortress of unity that nationalism would have a hard time entering. In general, the miners here are not only Albanians. Every labor brigade has a number of Serbs, Turks, and Romanians, and there are also Croats and Slovenes, as well as workers from Bosnia. All of this points up the fact that nationalists would not be able to become entrenched here among us."

ISLAMIC PAPER OBJECTS TO CRITICISM OF RELIGIOUS SCHOOL

[Editorial Report] The 15 August 1981 issue of PREPOROD (Sarajevo publication of the Community of Islamic Elders of Bosnia-Hercegovina, Croatia, and Slovenia) publishes a full-page refutation of an article in VECERNJE NOVOSTI (Belgrade) of 3 August 1981 written under the title "Priests Are Burdening Children." The PREPOROD editorial, "Who Is Disturbed by Religious Freedom and Why?", says this article is an example of newspaper writing aimed at spreading "disinformation, untruth, and false interpretations to create an unfavorable response in society. All these examples show how much professional ethics, seriousness, and responsibility are lacking in certain editorial boards." Such articles, it says, describe religious activities which are fully guaranteed by the constitution as allegedly impermissible and against the law. Moreover, it notes that the author "takes the liberty...of linking wild behavior of a nationalist and irredentist nature and various other forms of enemy activity to...Islamic religious instruction, and [the author] concludes that manifestations of nationalist fervor have served as a platform to strengthen religious instruction. Such assertions are a gross and loathsome deception and offense imposed not only on hodjas [priests] who are honorably, responsibly, and with full right, carrying out their tasks and obligations, but also on the honor, dignity, and patriotic feelings of citizens of the Islamic faith, because VECERNJE NOVOSTI equates them with Albanian nationalists and irredentists."

BRIEFS

PRIEST SENTENCED--The Citluk (Hercegovina) Opstina magistrates court sentenced Father Ferdo Vlasic, priest from Duvno, to 60 days in prison for violating Article 2, Point 5 of the Law on Public Peace and Order; Vlasic is editor of the religious paper NASA OGNJISTA published in Duvno. The charge which was clearly proved against him at the trial said that Vlasic on 12 August 1981 opposed police officers in carrying out their duty, by threatening to run them over with his car if they did not get off the road and denigrating them before a group of citizens, saying that the police meant nothing to him. Because several days after the penalty was handed down he again behaved in a similar way, the opstina magistrates court in Citluk, on the basis of Article 310 of the Law on Legal Infractions of Bosnia-Hercegovina, directed Father Vlasic to serve his sentence immediately. FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SED'S TENTH CONGRESS FOREIGN POLICY AIMS ANALYZED

Hamburg AUSSENPOLITIK in German Vol 32, 3rd Quarter 1981 pp 237-250

[Article by Wilhelm Bruns: "Foreign Policy at the 10th SED Congress." A translation of the East Berlin EINHEIT article cited in footnote 6 is published under the heading, "Axen Analyzes Results, Impact of 26th CPSU Congress," in JPRS 78364, 23 Jun 81, No 1891 of this series, pp 12-20]

[Text] At the 10th SED Congress in April 1981, the main emphasis was on economic problems. However, since the principles, tasks and objectives of the SED are of crucial importance for the GDR, one may also inquire about the results and long-range objectives of the foreign policy pursued by the second German state. In the following article, Dr Wilhelm Bruns--head of the Security and Disarmament Department at the Bonn Research Institute of the Friedrich-Ebert-Stiftung [Friedrich-Ebert-Foundation], lecturer at Bonn University and author of numerous articles and several books on the relations between the Federal Republic of Germany and the German Democratic Republic--examines the SED's foreign policy guidelines. According to Bruns, one must proceed from the three structural principles--proletarian and socialist internationalism, peaceful coexistence and anti-imperialist solidarity--and from the basic statement that "imperialism" alone is to be blamed for the deterioration of the international situation and that only the "really existing socialism" can show the way toward peace. According to this position, improvement of the inner-German relations is contingent on the following: on improvement of the international situation, even though the Basic Treaty provides a special operational framework in regard to the relations between the two German states; on revocation of the NATO Dual Resolution (in the discussion of which the negotiation proposal contained therein is totally ignored); on the consent to a conference on military detente and disarmament such as was proposed in Madrid by Poland (although Poland did not take into consideration any of the other proposals). The GDR claims that on the one hand its foreign policy is based--"without any reservations"--on international law and on the principle of peaceful coexistence and on the other hand on the Basic Treaty, which it "fully" affirms. This contradiction has not been resolved. There are good reasons to assume that the Basic Treaty is to be played down so that demands such as those concerning the

question of citizenship and the problem of the permanent missions--which after all had been settled--can be broached anew.

Every 5 years, the Socialist Unity Party of Germany (SED) strikes the balance, establishes the priorities for the next 5 years and promises clear guidelines to the GDR population.

As had been the case at the previous party congresses, at the 10th SED Congress the triad: "results are good"; "analysis is correct"; "prospects are excellent" was the key-note of the Central Committee (ZK) report delivered by Erich Honecker and of the speeches made by the deputies of the Party Congress itself.

Exactly what are the GDR's results in the fields of foreign, security and Germany policy? What assessment of the international situation is the GDR's policy based on? How does the GDR leadership perceive the problems concerning foreign policy and the international arena? What proposals are being made to accomplish the GDR goal of obtaining the "most favorable international conditions for the construction of socialism/communism"? Are there any starting points in regard to new developments in the field of disarmament? And last but not least: Are there any new suggestions and starting points for further development of the inner-German relations?

Before discussing the individual sectors of GDR foreign policy, we will explain why we attach crucial importance to the SED Congress.

SED Is GDR

The 10th SED Congress, which was held in East Berlin from 11 to 16 April 1981, merits our attention for at least three reasons:

—The statements made at the SED Congress, the GDR's "principal Communist forum" (thus the title-page motto of issue No 15/1981 of HORIZONT, a foreign affairs-oriented weekly), establish the GDR's domestic, economic and foreign policy targets for the next 5 years.

--The objectives of the SED are more than just the views of a party; they are equally binding for the GDR, for SED congresses are admittedly "milestones" for the "entire social development" of the GDR (this was the tenor of all speeches before and during the Party Congress). "The Party--guiding force of our society"--this headline in NEUES DEUTSCHLAND (ND) (24 Apr 81, p 2) reflects the SED's self-image and the actual situation in the GDR.

--It is the SED's pretension that arrests our attention: In his closing speech, Erich Honecker stated the Party Congress had "clearly mapped out" the course to be followed by the GDR. Foreign Minister Fischer claimed that the SED was facing up to the "basic problems of our time," that it was tackling these problems "competently and resolutely, thus providing clear guidelines in all situations" (ND, 14 Apr 81, p 6).

There is no doubt that GDR foreign policy is one of the prerogatives of the SED. This statement need not even be empirically substantiated: it is sanctioned by the GDR constitution (Article 1.1) and can be considered constitutional reality: "The principles, objectives and tasks of our foreign policy are worked out by the SED, the leading power in the GDR, which also organizes their implementation."[1]

According to an authoritative GDR definition, foreign policy comprises "both the state's principles, tasks and objectives in the field of international relations with other states, groups of states, public and private international organizations and movements and the means and methods of their implementation."[2]

The question is: Did the 10th SED Congress point out new developments, new viewpoints in regard to the principles, tasks and objectives of the GDR's foreign policy?

The GDR's foreign policy is determined by three structural principles:

--by the structural principle of "proletarian and socialist internationalism" (operative within the "socialist community" on both the national level and the party level);

--by the structural principle of "peaceful coexistence" (operative in the relations with the capitalist states);

--by the structural principle of "anti-imperialist solidarity" (supposed to be operative in the relations with the Third World).

These structural principles are articulated in Article 6 of the GDR constitution.[3]

The SED's Analysis and Assessment

The SED Leadership

The Central Committee report, which was delivered by Erich Honecker in a 5-hour speech and which was declared a resolution by the Party Congress, consists of seven main parts.[4] We will concentrate here on the parts dealing with foreign policy and international problems, albeit only for considerations of space, for a separation of foreign and domestic (economic) policy is rejected as arbitrary not only by the SED.

Erich Honecker presented the GDR as a state, which had "demonstrated its political stability," increased its "economic capacities" and proved "a cornerstone of peace in Europe."

What proposals concerning peace, disarmament and Germany policy has the "cornerstone of peace in Europe" advanced for solving the numerous problems?

Characteristic of the SED's analysis are two points that ran like a red thread not only through Honecker's report, but through all of the speeches delivered before, at and after the Party Congress:

--It is imperialism that is solely responsible for the "considerable" deterioration of the international situation (formula: "most aggressive forces of imperialism" or "powerful circles of the monopoly capital").

--It is only the "really existing socialism" that through its position and proposals shows the road toward peace, for: "Socialism and peace are identical" (Honecker).

Proceeding from this one-sided attribution of the blame and the alleged guarantee of peace by the "really existing socialism," the SED considers it self-evident that the international relations can be improved only if "imperialism" changes its conduct. Concretely, this means:

--revocation of the "Brussels Missile Resolution" (i.e. NATO's Dual Resolution of 12 December 1979).

--acceptance of the "consistent, clear peace concept" of the USSR (i.e. the five proposals advanced by Brezhnev at the 26th CPSU Congress).[5]

--the Federal Republic of Germany must accept "without any reservations" the existence of "two mutually independent, sovereign states adhering to different social systems" (Honecker).

--NATO must accept the proposals advanced by the Warsaw Pact at the Vienna MBFR talks and the proposals concerning convocation of a CSCE disarmament conference in Madrid.

The struggle of all "peace-loving forces" is directed against imperialism, which "with its aggressiveness, its unpredictability and its striving for hegemony" is and remains "a danger and a threat" to the nations (Honecker).

The SED leadership, which portrays the international situation in a way suggesting that presently the crucial issue is that of war and peace and that disarmament is the overriding concern of our time, has failed--its great pretensions notwithstanding--to introduce any peace initiatives or disarmament-oriented proposals. In its role as "cornerstone of peace in Europe," it has restricted itself to repeating the latest proposals of Brezhnev--advanced at the 26th CPSU Congress--which the GDR supports "in their entirety" (Honecker).[6]

In this regard, just one thing should be noted: It is not the USSR proposals as such, but the timing and the numerous open questions connected with the proposals that rule out acceptance under the present conditions (this applies to two of the five proposals, namely the moratorium proposal in regard to nuclear medium-range weapons in Europe and the proposal concerning the confidence-inspiring measures).

The armament dynamics are not analyzed; rather, the complexity--conceded even by the GDR--is reduced to the "imperialist arms race" and here in particular to the "Brussels Missile Resolution." Not even this dual resolution of NATO is analyzed, even though it is a primary concern of Honecker's--and of the other speakers as well (especially of the GDR's minister of defense, Heinz Hoffmann). The negotiation component was completely ignored. Prominent GDR experts claim--again without sufficient analysis--that "in the concrete policies pursued by its originators the alleged dual resolution" rests "only on the armaments prop. The negotiation prop--unpopular anyhow--appears to have been amputated a long time ago."[7]

The sharp attacks on the policy pursued by the West, which are characterized by one-sided attribution of the blame and by the claim that only the "really existing socialism" desires peace and detente, are not the result of a reproducible analysis: this claim is made apodictically. It does not rest on an empirical foundation; rather, it is derived from the "essence" of imperialism and socialism.

On the CSCE Process

To "bring about a change of course toward disarmament" (Honecker) in the 1980's, convocation of an "all-European conference on military detente and disarmament" would be "of great benefit." Honecker stated that the proposal submitted by Poland at the Madrid CSCE--which was "in its entirety" supported by the GDR--could be a "good foundation." In this respect, one should note the following: Regarding the European Disarmament Conference, which is supported by all of the 35 CSCE states, there are six--in part well-articulated--proposals. One of these is the proposal advanced by Poland. The most detailed proposal is the one advanced by France; this proposal also has the advantage of having been submitted ahead of all others. The Polish proposal is characterized by vagueness. It contains only two concrete suggestions: The conference is to begin on 21 October 1981 in Warsaw. The proposal leaves open all agenda-related questions.

Even though GDR writers have reported frequently--albeit selectively--on the CSCE, they have not discussed the detailed proposals advanced by the West, above all the proposal made by France. Such a discussion is imperative, however; and the preference given to the Polish proposal appears to be quite arbitrary. Moreover, the Polish proposal was not supported by any of the Warsaw Pact states. Romania submitted a proposal of its own.

Inner-German Relations

In the report delivered by Honecker and in the comments made by Fischer and Naumann, much attention was directed to the relations between the GDR and the Federal Republic of Germany. As is well known, the GDR does not consider this subject to be part of Germany policy; rather, it classifies its relations with the Federal Republic of Germany under "peaceful coexistence," the structural principle governing its foreign policy.

Prior to the 10th SED Congress, certain phenomena and developments in the inner-German relations gave rise to questions that the Party Congress was supposed to answer. Let us recall some of these phenomena and developments:

First and foremost, one must mention Erich Honecker's Gera speech, which was delivered on 13 October 1980 and which Honecker--in his speech at the Party Congress--elevated to the rank of a speech concerned with fundamentals. The Gera speech revolved around four demands addressed to the Federal Republic of Germany: "recognition of GDR citizenship"; "abolition of the so-called 'Central Registration Center' at Salzgitter"; speedy "settlement of the course of the border on the Elbe River in accordance with international law"; conversion of the permanent missions into embassies and exchange of ambassadors ("which is in accordance with international law").[8]

The novelty here was not the demand for recognition of GDR citizenship (on 17 December 1980, Stoph referred before the GDR People's Chamber to "respect" instead of "recognition," which is more than a mere nuance) or the demand for abolition of the Salzgitter Registration Center. It was the following two aspects that were new in these demands:

--Honecker declared the fulfillment of these status demands to be the "inalienable" precondition for further steps toward normalization of the inner-German relations. Subsequently, the GDR gradually abandoned this position.

--The second and most serious aspect: Whereas the first three demands can be reconciled with the Basic Treaty, the key document of inner-German relations, the fourth demand gives rise to the question whether the GDR still accepts the Basic Treaty as an operational framework, for Article 8 of the Basic Treaty merely refers to Permanent Representatives--and for good reasons. This demand differs from the others in that it expressly calls into question an entire article of the Basic Treaty.

It was the Gera speech--not the drastic minimum exchange rate increase of 13 October 1980 which is practically irreconcilable with the intent of the by- and multilateral agreements--that caused the break in the inner-German relations.

The GDR leadership became more and more insistent in demanding of the Federal Government not to restrict the inner-German relations "merely" to facilitation of travel, but to give priority in the inner-German talks to the problems concerning disarmament and maintenance of peace.[9]

At the East Berlin Conference of Bezirk Deputies on 15 February 1981, Erich Honecker had spoken of the "unification" of the two German states--albeit in the sense of a "threat," for such a unification would be effected under communist auspices.

At the 1981 Leipzig Spring Fair, Honecker stated the difficulties in regard to East-West relations should not be allowed to affect the inner-German relations. West German visitors to the fair stated unanimously that the SED leadership appeared to be interested in improving its relations with the Federal Republic of Germany. Upon his visit to Leipzig, the mayor of Hamburg, Hans-U. Klose, even felt that "something is afoot" in inner-German relations; he pointed out, however, that this was contingent on resisting the "temptation to interconnect all problems on a conditional basis" (quoted from the SUEDDEUTSCHE ZEITUNG, 18 Mar 81, p 22).

At relatively short intervals, Erich Honecker met with Bonn's representative in the GDR, Klaus Boelling (on 15 and 18 March 1981); in this regard, it should be noted that in the past talks between Honecker and Boelling's predecessor, Guenter Gaus, frequently signaled new rounds of negotiation. Thus these meetings can be considered a promising sign.

In this constellation of observations and developments, one must also include the much-discussed (in the GDR as well) interview of Guenter Gaus by the weekly DIE ZEIT (30 Jan 81, pp 3 ff), in which Gaus warned against overusing the concept of nation and urged the Federal Republic to come up with a more adequate GDR image.

From Gera to the 10th Party Congress

How was this inner-German constellation reflected by the 10th SED Congress? What answers were given here?

For the second time, the GDR had an opportunity to sum up the results of its Germany policy after the conclusion of the Basic Treaty. And again it became apparent that for the GDR leadership the key document of inner-German relations, the Basic Treaty, is not the primary point of reference: the GDR draws on two other elements of support--"international law" and "peaceful coexistence."

Honecker held that insofar as the two German states could come to an agreement on peaceful coexistence and develop their relations in accordance with international law, the inner-German relations could be expected to make progress. But precisely this is the crucial point: by mutual agreement, there was established between the two German states an operational framework, namely the Basic Treaty. So one could say: To the extent--and only to that extent--that the Basic Treaty is put into practice and becomes an integral part of the policies pursued by the two partners, the goal of establishing good neighborly relations between the two German states can become a reality.

Both the speech of Honecker and that of the GDR foreign minister contained friendly notes. Honecker stated that "We have always been prepared constructively to contribute to the development of normal, even neighborly relations between the GDR and the FRG" (in Article 1 of the Basic Treaty, the two German states pledged to develop "normal, neighborly relations"). Oskar Fischer stated the GDR was prepared "to complement the network of contractually secured, coexistence-oriented relations by further, mutually advantageous agreements." Upon closer examination, however, it turns out that such declarations of intent are coupled with considerable qualifications: The GDR holds that

1) as long as the international situation--from which the inner-German relations cannot be "isolated" (Honecker)--remains so critical, it will be impossible to improve the relations between the GDR and the FRG;

2) as long as the Federal Government promotes "NATO rearmament," "concrete conditions" are created that impede further normalization of the inner-German relations and that "jeopardize the results hitherto attained" (Honecker);

3) the "adherence to revanchist doctrines asserting continuance of the German Reich within the borders of 1937," which Honecker calls "anachronistic and dangerous" and which--he feels--is influencing the policy of the Federal Government and blocking further progress.

A comparison with the months following the Soviet occupation of Afghanistan is instructive: Whereas until the summer of 1980 the inner-German relations were surprisingly good /in spite of/ [words in slantlines printed in italics] the considerable deterioration of the international atmosphere--with the GDR intimating that it was interested in more intensive contacts with the Federal Government--today it is alleged that progress in regard to inner-German relations is impossible /on account of/ [words in slantlines printed in italics] the unfavorable international situation.

In this connection, one should also point out a flagrant contradiction in the GDR's position concerning inner-German relations: Honecker's declaration of readiness (see above) is valid only if both German states accept "without any reservations" the existence of two mutually independent, sovereign states. "The relations

between them can only be based on peaceful coexistence." Relations with the Federal Republic of Germany just like with any other capitalist state? A few passages later, both the Party and the GDR Government "fully affirm" the contractual foundations of inner-German cooperation. Without analyzing and formulating this in detail,[10] one can say: Either the inner-German relations are relations "without any reservations"--such as those between the GDR and France or (as the GDR claims) those between the GDR and Austria; or the relations are governed by the "full affirmation" statement. The Basic Treaty (the mere construction of this treaty with all its appendices shows the "special nature" of the inner-German relations) contains sufficient explicit reservations that were accepted by the GDR and thus became part of the operational framework of inner-German relations--e.g. the Four-Power Reservation, the reservation concerning the national question and, last but not least, the "reservation in regard to questions pertaining to citizenship."

The contradiction or--at any rate--inherent tension: Demanding "relations not subject to any reservations" ("peaceful coexistence"), one cannot at the same time "fully affirm" the Basic Treaty. At this point in Honecker's speech, it becomes apparent that for the GDR the Basic Treaty is not the primary point of reference. For according to Honecker, "peaceful coexistence" is "based on the principles of international law that were laid down in the European treaties, in the UN Charter and also in the Final Act of the Helsinki Conference." In this list, which is supposed to be the "basis" of inner-German relations, where is the Basic Treaty?

In the opinion of the present writer, it is instructive that Honecker did not again mention and declare as inalienable the four status demands raised in his Gera speech of 13 October 1980, even though he elevated the Gera speech to the rank of a basic declaration so as to "define" the GDR's position "for both the present and the future." So the Gera speech and--consequently--the four status demands addressed to the Federal Republic of Germany are still valid. As was learned from press reports, the GDR has now presented the Federal Republic with a "list" containing a number of "facts that the GDR considers infringements of its national sovereignty, which was recognized in the Basic Treaty."[11] Included here is the demand for abolition of the Salzgitter Central Registration Center, which records offenses committed at the GDR border, and the demand for settlement of the course of the border in the middle of the Elbe River between Lauenburg and Schnackenburg.

Schmidt and Honecker

It is worthwhile to compare two statements that were made at about the same time: the Federal Chancellor's address of 9 April 1981 concerning the state of the nation in divided Germany and Honecker's speech of 11 April 1981, delivered at the 10th Party Congress in East Berlin. Even though the "common aspects" should not be overrated, we will point out--by means of a synopsis--a four-point consensus:

Helmut Schmidt, addressing the Bundestag [Lower House] on 9 April 1981:	Erich Honecker, addressing the 10th Party Congress on 11 April 1981:
"The more intensive the relations between East and West, the better the relations between the United States and the Soviet Union--the better for us Germans."	"Nor do we dream of the possibility to maintain good relations with the Federal Republic of Germany, one of the strongest NATO states, if the relations between the

	United States and the USSR become aggravated as a result of an unpredictable, confrontation-oriented policy on the part of the United States."
"Both German states must see to it that the relations they maintain with each other do not create any additional burdens for East-West relations."	"We proceed from the assumption that in regard to this crucial problem the development of normal relations between the GDR and the FRG is of great importance not only for the two states, but also for the overall situation in Europe."
"The Federal Republic of Germany belongs to the West."	"To prevent any misunderstandings--we do not intend to undermine the relations the Federal Republic maintains with its allies, above all with the United States."
"It is our geographical and historical situation in particular that imposes on us the obligation to preserve peace. Not as illusionary pacifism, but as an obligation to pursue a concrete policy."	"Our primary objective--also in regard to our policy vis-a-vis the FRG--is to serve the cause of peace and to create the conditions insuring lasting peace. Only that which promotes peace benefits the people in the two German states and all of the nations of our continent."
Quoted from: BULLETIN (Press and Information Service of the Federal Government), No 36, 10 Apr 81.	Quoted from: NEUES DEUTSCHLAND, 12 Apr 81.

On the 1971 Four-Power Agreement on Berlin

Regarding Erich Honecker's comments on the Berlin complex, two aspects merit attention:

--Firstly, he places Berlin within the framework of inner-German relations.

--Secondly, in urging the parties concerned to refrain from "subjecting to a stress test" the Four-Power Agreement of 1971, he includes the GDR.

He reiterates a well-known GDR position, namely that according to the agreement's "core provision" Berlin (West) is not part of the Federal Republic of Germany and must not be governed by it. The qualifying designation of the agreement as a "Quadripartite Agreement on Berlin (West)" does not come as a surprise; but it is worthy of note that Honecker repeats the complete formula of "strict observance" and "full implementation" of the agreement, for several GDR comments on the Berlin Agreement mentioned only the "strict observance" and this admonition was addressed exclusively to the Federal Republic of Germany.

As a criterion for any GDR agreement with West Berlin (!), Honecker points to the "benefit for the permanent residents of Berlin (West)." "But very harmful are the increasing attempts--attempts violating the Quadripartite Agreement--to treat Berlin (West) as a state of the FRG and even to draw it into the orbit of NATO

policy." He does not identify the elements supposedly at variance with the Quadripartite Agreement of 1971, nor does he specify the regulations violated by certain "attempts" criticized in the GDR press.

On the GDR's UN Policy

Not without pride, Erich Honecker stated that the GDR was a "member of the UN and of the UN's special organizations"; but he did not comment on the GDR's UN policy. Besides, the reference to affiliation with the UN "and its special organizations" as evidence of the fact that the GDR occupies an "equal and respected position" in international politics is misleading or at least apt to give rise to misunderstandings.

For it has been demonstrated in a comprehensive study[12] that while the GDR enjoys "equal rights" in the UN system, it does /not/ feel it has equal /obligations/ [words in slantlines printed in italics]. The GDR is not represented in half of the special organizations and the half it does not belong to includes important--especially for the Third World--special organizations such as the FAO, which incidentally is the largest special organization (over 150 member states).

The policy of selective membership includes the policy of restricted collaboration in the organizations with which the GDR is affiliated. Thus the GDR consistently sidesteps the material contributions that are earmarked for the Third World and that would ensue from the /equal rights/ (especially in regard to the FRG) as an /obligation/ [words in slantlines printed in italics].

Four "Priority" Objectives of GDR Foreign Policy

Exactly what are the GDR's foreign policy objectives for the 1980's? In his report to the 10th SED Congress, Erich Honecker stated that for "the coming years" the SED has formulated four "priority" objectives (ND, 12 Apr 81, p 5):

--Systematic consolidation of the fraternal alliance with the Soviet Union and the other states of the socialist community on the basis of the friendship agreements concluded. Orientation toward overall strengthening of socialism and intensification of its international influence through further development and utilization of the advantages offered by it.

--Steadfast, persistent work toward preservation of peace, toward termination of the arms race with the object of defending and extending political detente and above all stabilizing it and making it irrevocable by means of measures pertaining to military detente and disarmament.

--Active anti-imperialist solidarity with all peoples fighting for their national and social liberation. Development of multifaceted cooperation with the states of Africa, Asia and Latin America. Support of the struggle for a new international economic order based on equality.

--Consistent efforts toward developing relations of peaceful coexistence with the capitalist countries. Intensification of the contacts and agreements with the object of consolidating the cooperation in the interest of peace and mutual benefit and thwarting the confrontation-oriented policy of the aggressive circles.

The above sequence denotes an order of priority. The primary objective is and remains the "systematic consolidation" of the relations within the "fraternal alliance," above all with the USSR. Perhaps it is worth noting that it is not "proletarian internationalism" or "socialist internationalism," but the "friendship agreements concluded" that are named as the "basis" for such a consolidation. To be sure, there is no friendship agreement between the GDR and the states of the "socialist community" (with the exception of Romania) that does not contain the formula of "socialist internationalism."

The second objective reiterates well-known GDR positions concerning "complementation of political detente by military detente" and "irrevocability" of political detente. Here one is struck by the absence of specifics: In this connection, one would have expected the SED to champion the "Conference on Military Detente and Disarmament in Europe" demanded by the Warsaw Pact. In regard to implementation of this objective, one would have expected the SED to advocate continuation of the CSCE process. In view of the absence of any concretization, it appears safe to assume that the SED is very insecure in regard to the prospects for implementation of its proposals and that it is skeptical in regard to acceptance of the proposals by the states in both East and West.

The third objective--the affirmation of "anti-imperialist solidarity" with the peoples fighting for their liberation and of cooperation with the developing countries (thus there are two addressees)--likewise called for concretization and particulars. The stated objective--"new international economic order" is too vague to serve as an operational guideline and to be appreciated by the developing countries.

Regarding the fourth objective: The GDR does not expressly promise to extend its relations with the Western states, including the Federal Republic of Germany, on the "basis of the agreements concluded" or on the basis of the Final Act of the Helsinki Conference. Admittedly, the GDR's objective is peaceful coexistence; however, neither in the East Treaties nor in the Berlin Agreement nor in the Final Act of the Helsinki Conference did the states commit themselves to this objective--and there were good reasons for this.

By committing itself to "peaceful coexistence," the GDR reserves to itself the option of defending as compatible cooperation (wherever it seems advisable) and "ideological class struggle" or demarcation (wherever it appears necessary). This commitment to the structural principle of "peaceful coexistence" also restricts the "intensification of contacts and agreements" to inter-governmental relations, for--as the GDR has openly stated--"peaceful coexistence" applies only to the inter-governmental level. As regards the last sentence of the Fourth Objective--"for the coming years"--the SED has taken up again the older Two-Policies Theorem originated in 1974: The peace-oriented policy pursued by the communist states is confronted with the war-oriented policy pursued by the aggressive circles of imperialism; the "consistent efforts toward consolidation of relations based on peaceful coexistence" are faced with the "confrontation-oriented policy of the aggressive circles." This is also an implicit comment on the role of the two German states.

The GDR's above-described foreign policy objectives can be characterized as follows:

--The objectives are vague. It is only the increasingly intensive relations with the USSR that are unequivocal--even in regard to their concrete form. All the other objectives are ill defined and open to any number of interpretations.

--The vagueness is especially striking when one compares these four objectives with the GDR's concrete five-point foreign policy program adopted at the Eighth Party Congress in 1971 (here the GDR wanted to contribute to the "successful implementation" of the European Security Conference, to join the "United Nations as an equal member," to "establish diplomatic relations with all states," to "establish normal relations--based on international law--with the FRG" and to contribute "to the normalization of the relations with West Berlin"). These operational objectives were amenable to reexamination, and this was done at the Ninth Party Congress.[13] To be sure, the Ninth Party Congress (1976) formulated merely three "primary foreign policy objectives" (ND, 19 May 76, p 5), which have now grown into four objectives, with hardly any differences being detectable between 1976 and 1981.

--The SED did not translate the stated "primary" objectives (which incidentally are listed in Article 6 of the GDR constitution of 1974) into tasks and steps "for the coming years"; thus it did not indicate exactly what must be done to attain the objectives.

At any rate, according to the heading of a lengthy commentary in NEUES DEUTSCHLAND (21 Apr 81, pp 1 ff), the SED considers itself "a source of strength and a compass." In view of this vagueness, however, the compass character of this program appears to be questionable. "The course for the 1980's has been mapped out by the 10th Party Congress" (ibid.). At best, this is true of the 10 points of the economic program. The GDR's foreign policy for the next few years lacks precisely what is claimed in the source of strength- and compass-commentary (see above): "The precise designation of all important intermediate goals...."

Conclusion

Analysis of the 10th SED Congress yields the following results:

--As regards foreign, security and Germany policy, there are no new viewpoints, proposals or concrete long-range plans.

--It can be considered an economic congress, an event tailored to the requirements of Erich Honecker. An appropriate label would be "congress for preserving the status quo."

--The statement that in regard to foreign policy this party congress was not fruitful on account of the absence of new ideas and suggestions is not necessarily negative. After all, this 10th Party Congress was oriented toward consolidation. One must take into consideration that in terms of foreign policy the 1970's were a successful decade for the GDR, a decade distinguished by numerous premieres for the second German state.[14] The 1980's are unlikely to become another such decade. The speech of the GDR's foreign minister, who promised to pursue a "long-range, calculable and prudent policy" (ND, 14 Apr 81, p 6), was indicative of the desire to maintain a high degree of continuity and calculability.

Calculability of the GDR's foreign policy and its course vis-a-vis the FRG would be very advantageous to us. However, calculability--which apparently is desired by the GDR leadership as well--is contingent upon the efficacy of the factors governing the development of the GDR. Among these factors, it is above all the USSR as

the key element, the East-West relations and--last not least--the domestic situation in the GDR that are of crucial significance.

NAVY RECEIVES NEW TYPE OF SUBMARINE CHASER

Frankfurt/Main SOLDAT UND TECHNIK in German Vol 24 No 8, Aug 81 pp 432-434

[Article by Siegfried Breyer: "'BAL-COM-4'" Further New Development of Warsaw Pact Naval Forces--GDR 'People's Navy' Receives New Generation of Submarine Chaser"]

[Text] Since approximately 1978/79, a new production of sumbarine chaser has been under construction in the Peene Shipyard in Solgast, which is reserved almost exclusively for the building of warships and special ships. This new production has been classified by NATO under the "BAL-COM-4" designation ("BAL-COM" is a name which NATO has created for newly developed warships of the Warsaw Pact navies in the Baltic area. This stands for "Baltic Combattant," i.e. "Baltic (surface) warship." The nuclear powered FK cruiser "Kirov" appeared under "BAL-COM-1," while the FK destroyer of the SOVREMENNY J and the UDALOY classes ran under BAL-COM-2" and "BAL-COM-3," respectively). The GDR press reported recently the introduction of one of them, probably of the class ship. It is named after a small town in Mecklenburg, Parchin. (Until now this had been the name of the test ship, which was classified by NATO as belonging to the HAI-II class, and which represents a precursor of the HAI-III class submarine chasers called "Antisubmarine ships." If this ship has not been taken out of service, it is likely to have a different name and designation now.) According to GDR press reports, the ship was delivered to the People's Navy on 6 April, and it was placed into service on 9 April.

This new class--which on occasion had also been reported under the Koralle class--is apparently designed to be the successor to the HAI-III class built in the 1960's. HAI-III class ships obviously had several deficiencies, especially in engine design as evidenced by the repeated changes which were made in the beginning in the air intake shaft (often unjustifiably called the chimney).

Compared to the HAI-III class, the newly built ships are clearly larger, as can be seen from the Comparative Table of Figures. A total of 14 additional meters in length corresponds to a 27-percent increase, and the water displacement--with maximal equipment--has doubled. The parameters of the considerably larger hull--length 40 m, width 9 to 10 m, and central side height at least 6 m, which means an expected displacement of approximately 800 tons, indicate an essential increase in time at sea, sea worthiness and handling in rough seas, as opposed to the HAI-III class.

Its fineness ration--the value which is the result of the ratio between length and width (both measured in the construction water line)--must be estimated at

approximately 7.2. This is a little less than in the HAI-III ships, which, however, also have a different engine system, a 3-wave CODO6 system consisting of 2 Diesel engines and one gas turbine of 3,500 kW (4,800 hp) and 7,350 kW (10,000 hp), respectively, for at least 25 knots. The "BAL-COM-4" class units have a system which consists exclusively of Diesel engines and works on 2 or 3 waves. Its total power is estimated at 11,000 to 14,700 kW (corresponding to 15,000 to 20,000 hp), if its speed is within the range of the HAI-III class.

These new submarine chasers are armed exclusively with systems of Soviet construction:

-- 4 (short) individual tubes for 400 mm submarine chaser torpedoes, arranged in twos, one behind the other, diverging by approximately 14 degrees out of the ship's longitudinal axis onto the side deck.

-- 2 RBU-6000 submarine chaser rocket launcher groups next to each other at a distance of a few meters on the superstructure deck in front of the bridge represent the primary armament. The following are defensive weapons:

-- One 57 mm L/80 antiaircraft twin tower on the quarterdeck.

-- One 30 mm L/65 antiaircraft twin on a deckhigh superstructure (it is probably the ammunition chamber which belongs to it) in front of the superstructure deck, and

-- 2 installations for SA-N-5 short-range ship-to-air missiles, positioned midships at the rear of the front superstructure deck.

The SA-N-5 is a "navalized" weapons system of the mobile Strela troop antiaircraft system, which has been used by the Soviet armed forces for years, and which is classified as SA-7 and called GRAIL by NATO. Here, these are gathered in starter groups of 4 and stored at 360° around a rotating prism. This weapons system, which is not very heavy, and does not take up much space, is suitable for engaging slow and/or low flying planes and helicopters, because guidance to the target occurs with the help of an infrared homing device.

These units can also lay mines. For this purpose they are equipped with 2 casting ramps on the stern, and with transport tracks on the side decks, which apparently reach beyond midships.

On electronics--in the most far-reaching sense--there is the following:

-- One STRUT CURVE-circular search radar,

-- One navigational radar of the TSR production manufactured in the GDR,

-- 2 WATCH DOG sensor systems as passive ECM, and

-- One HIGH POLE-B answer antenna of the IFF installation. (ECM and IFF are terms from electronic warfare, and stand for "electronic countermeasure" and "Identification friend-foe"), all on top of, i.e. at the main mast over the bridge; and

-- One MUFF COB weapon guidance device on a medium high beam of the rear superstructure complex.

In addition there are two 16-tube chaff stick launchers, 1 starbords behind the bridge superstructure, the other probably on the opposite side. The presence of a hull sonar must also be assumed.

The outer form of these new warships was undoubtedly greatly influenced by two components: optimal sea properties, and the engine. The former can be seen by the shape of the smooth-deck hull, with a deck spring so pronounced that the freebord elevation at the bow is easily twice that at the stern. Openings for exhaust on both sides of the hull right behind midships indicate the exclusive use of Diesel engines. These openings permitted the elimination of a chimney, adversely affecting the total picture: the lack of a chimney gives the impression of a certain incompleteness, similar to that found in the Spanish frigates of the ATREVIDA class from the 1950's, to which the "BAL-COM-4" is quite similar in other ways and in its main calibrations.

Presently there are 6 ships of this new class, but it is considered possible that there will be twice as many, in order to fill the void threatened by the imminent elimination of the HAI-III submarine chaser.

Comparative Table of Figures

	HAI-III Class	BAL-COM 4 Class
Standard displacement, tons	350	?
Operative displacement, tons	400	app. 800
Overall length, meters	56.00	app. 70.00
Width, meters	6.20	app. 8.00-10.00
Draft, meters	2.40	app. 3.50
Driving system	CODOG	engines
Engines	2 Diesel engines 1 gas turbine	2 or 3 Diesel engines

STUDENTS CRITICIZED FOR BAD BEHAVIOR, VANDALISM

Bucharest FLACARA in Romanian 30 Jul 81 p 6

/Letter to the editors from Academician Eugen A. Pora/

/Text/ I would never have believed that I would actually see that there is also a "pedagogic pollution." I can find no other term for what I saw in the lodge in Valea de Pesti, located on the West Jiu at the foot of Retezat, where there is so much beauty, peace and quiet. As a teacher for more than 50 years, I was shocked by this appalling phenomenon and concerned because it has lasting effects and involves the very future of some youths.

I think the building in Valea de Pesti (Why not "with fish"?) is the most beautiful mountain lodge in Romania. Located on a plot above the reservoir lake with a spendid view of the peaks of Retezat, it brings to our landscape the style of the Swiss chateaus. With concrete walls and studs that imitate the texture of fir wood, each room is picturesquely isolated from the other by balconies and wavy shingled roofs. With its four stories of 20 rooms each with installations for running water (hot and cold?) and electric current (without adequate lights) and sanitary installations, as well as a spacious ballroom and a large dining room on the ground floor, all designed by the highest standard of civilization, it is unique.

In July the lodge is not yet heavily frequented. But it too has a production plan! And in order to fulfill it pupils' excursions are accepted from many centers in Romania. There are often three or four buses (BTT's) in front of the building, each with an average of 40 pupils and three or four teachers. The loaded buses arrive by a road about 2 km long and full of stones that destroy many tires (The cost of the damage is surely more than it would cost to asphalt that road!). They reach the destination at 4:00 or 5:00 PM. The children eat supper there, sleep, eat breakfast the next day, and then leave for another lodge at 10:00 AM. What can these children see except the daily routes (Do they see them?) and the lodges where they sleep? I wonder if such an excursion is justified and if the money spent on the bus, meals and shelter yields any educational return. Personally I do not think so! The pupils' excursions to know the country should be organized differently.

On the night of 11-12 June 1981 a festive dinner was arranged at the lodge for the graduates of the Petrosani Industrial High School, presided over and supervised by the chemistry teacher, who was also these youths' classroom teacher (I do not mention

the name for the time being!). They came by turns in a workers transport bus. Some of the organizers were first to arrive, and then the "orchestra," consisting of saxophones, trumpets, a harmonica and a drum. The other graduates arrived in another bus and finally the classroom teacher with her husband and one more adult (probably also a teacher). They were cordially received and "Gaudeamus" was sung as required. All were happy and joyful as befits youths who are now entering upon life, and it was a pleasure to see them. But the party began at 9:00 PM in the party room of the lodge, where dinner was served and there was dancing. The sounds that now issued from the lodge were over 120 decibels and the "music" was heard for many kilometers around. I am sure all the bears on Retezat will remember those sounds like howls of the kind made by redskins attacking an enemy. They certainly could not be called songs. They were horrible, loud outcries of tormented people. And all this "party" behavior was in the presence and hearing of the classroom teacher and other teaching personnel. I consider it vandalism sponsored and encouraged by a teacher! It was a veritable demonstration of how our youth of today should not behave. All of us who were in the lodge wondered how it was possible for such a display of hooliganism to be tolerated in the presence of a classroom teacher, especially since there was an official notice in plain sight in the ballroom stating that the peace and quiet of the lodge were to be respected after 10:30 PM by everyone. And the "music" lasted all night.

In the morning there was a mess in the party room consisting of broken glasses, paper, cigarette butts, drinks spilled on tables and the floor, a spectacle of very sad memory. I wonder how it is possible for such teachers to last in education that is supposed to bring up youth in the spirit of respect for the public good and for the kind of social behavior required by socialist ethics.

That was only the beginning! In the next few days successive groups of younger or older pupils arrived at the lodge from various general cultural schools who were making "excursions at the end of the year." In the afternoon of 15 June three buses arrived with pupils from Craiova and Filiasi (and perhaps from other Oltenian communities). All the rooms were filled and many slept double. When the children were settled they began to dance in the ballroom, drink beer and smoke cigarettes, and the older girls were embracing the boys in corners or outside in the bushes (I saw such spectacles and I might recognize some of the girls!). The younger pupils were running and shouting through the corridors, amusing themselves by clapping their hands and throwing stones at the doors of the rooms. Not one teacher was watching them. They were gathered in two rooms minding "their own business." I sought out some of these "colleagues" and told them what the children were doing whom they were supposed to be watching. One teacher (I do not mention her name) answered me very innocently, "But what can we do about them?" That is a reply of an irresponsible teacher. The game in the corridors and the dance in the ballroom were continued after dinner until past midnight to the music of the lodge's records and tape recorders. The single bathrooms on the floors were crowded with children, some of whom even relieved themselves in the corridors. The maids who were trying to clean up on the second day told me that sort of thing often happened and they were thinking of leaving the lodge because they could no longer stand the mess. The whole lodge smelled and only after the manager brought potassium chlorate from somewhere in the valley was it possible to wash away the stench so that there was fresh mountain air in the corridors and rooms again.

Such situations also occurred on the following days, perhaps not quite so bad but characterized by the same kind of behavior.

The school inspectorates of the respective schools should analyze such cases and proceed against the teachers who cannot control or educate the pupils in their charge. Parents! Do not allow your children on excursions where the teachers tolerate their acts of hooliganism and misbehavior. You will also suffer yourselves from this educational failing of the teachers.

But it can be done, and well!

A busload of pupils with four teachers arrived on the afternoon of the 18th (from Hategi I believe). After they were assigned to rooms in the teachers' presence, each teacher took the children in his charge and they planned a specific program. One went off and played soccer with them on the asphalt tennis court, another played volleyball with them (with a big rubber ball) on the lawn in front of the lodge, the third one went for a walk with them in the forest above the lodge, and the fourth one went down to the reservoir lake with them. They met for supper at the appointed hour, ate, then danced for an hour, and by 10:00 PM all the children were in bed, after they were sent in turn to the toilet, which was constantly checked. Everything proceeded in perfect order. It all depends on the teacher who is educating the children.

I worked for a long time with the pioneers and pupils in the higher grades. I know that our children's minds contain good, clean, honest and orderly material. Romania's future depends upon this exceptional material, which the educators are expected to polish like a diamond. But in the absence of good teachers this good reserve is distorted and impaired, and later on it will motivate those who are at odds with work and good social behavior. In this way irresponsible teachers constitute a risk of pedagogic pollution, a pollution of the educational process, and they threaten the very future of our children and through them the future of the Romania of tomorrow.

Thanks to such teachers and children, the lodge at Valea de Pesti is in a state of neglect and destruction that does us no honor (broken or stolen light bulbs, washbowls ripped from the walls, missing window panes, doors torn off the walls, broken faucets, drinking fountains that no longer work, etc.). That lodge was built at great expense and is a possession of us all of which we might be proud! Close attention on the part of those responsible for it might make it a matter of national pride again, but that requires certain standards of behavior on the part of those who visit it, which must be set and observed by all. The mountain lodges are not places to go on a colossal spree, to howl as if to drive the wolves from their lairs or to smash and damage everythink like a hopeless drunkard. The mountain lodges are a national property of great therapeutic value. An Austrian who was visiting the lodge (along with a family from the GDR) said to me, "It's a shame! It is a pity that such a beautiful lodge is not properly maintained! In this splendid decor, it is an achievement like nothing we have in Austria, but it is intolerable to have no hot water, dirt in the corridors, no water running in the bathrooms at night and so much noise during the day!" That foreign visitor was quite right.

INDEPENDENT ROLE OF TRADE UNIONS STRESSED IN CEAUSESCU BOOK

Bucharest MUNCA DE PARTID in Romanian May 81 pp 14-16

[Article by Aurel Duca, secretary of the Central Council of the General Union of Trade Unions of Romania]

[Text] The volume which appeared recently as an ardent homage paid to the party and its secretary general gives credit to a scientific, dynamic and mobilizing concept of the trade unions' role in the stage of creating the multilaterally developed socialist society, clearly marking out the value of traditions in carrying out their role as the most comprehensive organization of workers and the importance of their present duties in the leadership, organization and development of political, economic and social life. These qualitatively new duties and responsibilities result from the position of the working class as the leading class in our present society.

The wealth of theses, ideas, solutions and specific indications makes up a prestigious work of high theoretical and practical value which clearly establishes the trade unions' position in the broad mobilization of forces in our society for implementing the party's economic policy and the program to raise the workers' standard of living and for optimum utilization of the institutions of socialist democracy and participation of the creators of material and spiritual goods in decision making.

The analytical and clearsighted spirit and consistently revolutionary spirit which characterize all the political-ideological activity of the party's secretary general, the boldness and originality of his inestimable contribution to enriching scientific socialism are brought out strikingly in this work, also, as brilliant qualities which define the prominent personality of Comrade Nicolae Ceausescu--a thinker and man of action--and his decisive contribution to working out and implementing the program to build modern, rich and prosperous Romania.

A central spot in this volume is held by the problems in the role of the trade unions, within which the position promoted at the RCP Central Committee plenum of February 1971, stand out in particular, because it signifies the final abandonment of outdated theory of the mission of this organization and clear definition of its forms of operation which correspond to the demands of our day. Clearly asserting that "the old slogan of 'transmission belt' do longer corresponds to the current stage of development of our society," since "the party does not need such a 'belt' to speak with the workers," Comrade Nicolae Ceausescu stressed the purpose of the trade unions to be primarily a broad forum for joining workers to discuss all social-economic problems.

In their concern for broadening and continually improving the democratic framework for workers' participation in the organization and leadership of production and in working out and implementing the decision-making act---political, economic and social--our party and its secretary general have conceived of proper levers to actually achieve the democratic prerogatives with which the working collectives, trade unions and other mass and public organizations have been entrusted. Such levers--workers councils, where the trade union president is the vice president, the workers general meetings headed by the presidents of the trade unions--are deliberative, decision-making forums for certain basic economic and social problems of the social-economic units, whose importance has been made valid already in practice. As we know, the workers general meetings, at Comrade Nicolae Ceausescu's indication,have become democratic institutions with a decisive word about the good progress of the enterprises. In light of their duties, the demand is fully justified that, by participating in the leadership organs in enterprises, institutions, in ministries, including in the government, where they have the best conditions for expressing the workers' interests, the way the working class thinks, an opinion on all problems of the country's development, the trade unions should fully utilize these opportunities, insuring the active presence of the broad masses in the leadership of economic and social matters.

Placing the new tasks and duties belonging to the trade unions in the center of attention in order to involve the masses in leadership of all social-economic activity and to insure the best working and living conditions and to organize rich and attractive political-educational and cultural-artistic activity, the volume offers a clear prospect for the theoretical and practical approach to the problems of self-leadership and self-management of the workers and implementation of their principles. Having become a basic condition of economic activity, the precise application of the new economic-financial mechanism also formulates greater responsibilities for the trade unions. We see the collective work organs, the workers councils and the general meetings as forms of development of worker self-leadership, of demonstration of each collective's responsibility for good management of the financial and material resources entrusted to it--as part of the general wealth of all our people." Concern with carrying out activity of profitable production which would make it possible to allocate capital for broader reproduction and for providing the necessary resources for raising the people's material and spiritual st ndard of living, concern with strengthening order, responsibility and discipline in production and with utilizing the workers' initiative in improving work techniques and methods and with establishing relations of close cooperation in honoring the tasks in the spirit of socialist ethics and equity and intensification of political-educational and cultural-artistic activity--all these are an integral part of the goals for the fulfillment of which the trade unions are being called on to actively mobilize their members.

Also we should stress the insistence with which Comrade Nicolae Ceausescu, on one hand, brings out the need for a more powerful and permanent cooperation with the ministries and centrals and all organs which the trade unions are part of and in which they are called on to firmly have their say as representatives of the workers and with the other mass and public organizations and creative unions and institutions of learning, art and culture and, on the other hand, the requirement for as strict a deliniation as possible of the tasks and specific methods of action.

The theses worked out by the party's secretary general on the role and duties of the trade unions are under the banner of promoting what is new in trade union life, the permanent desire to give their work a climate of high exactingness and social responsibility, true creativity in the professional, economic and public activity of the mass of this organization's members.

The trade unions' role and duties can be carried out under optimum conditions due to their leadership by the party. The way in which this principle is applied corresponds fully to the general style of our party's activity and it does not exercise this role in an administrative way and does not seek to superpose with other organs and institutions or to carry out the duties belonging to certain collectives or people by absolving them of the responsibilities they were given. As Comrade Nicolae Ceausescu specifies, "The party's leadership of the trade unions must be of a political nature." Fulfilling its mission as leader with this view, our party is concerned with development of a revolutionary spirit in the activity of the trade union organizations and is seeing that their measures correspond to society's vital interests and those of the people and that they contribute fully to implemenetation of our state's domestic and foreign policy. As Comrade Nicolae Ceausescu recently pointed out at the congress of the General Union of Trade Unions of Romania, "The party organizations should not subordinate or watch over the trade unions, but they should take action through the trade union communist so that they fulfill their responsibilities."

The book's final chapter, referring to the trade unions' contribution to strengthening the world worker movement, expresses an exemplary humanism, a convincing call to achieve working class unity in all countries, a call for democratization of the mass organizations in the context of democratization of international political life. Drawing attention to the fact that reaction and imperialism always have taken action against working class unity while the slogan of so-called independent trade unions, which is not a new one, has served the interests of the bourgeousie and imperialism, Comrade Nicolae Ceausescu emphasizes with revolutionary conviction: "The unity of the working class and of the trade union movement has been and is the primary requirement of the revolutionary struggle, of the victory of the socialist revolution, of the construction of socialism, of strengthening of the independence , sovereignty of any socialist country."

Through the complexity of the problems treated and the sharpness and current nature of them, the work is a plea for increasing trade unions' contribution to the general activity of our society to promote a scientific, revolutionary, creative and efficient style of work through which the organization can honor its high mission, it itself being historic, entrusted by the party along the road of creating socialism and communism, creating a high material and spiritual standard of living and flourishing of our dear country, the Socialist Republic of Romania.

BRIEFS

CEAUSESCU ATTACK ON PRESS--In his speech on the 50th anniversary of the publication of the Romanian party organ SCINTEIA, the Romanian president Nicolae Ceausescu placed great importance on all the Romanian mass communications media in all stages of socialist construction. At the same time, Ceausescu criticized some phenomena in the work of the press. In his words, there have appeared in the press some cosmopolitan and reactionary ideas which have nothing in common with the struggle for socialist progress. AUTHOR, RETURNEE FROM SOVIET PRISON CAMPS, INTERVIEWED

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1594, 19 Jul 81 pp 22-24

[Article by Milo Gligorijevic based on an interview with Julius Jemeljanovic Baranovski, author of the book "Zatvorska i sibirska sjecanja (1926-1957)" [Prison and Siberian Memoirs (1926-1957)]: "Memories From the Realm of Death"]

[Text] The man we intend to write about is named Julius Jemeljanovic Baranovski, he is a pensioner, a former chief republic forestry inspector in SR [Socialist Republic] Croatia. He is 77 years old and lives on Mljet, where the landscape is something out of the Bible. He might be taken for some retired professor who has a quiet and comfortable life, but appearances are once again deceiving. Baranovski is one of the 13 Yugoslavs who have returned from Stalin's camps. He was 22 years old when his party, the Communist Party of Yugoslavia, sent him to the Soviet Union to go to school. He was in love with the forest, with the Siberian forest especially, he studied forestry, but suddenly he was a sufferer, a camp inmate in Siberia. The reader will rightly say: The irony of fate.

In his book "Zatvorska i sibirska sjecanja," whose first edition was soon sold out, Baranovski says:

"When I finally returned to my old homeland, to Yugoslavia, where I was born, I filed away little scraps of pictures deeply engraved in my memory which were still fresh. Even now I can see the faces of people, the walls, the barbed wire fence, the situation, the objects, the landscape of the Soviet north. I recognize the voices of my interrogators and the noises from the cells. I hear gunfire, commands, shrieks, the barking of dogs, steps, and the whistling of the locomotive of the prisoner train. I can sense the quiet of the magnificent Russian forest near Arkhangelsk, I hear the hubbub of camp life and the Siberian taiga under the snow on the banks of the frozen Yenisey. I hear the crackling of branches and the unforgettable sound of an enormous tree crashing down. I was a forestry engineer, and for long years that was my entire world."

When we sought him out at his domicile on Mljet, at Govedjari, he told us that troublesome nighttime dreams take him back to Siberia even today:

"I dream about fulfilling the plan. I dream about investigations and tortures. I experience it all over again. At times names and people I had forgotten come back to me in a dream."

Twilight of Humanity

On our way to find Julius Jemeljanovic we went through Zagreb, since the man who was the first reader and judge of his memoirs lives in Zagreb. This is Joza Vlahovic, the well-known newsman. He finds that Baranovski's conception of the world has remained just as it was before he went off to the Soviet Union and before his Calvary as a prison inmate. What this means more or less is that this man who was once poor and was born in Prnjavor in Bosnia, has retained and preserved his communist ideals. So, the question that we took with us to Mljet ran like this: How is it possible to survive everything that Baranovski experienced and not become an anticommunist?

The answer, one of the answers, is to be found in Baranovski's very first sentences. He says: "At that time we did not have a life of our own. We were building a life in the interests of the party, the working class and our homeland. I was prepared to go through fire and water for the party. Even in prison we were building the socialism to which we had pledged ourselves."

And the answer, of course, leads to a new question. Is it possible that a man who was convicted without evidence as the member of some invented rightwing organization, as a supposed spy and traitor, whose family has been scattered, who has lost his spouse forever and is reunited with his son Volodja and daughter Valja--after many years of imprisonment--once again in a camp, who has been tortured with beatings and starvation and has spent two long decades behind a wire fence, is it possible that such a man would not lose faith in socialism and would not turn against his original goals?

On page 106 of "Zatvorska i sibirska sjecanja" Baranovski says: "Certain of the officials stole the food allotted to the prisoners and sold it outside the camp. The same thing happened to the clothing and footwear intended for the prisoners. Stealing, beatings and even killings of prisoners, apparently with the support of the camp management, were everyday occurrences accepted as a way of life."

On page 114 he described the special solitary confinement cell block:

"In that cell block, which was built of logs, there were separate cells strengthened with sheet metal. Some people they kept below in a cold pit, they put others in straitjackets and bound their hands and feet, still others they hurled into dark concrete cells in which they could only squat. Certainly the purpose of such punishment was not correction, but simply physical annihilation."

The reader learns that the delinquents and criminals made life miserable for the political prisoners. They became accomplices of the guards and demonstrated their superiority in savage ways. These past masters at fighting and bloody showdowns, for whom human life was too cheap, developed their banditry in the prison, organized drinking bouts and gambling. They even lost in gambling

"their own" wives, women political prisoners compelled to live with them. On the one hand, then, the NKVD with its sinister tricks, and on the other this human dregs, and on yet another disease and hunger--is not all that enough to lose hope and to have one's ideals shattered?

We will also copy down these lines:

"I behaved altogether unnaturally for a man at forced labor in a camp: as though I was free. When for a moment I became aware of things as they were, I saw the sufferings of others, and I aroused myself and deliberately strove to suppress those feelings in myself. Probably I would after all be free one day, it would not go on this way forever, there was justice, just hold on a bit! At that point I could not even suspect that I would have to hold out for all of another 15 years. That is how it is with illusions."

Therapeutic Illusions

Baranovski, who was kept alive by illusions, knows that his book is a grave accusation of Stalinism and appeals for socialism and communism not to be linked to Stalin's name. Stalin, he says, abolished the class of producers and created the class of the bureaucracy.

"Those who built careers on the bones of innocent people were not communists, but criminals. They proclaimed millions of honest people to be criminals and convicted them without proof. Not a single country in the world could survive as many criminals as Stalin produced. But the Soviet Union survived them because they were not criminals, but law-abiding citizens who were building socialism even in the prison. I have written somewhere that the USSR had the highest number of criminals, but no crime. With us here in Yugoslavia it is quite the reverse. We have crime, but no criminals. I was very gratified when Petar Stambolic spoke so harshly as to say that we even award decorations to certain criminals."

Of course, Baranovski does not have such a high opinion of all his cosufferers and fellow inmates. Many sold their souls to the devil to make life easier in the camp. Something about that can be found in the papers which Baranovski sent to the Central Committee of the League of Communists of Yugoslavia. For a time he hoped to relate the Soviet events and details to Tito. And Tito himself on several occasions had a habit of saying at receptions: "We must get together, Julius, we must have a talk." But he was too busy and ill to manage it. Baranovski has now sat down and written what he did not succeed in telling to Josip Broz. He has written thousands of pages. Descriptions of his meetings with well-known figures in the working class and communist movement are a particularly interesting feature of these memoirs. He knew Ivan Krndelj, Vladimir Copic, Grgur Vujovic, Bozidar Maslaric and Paja Marganovic. He was well acquainted with Nikita Sergeyevich Khrushchev from the time when the two of them were secretaries of party committees of schools of the university in Moscow. In 1957, when he was rehabilitated, Baranovski had to part from his companion in the camp, his spouse Olga. She would have had to officially renounce her daughter Nadja if he was to be able to bring her to Yugoslavia. Then Tito appealed to

Khrushchev to give Olga a permit to come to Yugoslavia. Did Nikita Sergeyevich remember at that time his student days and Julius Baranovski, his former comrade?

Baranovski also knew Nadezhda Aliluyeva, Stalin's wife, and Zhemchuzhina, Molotov's wife. Aliluyeva, as is well known, was killed by her husband, the boss in the Kremlin. And Molotov had his wife put behind bars. "She lived to see her rehabilitation under Khrushchev," Baranovski says, "and she died soon thereafter." To go on, he knew Radek well, they were together in exile in Voronezh. He also knew Dimitrov. He wrote letters to the first man of the Comintern, just like thousands and hundreds of thousands of other arrestees.

"We wrote to him that we were not seeking any sort of mercy. We wanted the charges to be proved. We reminded him that he himself had had a fair trial in fascis Germany. We said: Let us be given a fair trial here in a socialist country. There was no answer from Dimitrov. I think he himself was overwhelmed with fear of reprisal."

When a story goes on paper, it behaves like a river with many tributaries and backwaters. Baranovski now describes the columns of arrestees and the heartlessness of the NKVD people. How did the suspicions and investigations begin?

"I was in Kalinin, where I was a member of the city committee and was a lecturer on party history. An order came down to form special departments, intelligence groups, in all institutions. A system was created in which everyone was keeping watch on everyone else. The times were such that today someone could point even to the head of the NKVD as an enemy, and the next day he himself might become the victim of someone's fabrication."

Foreigners, to a man, one after the other, and emigres motivated by economic incentives were the first to be attacked. Later the suspicion grew by chain reaction into a kind of hysteria.

At this point the story has to go into parentheses and the fate of the economically motivated emigres explained. There were many of them who went to the Soviet Union when the Comintern was appealing for experts and promised them good wages in rubles and half of the money deposited in dollars until their departure from the Soviet Union. Many went, many fled and many stayed. Those who did stay got the camp for their pains. They were never to see the deposited dollars.

Among the 13 Yugoslavs returning from Siberia, Baranovski said, only 3 were charged with political crimes. Which three? Or: Which two besides him? For some reason the question is passed over in silence. But Baranovski repeats that the fate of the political prisoners was far worse. That fate is indicated by the following lines from "Zatvorska i sibirska sjecanja":

"I was not afraid of death itself. But I was horrified by the thought of its hypocritical preparation through a new investigation, tortures, abuse, curses, beatings, assembly-line interrogations, starvation, canker sores.... Tortured

to the extreme, I finally fell asleep, but sleep did not calm me down. Several times I was awakened in fright by my own screams."

Between descriptions of this kind Baranovski has inserted sketches of the heartless moneygrubbers, informers, scoundrels, thieves and cold-blooded killers, but also a small procession of noble people who occasionally made his hell more bearable. There is a description in the book of a conversation he had with Lieutenant Colonel Didorenko, an NKVD official, which is unforgettable. "We talked without witnesses, man to man.... He spoke with such scorn about the criminals in the NKVD that for a moment I was afraid that this might be some new provocation."

Lieutenant Colonel Didorenko was the head of an oblast NKVD administration somewhere in the Ukraine at the time when the mass arrests began in 1937. He was not zealous in his work and had to take a lower position in some camp in the Far North. It was then that his travels would crisscross those of Baranovski. He was also to appear in a time of need, as a rescuer. Baranovski went through seven investigations, he was convicted four times without evidence, once being sentenced to death. Didorenko's hand was also behind the reduction of that death sentence to life imprisonment.

Baranovski also remembers Lieutenant Kuznetsov, head of the Mostovitsa camp, for the good he did. There was hunger, he says, the camp inmates were eating grass and dying like flies. He proposed to Kuznetsov that livestock be purchased from the peasants for the money of the camp inmates and that some old buildings be patched up. Kuznetsov assented and then horses began to arrive which had been purchased for a trifle. Life returned to the camp. But soon came Belayev, one of the torturers, and he raised a tremendous fuss. A new investigation, a new charge: Baranovski had been working against the interests of the Soviet state. He had deliberately attempted to impoverish households in order to undermine their economy and destroy agriculture.

Baranovski says:

"When a commission came to the camp, its members asked Kuznetsov: Why aren't your people dying? He told them frankly: People are not dying in my camp because the one who saved them is dying."

Didorenko and Kuznetsov, and then the freeman Roginskiy, stand as in Shakespeare's dramas against the gaping darkness of Belayev, Dubasov, Korobitsin, that Korobitsin, Baranovski says, who in cold blood and with his own hand killed a coachman, a young man who had only begun to live.

We asked him what should have been done to make life in the camp more supportable?

"In the Gulag system they were constantly thinking about deriving benefit from the labor that was expended. Thus professional competence often saved lives. And strength, physical endurance. People died who did not have professional competence or strength and who did not want to become fingermen. I was saved by

my knowledge and by my consistency. I received 27 certificates for good work in the camps, and when I came to Yugoslavia I packed them all up and said: Here you are, I don't need them, I am making a present of them to you."

How To Recognize an Adversary

And in Yugoslavia, Baranovski says, he came upon new troubles, he became ill.

"I was a strange sight in wide Russian trousers, with a lock of hair that had turned white overnight, after my trial and sentencing to death by firing squad. When I started from Siberia it was 64° below zero, and in Belgrade it was 38° above. I somehow seemed to lose my strength all at once, I could no longer walk. And my child became ill: It went to the children's home, and I went to the hospital. Zvonko Brkic came to see me, other comrades came, and the doctors constantly said that they must cut off my legs, that there was no chance for my legs. They said: He has no muscles, he is standing on the bones. And I began to do exercises persistently, every day, and there, now I can walk, but had I listened to the doctors, I would have lost my legs."

The remembrance of Brkic, Marijan Cvetkovic, Karl Mrazovic, Djuro Salaj and many other officials who took care of him, of Kardelj who once had a long conversation with him, of Tito who personally presented a commemoration to him, to him alone of all the returnees, cannot erase the unpleasant trace of a brief sentence which he remembered from a time when they were talking in Zagreb about his being appointed to a particular important post and when someone less well known than all those mentioned, said: "We have our own people." Is it possible that even here in Yugoslavia, his homeland, he is a foreigner? Is it possible that his Ukrainian origin, or perhaps the circumstance that he was in Siberia, makes him suspicious?

Baranovski knows that he turned some people against him. They did not respect his sincerity, they did not understand his enthusiasm. When the forest on Mljet was burning, he spent 2 nights out in the open going from door to door, calling out people to fight the fire, but people said: That is not our district, that is Babino Polje.

"I think that this is one country and that a single system, socialism, should be built in it."

It is time that we noted down the views of Julius Jemeljanovic Baranovski concerning the development of socialism. He says that it was easy to reflect and to act when Marxism-Leninism and Social Democracy existed with the same goals and different programs. Now there are eight different Marxisms, Stalinist, Maotsetungist, Trotskyist.... We have become fragmented, we have quarreled, we are more involved with criticizing one another than with the destiny of the working class.

Baranovski speaks about the days of his youth and says that communists always wore distinguishing marks, a red tie, and then when that mark was discovered, a kerchief, a bamboo cane.... And they could easily detect the fellow fighter and

the opponent. Now, he said, that is unfeasible. Now you don't know who you're fighting against. There is constant talk about unnamed people who are at fault, but whenever those at fault are unnamed, the blame falls on the government and the party.

Olga Baranovski, Julius' spouse, says that fighters went into revolutions with ideals. And they died. Behind them came people most of them of a different stamp, and that explains the wandering and the stumbling.

In his eyes, which are the color of a bright sky, there is firm belief in the truthfulness of the words he utters.

A Terrible Joy

Does this mean that everything would have happened differently in the Soviet Union if there had been no Stalin? The question contains an obvious doubt that it can be answered in the affirmative, but the Baranovskis say: "Yes. The people," Julius Jemeljanovic says, "raised Lenin up on a pedestal like a god, since a god on earth was needed for current politics. And when Lenin died, some new god, a new messiah, had to be chosen. Stalin pledged that he would carry out Lenin's policy, but he committed the gravest crimes."

Regarding these simplifications as wonderful coming from a man with such a biography, we asked ourselves once again: How is it possible to see so much evil in a system which is called socialist and which says that it is headed toward communism and not abandon the idea of communism and socialism?

Baranovski says with assurance that a communist who easily changes his ideological clothes has never been a communist at all. And that is a complete answer. Baranovski says that there were barely 1,000 people in the Communist Party of Yugoslavia when he became a member of it. Those 1,000 never even dreamed that they would bring down the state, but they hoped that some good would come about through their death. And they were prepared, truly prepared, to undertake self-sacrifice.

End of the conversation. If there were not the piece of paper "recording" this conversation, if there were not a book entitled "Zatvorska i sibirska sjecanja," we might think that this had been a conversation with heroes from Maxim Gorky.

KOSOVO HISTORIAN HADRI CRITICIZED FOR CHAUVINISM

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1596, 2 Aug 81 pp 33-34

[Article by Milos Misovic: "History According to Hadri"]

[Text] Speaking at a press conference in the rector's office of Kosovo University in Pristina last Monday, Redzep Gasi, chairman of the university action committee of the League of Communists, said that differentiation in this higher educational institution was under way, but that many important jobs remained. There is a need to shed light on the problems of indoctrination with nationalism and irredentism and then of national romanticism and its influence on historical science.

In that context he also mentioned the fact that Dr Ali Hadri, a man whose name has recently been associated most frequently with a biased and nationalistic interpretation of history, had been punished with the last party admonition before expulsion for, as he put it, opportunism and passivity.

Ali Hadri, a Kosovo historian, professor and member of the academy, appeared on the academic scene back in the seventies, when he defended his doctoral thesis at Pristina University on the topic: "The National Liberation Movement in Kosovo 1941-1945." Though even before that he had been concerned with history (his master's thesis was entitled "The Prizren League"), his dizzying ascent began after he received his academic title. He then became the principal writer of Kosovo history, a professor at the School of Philosophy, director of the Bureau for Kosovo History, and after several years a member of the Kosovo Academy of Sciences and Arts as well.

Perhaps it would have not been unusual for a young historian to capture the highest scholarly title, accompanied by diverse public recognition, in what was like an assault if strange interpretations of historical facts and of the past of the Serbian and Albanian peoples in Kosovo had not been detected in his activity.

Seven years ago Dr Hasan Haleshi, professor at the School of Philosophy in Pristina, sent a letter to leading figures and institutions in Kosovo and alerted them that the Professors Ali Hadri and Skender Rizaj were committing "obvious falsifications of past history" and were thereby "directly furthering misguided

training of young historians, whose harmful consequences are perhaps invisible today, but will in future be ever stronger." Illustrating the way Hadri and Rizaj were falsifying history with a number of examples, Professor Haleshi also referred to their "scientific discovery" that there was no exodus of Serbs from Kosovo.

Perhaps it is to Professor Haleshi's credit, since he is an Albanian from Kosovo, that he was the first to raise his voice against the falsification of historical facts, but it cannot be regarded as politically correct that those to whom the scholar turned and called upon to take appropriate steps, did nothing. On the contrary, Ali Hadri and Skender Rizaj, with the tacit consent of political bodies and with the financial aid of the relevant institutions, continued to "shape" the history of Kosovo according to their nationalistic criterion. Incidentally, let us look at a few other remarks which Professor Haleshi made in the letter we have mentioned:

"Since it is a question of distorting facts which are already well known, of the most vulgar falsifications, I reacted out of scholarly duty and my conscience as a professor--I wrote an article and sent it to the journal PERPARIMI, since that is where S. Rizaj published the article in which he falsified a number of scholarly truths, with implications for relations among the nationalities as well. But, though I sent the article in 8 months ago, so far it not only has not been published, but the editors have not seen fit to even inform me whether they will publish it. So no other conclusion can be drawn except that the editors of PERPARIMI take the same position and stand behind the views of S. Rizaj."

The Scholarly and Nationalistic Climate

"It is very symptomatic," Haleshi went on to write, "that S. Rizaj, after presenting his 'scientific' discoveries in writing, was elected head of the History Department of the School of Philosophy in Pristina, was elected president of the Society of Kosovo Historians, was delegated as a member of the editorial board of the history journal, was elected editor in chief and responsible editor of ALBANOLOSKA ISTRAZIVANJA, received several thousand dollars to go to London to conduct some sort of research, though he cannot speak a single correct sentence in English. I cannot help but place all this in a logical relationship--the thing to do is to falsify history and adopt primitive and nationalistic positions, for all doors to be opened unto you."

It needs no great research effort to ascertain the degree to which the writing of history in Kosovo is burdened with ethnic romanticism and Great Albanian nationalism, of which Ali Hadri, member of the academy, is a spokesman. To show that this is not a mere hypothesis, let us see how this scholar is represented in an official document.

At the end of May last year the Committee for the AVNOJ [Antifascist Council of the National Liberation of Yugoslavia] Prize received a joint nomination of the Kosovo Academy of Sciences and Arts and the School of Philosophy in Pristina to award this high recognition to Ali Hadri, member of the academy. The extensive substantiation of the nomination included the following points:

i. that Hadri, member of the academy, has elucidated a number of scientific problems in numerous scholarly works, relying on Marxist thought, which gives his writings particular importance,

ii. that he occupies an important place among the most distinguished historians of the National Liberation War and socialist revolution,

iii. that he is among the most distinguished Albanian scholars, not only in Yugoslavia,

iv. that in performance of his lengthy scholarly work, in publishing numerous writings of exceptional scholarly interest, in training scholars, especially in the field of historical science, he has laid the foundations for the solid writing of history in Kosovo in the spirit of historical materialism, which is contributing to the scientific study and treatment of this province's history, and at the same time the history of the nationalities and ethnic minorities of Yugoslavia and the history of the LCY,

v. that as a teacher he has made an exceptional contribution to the training of historians who serve as an example to the entire country.

Thus this document portrays the image of Academician Hadri, decorated with high orders and recognition, who lacked only the AVNOJ Prize. Those who understand history a bit better, think differently about this scholar.

Uncritical Acceptance of Albanian Views

Ali Hadri demonstrated his "Marxist interpretation" of history in his "Critical Essay on the Memoirs of Svetozar Vukmanovic Tempo," published in 1972 in the journal KOSOVO. On that occasion he presented a number of inaccurate and, from the standpoint of the writing of Yugoslav history, unacceptable--judgments, and among them particular attention was attracted by his interpretation of the role of the delegate of the Communist Party of Yugoslavia in establishing the Communist Party of Albania.

"It seems to us that the time has come for the Yugoslav writing of history to treat correctly as one of the elements, the external factors, the role of the delegate of the Communist Party of Yugoslavia with respect to the Communist Party of Albania, and to reject the opinion of Svetozar Vukmanovic Tempo (which is not his alone), who has raised the work of the delegate of the Communist Party of Yugoslavia concerning the Communist Party of Albania to the level of megalomania, which is not based on historical truth."

This and a number of other judgments presented in Hadri's "Critical Essay ..." led Gen Petar Brajovic, at that time head of the Institute of Military History, who incidentally fought in the Partisans from 1941 and was a well-known Partisan commander from Kosovo, to subject Hadri's judgments to harsh criticism.

"Ali Hadri," Brajovic wrote in March 1974, "blames Tempo for not having adapted his memoirs to Albanian documents, especially to the 'History of the Communist

Party of Albania,' to which he refers most frequently. It is strange that the author unreservedly concurs in the judgment of the Albanian leadership that that 'history' is its guide and that he is offering these views to Yugoslav historiography."

General Brajovic sent an extensive and documented analysis of Hadri's views to the leaders in Kosovo: Mahmut Bakali, Dzavid Nimani and Mihail Zvicer, along with the remark that he was surprised that no one had taken exception to this writing of Hadri's.

In the meantime Svetozar Vukmanovic Tempo, in a very fully documented text, himself contested Hadri's assertions, but the publication of Tempo's response was placed under an embargo by the Executive Committee of the Presidium of the Central Committee of the League of Communists of Kosovo because it allegedly offended fighters from Kosovo, both living and dead.

When it became evident that Dr Hadri had gone too far, the Executive Committee of the Presidium of the Provincial Committee of the League of Communists of Kosovo created a commission whose task was to examine his criticism of Tempo's memoirs. The commission ascertained that Ali Hadri had uncritically taken over the judgments of the Albanian Workers' Party "which came about in a period of an ideological and political offensive against the League of Communists of Yugoslavia and against our country from Cominform positions," without taking exception to them. For that reason the Executive Committee of the Presidium of the Provincial Committee of the League of Communists of Kosovo took exception to Hadri's views internally and recommended to the basic organization of the League of Communists at the School of Philosophy that it ascertained the degree of his political responsibility for that kind of writing.

The Target of Hadri's Criticism

However, when a debate was held in the party organization on this matter, individuals praised Dr Hadri so highly that one of the participants asked at one point whether they were debating nomination for a prize or establishment of political responsibility. In that kind of atmosphere Hadri was given only a warning, which did not alter by one whit his firm nationalistic commitment.

The chronicle "Djakovica in the National Liberation Movement 1941-1945," which was written by Dr Hadri and was published by the Institute for Kosovo History, was an occasion for new criticism, warnings and disavowals. Professor Haleshi sharply criticized this book, which is full of historical falsehoods and nationalistic coloring, in an article which the journal OBELEZJA published in No 3-4, 1976, after Haleshi's death. Unfortunately, it all ended with his being warned that "he must not pass lightly" over these historical falsehoods, since "they threaten to become a bad habit which could have (and indeed today does have) very serious repercussions."

No one did anything even after the documented critical remark made by Col Mile Djesarevic, a partisan fighter from 1941 from Djakovica, who called upon the war veterans' organization of Djakovica to disavow Hadri's distorted presentation of

the truth. Instead of that, in last year's nomination for Hadri to be awarded the AVNOJ Prize, the chronicle "Djakovica in the National Liberation Movement 1941-1945" is presented as one of the "major works of Academician Hadri."

If one is to understand more easily the atmosphere in which Dr Hadri does what he does, it is worth looking at one other observation of Professor Haleshi:

"We should emphasize that we here in Kosovo absolutely lack an advanced criticism of the writing of history, which is clannish, nepotistic and panegyric, and its purpose is to praise and glorify the writings of particular authors, though often they do not meet even formal scholarly conditions. On the other hand, some historians have an almost deep-rooted opinion that the purpose of Albanian historiography in Kosovo is to attack every book published in Belgrade or elsewhere in order to show how maliciously the history of the Albanian people has been treated. As an example we will cite the book of Ali Hadri entitled 'Kritika historiografska' [Historiographic Criticism] in which three-fourths are taken up by criticism of particular Yugoslav writings which have gone through three or four editions."

Professor Haleshi pointed out that Ali Hadri has on four occasions criticized the views presented by M. Garashanin, member of the academy, in "Istorija crnogorskog naroda" [History of the Montenegrin People]. That is the number of times his criticism "History of Yugoslavia" as told by Djirkovic, Bozic, Ekmecic and Dedijer has been published. These critical essays, which were not published in journals alone, but also as a serialized feature in the newspaper RILINDJA, would arouse no suspicions if it were not that Ali Hadri's critical inclination is equally directed toward all quarters. But he did not deem it necessary to write "a single critical word concerning the numerous distortions and falsifications of historical facts presented in 'Istorija albanskog naroda' [History of the Albanian People], 'Istorija Albanske partije rada' [History of the Albanian Workers' Party], and many other Albanian publications," Professor Haleshi wrote in the article we have mentioned.

When this prehistory is carefully examined, it seems that the party punishment pronounced against Hadri could have been invoked for an altogether definite and clearly oriented activity rather than for passivity.

REGULATION ON ISSUING TRAVEL, OTHER DOCUMENTS TO FOREIGNERS

Belgrade SLUZBENI LIST SFRJ in Serbo-Croatian 14 Aug 81 pp 1153-1160

[Regulation issued by the federal secretary for internal affairs in Belgrade on 10 June 1981; please note that 6.5 pages of forms included in this text have not been translated: "Regulation on the Manner of Issuance of Travel and Other Documents and Visas to Foreign Nationals and on the Forms of Those Documents and Visas"]

[Text] On the basis of Article 99 of the Law on Movement and Sojourn of Foreign Nationals (SLUZBENI LIST SFRJ, No 56, 1980), the federal secretary for internal affairs prescribes the following

REGULATION
ON THE MANNER OF ISSUANCE OF TRAVEL AND OTHER DOCUMENTS AND VISAS TO FOREIGN NATIONALS AND ON THE FORMS OF THOSE DOCUMENTS AND VISAS

I. General Provisions

Article 1

This regulation prescribes the following:

1) the manner of issuance of travel and other documents and visas to foreign nationals, the manner of approval of temporary residence, the manner of approval of permanent settlement, the manner of recognition of refugee status, and the manner of notification of commencement and termination of domicile and commencement of temporary residence;

2) the forms of the alien travel permit, tourist passes, the alien identity card, the permanent settlement permit, the temporary residence permit, and the visa issued to foreign nationals, as well as the forms of the applications for their issuance;

3) the form on which notification shall be given of commencement and termination of permanent residence and commencement of temporary residence and the forms of the records which are to be kept under the provisions of the Law on the Movement and Sojourn of Foreign Nationals by organizations of associated labor, other

self-managing organizations and individuals offering lodgings to foreign nationals;

4) the manner in which records shall be kept and notification given of foreign nationals residing permanently or temporarily on the territory of the Socialist Federal Republic of Yugoslavia or crossing the territory of the Socialist Federal Republic of Yugoslavia (hereafter the "SFRY") and on travel documents and visas issued to foreign nationals by the competent agencies in the republic or autonomous province;

5) the manner in which the register of aliens' associations and other registers of aliens shall be kept.

Article 2

Upon receiving an application for issuance of a travel document or visa, a temporary residence permit, a permanent settlement permit, recognition of the right of asylum, recognition of refugee status or the issuance of an alien identity card, the official authorized to conduct procedure (hereafter the "official") shall establish the identity of the foreigner who has submitted the application and shall ascertain whether the travel or other document submitted as evidence of his identity is in order and valid, whether the application has been filled out accurately and legibly, and whether the prescribed appendices have been submitted along with the application.

The application referred to in Paragraph 1 of this article shall be typed or printed, if filled out by hand.

Article 3

The application for issuance of a travel document or visa, temporary residence permit, permanent settlement permit, recognition of the right of asylum, recognition of refugee status and issuance of an alien identity card shall as a rule be filed by the foreign national seeking issuance of the document or visa or permanent settlement permit or recognition of refugee status or the right of asylum.

An application for issuance of a tourist pass or visa may also be submitted by the leader of a group of foreign nationals.

Article 4

The official ruling on the application for issuance of a travel document or visa may require that the applicant furnish more detailed grounds for his application and also furnish other information related to the application.

II. Issuance of Travel and Other Documents and Visas

1. Issuance of Travel Documents

Article 5

The refugee travel document, the stateless person travel document, and the alien travel permit shall be applied for in writing. The application shall be submitted on Form No 1 [not included in this translation].

The application shall be accompanied by two photographs 4.5 x 6 cm in size which faithfully portray the person seeking issuance of the document.

The official receiving the application for issuance of the refugee travel document shall ask the applicant to show the decision of the competent agency recognizing his refugee status.

In ruling on an application for issuance of the stateless person travel document the official shall make a check as to whether the applicant or person to whom the application pertains is the national of some foreign state.

Article 6

The period within which the refugee or stateless person may return to the SFRY shall also be entered in the refugee travel document and stateless person travel document.

The phrase "not entitled to return" shall be entered in the stateless person travel document issued to a foreign national who is leaving the SFRY.

Article 7

The form of the alien travel permit shall be 10 x 14.5 cm in size and shall contain 20 numbered pages.

The text of the form of the alien travel permit shall be printed in one of the languages of the nationalities of Yugoslavia and also in French.

The alien travel permit shall be issued on Form No 2 [not included in this translation].

Article 8

The period of validity of the alien travel permit shall be as follows:

1) up to 1 year--to an alien who has been granted the right of asylum in the SFRY, for travel abroad;

2) up to 3 months--to a foreign national who has obtained protection of the SFRY, to come to the SFRY;

3) up to 6 months--to a foreign national who has been released from SFRY citizenship, for departure abroad;

4) up to 3 months--to a foreign national who has lost a foreign travel document or has been left without it in some other manner, when the state of which he is a national does not have its diplomatic or consular mission in the SFRY nor are its interests represented by another state, to depart abroad;

5) up to 3 months--to an alien who while abroad has lost his alien travel document issued by the competent agency of the SFRY, to return to the SFRY.

The phrase "not entitled to return" shall be entered in the alien travel permit issued to an alien who is emigrating from the SFRY and in the alien travel permit issued to the foreign national referred to in Subparagraph 4 of Paragraph 1 of this article.

Article 9

The following shall be appended to the application for issuance of the alien travel permit:

1) by an alien who has been granted the right of asylum--a copy of the decision granting right of asylum in the SFRY;

2) by a foreign national who has been released from citizenship of the SFRY--a copy of the decision on release from citizenship of the SFRY;

3) by a foreign national who has lost or in some other manner been left without his travel document, when the state of which he is a national does not have its own diplomatic or consular mission in the SFRY nor are its interests represented by another state--a document certifying notification of the loss or disappearance of the travel document.

Article 10

Data shall be entered in the refugee travel document, stateless person travel document and alien travel permit with a special typewriter.

An embossed stamp shall be applied to the travel documents referred to in Paragraph 1 of this article, and photographs shall be stapled.

2. Issuance of the Tourist Pass

Article 11

As a rule application shall be made orally for issuance of the tourist pass.

A foreign national seeking issuance of a tourist pass must show to the official a valid national travel document or other document which is proof of identity.

Article 12

For issuance of a tourist pass to a group of foreign nationals on an excursion in international maritime, river or air traffic the leader of the group shall submit two copies of the list of passengers certified by the captain of the vessel or aircraft--and each passenger shall submit his valid national travel document or other document proving identity.

After verifying the identity of the passengers, the official shall certify both copies of the passenger list by applying the prescribed stamp for certification of the crossing of the border and shall sign both copies, one of which he shall retain, while he shall return the other to the leader of the group and issue tourist passes to members of the group.

Article 13

The foreign national shall deliver the tourist pass to the official of the agency competent for monitoring crossing of the national border upon departure from the SFRY.

A foreign national who has entered the SFRY on a tourist pass, should the competent agency in the SFRY issue him a temporary residence permit or visa, shall return the tourist pass to the agency which issued him the permit or visa.

The tourist pass shall be issued on Form No 3 [not included in this translation].

3. Issuance of the Alien Identity Card

Article 14

Application for the alien identity card shall be made in writing. The application shall be submitted on Form No 4 [not included in this translation].

Two photographs 3 x 4 cm in size which faithfully portray the person for whom the alien identity card is being sought shall be appended to the application referred to in Paragraph 1 of this article.

The official may require the applicant for issuance of an alien identity card to show the following: permit for permanent settlement in the SFRY or approval of recognition of refugee status or the right of asylum or travel document or abstract from the birth records or a prior alien identity card or other document.

The alien identity card shall be issued on Form No 5 [not included in this translation].

Article 15

The words "permanently settled alien" shall be entered under the heading "Residing in the SFRY as ..." in the alien identity card being issued to an alien who

has been granted permanent settlement or the right of asylum and who has settled in the SFRY.

The word "refugee" shall be entered under the heading "Residing in the SFRY as ..." in the alien identity card being issued to an alien who has been granted refugee status.

The grounds of residence (academic study, specialized training, marriage to a Yugoslav national, etc.) shall be entered under the heading "Residing in the SFRY as ..." in the alien identity card being issued to the alien referred to in Article 84 of the Law on Movement and Sojourn of Foreign Nationals.

Article 16

Upon leaving the SFRY an alien who has been issued an alien identity card must deliver the alien identity card to the agency competent to issue the identity card at the place of his permanent or temporary residence in the SFRY.

Article 17

Alien identity cards which have been replaced, confiscated or returned shall be destroyed in the presence of a commission. An official record shall be kept of the destruction of alien identity cards.

If an alien identity card has been replaced or confiscated by an agency which did not issue that alien identity card, it shall so inform the agency which did issue the alien identity card for purposes of deletion from the records.

4. Notification of Loss or Disappearance of a Travel Document, an Alien Identity Card or Other Document Proving Identity

Article 18

In the notification made to the competent agency of the disappearance or loss of a travel document, alien identity card or other document proving identity the foreign national must state the following: the circumstances under which he lost the document or under which the document disappeared; the type of document, the name of the agency which issued the document, and, if possible, the number of the document as well; the circumstances, time and place when the document was last used: place of temporary or permanent residence in the SFRY; the border crossing and time of his entry into the SFRY and the conveyance used, and also other circumstances and facts which might make it easier to find the lost or vanished document.

When reporting the disappearance or loss of a travel document, alien identity card or other document proving identity the foreign national shall show to the official of the agency to whom the loss or disappearance of the document is being reported some other document by which the official can establish his identity.

Article 19

The official of the agency to which a foreigner has reported disappearance or loss of a travel document, alien identity card or other document proving identity shall establish the identity of the foreigner and the legality of his sojourn in the SFRY and shall check the truthfulness of the facts stated in the report. Note shall be taken on establishment of the foreigner's identity, on ascertainment of the legality of his sojourn in the SFRY and on the check into the facts stated in the report.

If he cannot immediately establish the foreigner's identity and the legality of his sojourn in the SFRY and cannot immediately verify the truthfulness of the statements in the report, the official referred to in Paragraph 1 of this article shall order the foreigner to remain at the place where he has reported the loss or disappearance of the travel document, alien identity card or other document proving identity until his identity is established.

Article 20

If a foreign national has reported the loss or disappearance of an alien travel document issued by the competent agency of the SFRY, an alien identity card or tourist pass, the agency to which the loss or disappearance has been reported shall request from the agency which issued the lost or vanished travel document notice as to whether that agency issued the travel document or alien identity card or tourist pass whose loss or disappearance has been reported.

The competent agency to which the disappearance or loss of a travel document issued by a competent agency of the SFRY or alien identity card has been reported, after ascertaining the foreigner's identity, the legality of his residence in the SFRY and the truthfulness of the facts stated in the report, shall issue a document certifying notification of the loss or disappearance of the travel document and shall instruct him to apply to the competent agency of the SFRY for issuance of a new travel document or alien identity card or shall issue him the document if it is competent to issue it.

The competent agency to whom a foreigner has reported the loss or disappearance of a tourist pass shall issue the foreigner a certificate certifying notification of the loss or disappearance of the tourist pass and shall instruct him to apply to the agency which issued the tourist pass for issuance of a new tourist pass or shall instruct him to apply to the diplomatic or consular mission of the state of which he is a national for issuance of a travel document.

Article 21

The competent agency to which the disappearance or loss of a foreign travel document has been reported, upon establishing the foreigner's identity, the legality of his residence and the truthfulness of the facts stated in the report, shall issue to the foreigner a document certifying report of the loss or disappearance of the travel document and shall instruct him to apply to the diplomatic or consular mission of the country of which he is a national or other

foreign diplomatic or consular mission representing its interests for the issuance of a travel document.

The certificate certifying notification of the loss or disappearance of a foreign travel document shall serve the foreigner in traveling to the foreign diplomatic or consular mission and for sojourn at the place where the diplomatic or consular mission is located until he obtains a travel document.

Article 22

If during proceedings related to report of the loss or disappearance of a travel document, alien identity card or other document proving identity the vanished or lost document is found, it shall be delivered to the foreigner who reported its loss or disappearance, and procedures shall be terminated.

A foreign travel document which has been found and which could not be delivered to the foreigner named therein shall be delivered to the Federal Secretariat for Internal Affairs for delivery to the diplomatic or consular mission of the foreign state which issued that document.

A document for a foreign national which has been found and which was issued by the competent agency of the SFRY, if it could not be delivered to the foreigner named therein, shall be delivered to the agency which issued that document.

Article 23

Should a foreign national find a travel document issued by the competent agency of the SFRY, alien identity card or other document proving identity which he had lost or which had disappeared, he shall turn it over for cancellation to the agency which issued him another such document.

If a foreigner finds a foreign travel document which he had lost and which contains a valid Yugoslav visa, he shall submit it for cancellation of the Yugoslav visa to the agency which issued him a visa on a new travel document.

5. Issuance of Visas

Article 24

A foreign national shall apply for a visa in writing. The application shall be filed on Form No 6 [not included in this translation].

As an exception to the provision of Paragraph 1 of this article, the agency in the republic or autonomous province competent to monitor the crossing of the border may issue a visa to a foreigner on the basis of oral application.

The foreigner shall append to his application for issuance of a visa the travel document for which issuance of the visa is sought.

A foreigner who in the SFRY has lost his travel document or been left without it in some other manner, when applying for issuance of a visa on a new travel document, must append to that application the document certifying notification of the loss or disappearance of the travel document.

The foreigner referred to in Paragraph 3 of this article may submit application for issuance of the visa to the nearest agency in the republic or autonomous province competent for issuance of visas to foreigners.

Article 25

The official of the agency competent for issuance of visas to foreigners shall verify that the travel document on which the foreigner seeks issuance of a visa is in order and valid and shall check whether there are legal impediments to issuance of a visa.

The visa shall be issued by application of the prescribed stamp in the foreigner's travel document and shall be certified by the round seal and signature of the official of the agency issuing the visa.

The visa shall indicate the type of visa and shall state whether the visa is being issued for one, more than one or an unlimited number of trips, shall state the period of the visa's validity and shall give the date and place of its issuance. The number of the register of issued visas may also be entered in the visa.

The stamp of the visa is prescribed in Form No 7 [not included in this translation]. The visa stamp shall have its own number.

Article 26

Visas issued to foreigners may be of the following types:

1) entry-exit--for entry into the SFRY and return abroad;

2) exit-entry--for departure abroad and return to the SFRY;

3) exit--for departure from the SFRY;

4) transit--for crossing the territory of the SFRY.

Article 27

Visas issued by the agency in the republic or autonomous province competent for monitoring the crossing of the border shall be issued with the following period of validity:

1) to a foreigner to whom a diplomatic or consular mission of the SFRY has issued a transit visa, when he is filing application for a visa for temporary residence--up to 3 months;

2) to a foreigner leaving the SFRY after expiration of the visa with which he entered the SFRY--up to 3 days;

3) to a foreigner who is embarking in a Yugoslav seaport or riverport to return to his country or to depart for some other foreign country--up to 7 days.

A transit visa issued by the agency referred to in Paragraph 1 of this article shall be issued for a period of validity up to 7 days.

Article 28

The agency in the republic or autonomous province competent for monitoring the crossing of the border may, in the context of the provision of Article 22, Paragraph 2, of the Law on Movement and Sojourn of Foreign Nationals, issue a visa to a national of a state with which the SFRY maintains diplomatic relations or who is coming to the SFRY for a tourist visit or who is crossing the territory of the SFRY.

The visa referred to in Paragraph 1 of this article shall be issued only on a national travel document, for a single trip and with a period of validity up to 3 months.

Article 29

Visas issued by the agency in the republic or autonomous province shall be issued with the following period of validity:

1) to a foreigner leaving the SFRY after expiration of the validity of his visa--up to 7 days;

2) to a foreigner who has been granted permanent settlement in the SFRY and who is seeking a visa for departure abroad and return to the SFRY--up to 1 year;

3) to a foreigner who during temporary residence in the SFRY applies for a visa to depart abroad--with a period of validity which may not be longer than the period of validity of his temporary residence permit;

4) to the foreigner referred to in Article 9, Paragraph 2, of the Law on Movement and Sojourn of Foreign Nationals--up to 6 months;

5) to a foreigner emigrating from the SFRY--up to 6 months;

6) to a foreigner who in the SFRY has lost his travel document or been left without it in some other manner and who is leaving the SFRY with a new travel document or alien travel permit--up to 3 months;

7) to a foreigner who has been issued an alien travel permit to emigrate from the SFRY--up to 6 months;

8) to a foreigner who has entered the SFRY on a tourist pass and the diplomatic or consular mission of the state of which he is a national has issued him a travel document--up to 3 months.

Article 30

The visa shall be canceled by stamping over the visa the word "CANCELED" in the foreigner's travel document.

III. Manner of Approval of Temporary Residence

Article 31

Temporary residence in the SFRY shall be permitted on the basis of the foreigner's written application. The application shall be submitted on Form No 8 [not included in this translation].

Application for extension of temporary residence shall be made before expiration of the period of temporary residence previously granted.

Article 32

A foreigner applying for the granting of temporary residence to attend school shall append to his application for issuance of the permit a certificate that he has the status of a pupil or fulltime student in an appropriate school or university in the SFRY.

Article 33

A foreign applying for a temporary residence permit for purposes of specialized study, training or practice shall append to his application for the permit the certificate of the organization of associated labor, other self-managing organization or community, or government agency that his specialized study, training or practice in that organization or community or agency has been approved.

Article 34

A foreign national applying for a temporary residence permit for scientific research must append to his application the permit of the competent agency in the republic or autonomous province that he may conduct scientific research in the SFRY.

Article 35

A foreigner seeking a temporary residence permit for purposes of employment must append to his application the statement of the organization or individual referred to in Article 1 of the Law on Conditions for Establishment of the Employment Relation With Foreign Nationals (SLUZBENI LIST SFRJ, No 11, 1978) to the effect that it will establish an employment relation with the foreign national, if the foreigner obtains the permission of the competent agency to establish the employment relation.

Article 36

A foreigner applying for a temporary residence permit to carry on a particular professional activity requiring a special license shall append to his application the license for carrying on the particular professional activity which has been issued by the competent agency of the SFRY.

Article 37

When application for the temporary residence permit of the foreigner referred to in Articles 32 through 36 of this regulation is made by an organization of associated labor, other self-managing organization or community or government agency, the application shall also state the time and place of the foreigner's schooling, specialized study, training or practice, scientific research, employment, or practice of a particular professional activity, as well as the manner in which he has been assured means of support.

When application for a temporary residence permit is filed by the foreign national referred to in Articles 32 through 36 of this regulation, he must append to the application evidence that he has means of support or his support in the SFRY has been provided for in some other manner.

Certificate of the balance of the foreigner's bank account in a Yugoslav or foreign bank, the certificate of an organization of associated labor, other self-managing organization or community or government agency on the amount of his personal income or scholarship, or other document unquestionably proving the existence of the necessary means of support shall be taken as evidence in the context of Paragraph 2 of this article.

Article 38

The agency competent to issue the temporary residence permit to a foreigner shall before issuing the permit check whether the foreigner possesses a valid travel document and whether he has reported his sojourn to the competent agency in the SFRY, whether the prescribed appendices have been filed with the application and whether there are legal impediments to issuance of the permit.

The official of the agency referred to in Paragraph 1 of this article may also require that the foreigner give information about the facts stated in the application which has been submitted.

Article 39

The temporary residence permit shall be issued by applying the prescribed stamp to the foreigner's travel document.

The stamp of the temporary residence permit is prescribed in Form No 9 [not included in this translation].

IV. Manner of Approval of Permanent Settlement

Article 40

Permanent settlement in the SFRY shall be granted upon the foreigner's written application. The application shall be submitted on Form No 10 [not included in this translation].

The application for permission to settle permanently in the SFRY shall be filed in person by the foreign national. Application for the granting of permanent settlement in the SFRY for children shall be filed by one of the parents or guardian.

Application for the granting of permanent settlement in the SFRY shall be submitted in one of the languages of the nationalities of Yugoslavia. The documents appended to the application which have been issued by the competent agency of the SFRY shall be submitted in the form of a certified copy, and foreign documents shall be submitted in the form of a certified translation into one of the languages of the nationalities of Yugoslavia. The official of the competent agency receiving the application may require that the foreigner show the originals of the documents whose copies or translations are appended.

The official of the agency competent to receive applications for the granting of permanent settlement in the SFRY may also call upon the foreigner to provide oral information on the facts alleged in the application.

Article 41

The foreigner must submit the following to accompany the application for the granting of permanent settlement in the SFRY: abstract from the birth records, abstract from the marriage records (for married persons), health certificate, certificate on schooling and professional training and a statement proving that he possesses the means of support or that his support in the SFRY has been provided for in some other manner.

Article 42

The application for granting of permanent settlement in the SFRY shall be submitted through the agency in the republic or autonomous province competent for issuance of travel documents and visas to foreigners where the foreigner resides or through a diplomatic or consular mission of the SFRY abroad.

Article 43

The agency which has received a foreigner's application for the granting of permanent settlement in the SFRY shall verify the allegations in the application and shall deliver the application with its opinion to the Federal Secretariat for Internal Affairs through the republic or provincial secretariat for internal affairs.

Article 44

The permit for permanent settlement in the SFRY shall be issued on Form No 11 [not included in this translation].

Article 45

The permit for permanent settlement in the SFRY or the decision rejecting an application for the granting of permanent settlement in the SFRY shall be delivered to the foreigner through the agency to which he filed application or through the agency competent for issuance of travel documents and visas to foreigners where he resides.

V. Manner of Recognition of the Right of Asylum

Article 46

The foreigner shall submit the application for recognition of the right of asylum in person through the agency and the republic or autonomous province competent for issuance of travel documents and visas to foreigners where the foreigner resides or through a diplomatic or consular mission of the SFRY abroad.

The application referred to in Paragraph 1 of this article shall contain the following: last name and first name, date and place of birth, nationality and occupation of the applicant, place of permanent residence in the country from which he has been driven, information on the members of his immediate family and the place of their residence, the grounds on which recognition of the right of asylum is being sought, a statement as to whether he has already sought protection of another state and other circumstances important to the granting of the right of asylum.

A foreigner's application for the granting of the right of asylum may also be made on the basis of the official record of an interview.

Article 47

The agency which has received a foreigner's application for recognition of the right of asylum shall check the allegations in the application and shall deliver the application along with its opinion to the Federal Secretariat for Internal Affairs through the republic or provincial secretariat for internal affairs.

Article 48

The decision of the competent agency granting the right of asylum or the decision rejecting the application for recognition of the right of asylum shall be delivered to the foreigner through the agency to which he filed application or through the agency competent for issuance of travel documents and visas to foreigners where the foreigner resides.

VI. Manner of Recognition of Refugee Status

Article 49

The foreigner shall file application for recognition of refugee status in person, immediately after crossing the border through the nearest agency in the republic or autonomous province competent for issuance of travel documents and visas to foreigners.

The application for recognition of refugee status shall contain the following: last and first name, date and place of birth, nationality, the foreigner's ethnic origin and occupation, domicile in the country from which he is fleeing, circumstances under which he has come to the SFRY (time, place and manner of crossing the border), information on members of the immediate family and their domicile, information on relatives in the SFRY (if there are any) and their domicile, grounds on which recognition of refugee status is being sought and indication as to whether he has sought the protection of any other foreign state.

A foreigner's application for recognition of refugee status may also be taken on the basis of the official record of an interview.

The agency which has received an application for recognition of refugee status shall designate the place in which the foreigner must reside until a decision is made on his application.

Article 50

The agency which has received a foreigner's application for recognition of refugee status shall verify the allegations in the application and shall deliver the application with its opinion to the Federal Secretariat for Internal Affairs through the republic or provincial secretariat for internal affairs.

Article 51

The decision granting refugee status or the decision rejecting the application for recognition of refugee status shall be delivered to the foreigner through the agency to which he submitted the application or through the agency competent for issuance of travel documents and visas to foreigners where the foreigner resides.

VII. Deportation of an Alien

Article 52

A stamp (Form No 12 [not included in this translation]) stating the date by which a foreigner must leave the territory of the SFRY and the period during which he may not again enter the SFRY shall be applied to the travel document of a foreigner against whom the safety measure of expulsion or the protective measure of deportation from the SFRY has been pronounced or whose residence in the SFRY has been canceled.

The stamp on cancellation of residence shall be applied to the travel document of the foreigner referred to in Paragraph 1 of this article after the decision of the competent agency becomes final.

The stamp on cancellation of residence shall be applied alongside the Yugoslav visa, but if a visa is not required under international treaty--alongside the stamp of the agency competent for monitoring the crossing of the border recording the foreigner's last entry into the SFRY.

VIII. Notification of Commencement of Residence and Commencement and Termination of Domicile

Article 53

Notification of commencement of residence or domicile or notification of termination of domicile or notification of change of street address shall be made on Form No 13 [not included in this translation].

The notification referred to in Paragraph 1 of this article shall be made by the foreigner in person. Any adult member of the family may make the notification for members of the foreigner's family.

The notification referred to in Paragraph 1 of this article must be neat and legibly filled out and must contain all the information prescribed for the form.

A certificate shall be issued to the foreigner certifying that notification has been made of commencement of residence or domicile or termination of domicile or change of street address. The certificate shall be issued by the official of the competent agency or authorized person of the organization of associated labor or other self-managing organization furnishing lodgings to foreigners or authorized person of a tourist organization.

Article 54

In making notification of commencement of residence or change of street address the foreigner shall furnish the certificate and notification of prior residence or certificate on notification of termination of domicile.

Article 55

A person giving notice of commencement or domicile or termination of domicile or change of street address shall enter information in the notification on the basis of one of these documents--foreign travel document, alien travel document issued by the competent agency of the SFRY, alien identity card, foreign document used as the basis for issuing a tourist pass to the foreigner, certificate stating temporary retention or confiscation of a travel document or certificate certifying that the loss or disappearance of a travel document has been reported.

Article 56

The authorized individual of an organization of associated labor or other self-managing organization or individual offering lodging to a foreigner or person whom the foreigner has come to visit shall give notice of commencement of residence for foreigners using lodgings in an organization of associated labor, other self-managing organization or of an individual offering lodgings to foreigners for compensation and for a foreigner who has come to pay a visit.

Article 57

Should the authorized individual of the organization of associated labor or other self-managing organization or an individual offering housing to foreigners find that the travel or other document of the foreigner used for making notification is incorrect or improper, that its period of validity has expired, that the visa or temporary residence permit or tourist pass has expired, he shall make a note in the notification of commencement of residence and shall immediately inform the agency competent for notification of commencement of residence.

The authorized person or individual referred to in Paragraph 1 of this article shall also be mindful of expiration of the temporary residence of a foreigner to whom he is providing lodgings and shall warn him in good time of the expiration of that period.

Article 58

Foreigners who come to the SFRY in foreign boats or yachts intended for recreation or sport and who use lodgings on those boats or yachts shall make notification of their residence only in a seaport or riverport in which crossing of the border is monitored upon their entry into the SFRY.

The notification referred to in Paragraph 1 of this article shall be made through the agency in the republic or autonomous province competent for monitoring the crossing of the border.

Article 59

The official of the agency to which notification has been made of commencement of residence or domicile or termination of domicile or change of street address of a foreigner shall verify the data entered in the notice and shall establish whether notification has been made within the period prescribed by law.

The official referred to in Paragraph 1 of this article shall check whether legal impediments exist to the foreigner's residence in the SFRY.

Article 60

Records on foreigners kept by an organization of associated labor, other self-managing organization or individual offering lodgings to foreigners--referred to as the book of foreigners--shall contain the following: last name and first name of the foreigner, nationality, type and number of travel or other document

of the foreigner, date up to which the foreigner has been granted residence in the SFRY; date and hour of the foreigner's arrival and departure.

The book of foreigners must be sewn and its pages numbered.

The date of commencement of the book's use shall be indicated on the title page of the book of foreigners, and the date of termination of keeping the book shall be entered on the last page.

Article 61

The competent agency shall certify the book of foreigners by entering the following on the last page of the book: "This book contains ___ (written out _____ _____) pages. The book is being kept by _____ in _____ _____ (town, street and number). It is registered as No ___." The seal of the agency shall be placed beneath this text, the text shall be certified and signed by the official.

Article 62

The book of foreigners shall be closed at the end of the calendar year or when all its pages have been filled.

The closing of a book of foreigners shall be noted on the page of the book beneath the last foreigner who has been entered or on the inside of the back cover if all the pages of the book have been filled.

Article 63

The agency competent for certifying the book of foreigners shall keep a register of the books of foreigners which it has certified. The register shall contain the following: the name of the organization of associated labor or other self-managing organization or last name and first name of the individual offering lodgings to foreigners and the date of the book's certification.

IX. Confiscation and Retention of Travel Documents of Foreigners

Article 64

The travel document of a foreigner which has been confiscated or temporarily retained shall remain in possession of the agency which issued the decision to confiscate the travel document or which issued the certificate on temporary retention of the travel document.

A travel document confiscated or temporarily retained shall be returned to the foreigner after cessation of the reasons for which the travel document was confiscated or temporarily retained.

If the security measure of expulsion from the country or the protective measure of deportation from the territory of the SFRY has been pronounced or if his residence in the SFRY has been canceled, the agency referred to in Paragraph 1 of

this article, when returning the foreign travel document to the foreigner, shall apply a stamp in the document stating that residence in the SFRY has been canceled.

Article 65

The confiscated or temporarily retained travel document of a foreigner who has been sent to serve a prison sentence shall be delivered to the penal-correction institution to which the foreigner has been committed to serve his sentence.

The penal-correction institution in which the foreigner is serving his prison sentence, before the sentence has been served, shall deliver the foreign travel document to the agency in the republic or autonomous province competent for issuing visas to foreigners where the institution is located so that a visa may be issued or statement entered on cancellation of residence in the SFRY.

X. Recordkeeping

Article 66

The agency in the republic or autonomous province competent for monitoring the crossing of the border shall keep records on the following:

1) on visas issued to foreigners,

2) on measures undertaken with respect to foreigners.

Records on visas issued to foreigners shall contain the following: the foreigner's first and last name, nationality, the type and number of the foreigner's travel document, the type of visa, the visa's date of issuance and the visa's expiration date.

Records on measures undertaken with respect to foreigners shall contain the following: the foreigner's first and last name, his nationality, the type and number of the foreigner's travel document, the type of measure undertaken, the date when the measure was undertaken and the legal grounds for taking the measure.

Article 67

The competent agency in the republic or autonomous province shall keep records on the following:

1) on travel documents and visas issued to foreigners (the refugee travel document, the stateless person travel document and the alien travel permit),

2) on permits issued for temporary residence in the SFRY,

3) on measures undertaken with respect to foreigners,

4) on travel documents or other documents of foreigners whose loss or disappearance has been reported,

5) on alien identity cards issued,

6) on notification of commencement of residence or domicile or termination of domicile or change of street address,

7) on permanently settled foreigners,

8) on foreigners granted refugee status in the SFRY.

Article 68

Records on travel documents issued to foreigners shall contain the following: the foreigner's first and last name, his nationality, the reason for his residence in the SFRY, the date when the foreigner's residence in the SFRY began, the date of issuance of the document, the type and number of the travel document issued, and the expiration date of the document issued.

Records on visas issued to foreigners shall contain the following: the visa's date of issuance, the foreigner's first and last name, his nationality, the type and number of the travel document on which the visa has been issued and the type of visa and its expiration date.

Article 69

Records on permits issued for temporary residence in the SFRY shall contain the following: the foreigner's first and last name, his nationality, the foreigner's place of residence in the SFRY, his street address, the reason for his residence in the SFRY, the date when the foreigner's residence in the SFRY began, the type and number of the foreigner's travel document, the reason why the permanent residence permit is being sought, the decision made on the application, the date of issuance of the permit and the period of validity of the temporary residence granted.

Article 70

Records on measures undertaken with respect to foreigners shall contain the following: the foreigner's first and last name, his nationality, the reason for his residence in the SFRY, the date when the measure was undertaken, the type of measure undertaken and the period in which the foreigner must leave the SFRY.

Article 71

Records on travel or other documents of foreigners whose loss or disappearance has been reported shall contain the following: the foreigner's first and last name, his nationality, the reason for his residence in the SFRY, the date when the report was filed, the type, and if possible also the number, of the document whose loss or disappearance is being reported, the manner in which the foreigner's identity was established, and the number and date of issuance of the document certifying notification of the loss or disappearance of the document.

Article 72

Records on alien identity cards issued shall contain the following: the foreigner's first and last name, the foreigner's date and place of birth, his nationality, the status in which the foreigner is residing in the SFRY, the date of issuance of the alien identity card, the serial number of the alien identity card issued and the period of validity of the alien identity card.

The record referred to in Paragraph 1 of this article shall be kept in the form of a card file. A photograph of the foreigner to whom an identity card has been issued shall be pasted on the card containing the information, and the prescribed fingerprint shall be fixed on the card as well. The card shall be signed by the foreigner and the authorized individual of the agency competent for issuing the identity card.

Article 73

Records on notification of commencement of residence or domicile (Article 67) or termination of domicile or change of street address shall be kept in the form of a card file. The notices which foreigners file with the competent agency on the prescribed form shall be entered in the card file.

Article 74

Records on permanently settled foreigners shall contain the following: the foreigner's first and last name, the date, place and state of the foreigner's birth, his nationality, his occupation, the date of commencement of the foreigner's residence in the SFRY, the foreigner's domicile in the SFRY and his street address, the number and date of issuance of the permit for permanent settlement in the SFRY and the date and reason for deletion of the foreigner from the records (acquiring Yugoslav nationality, emigration, cancellation of his residence permit, death, etc.).

Article 75

Records on foreigners who have been granted refugee status in the SFRY shall contain the following: the foreigner's first and last name, the date, place and state of the foreigner's birth, his nationality, his occupation, the date when the foreigner's residence in the SFRY began, the foreigner's domicile in the SFRY and his street address, the number and date of the decision granting refugee status, the date and grounds for deleting the foreigner from the records (acquiring Yugoslav citizenship, emigration, cancellation of residence permit, death, etc.).

XI. Transitional and Final Provisions

Article 76

Forms Nos 1 through 13, as referred to in Articles 5, 7, 13, 14, 24, 25, 31, 39, 40, 44, 52 and 53 of this regulation have been printed to accompany this regulation [not included in this translation] and shall constitute an integral part of it.

Article 77

The present forms shall be used until the forms prescribed by this regulation are printed, but no later than 1 July 1982.

Article 78

The Regulation on Issuance of Documents for the Movement and Sojourn of Foreign Nationals in Yugoslavia and on the Forms of Those Documents (SLUZBENI LIST SFRJ, No 37, 1973) shall cease to be valid on the day when this regulation takes effect.

Article 79

This regulation shall take effect on the eighth day after publication in SLUZBENI LIST SFRJ.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

ROMANIAN HISTORY REVIEW TAKES ISSUE WITH BULGARIAN HISTORIAN

[Editorial Report] An article by Petre Diaconu entitled: "Political Realities in the Lower Danube: Romanians, Byzantines, Bulgarians and Petchenegs," published in the Bucharest REVISTA DE ISTORIE, monthly organ of the Academy of Social and Political Sciences, Section for History and Archeology, June 1981, pages 1111-1133, discusses the following work by Bulgarian historian I. Bozhilov: "The Anonymous One of Hase. Bulgaria and Byzantium in the Lower Danube at the End of the 10th Century," published by the Bulgarian Academy of Sciences in Sofia in 1979.

The following is a translation of excerpts from REVISTA DE ISTORIE's French resume of Diaconu's article:

While recognizing the merits of I. Bozhilov who rejects the thesis that the notes of the anonymous one were a falsification committed by Ch. B. Hase [a 19th century French Byzantologist who edited the notes], the author of the present study rejects the interpretations of the Bulgarian historian in this regard.

For example, I. Bozhilov believes that the Notes contain information regarding the presence of a Bulgarian population and of Bulgarian rule in Moldavia and Wallachia at the end of the 10th century. The thesis brings in some archeological "arguments." A close analysis of the text of these Notes authorizes us to state that, at the time, the regions mentioned were inhabited by Romanians, just as Dobrudja was, at that time and that the barbarians who attacked the region ruled by the Anonomyous One, probably located somewhere in Dobrudja, were Bulgarians. The proper interpretation of the information contained in the Notes gives us no information that "the leader north of the Danube" was the Bulgarian tsar Samuel, as I. Bozhilov believes. Instead, he was a Petcheneg chief since it was the time that the Petchenegs were taking political control of the lands north of the mouth of the Danube.

The author also points out the baselessness of the arguments invoked by I. Bozhilov to prove a Bulgarian presence in the Lower Danube dating from the 5th century or to show that the dukedoms of Transylvania, such as the one headed by Menumorut, constituted a proof of the domination of the Bulgarian state in this region of our country in the 10th century.

ARMED FORCES POLITICAL HEAD ON MILITARY MISSION, TRADITIONS

East Berlin TRIBUENE in German 8 May 81 p 5

[Holgar Arnold interview with Col Gen Heinz Kessler, deputy national defense minister and chief, political administration of the National People's Army (NVA): "The Protection of Peace Has Been Written Into Our Army's Genealogical Record, Or, What the NVA Soldiers Regard as Their Most Important Mission"]

[Text] Heinz Kessler was born in 1920 as the son of a class-conscious working class family in Laubau. In 1929 he joined the Red Young Pioneers in Chemnitz (which is today Karl-Marx-Stadt). From 1934 to 1937 he was trained as a machinist. He worked in this occupation until 1940. In 1940 Heinz Kessler was drafted into the fascist Wehrmacht. In keeping with his upbringing, he fought against fascism and only a few days after the beginning of fascist aggression against the Soviet Union, he joined the Red Army.

Heinz Kessler was one of the founders of the "Free Germany National Committee," which was formed by German communists, anti-fascists and prisoners of war in the Soviet Union. He took part in the Soviet Union's struggle against the fascist German imperialism.

After the liberation of the German people from fascism through the Soviet army and its allied forces in 1945, Heinz Kessler led the first anti-fascist youth committee of Berlin. After the founding of the Free German Youth, he became chairman of the FDJ leadership for Berlin and--even as far as taking over missions in the armed branches--secretary of the central council. After that Heinz Kessler earned merits in his service for the protection of the accomplishments of the first socialist state on German soil.

At first he was chief of the People's Police Air and held the rank of inspector general. After attending an academy in the Soviet Union, he was named chief of the air force/air defense in 1956. From 1967 to 1978, Col Gen Heinz Kessler was deputy national defense minister and chief of NVA headquarters. In

the beginning of January, 1979, he took over the functions of deputy national defense minister and chief, political administration of the NVA.

Since 1946 Heinz Kessler has been a member of the party leadership, i.e. of the SED Central Committee. In 1950 he was elected to the People's Chamber and has been its delegate since then. Heinz Kessler has been honored with high national and social awards of the GDR as well as of the Soviet Union and other socialist nations. He has received the Karl-Marx medal, the medal of the October Revolution, the Patriotic Merit Badge and the Scharnhorst medal.

[Question] Comrade Col Gen, what was written into the NVA's genealogical record 25 years ago, when the NVA was founded?

[Answer] The NVA was formed in a country in which the workers, under the leadership of the working class and its revolutionary avant guarde, had already been in power for seven years. They had created their socialist state, which now began to organize for its protection against enemies from outside by forming a standing army. The army to be established could not receive any mission other than the mission of victorious workers and farmers who must defend the revolutionary achievements of the people. It was this which was--as you put it--written into the genealogical record.

This basic concern of our army is reflected--was reflected even while it was being founded--in the political composition of its officer corps. Of the 26 leading generals and admirals, 18 had belonged to the workers' movement before 1933. Seventeen had participated in the anti-fascist resistance struggle, nine of them in Spain, and five in the "Free Germany" movement, eight had been imprisoned by the fascists in concentration camps and penetentiaries. More than 85 percent of all officers were SED members or candidates in 1956.

[Question] The NVA did not stand alone...

[Answer] Of course not. When solving military problems, we could depend on the Soviet army's vast experience, the knowledge of Soviet military science, and the constant, immediate practical help of Soviet comrades, who were at that time advisors to the NVA. The GDR armed forces were formed and developed from the very start with its role and mission in the international Socialist military coalition, which had come into existence with the Warsaw Pact, in mind. The brotherhood-in-arms relations, which grew out of this, were and still are important, not only for quickly achieving military mastery. Above all, they are a source of military and moral strength. They let members of the NVA experience the strength of our alliance, the reliability and loyalty of the brothers-in-arms, as was the case, e.g., during the "Brotherhood-in-Arms 80" maneuvers of the "Sojus 81" commando staff exercises.

[Question] The peace mission of the Socialist armed forces has been proven many times through history. Can you name a few examples of this?

[Answer] If we had been successful for more than 35 years in containing the aggressive imperialist forces militarily, and in maintaining peace in our continent, then we must primarily thank the socialist community and its military power. The USSR and its armed forces carried the main burden. The combat strength and combat readiness of the allied socialist armies has a sobering effect on the imperialist aggressors. We have experienced how, e.g., in 1961 the firm attitude of the Soviet Union and of the other fraternal nations of our alliance prevented a threatening imperialist aggression in the heart of Europe and supported GDR security measures on 13 August. Let's remember the prevention of war in 1962. The USSR and the other Warsaw Pact nations at that time forced the United States with appropriate military measures to renounce the use of military force against Cuba. In 1968 also, the NATO powers were not successful in breaking Czechoslovakia out of the Socialist community, because the Soviet army, the NVA and other fraternal armies defended the interests of that country as if they were their own. All this makes it clear that the Socialist armed forces represent a significant weight on the scale of peace.

[Question] Traditions also say much about the essence of our army...

[Answer] That is completely right. The NVA conserves and continues the progressive military traditions of German history, of the history of the international workers' movement and of the brotherhood-in-arms in the military coalition. The highest military award of the GDR, e.g., bears the name of von Scharnhorst. Regiments, barracks, ships and boats are named after heroes of the anti-fascist resistance struggle and of the Great Patriotic War, of the revolutions of 1848 and 1918, or after true patriots who fought against Napoleonic oppression.

[Question] What do you think of the so-called eternal soldier's virtues, such as courage, bravery, aggressiveness, and a sense of comradery?

[Answer] "Eternal" military virtues are a demagogical invention of the bourgeois military. With this they want to cover up the crimes which were committed by their exploitative armies, which even include genocide. In this way, fascist war criminals are considered acceptable in the Bundeswehr, i.e. progressive traditions are being misused. The Bundeswehr soldier is being manipulated with "eternal" models. It by no means concerns courage and bravery "in themselves," but rather the question "what for, and against what?" The virtues of the soldier of a socialist army therefore show in his conscious dedicated to socialism, for the protection of the achievements of the working people.

[Question] The NVA has not had to prove itself the way the Soviet army had to. How does the NVA soldier measure how he fulfills his military duties?

[Answer] So far we have been successful in preventing a war in Europe. The NVA soldiers have played their part in this during the past quarter of a century. At the same time we must not overlook the fact that members of our armed forces must prove themselves even today. I am thinking of the deployment force of the air force/air defense at sea. These are missions which must be fulfilled to secure our air space and our sea borders in the Baltic against forces of the GDR and other NATO armies.

The joint maneuvers of the united Warsaw Pact forces represent difficult tests of conscious acts of political and military responsibility. Combat worthiness is accounted for in these maneuvers. And finally, the soldier must prove himself every day--in combat training, during guard duty, in his mastery of combat technology, during training for combat readiness, in the field as well as in the classroom. The measures of his achievement are the party's decisions, the orders and demands of his superiors for the fulfillment of the training programs and norms in combat training, as they are laid down in the appropriate regulations.

[Question] How can the soldier of a socialist army prove courage and bravery in peacetime?

[Answer] Many members of the Free German Trade Union Federation, who have served in our army, could answer this question from their own experience. The soldier is trained in courage and bravery during combat training in all branches of service, so that he can survive in armed combat, when it is a matter of life or death. I am thinking, e.g., of the motorized infantrists, when they have to overcome phosphorus fires or have a tank roll over them. Or take the maneuver formation flying of the fighter bombers, or naval missions in rough seas. In addition there are exceptional cases, as the saving of human lives and technology during salvage and catastrophy missions.

[Question] In which characteristics and skills does the NVA officer of the 1980's excel?

[Answer] The profession of an officer is a vocation in the truest sense of the word. Whoever follows it needs solid class consciousness, party loyalty, a firm internationalistic attitude and extensive military knowledge and skills. In view of the coming years, two things seem to me to be especially important in this connection. First of all, it is the urge and the ability of the officer to react quickly to everything new. Our armed forces are developing rapidly. New realizations must be adapted to constantly, because processes are under way which affect all aspects of military life. The officer of the 1980's must therefore be a very creative person, who helps direct and further these processes.

Secondly, I would like to emphasize the officer's ability to inspire his men to enthusiasm for the missions to be solved, to stimulate them, to sweep them along and to lead them to do their very best. Socialist troop leadership is above all leadership of men. This fact is decisive for the NVA officer, whether he is a commander, staff officer, political officer or specialist.

[Question] During the past year, the international situation has obviously become more critical. How, Comrade Col Gen, do you judge this situation?

[Answer] The communist party of the Soviet Union, the SED and also other fraternal parties have unanimously evaluated the international situation during their latest party congresses. Imperialism has begun a counter offensive in order to escape the historical defensive position. Aggressive forces of the monopoly capital world obviously believe that they have found the way in superior military strength with which the advance of socialism, its growing international influence and also the national liberation movements can be stopped, i.e. destroyed.

For that reason, they start insane arms programs, such as NATO's long-term program, the United States' intensive arms program, the stationing of American medium-range missiles in NATO countries of Western Europe. The emphasis lies on, among other things, the introduction of new strategic offensive weapons--the MX intercontinental ballistic missile equipped with multiple warheads and a new long-range bomber and the building of additional war ships. The forming of the so-called American intervention force is accelerated. This is a machinery of aggression designated for development in the Near East and East. The United States tries to force their NATO partners with massive pressure to introduce the neutron bomb into the arsenal of means of mass destruction.

Important to the imperialists is the military superiority over socialism as a basis for unrestrained and brutal power politics which calculates on war. This makes the struggle for peace, based on the suggestions submitted by the Sixteenth Party Congress to the communist party of the Soviet Union even more urgent.

[Question] How is it that voices appear in the FRG which cry loudly along with the others for more and more, and more modern weapons?

[Answer] German imperialism, as a consequence of the combination of historical, political and economic factors, has always been especially aggressive and rapacious. After its striking defeat in World War II, it was able, on part of the territory of the former German empire, not only to restore itself with the help of the victorious Western powers, especially of the United States, but finally to become the first among the capitalist nations in Europe. Those in political, economic and military power use the FRG's monopoly bourgeoisie in order to check history, to reestablish their rule within 1937 borders. The most aggressive among them openly count on military force, on the course of war of the United States and of NATO.

[Question] For that reason, the overwhelming majority of our Republic's young men understand the necessity for socialist armed forces and fulfills its obligation with a sense of responsibility. But here and there are some who--especially when it concerns extended duty--shrink from the harshness of military service. What do you say to that?

[Answer] You are asking two questions. The harshness of military service is undisputed. But tens of thousands of draftees prove year after year that the better one is prepared for them--especially in the Society for Sport and Technology, but also in the Free German Youth, and in labor union collectives--the better one can meet the psychological and physical demands of active service.

As far as extended service is concerned, we see this also as a question of preparation. It concerns an understanding of the necessity, a deeper understanding of the importance of socialist national defense, and especially the armed forces. Union collectives can and must contribute to this also out of a sense of responsibility. We know that this is done successfully in many places, but also that more could be done.

[Question] A few weeks ago the Tenth SED Party Congress took place. Delegates of military party organizations took part also. What results were they, as NVA representatives, able to report?

[Answer] In summary, it is the fulfilled military class mission given to our armed forces by the Ninth Party Congress. Hidden behind this brief statement are great achievements by members of the armed forces in combat training and the struggle for growing combat readiness of companies, regiments and divisions of all branches of service. The NVA was judged by the Tenth SED Party Congress to be a modern, combat worthy socialist coalition army, which has always justified the trust of the party of the working class and of the entire nation. This high estimation obligates us to make our contribution to the reliable protection of socialism and of peace in the future also, and to always be combat-ready in the socialist military coalition.

TACTICAL ASSAULT HELICOPTER EXERCISE DESCRIBED

East Berlin FLIEGER-REVUE in German No 7, Jul 81 pp 305-307

[Article by Lt Col Kuno Baaske, Air Forces/Air Defense Command (LSK/LV), member, FLIEGER-REVUE editorial board: 'National People's Army (NVA): To the Other Bank']

> [Text] Accomplishments in the military safeguarding of peace by members of the NVA were part of the successes reported at the Tenth SED Party Congress. Every day they struggle for greater combat strength and combat readiness and thus fulfill the promise given by General Heinz Hoffmann at the party congress, that our party, our people and our allies will always be able to rely on them.
>
> Our author, Lt Col Kuno Baaske, witnessed one exercise where one NVA helicopter unit mastered a difficult task.

Thick clouds are hanging over the airport. Lt Col Paul Liefeld, wing commander, looks up to the sky and says: "Difficult weather, and visibility is not going to improve." A shrugging of shoulders. It probably means that there is nothing one can do about the weather. After the last airborne soldier has taken a seat in the cockpit of the Mi-8 helicopter, the door is shut. A few minutes before the planned take-off, the engines roar. The powerful lifter propeller begins to turn. The helicopter trembles slightly, rocking on its shock absorbers. We roll over the lawn to the starting point. First our chain, then the entire wing.

At precisely the right second the machine vibrates under full engine power. We lift off and climb 2 or 3 meters. We stay in place. A slight vibration. Now the cockpit tilts forward, and finally the Mi-8 thunders across the field with full force. The machines to the right and to the left, as I observed immediately, follow exactly. Now the unit builds a formation in the air. Lt Col Liefeld is flying with an experienced crew: the second helicopter pilot, 1st Lt Gerald Boenig, has proven himself several times, also 1st Sgt Herbert Georgi, the flight technician. They have practical experience with combat technology as well as good theoretical knowledge. But in spite of this, today's combat mission is difficult. In spite of the unexpectedly bad weather, the ground forces must be supported while crossing the river by air attacks on enemy positions on the other bank and airborne troops must be put down. This is the combat mission to which they must be totally dedicated. We are not flying at too great an altitude, perhaps 200 m.

Above us loom almost threateningly dense clouds, parts of them seeming to reach for us from time to time. Visibility? Possibly 2 km. Commander Liefeld looks briefly to the "No. 2," who is just putting a finger on the map and calling out the name of a town.

General Boenig is a master of navigation. He is a first class helicopter pilot and is used to flying complicated exercises. With concentration he observes the terrain, repeatedly he reports striking features or elevations to the commander.

Paul Liefeld listens attentively, just now learns from the flight technician that temperatures, fuel pressure and exhaust gas temperatures are normal. Herbert Georgi, the flight mechanic, is also always reliable, has been so for many years.

"It is a pleasant feeling, to have such a good crew," says the commander.

He himself has worn the uniform for more than two decades. Paul Liefeld is a first class helicopter pilot. He began in the 1950's with an SG-38 training glider of the Society for Sports and Technology.

Suddenly there is a jolt in the helicopter. I am a little afraid, and I look around in surprise. "An evasive maneuver," says the man across from me, a tall airborne soldier. He is familiar with this and smiles at me with understanding.

Now we race across the earth at an altitude of 15 to 20 m. It seems that we can reach the tree tops. Every elevation in the terrain, every group of trees is used for cover, in order to lead the wing as unnoticably as possible to the crossing. There is radio silence.

The second helicopter on the right suddenly disappears behind some trees. Minutes later, out in the open over a field, the unit is together again. An almost blind understanding, it seems to me. Not even a command was given.

During flight preparation on the previous day, the crews had of course acted it all out, had studied the course of the terrain, the flight path, exactly, and had carefully worked up the documentation in accordance with it. Comrade Liefeld did not dismiss anyone without having first carefully tested him. Their past successes are the result of the hard and tireless work of each individual.

Yes, theory is important, because--according to Paul Liefeld--"even an identical task is never identical, even when I have already flown the course several times." He is thinking of the weather conditions. How fast they can change. And combat conditions can change equally fast. Comrades Boenig and Georgi suddenly pay even closer attention to the surface below. Visibility has gotten even worse. The area of operation is getting closer, and there is a command to regroup for combat. Take the front.

"Switch on weapons system," Comrade Boenig signals, while he does not let the altimeter out of his sight. There--the river. Gray and muddy, it flows on and on. I look out of the porthole and see one of the helicopters next to us. The two pilots in the neighboring helicopter are just as clearly recognizable as are the brightly shining missile containers. And there, beneath me, I can see, in a cloud of dust, the tank and amphibious tank columns racing at high speed toward the river.

Suddenly the helicopter tilts to its side. The formation appears to be literally dissolving.

"Distance 1,200 m," I hear from No. 2. An order is given. "Manuever combat curve." The helicopters race towards the target area.

Comrade Liefeld concentrates on the viser: "Correct angle of elevation, target latitude in the net. 1,000 m." He hears the "combat ready" from 1st Sgt Herbert Georgi, the flight mechanic. And immediately afterwards he pushes the combat button. For a fraction of a second, while the unguided missiles discharge, one can hear the silvergray containers rumbling on the outside.

Our machinegun is firing, and with my bare eyes I can see the impacts on the earth, smoke, water fountains. The other helicopters of the formation are approaching just as fast, and hundreds of missiles hit the opposite bank. Just as in a dive, we veer off to the left in a sharp curve. The repeat attack from another course is begun. Everywhere around I see tactical assault helicopters. Who can find his way around here? Beneath is the dark river. Again the Mi-8 goes on its computated course, and the crew uses the weapons effectively on this second attack flight also. The assault on the opposite bank by the ground forces is prepared. A no less complicated task begins now for the Liefeld wing: Putting down the airborne troops, which must follow immediately.

I look attentively at the faces of the comrades, who are checking over their equipment once more. These men are filled with concentration. But in spite of the tension caused by the imminent landing and combat mission, they radiate tranquility. One thing is certain: these well-trained fighters will give their best in doing their part for the success of the operation.

The helicopters slowly approach the bank, the landing place. The Mi-8's descend like hornets. While the heavy propellers are still hissing through the air, the men jump out of the door in their camouflaged fatigues. They barely have solid ground under their feet, when they begin to charge and open fire with their machine pistols. They disappear from my sight in the smoke of the battlefield.

The flight mechanic quickly closes the door of our helicopter, there is a short moment of hovering, and seconds later we fly off above the river. Soon the entire formation has found together and regrouped. Behind us now the dark river, which is already being crossed by the first tanks. Sweat runs from the forehead of the three comrades in the cockpit. The tensions and efforts of the past minutes become evident.

WIEJACZ VIEWS CHANCES FOR DETENTE IN EUROPE

Warsaw SPRAWY MIEDZYNARODOWE in Polish No 3, Mar 81 pp 7-14

[Text] The Polish nation entered the 1980's under the pressure of events of historical magnitude. The phenomena of deep political, social, and economic crises as well as the process of the socialist renewal of Poland are accompanied by a complex international situation, full of tensions. In fact, the events in Poland and their possible international implications have been listed among the most important events of the past year. Interest abroad in the Polish events--an interest characterized by friendliness and multifaceted assistance in the case of the socialist countries, or an interest motivated by designs contrary to our raison d'etat in the case of certain political circles in the West--is a direct result of Poland's position in the politico-military commonwealth of socialist states and in the post-war configuration of political forces in Europe. This interest is, then, a function of the current configuration of the East-West relations. This has to be understood.

At this point we do not know yet how the meeting of the CSCE states-participants in Madrid will end, and which direction in political practice will be favored by the new administration in the United States. Nevertheless, we must pose a question whether the international situation will foster the continuation of the renewal process, or whether tensions in the East-West relations, particularly in Europe, will not hamper, if not stop completely this process. However, before we attempt to answer this question it is necessary to make one general assumption, that is realize the fundamental truth that while the international situation influences the course of our current internal affairs, the course of these affairs impacts on the state of the political relations in Europe. The 7th plenary meeting of the PUWP Central Committee clearly stated that the task of renewal begun in Poland of socio-political life will also foster the strengthening of our ties with allies as well as the political stability in Europe.

The choice of paths for renewal is directly related to the general political climate in the East-West relations, a climate which in the second half of 1980 continued to show the prevalence of detente trends over tension and confrontation tendencies. Also, the prospects of the renewal process depend on the conditions for continuing the policy of detente and universal cooperation between the East and the West. Hence, the involvement of Poland in activities concerning detente, normalization, and stabilization of situation as well as cooperation

in Europe--so common for the Polish foreign policy throughout the entire post-war period--finds now even more concrete expression by relating even more national security interests to domestic needs.

This system of mutual relations and mutual influences presents a great chance in itself, but also a great responsibility. This means that despite economic problems, which will be present for a prolonged period, Poland can still fulfill a vital part in shaping the situation on the European continent as well as in continuing and deepening the changes characteristic for Europe in the 1970's.

I

The decade of the 1980's presents itself as a complex period in the development of the international situation, both on a regional scale in Europe as well as globally. The 1970's were a period of strengthening and concretization of the policy of peaceful coexistence, broadening of cooperation, growth of mutual trust and of growing hopes for achieving concrete progress in efforts aimed at disarmament. The end of the 1970's did not fulfill many of these expectations, and in East-West relations, particularly in U.S.-Soviet relations, the confrontation tendencies began to dominate. The arms race, which has always been the exemplification and function of more general tendencies in the politics of the main actors on the international stage and of the growing distrust in mutual relations, reached the level threatening the lasting results of detente policy, international security, and peace. The arms race has entered a phase which threatens the security of all nations.

The continuing and intensifying arms race is above all the consequence of the doctrine adopted by the leading circles of the North Atlantic Pact and pointing to the absolute necessity of restoring by the NATO as a whole, and particularly by the United States, military superiority over the Soviet Union and the Warsaw Pact countries. The politico-military power centers in the United States seem to withdraw from treating the Soviet Union as a partner in politico-military agreements (treaties) on the most fundamental security matters on both the global and regional (e.g., European) scales. The questioning by the United States of the right to presence and participation of the Soviet Union in the solving of burning problems in various regions of the world had to bring about a lessening of mutual trust in relations between these two great powers.

The European situation at the end of the 1970's was particularly negatively affected by the December 1979 NATO decision to place new types of medium range of American nuclear missiles in Europe. This decision ought to be seen in the broader context of the evolution of the NATO military doctrines envisaging the possibility of limited nuclear war in Europe. This decision--if it comes to fruition--will place a big question mark over the European policy of detente and cooperation in the decade ahead.

The question arises: how durable is detente without disarmament? What are the limits of immunity of the detente and cooperation processes to the armament decisions of the NATO countries which destabilize the military balance between

the East and the West? The starting point for the discussion and formulation of an answer should be the ascertaining of the factual situation to which the above questions referred to. That is a statement--often expressed by the socialist countries, e.g. in the Warsaw Declaration of States-Parties of the Warsaw Pact of May 1980, or in the communique on the meeting of the Foreign Ministers Committee of the States-Parties of the Warsaw Pact which took place in October 1980 in Warsaw--that it is impossible to continue the policy of detente and cooperation without achieving a visible progress in the field of arms race stoppage and in disarmament. It can be noted with satisfaction that this statement is presently widely understood, more widely than only a few years ago. This can be exemplified by the discussion at the last session of the UN General Assembly as well as by growing support for the idea of organizing a conference on military relaxation of tension and disarmament in Europe. This can be a source of some optimism for the future.

II

Unfortunately, the rich content policy of detente in Europe of the 1970's has not only failed to bring about disarmament, but has been accompanied by an intensified arms race, which may bury this policy altogether. No level of the disarmament negotiations has brought any progress, even in terms of reflecting the unquestionable results of detente in the political sphere. The states and nations of the world have harbored particularly great hopes for the Soviet-American dialog on the limiting nuclear and strategic armaments. The termination of this dialog as a result of the American postponement of ratification of the Soviet-American treaty on strategic arms limitations (SALT II) has had a negative effect both on the disarmament negotiations in other areas and on entire East-West relations. One may hope that the administration of President Reagan will show more consistency in the dialog with the USSR on limiting nuclear and strategic arms. This dialog--which is of fundamental importance for progress in the sphere detente in the East-West relations--will certainly have a positive impact on the entire relations between the two big powers as well. Poland, like other states sincerely interested in continuing the process of detente, gives total support to the dialog and complete normalization of relations between the USSR and the United States of America.

On the European scale, the most important problem in the field of broadly understood military detente is to achieve progress in the strife for stopping nuclear-missile armaments on our continent.

As it is known, in the fall of 1980 Soviet-American talks on this subject were held in Geneva. We hope that also in this area the present American administration will aim to achieve concrete positive results. There is no shortage of signs from the Soviet side that it is ready to act with the aim of preventing escalation of nuclear-missile armaments in Europe. The results of the dialog will decide the fate of any action on military detente on our continent. A progress in this dialog will help the Vienna negotiations on reduction of armed forces and armaments in Central Europe, negotiations which despite their 7-year duration and important political function have not brought concrete agreements.

It can be assumed--considering the present situation probably very optimistically, and yet realistically as well--that this year three levels of disarmament negotiations directly affecting our continent will crystallize: Soviet-American talks on nuclear missile weapons in Europe; Vienna negotiations on armed forces and armament reductions in Central Europe--focusing particularly on conventional forces; and all-European negotiations in the form of a conference on military detente and disarmament on our continent, a conference which in its first stage will primarily focus on the question of broadly understood means to build trust.

Presently, the most vividly debated problem is the European disarmament conference (KOMiR). The socialist countries await the decision by the Madrid Meeting to call such conference. Specific proposals in this respect were presented by Poland in December 1980 in Madrid. They express the position of the socialist countries. Other countries such as members of political-military alliances as well as neutral and nonaligned ones have also presented their own proposals. Although they differ among themselves, sometimes on major issues--e.g. on the character and territorial range of confidence building measures--we do believe that there is a real chance to reach an agreement on calling such conference.

The struggle for progress in the sphere of broadly understood military detente is presently the front line of struggle not only for the shape and content of the detente process, but also for the defense of results of the detente policy of the 1970's. We hope that the progress in the sphere of military detente will bring about an end to the escalation of armaments along with all positive consequences, including economic ones, as well as to bring about a reduction in the role of the military factor in the East-West relations which is an indispensable premise to mitigate dangers inherent in the politico-military divisions in Europe, and thus encourage greater participation of medium-size and small countries on our continent. Poland, like all other states-members of the Warsaw Pact, aims at making the 1980's the decade of limited armaments and of disarmament. This aim was solemnly proclaimed on the 25th anniversary of the Warsaw Pact in the Declaration of its Political Consultative Committee of 15 May 1980. This is a further expression of consistent desire on the part of these countries to continue the detente process and to strengthen international security.

III

The continuing arms race and mutual distrust between opposing politico-military alliances are in the current international situation phenomena with the greatest potential for negative consequences. East-West relations, despite numerous gains in the area of cooperation, still continue to exhibit the deep divisions, confrontations, and rivalries. Moreover, other sources of potential and real conflicts and tensions have appeared: increased differences in the standard of living between "rich North" and "poor South," food and demographic problems in the Third World, ecologic and energy problems. Many of them have been observed in Europe, and in our country as well. They will certainly have an impact on the international scene. Historically, economic reasons have always been the source of tensions and conflicts. That is why the existing situation and dangers

ought to encourage, if not force governments and societies to cooperate and look for a common denominator such as the common interest of mankind. Thus the coming years will be filled--if we accept the optimistic variant--with searching for solutions to problems and phenomena adversely affecting societies, states, and continents.

The decade of the 1980's will present itself as the period of increased hopes and practical actions in the direction of increased cooperation and shared responsibility for the development of international lives of all countries. The symptoms of this can be seen already today, particularly at the United Nations which has presently over 150 states as its members. Every new member, after obtaining formal independence, strives to free itself from various forms of neo-colonial and factual dependence, and to real participation in shaping international relations.

In regard to the European continent, the principle of participation and shared responsibility is an inherent part of the process begun in Helsinki in 1975. The postulate or even imperative of democratization of international relations come out of the cultural heritage of the European nations, and out of the richness of their historical experience, sometimes a very bitter one. The opinions heard in the West about the decline in importance of the CSCE Final Act have no foundations and are used to undermine or distort the meaning of the process begun in Helsinki. The Final Act still should be treated as the basis of a long-term process of building a durable system of security and cooperation in Europe as an instrument of active work of all of its signatories for detente, disarmament, and cooperation. Nonallied and other medium- and small-size states see in the CSCE process also a chance for a stronger affirmation of their existence and of making a greater contribution to the shape of contemporary Europe and to the emphasizing of her identity. The socialist countries have always been against the policy of dividing Europe into two antagonistic politico-military alliances. On numerous occasions they have expressed their readiness to dissolve the Warsaw Pact provided that it is accompanied by a simultaneous dissolution of NATO, and as the first step in this direction they proposed limiting of military activities of both alliances and liquidation of their military organizations. These proposals have not been accepted by the other side. But even in the current conditions the CSCE states-participants do not want to allow further European divisions in various areas of life. They strive to come up with mutually agreeable steps which will have contributed to the increase of mutual trust, and in more distant future to the increase of chances of acting together in order to solve the most difficult problems facing mankind. The awareness of common fate and the acceptance of the necessity to cooperate are indispensable conditions for the solution of common problems of a given continent or of the entire globe.

The perspectives of the currently held Meeting in Madrid--a very important form of many-sided continuation of the CSCE process--depend most of all on the development of the general international situation and on shaped by this political will of its participants. If there is no unexpected international event, one can expect certain--modest perhaps, but still greater than in Belgrade-- results of the Meeting. They will be contained, among others, in the decision

starting the process leading to the European disarmament conference (an important activity of the European countries aiming at complementing political detente by military detente), and in agreements on increased cooperation in such fields as energy, environmental protection, culture, and education. One cannot also exclude new agreements in the humanitarian field such as uniting families, allowing mixed marriages which ease the movement of persons, etc.

The continuation of the CSCE process does not take place in isolation from events and processes taking place in other parts of the world. It is practically impossible, then, to completely protect the achievement to date of the detente process in Europe and its further development from negative influences of tensions and rivalries occurring outside Europe. Being aware of the fact that in the present configuration of political forces in the world the pragmatic usefulness of the thesis of indivisibility of detente is rather very limited, we are decisively against the thesis of indivisibility of tensions. We have done and continue to do everything to realize the idea of creating all-European system of security and cooperation on our politically divided continent. We also contribute to the peaceful solution of conflicts outside Europe honoring the necessity to guarantee all nations their irrefutable right to independence and free growth.

***

The most fundamental and elementary function of the state is to guarantee a nation internal and external security. The Polish People's Republic considers her main task to secure for her country and society peaceful conditions for growth. Our country has subordinated all instruments of her foreign policy to this fundamental task.

Peaceful foreign policy of our country--which is conducted with maximum involvement--has a deep historical justification; it draws conclusions from tragic and painful experiences of the nation. The Polish nation, which has a very special attitude toward its history and which identifies with its heroic and independence trends, considers such policy as its own and irrefutable treasure. The feature which has characterized the political outlook of the Polish society in the entire postwar period was the unanimity in giving the highest priority to the involvement of the people's state in the activity to achieve international security and peace. This unanimity is one of the most valuable achievements in the history of the postwar Poland. Natural differences in views on various internal affairs have not and do not weaken this unanimity.

The result of political education of our society during the 36 postwar years is its complete awareness of Poland's place in the European power structure as an important element in the balance of power on this continent. The weakening of this element as a result of activities leading to crisis situations in Poland creates a danger of violating the entire political structure in Europe as well as undermines durability of the order established at the Yalta conference, and confirmed at Potsdam and at the conference in 1975 at Helsinki.

A particularly important element of this collective wisdom of the nation is its complete understanding of the importance of Poland's alliances for her security and universal growth, of her unshakeable place in the Warsaw Pact and CEMA, and

of the importance of her friendship ties and cooperation with the USSR and other socialist states. In divided Europe, Poland's place is on the socialist side. At the same time we try--within our powers--to mitigate these European divisions, and to deepen the feeling of common fate among European nations and states, which are based on the assumption that Poland's security is related to the security of the entire European continent.

In the nationwide debate on the state of our affairs which has been continuing for months now no authentic political force in Poland and no segment of the Polish society--if we disregard the few individuals who are either injudicious or hostile to the socialist system--has not challenged the fundamental values and directions of our foreign policy. Thus, the concern on the part of the socialist states, particularly our neighbors, but also in other European states, is caused not by a challenge of the Polish foreign policy within the framework of the socialist renewal movement in Poland--because such challenge has not taken place and is not taking place now--but most of all by the lack of social and economic stability. Thus, it is not a paradox, but a logical consequence of a universal belief, that the Polish raison d'etat viewed today through the prism of Polish relations with abroad is today the basic element keeping our society together. The line of understanding covers today above all the preservation and maintaining of political capital, which we have gained--both on domestic and international levels--through our activities on the international stage, an activity which has won our Motherland respect and approval in the community of socialist states and in the entire international community.

January 1981.

CIVIL DEFENSE PROGRAMS OF VOIVODSHIPS DESCRIBED

Poznan Voivodship

Warsaw PRZEGLAD OBRONY CYWILNEJ in Polish No 4, Apr 80 pp 20-33

[Article by Col Ryszard Ronda, chief of the Poznan Voivodship Civil Defense Inspectorate: "Some Experiences From Civil Defense Activity on the Territory of Poznan Voivodship"]

[Text] Recently, we celebrated the 24th anniversary of Civil Defense (CD) of the Polish Peoples Republic. We surveyed our achievements in the CD arena, and determined the direction of our further activity. We noted with satisfaction that the past years were a period of considerable achievements and innovative solutions. Continued development and strengthening of CD necessitates the intensification of our work, and its elevation to a higher level. The use of innovative forms and methods of operation can play a considerable role in obtaining optimal results.

For this reason also, it is indispensable that they be presented in the columns of PREZEGLAD OBRONY CYWILNEJ, so that they may be circulated through the country and used advantageously by all parties concerned. In this publication, I am trying to present to the readers certain experiences from CD activity in Poznan Vojevodship.

Functioning of the Voivodship CD Personnel Training Center

In the totality of CD missions carried out within each voivodship, the proper training of leadership personnel and CD forces play a very substantive role. Cognizant of the great importance of personnel training within the staff of the Voivodship CD Inspectorate after having studied the economic-organizational conditions and capabilities, it is searching for various solutions to this problem. The most suitable one turned out to be the formation of a Voivodship CD Personnel Training Center based physically at a suitable labor establishment or institution. We found such a base with a suitable infrastructure, large enough for the training center.

Pursuant to the appropriate decisions and concluded agreements, the Voivodship CD Personnel Training Center was set up in the facilities of a veterinary hospital. It

has ten rooms with sleeping accomodations for two or three persons apiece that are rated in Category I according to the standards of the GKKFiT [Main Committee for Physical Culture and Tourism], fully equipped rooms used also as libraries and reading rooms, lecture halls which accomodate 30, and storage areas for training support purposes.

In view of its location in the proximity of the Group of Agricultural Schools in Wrzesnia, it simultaneously functions as an instruction base for defense training teachers of intermediate schools and postgraduate studies of the veterinary service.

The high level of voivodship agriculture and the high marketability of its production account for the particular interest in CD in that area.

In the case of the organization by the center of courses for instructor and leadership personnel of the veterinary service CD formations, the possibility exists of using all the locally available equipment. The entire equipment of the veterinary hospital, suitable for instructional exercises, with the students of the local Veterinary Technical School is also available.

Providing the attendees with suitably good living conditions, together with the friendly approach of the center leadership, the school personnel, and the lecturers, have created a favorable atmosphere since the first day of their arrival. This has helped the realization of the training tasks, which are characterized by considerable effort in the exericses. The fact that we managed to find a suitable person as head of the center has great bearing here too. He is reserve Colonel Zygmunt Marciniecki, the Voivodship inspector in charge of training CD personnel. He is a person with great organizational and instructional experience, high ethical, moral, and intellectual quality, who is devoting his knowledge and energy to the matter of training. The Voivodship CD Inspectorate gave him considerable power in the fulfillment of the important matters of the center and training.

The training tasks set up by the obligatory program are realized by a well selected instructional staff consisting in the main of workers of the Voivodship CD Inspectorate. Each one conducts exercises in a narrowly limited speciality connected with the service position occupied. Workers of the territorial CD inspectors and permanent workers of the hospital who received authorizations as Class I CD Instructors in the speciality of veterinary service and plant protection as a result of our purposeful activity, were also attached to the staff.

In order to upgrade the teaching qualifications of the instructors of the center, we are organizing lessons in the Institute of Teaching Methods of the Adam Mickiewicz University. In addition, the instructional staff raised their qualifications through self-instruction, mainly on the basis of training materials that we obtain from the IOCK [National Civil Defense Institute] and the organized programmed training for personnelstaff officer exercises, and demonstration exercises using the equipment of specific CD services. The training staff of the center has at its disposal an ample and modern training base and a large number of training aids of the publishing houses of the IOSK, the Ministry of National Defense and the Military Sciences Society. Training materials of the COSK OC [Central National CD Training Center], along with our own works. We have available a complete set of equipment specified in the billing tables (worked out by the IOCK).

All undertakings connected with the organization and equipping of the center were carried out by workers of the Voivoship CD Inspectorate with the help of various Voivodship institutions, without investment outlays.

During the process of teaching the students, we make use of audio-visual aids. The following is used: tape recorders with a full set of tapes containing verbal and musical programs on the subject of CD--from the recording studio of the Polish Army Institute, "Lech" type graphical display units with an ample set of foliograms[pages for reflective display], slide projectors, movie equipment, slides, a complete set of films on the subject of CD, posters, visual tables, diagrams, and photographs connected thematically with the mandatory programs of teaching individual trainee groups.

We have free use of the printing facilities of the Vojevodship Office, to turn out the appropriate sets of publications, diagrams, and pictures for the needs of the center. This allows us to increase the effectiveness of training, to save the time of the trainees in the labor-intensive resketching or retracing of various pictures, sets of documents, etc

We are organizing 21 courses per year. We are training 500 persons, including personnel for other voivodships also. The total annual cost of operating the center amounts to 380,000 zlotys.

I think that in the existing economic situation of the country with its investment difficulties, our experience in this subject can become a guide in solving problems in other voivodships.

The trained CD leadership and instructional personnel in a center organized this way is an important accomplishment of our voivodstvo.

We will always remember the people with whom we are conducting this program, and upon whom depend, among other things, the technical base, the physical facilities, and the equipment, and on whom our ability to realize the training goals now and in the future depend.

The Use of Local Mass Information Media in Poznan Voivodship for Publicizing and Propagating Civil Defense

The publicizing and propagation of CD information in local mass media within our voivodship is realized with the support of "The Guidelines for the Organization and Directions of Political Propaganda Activity in the Field of Publicizing CD" signed by Comrade Jerzy Lukaszewicz, Secretary of the PUWP CC. Pursuant to these guidelines, local mass media are realizing the fundamental political propaganda activity with respect to the preparation and undertakings of CD within the area of their activity.

The programmed activity has been developed primarily by the Polish Radio and the Television Center Station in Poznan, the editorial staffs of the dailies GAZETA ZACHODNIA (the organ of the PUWP executive Committee), GLOW WIELKOPOLSKI, EXPRESS POZNANSKI, and the institutional newspapers ZYCIE POMETU, GLOS ZALOGI, ZYCIA WPK, NOWINY, ELEKTROCHEMIA, STOMILOWIEC, ABC LECHIA, SEGMENTY, NASZA TRYBUNA, MOTOWIDLO, and PRZEMIANY ZIEMI GNIEZNIENSKIEJ.

This activity is supported by over 80 wire radio broadcasting centers. It can be stated that the press, Polish Radio, and television are carrying out the leading role in our territory from among the mass media engaged in publicizing the ideas, goals, and tasks of CD, and propagating knowledge in the CD field.

Thanks to the concept of planned and coordinated activities and training conducted by the Voivodship CD Personnel Training Center, and with the involvement of the editorial and correspondent groups, our publicity goals have been realized with ever increasing results and knowledge in the field.

During the course of the year, about 260 informational articles, reports, and notes have been published in the local and institutional press. More and more frequently, in articles concerning socio-political, economic, and volunteer blood donation activities, emphasis is given to the active and inspiring participation of the staff and members of CD formations. We have established working contacts with the representatives of journals in Poznan (ZOLNIERZ WOLNOSCI and WIRAZE).

The Polish Radio in Poznan and Poznan TV provide time for the programmed problems of CD (amounting to 25 minutes in Polish Radio, and 30 minutes on TV per year). (sic) The contents of the broadcasts are mainly reports on the rescue actions and exercises of CD bodies and forces, demonstrations of protection of animals, pastures, and water intakes from contamination, and other information concerning natural calamities, effective community work, etc. We operate for the purpose of obtaining the sympathy of individuals in TV and Polish Radio with respect to the publicizing of CD. We already have persons actively working. We are now expanding and enhancing the numbers of such persons. The CD problems are becoming the subject of broadcasts in the wire radio centers. On an annual scale, 970 programs with a total time of 195 hours are being broadcast.

Having in mind the continuous improvement of the publicity forms used in mass media, and seeking new forms, we are initiating activities for the purpose of spreading the readership and subscribership of PRZEGLAD OBRONY CYWILNEJ. The publicizing of PRZEGLAD OBRONY CYWILNEJ is conducted in local administrative bodies, among leadership personnel and members of CD formations, among lecturers and instructors in training the populace, and also readers concerned with problems of protection and rescue. Thus, year after year, the readership and subscribership of our journal are increasing. A 15 percent increase of subscribers is planned for 1980. During the time of organization of training in various groups, centers, and preparations for exercises of CD formations, the Voivodship CD Inspectorate recommends the study of selected articles from PRZEGLAD OBRONY CYWILNEJ. In our own area, we develop, print, and distribute leaflets (several thousands of copies of each circulated), of compact content, concerning alarm signals and the protection against contamination and poisoning of food, water, animals, pastures, and plants.

Cooperation of the Voivodship CD Inspectorate With Departments of the Voivodship Administration and Paramilitary Organizations

The successful realization of CD tasks of Poznan Voivodship depends, among other things, upon the actual cooperation of the Voivodship CD Inspectorate with departments of the Vovodship Administration and paramilitary organizations. We are aware of this and understand the essence of CD and our role in it. In order to create the possibilities and foundations of good cooperation of the bureaus of the Voivodship

Administration, everything has been done in an official and legal way. The main matters are regulated by the appropriate regulations in the Statute of the Voivodship concerning the realization of annual tasks in consultation with the specialized departments, units of the basic level, etc. In mentioning cooperation with the departments, it is worth emphasizing the good atmosphere that the Voivodship Administration creates for the constructive and effective work of all organizational units.

The Voivodship Inspectorate, recognizing its place in the system of realizing CD tasks, is considered to be one of the departments of the Voivodship Administration and identifies itself fully with the administration, its socio-economic, organizational, and political affiars, etc. The Inspectorate leadership participates on an equal footing with the leadership of other departments in the organized training, briefings, and consultations. We draw conclusions that apply to us, observe cooperation with other departments, and, if possible, we make use of any positive development. In practical activity, we consult, teach, and confer on how to prepare, plan, and realize CD undertakings. Often, we also help other departments (of equal rank) in the execution of their specialized tasks--essentially outside the CD area. The units know and value our help. This cooperation of the workers of the Voivodship CD Inspectorate is characterized by consistence with respect to CD matters, modesty in action, and the proper respect for other workers of the administration. In fulfilling the tasks and missions assigned us, in relation to the departments of the Voivodship Administration, we do not give orders, we do not issue commands, and we do not boss the show. We fulfill our missions at the appropriate time, the proper place, and on our own level. I wish to emphasize that cooperation of the Voivodship CD Inspectorate with the Voivodship Defense Committee Secretariat in the realization of the primary goal of executing defense tasks is characterized by good relations and cooperation. We operate in a coordinated and unanimous manner, which makes our efforts more potent and effective, and increases our mutual authority. It must also be stressed that cooperative relations are set up in a similar way with the Voivodship Military Headquarters and with paramilitary units and organizations.

The cooperation of the Voivodship CD Inspectorate and other departments of the Voivodship Administration with paramilitary organizations is regulated by an order (No. 64/177) of the Poznan Voivodship governor (dated 14 September 1977) with respect to the coordination of the activity of departments of the Voivodship Administration during the period of cooperation with associations and the provision of help to them. Cooperation with paramilitary organizations is realized by the Voivodship CD Inspectorate by means of: support and encouragement of their socially useful initiatives, joining organizations towards the realization of CD missions, consultation with organizations on matters connected with their area of activity and affecting CD problems, and the holding of local meetings for discussing the role and scope of activity of organizations on behalf of CD.

In suggesting to organizations that they pay heed in their activity to CD problems, and make use of material at the disposal of the organizations for activity concerning CD, the Voivodship CD Inspectorate never violates the autonomy and internal discipline of the organizations. In order to maintain constant contact and to assure cooperation with paramilitary organizations and the provision of direct aid to them, so-called "constant guardians" have been designated from among the workers of the Voivodship CD Inspectorate. The fact that nearly all our workers are registered as members of

one of the organizations and are very active as members facilitates the realization of Voivodship CD Inspectorate goals in the organizations. This organizational setup makes it possible for us to present CD matters at meetings of these same organizations and to develop training in the CD field among their members. We are also aware of the fact that all cooperating parties should derive advantages from good cooperation. Thus, in cooperation with paramilitary organizations, we adopted the principle of treating them as partners, on the basis of mutual advantages and comradeship. An example of such cooperation is the provision of help to organizations in conducting training exercises and competitions, the participation of Voivodship CD Inspectorate personnel in the judging committees, help in the area of material-technical supply for events, etc. We do not consider our forms of cooperation thus far with paramilitary to be something completed and closed. We continually search for new and attractive methods.

Including the Conclusions From Inter-Voivodship, Voivodship and Local Exercises in CD Plans

The practical exercises of various types in the CD system offer conclusions of a planning, organizational, operational-technical, and training nature to the Voviodship CD Inspectorate leadership personnel participating in them. We make a practice of having conclusions of a general nature and those more specifically applicable to the concrete situation of our voivodship drawn from our participation in such exercises and worked out in written form.

These conclusions become a subject of discussions within the leadership staff. They are subsequently brought to the awareness of volunteer workers of the Voivodship CD Inspectorates, the leaders of local CD inspectorates, workers officially engaged in the realization of defense missions in departments of the administration, groups, and units subordinate to the voivodship governor, during the course of internal training and briefings. The chief of the Inspectorate presents certain conclusions to the Voivodship Administration leadership.

Undertakings pursuant to these conclusions are reflected in the annual plans of CD goals to the voivodship, in CD plan documents, and also in specific organizational structures and operational-technical plans. The degree of acceptance and inclusion of undertakings from these conclusions, drawn from exercises, is also a subject of control and accounting of the execution of tasks.

I wish to say that up until now, every exercise has yielded a great deal of interesting informative material and has encouraged and stimulated individual solutions, comparisons, and self-critical evaluation of one's own activity. There are many practical effects of the inclusion of such conclusions. On the basis of experiences and conclusions of the exercises in which we participated, the system of detecting and analyzing contamination in Poznan Voivodship was checked out, and the optimal quantity of its elements for the existing conditions was established. This system was integrated with the elements of the over-all warning and alarm system. The plan for conducting rescue operations in Poznan city was modified. Under the influence of the experience from the exercises, we perceived the question of dividing the city into sectors, the activation of rescue forces, and their material-technical supply and leadership differently than before.

We received considerable encouragement from the exercises in the matter of decentralizing the population at the stage of developing plans. We checked out the documents for transporting the decentralized inhabitants through the facilities of the Polish State Railways, the State Motor Transport, and the Voivodship Transportation Enterprise Directorate in Poznan. We acquainted many people with the totality of the very complex problems, and calling attention to the conclusions derived from them, even before the decentralization preparations themselves and the transporting of the population from Poznan. We then provided the means to them to meet the various requirements of wartime. The methodology used by us of developing and including the conclusions from the exercise and training conducted in a different form are effective thus far. Thus, since all of our conscious activity has to undergo continuous improvement, we shall teach ourselves new forms and solutions or look for them from others in order to attain even better results.

Biala Podlaska Voivodship

Warsaw PRZEGLAD OBRONY CYWILNEJ in Polish No 3, Mar 81 pp 8-11

[Interview with Jozef Piela, Governor and Chief of Biala Podlaska Voivodship, by Grazyna Dembowska; date and place not specified]

> [Text] The basic problems of civil defense stem from the specifics of the territory, its operational characteristics, and its economic and manpower potential.
>
> Other matters are brought to the fore and solved in their own particular way in highly-industrialized regions with high population densities. The pattern of defense preparations is quite different. For example, in territories of a rural nature, which actually are potentially less threatened than large densely settled areas, but where the conduct of protective activities is no less important during critical moments, defense preparations can still be the deciding life-and-death factor for the populace. More on this subject is given in the interview made with Biala Podlaska Voivodship governor Jozef Piela by PRZEGLAD OBRONY CYWILNEJ.

[Question] What matters are the main object of the activities of CD in Biala Podlaska Voivodship. What are these activities aimed at?

[Answer] The general goal of all of our initiatives in the area of CD is the proper preparation of the voivodship, its inhabitants, and its economy for defense in case of a threat to the security of the state and during the time of war, and also for complex peacetime situations, when it is necessary to face natural catastrophes or other occurences having potentially unfortunate results.

Biala Podlaska Voivodship is a typical agricultural voivodship--over 60 percent of the inhabitants are engaged in farming, and it is their basic source of support. So, it is an obvious fact that the main thrust of CD preparations of this territory--aside from the natural protection of the population--is the improvement of the

system of protecting domestic animals, food, agricultural crops, pastures, and water from the results of the effects of mass destruction weapons, and especially against contamination. Therefore, both the organization of CD forces in the voivodship, and the type or structure of training for them are adapted to these very protective needs. We are concentrating attention on the undertakings realized by the local units--the communes and village units. I must emphasize--as practical experience shows--of inestimable importance for our work is the attitude of the commune heads and village administrators and their involvement in these undertakings, all the more so, since they fulfill a certain military function as CD officials and representatives of the lowest link of administrative authority. In each commune unit, we have one or two local civil defense detachments. Currently, we are aiming toward the maximum improvement of the structures of the CD forces of rural regions (relative to the tasks anticipated for them during peacetime and wartime), that would assure them a high degree of maneuverability. For apportioning defense and self-defense duties within the entire population of all village-administrator's offices, they have been organized into rural self-defense groups.

The preference that we give to problems of protection of agriculture that stems from the specific situation of the voivodship does not mean in any way that CD matters in labor establishments have been moved off into the background. Here also, both in the production establishments and in the service establishments, quite a lot is being done really. However, we observe a difference in the level of their preparation for CD (anyway, this same phenomenon shows up in the communes). In order to level out these differences, we are organizing, among other things, a series of working meetings in the enterprises that are leading in this capacity and are propagating their best experiences.

[Question] In view of the large number of production and economic tasks, are not the civil defense preparations being carried out now an additional load for the personnel of labor institutions, farmers, as well as for you, Citizen Governor, as the head of the Biala Podlaska region?

[Answer] I cannot imagine that the governor, who has been charged with the totality of the socio-economic life in the voivodship, could not find time for this activity. Anyway, every person in every work position has to keep in mind the necessity for preparations for defense in case of danger. The awareness of the necessity of the very protection of the populace, the region, the country is essential. This awareness must be deeply instilled in all of us. Any other concept and action would be simply a proof of carelessness, and the ignoring of obvious truths. Here, I would also want to add that CD is also very necessary for us in the normal peacetime life of the voivodship. For example, the participation of its formations in fighting natural catastrophes and for counteracting their results is important for us. We are a voivodship located along the Bug River. The Bug channel is not regulated and floods are a rather frequent occurrence. We have had a chance to test out the value of the help of the CD forces in such circumstances many times already.

[Question] And are they really prepared for this kind of activity?

[Answer] I consider that they are suitably prepared for this and are fulfilling these functions excellently. But this is not everything. In case of need, they are also

conducting considerable work useful for their own environment that are also necessary for the economy of the country. Returning to the question, I shall also add--and this is a matter of no small importance--that the activities of CD are accepted with understanding and acceptance by the society of our voivodship. This is most particularly manifested in its participation in anti-flood activities, which we have mentioned before, in firefighting, and in eliminating the effects of windstorms. At such times, disputes among neighbors and mutual animosities are set aside, and the only thing that is important is rescue and the protection of lives and property. Anyway, this has become such a commonplace thing in our society already (and this is proven by a number of facts from Polish history), that whenever something endangers this society, it closes ranks and mobilizes all of its forces. This is a positive manifestation.

[Question] How is the realization of CD tasks proceeding at present?

[Answer] We asserted in the past already that the recapitulation of the activity of the past year has a mobilizing effect on the realization of CD tasks. We have been applying this for years already. The recapitulation is of a working nature and is conducted in three groups: chiefs of cities, city-communes, and communes, and directors (or their equivalent) of the Voivodship Administration. Those whose activity brings results are distinguished publicly, by name, whereas the names of those who could operate more effectively are missing. As a result of such a method of evaluation of individual units, a true rivalry has been created between them and the benefit of this for CD has been obvious.

We intensified the training of leadership organs of units of all levels and commands of CD detachments. Unfortunately, the process of training is being impeded by the lack of a permanent base for this purpose. Aside from this, it is proceeding correctly.

The various types of exercises organized thus far in Biala Podlaska have concerned, primarily, all the most essential CD problems of our territory. For example, in the communes which are supposed to receive the inhabitants decentralized from cities known to be in particular danger, according to CD plans, this phase of decentralization operation was the subject of exercises. Flood control activities have been improved in the cities and communes of the Bug region. In the communes with highly developed agricultural production and food processing establishments, we are concentrating on the protection of water, food, pastures, and agricultural crops and domestic animals from contamination and poisoning. The task of an exercise of specialized CD forces was the attainment of full readiness as a basis for forming and regrouping zones of activities and deploying themselves under field conditions. The general principle in this is an actual joining together of defense and economic missions. Even during the autumn of last year, in spite of the well-known difficulties in agriculture, exercises on the commune level were conducted--and this was done at the initiative of the commune chiefs.

We managed, although not completely, to integrate the current activity of economic units with CD activity, and also to bring about closer cooperation among organs such as the Voivodship Military Headquarters, the Voivodship Headquarters of the Citizens Militia, the Voivodship Headquarters of Service to Poland, and social organizations--National Defense League, the Polish Red Cross, and shortwave fan clubs and CD clubs.

Cooperation between the Voivodship CD Inspectorate and the Voivodship Minitary Headquarters and the Secretariat of the Voivodship Organizational Committee, and also with departments of the Voivodship Administration is turning out well. This is a necessary condition for realizing the CD tasks that require the consolidation of efforts of all of these links, which are responsible for the defense readiness of the voivodship. I am limiting myself to the presentation of only some of the most important matters, but, one can see that the realization of CD tasks in the voivodship is a subject of broad coverage.

[Question] What has complicated the realization of plans in the CD field? Have the difficulties that our country has been recently experiencing been also unfavorably reflected in our CD preparations?

[Answer] Of course, we are struggling with numerous shortages--in supply, in the training material base, and with other things. And bringing attention to the conditions in which civil defense is operating in our territory, I can boldly state, that truly a great deal has been done with existing possibilities. The realization of tasks has not brought about so many difficulties now and in the last several years as compared to the problems that were the natural consequence of the creation of a new voivodship which was the result of the 1975 administrative reform.

The production potential of the territory of Biala Podlaska, both the industrial and the construction potential, is very weak. The decision of establishing the voivodship, however, awakened greater aspirations of its inhabitants--which comes as no surprise. The society tied considerable hopes to this fact and counted on more intense development and investments. At the same time, it was not possible to satisfy social needs in any measure, even the most urgent and most important ones, as had been expected by the voivodship inhabitants. In addition, many tasks were levied that had to be realized, making use of the weak potential. This example is important, even from the defense standpoint. Hospitals were built before 1975 in two independent administrative units, in Biala Podlaska and Radzyn powiats. Later, both of these powiats ended up in one voivodship. Therefore, we had to realize two investment projects simultaneously of high labor and capital intensity for our capacity to achieve. The needs of the inhabitants also grew and the influx of people into the new voivodship brought with it the necessity for accelerating the housing construction program. The needs of CD also reached a new scale at the voivodship level. Currently, the object of greatest concern is the completion of the construction of the facility in which there would be space for the storage of CD equipment of the voivodship, and which would simultaneously fulfill the function of a permanent training center.

[Question] And what are the main goals for the immediate future?

[Answer] Along with the many actions undertaken by us, the lowest CD link, such as the village, will continue to require particular concern. What this concerns is that the village self-defense groups have to be really prepared for their functions and would systematically check out and improve their readiness. We will be involving the Voivodship Administration to a greater degree than thus far in activities concerning the commune CD links. Specific departments of the Voivodship Administration (the Department of Agriculture and others) will have to be fully responsible for CD preparations in the commune level sections under their jurisdiction. Of course, the improvement of CD in labor establishments will also continue to be a task of current

concern. I note that there is always much to be done in both of these areas. I see in this a major role for the Voivodship Civil Defense Inspectorate--the coordinator of preparations on the part of the voivodship authorities and the Voivodship Organization Commission.

[Question] Are there units or individuals in the voivodship that merit special recognition, who are attaining better results in CD preparations than are others?

[Answer] But of course! For example, among the communes the leading one is the Janow Podlaski commune, which boasts of its attainments in all the areas of CD activity. Among the labor establishments, there is the Irrigation and Land Improvement Equipment Repair Enterprise in Biala Podlaska. Jerzy Barczynski, the director of the enterprise, in paying considerable attention to matters that are the subject of CD concerns, takes particular care of getting CD tasks realized in a planned way and at a high level. However, the activity of the entire health service is proceeding in first place on the voivodship level, and quite a bit of the credit for this goes to Jan Zukowski, MD, the Voivodship health officer.

It is an obvious fact that the level of CD preparation in the voivodship is primarily the result of the systematic tenacious work of the Voivodship Civil Defense Inspectorate. Its chief, Lt Col Adam Olesinski, is widely known because of his great inventiveness and effective procedures in this area.

[Question] In the name of our readers and the editorial board of PRZEGLAD OBRONY CYWILNEJ, and speaking for myself as well, I sincerely thank you, Citizen Governor, for this conversation.

And I promise the readers of PRZEGLAD OBRONY CYWILNEJ a detailed story on my visit to the labor establishments of Biala Podlaska and the Janow Podlaski commune in one of the coming issues.

Lodz Voivodship

Warsaw PRZEGLAD OBRONY CYWILNEJ in Polish No 3, Mar 81 pp16-19

[Article by Mgr. Jozef Niewiadomski, President of the City of Lodz and Civil Defense Chief of Lodz Voivodship: "CD Achievements of Lodz City Voivodship from 1975 to 1980"]

[Text] The 30th Anniversary of the Establishment of CD Falling in 1981 Leads One to Reflect Upon and Appraise its Achievements.

The current state of CD is the result of consistent and creative continuation of the previous stages of development--territorial anti-aircraft defense and universal self-defense. Each of these stages is the development of new specific forms of CD. The Resolution of the Council of Ministers on Civil Defense issued 18 May 1973 and the 1975 reform of territorial organs of state administration were of decisive importance for CD preparations. This resolution, along with the executive acts, is a new higher stage of CD preparations of the voivodship. The CD organizational structures were adjusted to the newly-created operating conditions and also--to qualitatively different theoretical principles, and previous experiences permitted a

relatively rapid work-up of effective and differentiated forms and methods of operation, which facilitate the achievement of the goals set forth. The new CD organizational structures in the units of the territorial organs of state administration of the voivodship were purposeful and appropriate. The situation and nature of the voivodship and its industrialization required us to have a grasp of the individual preparations of the responsible leadership organs and CD forces and their equipment.

One of the first elements of these preparations was the precise definition of tasks for the departments of the city administration, the territorial associations, and the basic level state administrative units. The principle was adopted that CD assignments must be realized on a level with other assignments by each organizational unit. The planned, over-all control of projects in the CD field was introduced. Depending upon the nature and specifics of the unit undergoing control, the control groups consisted of the representatives of other departments of the city administration of Lodz, and of associations in addition to representations of the Voivodship CD Inspectorate, the Voivodship Defense Committee, the Voivodship Military Headquarters, and the Social-administrative Department. These controls have as a purpose the verification of the immediate state of operations and the provision of help in order to eliminate difficulties.

At meetings of the Voivodship Defense Committee and at periodic briefings devoted to the problems of CD, periodic accounting is carried out by the directors of the departments, associations, and basic level CD chiefs of the realization of CD tasks.

The basis of the activity is realistic planning and the regular realization of CD plans. "The Plan for the Development of Civil Defense of the City Voivodstvo of Lodz in 1976-80" was of particular importance. It contained the fundamental undertakings aimed at raising the status of CD of the voivodship to a higher level based upon the mandatory prescriptions and real capabilities. This document and the guidelines of the Chief of CD of Poland were the basis for the work-up of annual plans of all organizational units of the voivodship. Worthy of note are the preparations of the initial data for the development of CD plans for all organizational units, and also the model plans for CD.

The annual plans of administrative units were checked out and updated during the course of exercises of the CD forces. An example of this are the exercises "Ziemia Lodzka-77," "Warta-78," and "Lodz-80". The continuous analysis of the exercises and the conclusions drawn from them served for the improvement of the CD plans.

An important achievement during the past five-year plan was the completion of the construction of general warning systems in several cities, and their further restructuring in others. These systems have been adapted to central control, and are maintained in full technical readiness. A real achievement is the installation of radio telephones without any financial outlays and with the participation of the technical workers of the Voivodship CD Inspectorate. It forms a general alarm network, and is also used for transmitting urgent administrative decisions from the voivodstvo to districts, cities, cities and communes, and comunes. In order to increase reliability and effectiveness, the communications equipment connected into the alarm system will be at the disposal of the Voivodship Firefighting Command, the Citizens Militia, the Polish State Railways, and also the Lodz stations of Polish Radio and Television. The organizational principles and technical solutions fully assure the early warning and protection of the populace in the event of danger from the air.

A voivodship system for detecting contamination has also been organized. Teams of personnel have been trained and have been furnished the needed equipment. In the course of exercises, this system is perfected and improved from an organizational standpoint.

In shelter construction, we made a detailed analysis of the needs and capabilities of territories that assure the initiation of planning-documentation work for preparing an appropriate quantity of accomodations in shelter structures for the crews of labor establishments and the population. A group of specialists was called upon who were trained by the Voivodship CD Inspectorate in planning shelter structures. The training of leadership personnel was aimed at preparing them for the realization of CD tasks during peacetime, and also during danger and war, by means of lessons, training sessions, and leadership-staff exercises. During the last five-year plan, three leadership-staff exercises were conducted with the leading CD bodies of the voivodship, one of these with the use of rescue forces within the framework of the "Ziemia Lodzka-77" inter-voivodship exercises. The exercises made it possible to verify the concept of leading the CD of the voivodship and intensified the capabilities of the CD leadership staff in realizing the tasks during the time of danger and war.

Group commands of rescue units and groups for handling the preparation and implementation of decentralization of the populace were called up and trained. The training of 100 percent of the leadership personnel of the territorial CD formations through a system of courses was an achievement. In order to simplify and generalize views in organizational and training problems, demonstration-training exercises were organized for the leadership CD personnel of territorial and basic level CD. In addition to the training and organizational goals, they also fulfill propaganda tasks. An important element of education is the useful social work that is realized during the time of these exercises. Their worth in our voivodship during the past five-year plan is estimated at 14 million zlotys. The CD formations of the city and commune in Aleksandrow Lodzki and the town of Glownie are leading in this respect.

The training of leadership personnel necessitated the preparation of a suitable training base. Method training rooms were organized at the Voivodship CD Inspectorate and in three district CD inspectorates. They are in the process of being organized in the other districts and towns.

The Voivodship CD Inspectorate, by agreement with the Office of the Superintendent of Education and Upbringing, with the support of the commune schools, is organizing CD training centers in every commune. Preparatory work is in progress. The greater part of the aid for the training offices was done in social actions by the CD personnel, which reduced financial outlays considerably, limiting such outlays to the purchase of audio-visual equipment.

Considerable attention was given to basic training of the crews of labor establishments, as well as people not belonging to organizations--the inhabitants of towns and villages. We cover about 40,000 persons on the average per year in this type of training. Constant improvement is conducted at the annual course-conferences of the instructor staff for various specialties, intermediate school defense training teachers, and military studies instructors. A major role in training and instruction for CD is carried out by social organizations, especially the Polish Red Cross, the Volunteer Firefighters Association, the National Defense League, and the Volunteer Reserve of Citizens' Militia.

The military studies at the higher educational establishments of our voivodship are making a notable contribution in preparing personnel for CD. In realizing their teaching assignments, they are preparing students for the leadership-instruction functions that are especially applicable in CD formations, and have at their disposal a properly prepared training base equipped with audio-visual and specialized equipment. The military studies at Lodz University, the Academy of Medicine, all the art schools, and Lodz Polytechnic Institute deserve to be singled out.

The defense training of the youth fulfills a very important role in preparing society for CD. It is the primary, most universal, and fundamental form of preparing the population for self-defense. During the years 1975 through 1980, about 127 pupils of schools of all types were involved in this type of training. About 450 intermediate school pupils attend defense training camps each year. During the sessions, 150 trainees were awarded CD youth instructor certificates and 320 achieved medical team commander certificates. The attendees of these camps achieved 670 CD proficiency awards and worked 7,000 hours on social projects, accomplishing work worth 90,000 zloty. During the last five-year plan, 57 workshops for defense training were restructured or newly-organized in various types of schools of the voivodship.

We attained considerable achievements in the improvement of the cooperation of CD organs and formations with military units, especially in the organization of joint exercises. An example of this is the demonstration exercises for the commands of units of the National Territorial defense, the Polish Military Organization and the CD leadership personnel of the voivodship that were conducted in 1975 with the use of the territorial defense regiment of the city of Lodz and the CD forces of the Lodz-Polesie district.

A substantive problem in realizing the CD tasks is the selection and employment of persons in positions connected with defense systems. We conducted analyses of the persons employed at these positions in all territorial administrative units, economic units, and in cooperatives. The results became the basis for the employment of individuals possessing professional qualifications that guarantee the proper realization of CD tasks.

We devoted considerable effort toward equipping CD forces and for the care and storage of CD equipment. The quantities received were very useful in raising the readiness of CD formation and the proficiency in its execution of tasks. We also carried out an inventory of the agricultural equipment and engineering machinery of the national economy in enterprises and institutions that are suitable for CD purposes, and we defined the bases for making use of them.

The increasing quantity of CD equipment necessitated the restructuring and expansion of the storage base. At the cost of low financial outlays, thanks to the involvement of CD formations in community work, the majority of the storage buildings were adapted to the needs for maintaining equipment and protecting it from theft and destruction. In addition, this adjustment influenced the proper storage of equipment. Good results in this area were achieved in the districts of Lodz-Widzew, Gorna, and in the city and commune of Strykow, the city of Glownie, and the commune of Brojce. It must be stated, however, that in the voivodship, the plan for the construction of storage facilities was not realized for objective reasons; we shall solve this problem on an over-all scale in the immediate future.

Publicizing CD occupied an important place in our activity. We developed and are developing political propaganda activity to expalin to the public the role of the voivodship and the significance of CD under modern conditions, the publicizing of its goals and tasks, and treating such activity as an important element of patriotic-defense education. We are using a variety of methods and operational forms: lectures, talks, rap sessions, meetings with participants of the workers' and revolutionary movement, war veterans, party and government activists, and personnel of the Peoples Polish Army. We are also organizing competition on CD science and annual competitions on wall newspapers. Annually, about 15,000 school youth take part in the competition. The representatives of the voivodship attain first place listings on the central government level in such presentations.

At 20 various exhibits during the past five-year plan, we presented our CD achievments and equipment to the public. About 30,000 persons atetnded the exhibits. Special emphasis should be given to the competition conducted in 1977 that passed the test for the titles of leading CD inspectorate and territorial CD detachment of the city voivodship of Lodz and the administrative department of the city of Lodz. Such forms of different scope were organized in territorial units of basic level administration, and in labor establishments of the voivodship. Thanks to the introduction of such competitiveness into the activity of these units, we carried out a number of ambitious tasks, adjusted out operating style, and included the active core of the CD formations, and the workers of factories, city residents, and villagers in the realization of our undertakings.

Since the time of establishment of the inspectorates in the new structure, i.e., from mid-1975 to the present, hundreds of thousands of persons have taken part in various publicity and propaganda presentations, and the value of the useful social and defense work of the CD forces of the city voivodship exceeded the amount of 14 million zlotys. Our preparations gained the recognition of the Sejm Commission for National Defense, which visited our voivodship in May, 1978. A delegation of the Territorial Anti-aircraft Defense of the Socialist Republic of Romania visited in the voivodship in 1975 for the purpose of exchanging experiences in the field of CD preparations. During the course of the visit, the guests showed great interest in familiarizing themselves with the realization and the solution of the CD undertakings of the voivodship.

Our tasks for the years 1981 through 1985 require continued hard work. Their realization will occur under complex socio-political conditions that our country is undergoing currently. I am convinced that if the people have a complete understanding of the need for CD preparations, we shall realize these tasks in full.

NEED TO UTILIZE, ENRICH NATIONAL CREATIVITY STRESSED

Bucharest SCINTEIA TINERETULUI in Romanian 11 Aug 81 pp 1, 2

/Interview with Prof Dr Ion Manzatu of Bucharest University by Monica Zvirjinschi/

/Text/ /Question/ In every stage of development there are words that occur more frequently, words that seem to belong to that stage and to define it. Now we very often speak of the new and its introduction in all sectors. Why do you think it is the new that is the word of the present?

/Answer/ It is by no means a fad. To innovate and introduce the new are just as necessary today for the nations that are developing and have to reach higher levels of competence and ability to act as they are for the economically developed ones whose existence is constantly threatened not only by competition from other nations but also by their own internal tensions.

/Question/ Let us talk about our need for the new.

/Answer/ We have inherited from the past centuries a great many things that constitute national-historical treasures, but we have also inherited a number of realities resulting from the profound economic backwardness in which the Romanian lands were left and from the attempts of external and even internal elements to block our intellectual progress in keeping with the Romanian people's extraordinary creative potential. It is not very long ago that the politicians of the former regimes were disseminating the idea that the Romanian people have an endemic need to be led by others and are destined only to bow down before a foreign civilization. A historical transition taking more than three decades was needed so that we can say what we say today, and the road from impotence to power was not an easy one. In characterizing this year of 1981 which follows a five-year plan based upon the idea of the technical-scientific revolution, we can say that we would have had no choice but to remain subservient to skills employed by those who developed historically under easier conditions, to go on burdening our balance of foreign payments, and to never be truly competitive. But the 12th Party Congress occasioned the entire people's unanimous decision (despite the voices from abroad that still disputed our right to true freedom) to radically change the structure of the national economy as well as the quality of productive activities, and especially to take no step until we had thought several times about its future consequences.

/Question/ Who are the elements who are still causing disagreements about introducing the new, now that we have a scientific view and strategy of the future and an economy open to all innovations?

/Answer/ You see we developed for years on end by resorting to imported licenses and equipment, all of which were originally a starting point. But in some fields we made the mistake of neglecting our own inventive potential for many years, repeating the same or other more expensive imports in cycles, instead of developing whatever meant progress at a given point. Even today there are still responsible elements here and there who, out of laziness or ignorance, still maintain that our creative potential is nil compared to what foreign countries have to offer us. What is more, the OSIM /State Office for Inventions and Trademarks/ has recently recorded over 76,000 Romanian patents of which the percentage of use, both domestic and foreign, is entirely unsatisfactory. It is incredible that the technical progress plans for some research and design or production units are drafted without consulting the national patent library and without comparison with the latest worldwide procedures, while some subjects have been preferred for 10-15 years. In such cases it is obvious that the three links in the chain of innovation (research, technological development, and assimilation of the manufacturing process) are still singing different tunes! Moreover there is an appalling indifference, here in the five-year plan of quality and efficiency, to the formation of data and information banks in every industrial central and research and technological engineering institute, or at least on the county level, concerning the innovations in national and international production, the state of the technologies used, and the reserves of existing procedures, which have been thoroughly tested but are still unused. In this way we compel the researchers, the specialists engaged in design and production of the new, and the supervisors to waste valuable time and run the risk of adopting outmoded procedures that may have serious consequences for the development of a field. We all know what the information explosion means. Every year 200,000 titles of technical-scientific publications appear in the world, over 60,000 inventions are patented, and thousands and thousands of new technologies and products are launched. Any country that intends to reach a high level of development including Romania, and especially Romania, which is not very rich in primary resources for development, has a first obligation to use the product of human intelligence in the form of new scientific discoveries, technologies and products.

/Question/ When asked about the inadequate sources of documentation and information, the elements in charge of organizing them blame it on conservation of funds.

/Answer/ I would resort to a comparison. The same economists who explain that they are conserving our funds did not hesitate a few years ago to recommend importing a license that would have amounted to 1,300 times more than double the value of all the informative publications that Romania needed at the time! But what is worse, even today many colleagues in the design and production sectors not only prefer imported technologies (thereby reducing the risk of their responsibility) but also favor equipment and installations that are already obsolete when they are purchased, even when they could use the available funds to purchase patents for innovations whose lifetimes are much longer than those of the products and cost much less.

/Question/ I think education, the mold in which the future specialists are formed, has a large part to play in changing that attitude.

/Answer/ Certainly in a world of technological and scientific competition (which promises to be keener in the future) it is the duty of education to teach youth to

love the new as a necessity for the development of their nation. The quality and value of all social and economic activity directly depend upon schools and their quality. Whatever equipment and technologies we may have, we will inevitably lag behind others without people who are highly competent, from design to the most elementary installation operations. A great thinker and inventor said that a nation that promotes its values from school on can never be subjugated by other nations for the simple reason that high-quality human minds can never be overcome. They always find the way out of difficult situations. If our youths sometimes become indifferent it is because in their courses we succeed only in repeating threadbare ideas and do not impart to them the thrill of the new or the enthusiasm and sense of responsibility for conceiving it. I am convinced that many of the present failings of the schools would disappear if the teachers themselves were all devoted to the idea of creation and effort. Noble ideas are compromised by the teachers' lack of enthusiasm and conscientiousness. Let us consider, for example, the state of integration of education with research and production. 1. Often the students, to say nothing of pupils, come into a shop or laboratories without the elementary preparation for the activity they should be performing and become a burden upon those who must teach them the basics instead of integrating them in the planned activity. 2. With laudable exceptions, many school and student laboratories are behind in production and research facilities, which means that the youth spends twice as much time by mastering an old technique at first and a new one later. 3. Very few youths learn from their teachers what an invention or a data bank is, or what an extraordinary part is played by timely information in forming creative thought. Of course in improving this situation education has the role of the conductor who knows the score well, but not one of the economic sectors is exempt from the responsibility because you cannot have a nation capable of peak creation if the generations are not aided and do not carry on their efforts. To be sure all this requires great efforts, understanding and courage, but we have no choice. From the high rostrum of the Second Congress of Workers Councils the party secretary general pointed out to us once again that there is no other chance of raising the national economy than by full use of our people's entire creative power. Actually, this is verified by history. The reason for all nations' rapid development and great material and cultural benefits is none other than the treasury of national creativity. It is the duty of all of us, young and less young, producers, teachers and researchers, to give the full measure of our competence to promote and assert it.

WEST GERMAN COMMENT ON SITUATION IN KOSOVO

Frankfurt/Main FRANKFURTER ALLGEMEINE in German 13 Aug 81 p 5

[Article by Johann Georg Reissmueller: "Resistance in Kosovo--How the Yugoslav Leadership Is Trying To Cope With The Unrest"]

[Text] The unrest of the Albanians in Yusoslavia's Kosovo differs in several respects from other ethnic conflicts Yugoslavia has experienced. There are several reasons for the peculiarity of the case. The Albanians constitute the only important non-Slav group in Yugoslavia (the Hungarians living in the Vojvodina, numerically much weaker, apparently being in the process of being absorbed as an ethnic entity by the Serbs). They are predominantly Muslims, and the maternal state of their ethnic group--Albania, headed by Enver Hoxha--feels it is entitled and able to increase the national consciousness and self-confidence of the "brothers across the border." However, the methods with which the Yugoslav leadership is trying to settle the matter differ little from those it used to master national movements elsewhere in years past. There is a pattern according to which recalcitrant peoples in Yugoslavia time and again are relegated to the position desired and considered normal by the central authorities, and Belgrade is now also sticking to that pattern in the Kosovo.

It made a familiar impression when the leadership at first employed Serbian police to cope with students demonstrating and rioting in Pristina, the capital of the Autonomous Province of Kosovo, which is part of the Serbian Republic. This had been its attitude whenever there was ferment in the Kosovo in the past. The Serbian police, however, are known for going into action without much restraint. They do not make much fuss with their compatriots in Serbia proper, much less with Albanians in the Kosovo in the case of major riots there. This has to do with the fact that the conflict in the Kosovo basically amounts to resistance by the Albanians against the Serbs. In such a situation the employment of Serbian police was bound to lend fuel to the fire. Prudent persons in Belgrade apparently realized this quickly, and soon police composed of all Yugoslav ethnic entities were sent to the Kosovo. That probably contributed to limiting the fire.

As always, this time too the Yugoslav Army blocked off the center of the disturbances together with the police. This has now gone so far as to cut off the Province of Kosovo completely from the rest of Yugoslavia, and of course also from Albania. For weeks on end neither foreigners nor citizens were allowed to enter the Kosovo without special permission. The army also played an important role in suppressing the Croatian national movement in 1971. At that time it encircled Zagreb and cut it off

from the Croatian country around it until police in the capital of the republic "cleaned up." This demonstrates again that the Yugoslav Armed Forces have a domestic mission as important as that of defending the country against any external attack.

After the revolt in Pristina the top party and government officials of the Autonomous Province of Kosovo to the extent that they are Albanian have been removed one after the other. In part they are being forcibly retired, in part they are being transferred to subordinate positions. In any case, they are disappearing from the sight of the population. Strange as it may seem, the Byzantine taboo against them is continuing as a result: as long as they were on top, no one was allowed to say as much as a word of criticism about them, but not that they have fallen the people are supposed to regard them as nonpersons. They have been replaced in part by officials who represented the Kosovo in the 1960's, be it in Pristina or in the central party and government bodies in Belgrade. At that time those men were not regarded highly by the Albanianians in the Kosovo. People said about them that they were lending little support to the Albanian ethnic group but were more concerned with Belgrade interests--centralist Yugoslav ones and those of the Serbian Republic, of which Belgrade is also the capital.

That was perhaps not quite correct. In Yugoslavia the making of policy at the top is protected from public scrutiny to such an extent that the man-in-the-street often adopts mistaken judgments that have spread among the public about what a leading man, wants, does or tries to alleviate. Perhaps the Kosovo representatives of the 1960's too, who occupied jobs of little influence or fairly small conspicuousness in the 1970's, have inwardly changed in the meantime. The fact that Belgrade has now recalled some of them to important positions does not yet constitute any proof to the contrary. After all, someone has to occupy the leading positions in Pristina, and since Belgrade at least publicly wants more or less to preserve the ethnic quotas in the hierarchy of the Province of Kosovo, it needs for the majority of these posts members of the Albanian ethnic group, which constitutes more than three-fourths of the population in the Kosovo.

But whatever the new officials in Pristina may be like, through the overthrow of the old officials ordered by headquarters in Belgrade the Yugoslav party once again has removed a regional leadership which represented the interest of a people in a multinational state in such a way as to cause that people to award it a certain amount of recognition. It had engaged in similar practice in Croatia, Slovenia and Serbia, in the Bojvodina and in Macedonia 10 years before. Since in Yugoslavia no position of power is filled by genuine popular election, no party or government leader can formally claim to be a democratic representative. It does happen, however, that by persistently advocating the interests of a region, of the ethnic entity inhabiting it, the leadership of one of the eight regions--six republics and two autonomous provinces--gains the respect of that ethnic entity and is accepted as its representative. (This may, however, be uncertain since there is no systematic way of establishing it reliably.)

This was surely the case in Slovenia and Croatia, in Serbia and Macedonia around 1970, and again in Serbia in the mid-1970's. At first glance it appears strange that the Yugoslav party thus time and again deprives itself of what every communist party misses sorely--popular assent. As a Leninist party, the Yugoslav communists are, however, constantly afraid of becoming dependent on the people,

for Leninism means rule of the top of a cadre party over the people. What is more, in multinational Yugoslavia the leadership is worried lest regional leaderships supported "populistically" by their respective ethnic entity and the republics get involved in ever new conflicts among themselves. There are conflicts between the components of the Yugoslav Federation as it is, but as long as the populations are not involved these can, if need be, be allayed more easily or at least dampened by a decisive word from the center.

The fact that the penal organs are working at a high pitch in the Kosovo is also reminiscent of old times. This time there actually are criminal offenses to be prosecuted, because the demonstrations in Pristina led to violence. This was by no means so in Croatia, say 10 years ago; those sentenced at that time had all been charged with uttering politically objectionable statements. Now, in the Kosovo, though some of the prison sentences seem also to have been meted out for purely verbal offenses (for example, "counterrevolutionary activity"), the sentences are only part of the official reaction. After the unrest in Pristina, the university there was closed until further notice (something like that had happened previously only during the student unrest in Belgrade in the summer of 1968), and all public sports events were banned in the entire Kosovo for a lengthy period--also something the authorities had previously not resorted to in the wake of unrest.

What makes the Kosovo affair so explosive is an aspect which is also peculiar to it--comparable only to former unrest, likewise among the Albanian ethnic group in Yugoslavia. The Croatian reform movement had been accused by headquarters of separatism, of striving to create an independent Croatian state. Political movements in Slovenia, Macedonia and Serbia had been accused by the central party leadership in the past only of being deviationist, with never any mention of separatism. The Albanians now are the only ethnic group in Yugoslavia being suspected by the central power of wanting to join a foreign state--Albania. It is for this reason that the demand that could be heard in the Kosovo now during the demonstrations, and also thereafter, that Belgrade should accord the autonomous province the status of a republic was condemned so utterly and dismissed as out of the question. A Kosovo elevated to the status of a republic--in other words, one entirely separated from the Republic of Serbia--the Serbian and also the central leadership in Belgrade fear, would be the penultimate step prior to joining neighboring Albania.

And this fear extends even further. It is feared that Kosovo might not be alone in joining Albania but take along with it western Macedonia (with the towns of Tetovo, Gostivar and Debar) mostly inhabited by Albanians, and perhaps even in addition the southern part of Montenegro, where many Albanians reside--for instance, in Stari Bar. In the 1970's it was possible to quietly discuss with Yugoslav party people the question as to whether it might not be best to accord the status of a republic to Kosovo and its Albanians, as to whether the increasingly expanded autonomy of the Province of Kosovo might not raise its independence vis-a-vis Serbia in a natural way and ineluctably to a point where one day elevation to the status of a republic would become a mere formality. For a long time these will now be questions not worth raising in Yugoslavia.

Nor is there now any public dialogue in Yugoslavia about the historical-political background of the unrest among the Albanians in the Kosovo. Thus the leadership is continuing another tradition of communist Yugoslavis, namely: National unrest must

never appear understandable even to a small extent against the background of past events; it has a history only insofar as it may reveal relics of "fascism." Thus the party disqualified the Croatian national movement around 1970. Thus, around the same time, it is definitively judged impulses in Slovenia of a will of its own which met with Belgrade's disapproval. And thus it has classified so far all unrest among the Albanians in the Kosovo and in Macedonia.

It does not want to utter a word about the fact that first in the Kingdom of Yugoslavia and then also in communist Yugoslavia Albanians for decades were treated as a citizens of secondary rank and rights. Rankovic, chief of the secret police and vice president, of Serb nationality, had considered it his special task to hold down the Albanians in a brutal manner. When he toppled in 1966 a better time for the Albanians began in Yugoslavia. Not only did the oppression gradually cease, but the Kosovo party and government apparatus soon predominantly was put in Albanian hands. Cultural institutions increased--the university in Pristina, publishing, Pristina radio with its Albanian radio and television programs. The Yugoslav Federation gave the Kosovo regular allocations from the government budget, and the Kosovo now received increasingly large amounts from the federal fund for underdeveloped regions paid into with a lot of complaining by the more developed republics.

The Albanians in the Kosovo gained strong self-confidence, which extended to the Albanians in Macedonia. Their high birth rate--the highest in Europe--quickly raised the proportion of Albanians among the Kosovo population (soon to be 80 percent), with that of the Serbs declining at the same rate. Tens of thousands of people belonging to the Serbian minority in the Kosovo feel hemmed in as a result of the advance of the Albanians, who are sticking together and whose Illyrian language and Muslim religion are strange to them anyway--hemmed in on their ancient native soil, because the Kosovo was a core of the medieval Serbian Kingdom. Since the late 1960's Serbs have migrated from the Kosovo into Serbia proper--The Republic of Serbia less the Autonomous Province of Kosovo--because they no longer saw a future for themselves in the Kosovo and even did not feel safe there any longer. That subject, however has been taboo in Yugoslavia for more than a decade.

Despite their upswing, however, the Albanians have not forgotten the previous bad times. Peoples have a long memory--but that is not something the Yugoslav party wants to know about this time either.

RELIGIOUS CLERICALISM SAID TO SPREAD ETHNIC HATRED

Belgrade BORBA in Serbo-Croatian 3 Aug 81 p 6

[Text] Certain individual priests extol their faith on a reactionary national-fascist platform, thus spreading hatred toward the faithful of other religious persuasions and toward other peoples.

In the struggle for strengthening the course of our Yugoslav revolution, and for the development of self-management, we must resolutely oppose various types of nationalism. We must devote particular attention to the activities of the clericalist nationalists, since certain priests are carrying on forbidden political activity, which they are cloaking in religious garb. They extol their faith on a reactionary national-fascist platform, thus spreading hatred toward the faithful of other religious persuasions and toward other peoples, supporting the intolerance of religious communities toward the political system of socialist self-management, trying to rehabilitate known war criminals, and dreaming of a time when "the clergy could assume worldly power." In this, they misuse the religious feelings of the working people and citizens. Recently, they have attempted to reestablish and revitalize old reactionary organizations such as the brotherhoods of Christian congregations, the Catholic youth organizations, young Moslem organizations and others.

Particular zeal in these activities has been shown by certain Orthodox priests in Semberija and Majevica. At the command of high officials of the Tuzla see and with the help of individual nationalist fanatics, they have been manipulating uninformed citizens. They are reviving prewar bigoted organizations, such as priestly brotherhoods, whose purpose is to repress priestly associations working within the framework of the Socialist Alliance. They have been establishing brotherhoods of Christian congregations whose purpose is to gather believers on the basis of the experience and the platform of prewar bigoted organizations with nationalist or Nazi ideologies. They are known to be the moving force for the creation of organizations with the same names as those which were the most eminent supporters of the Ljotic ideology and ardent servants of German fascism before World War II.

Provocations

Similarly they attempt to create a Catholic youth organization and operate such a magazine as OGNJISTE (THE HEARTH), which with ingenious craft, even pretense

of wit, spreads their clericalism-nationalism and intolerance toward all atheist positions. Some Imams from the ranks of the Moslem community at Bjelina are striving to keep up in the urge to spread national intolerance.

These manifestations vividly recall the wartime period, when Ljotic, Nedic and Draza Mihailovic competed with each other in spreading the Chetnik ideology and provocations of the Serbs against Moslems. At that time, they manipulated the fact that the Croatian Ustasa regime was conducting terror and genocide campaigns against the Serbian and Jewish population, so that with the acquiescence of the German overlords they agreed to the annexation of eastern Bosnia to the Nedic and Ljotic regime. The Ljotic national-fascist ideology was also attentively nurtured in the brotherhoods of Christian congregations by Ljotic ideologists.

The activities of Moslem clericalist-nationalists today also bring to mind that these promoters of reactionary fascist ideology, stemming from the top of the Islamic religious community, tried to divert the Moslem population from participation in the War of National Liberation. At the time of the occupation, wrapping their activities in religious garb, they launched the idea of Bosnian-Hercegovinian autonomy under the protection of fascist Germany. They became involved in the establishment of the 13th SS division with the aim of accommodating Hitler; this military formation was eventually to serve them as a bond with the West in case external factors contributed to political breakdown in Yugoslavia, as they hoped.

Freedom

This pro-fascist clericalist-nationalist ideology in Orthodox and Moslem congregations was defeated in the War of National Liberation, as was the Ustasa ideology. It was defeated because Moslems, Serbs and Croats in eastern Bosnia, as well as in the rest of Bosnia and Hercegovina, refused to be manipulated by the fascist occupying force. They took a position in support of the front of national liberation, under the leadership of the Communist Party, for brotherhood, unity, accord and community, as the only way to assure their emergence from darkness and the opening of prospects for harmonious life together in their mutual homeland.

Why are we making these comparisons? We do so to evoke unpleasant memories from our history. We are doing it because we do not want anyone to live in illusion and to expect that the working class--the working people, citizens, young people, believers and patriots of today--40 years after the struggle and the victory, and with all the efforts to build a socialist self-management society, will quietly watch the resurrection of that clericalist-fascist ideology and the attempts at sowing hatred between peoples. We paid too dearly for freedom, brotherhood and unity to permit someone to manipulate the religious feelings of the citizenry and national distinctions in order to destroy the most valued achievements of the War of National Liberation, the socialist revolution and the socialist self-management society.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

BETTER PARTY WORK NEEDED TO COMBAT 'FOREIGN CONCEPTS' IN MILITARY

Tirana RRUGA E PARTISE in Albanian No 7, Jul 81 pp 53-62

[Article by Gafur Cuci: "Let Us Enhance the Leading Role of the Party and the Effectiveness of its Work i the Armed Forces"]

[Excerpts] The leading role of the party has always been and remains the decisive factor in keeping the armed forces pure, faithful, vigilant and prepared to protect the fatherland, at any time. Just as everywhere else, in the army, too, it is the party which gives the guidelines for all work; it is the multilateral and skilled work of its organs and organizations which sets the tone for the activity of all the levers, the communists, the cadres and all the troops for political, ideological, military and moral training, which inspires them, gives them incentive, mobilizes them, organizes them and puts them into action to execute every duty, no matter how difficult and complicated it might be.

The positive experience of many units and sections which have achieved good results in the execution of tasks related to education, drills and combat readiness are testimony to the fact that there is a broad understanding of the leading role of the party and to the fact that this role is being executed in a creative manner in every link and instance. Particularly good experience has been achieved in the large drills, in which the party organs and organizations stipulate definite objectives, take all the necessary political, ideological, organizational and military measures, explain the duties of the commands, the youth organization and all the troops, and take active measures to execute them.

However, this is not the case everywhere. In practice there are cases which demonstrate a narrow unilateral and bureaucratic understanding of the leading work of the party organ or organization.

First, the leadership work of the party cannot tolerate those concepts and practices which appear here and there when the party problems are resolved mainly or solely by means of meetings, when the supervision of the party/organ or organization is carried out mainly or solely through an appeal in the report or by an analysis of work in the basic party organization. Such practices narrow the sphere of activity of the party organs and the basic party organizations and of the communists and the levers. They weaken the leading role of the party organization which, as Comrade Enver Hoxha teaches us, is complex, concrete, a daily task, one and inseparable.

There are cases where some party organs, basic party organizations and communists believe that the leadership work can be carried out solely through the regular holding of meetings; some make a fetish of their role, thinking that the leadership of the party cannot be assured unless the problem is brought up for discussion in the party organ or organization or that when the problem it brought before these bodies then everything is done and it is solved. To reduce the leadership work of the party solely to the calling of meetings means to deprive yourself of the spirit of revolutionary action and to become estranged from the daily revolutionary activity of the communists.

Second, party work is not done only by communists, basic party organizations, party committees and apparatuses, but by all cadres, with and without the party, by commands, staffs and other levers of the party. There can be no separation between the activity of the party organs and organizations and their levers, and that of the commands and staffs and the youth organizations. Their entire activity forms a unit, otherwise the party line is not executed as it should be.

The party includes all communists who, wherever they work, in the units and sections, in the unit staffs, in the training institutions, etc, carry out the leadership of the party. There are some communists who are lazy and who take no initiative; they make a weak attempt to raise their ideological and military level. Not only are they not exemplary and in the vanguard but in some cases they trail behind the masses. The party organizations are working with these communists to activate them, to put them in militant positions so that they will be in step with the times and the revolution. But it is necessary that better work be done with them, on an individual and group basis; they should continually be given assignments and each communist should be made thoroughly aware of his responsibility to the party in the unit and section.

There are still some cases where basic party organizations and party organs and staffs in the army, under the pretext of executing a leadership role, continue to be concerned with minor matters, practical actions, problems related to the material base and the preparation of training schedules, and administrative problems in regard to which there are laws and regulations and which the commands and cadres should be able to resolve properly. Such activities should be harshly criticized and concrete measures should be taken to remove them from the work method of the party organs and organizations because, among other things, they restrict the initiative and independent action of the commands, the staffs and the cadres. On the other haud, one should criticize and combat every instance of expectation, any feeling of insufficient responsibility, lack of initiative in the execution of tasks, on the part of some commands, staffs and cadres. We emphasize this aspect of the problem because there have been many occasions where directives, decisions, or orders which have come down from on high to commands, staffs and cadres wait around for the opinion of the party organization and no action is taken.

For example, one of the major on-going duties of the commands and of the cadres is to work unceasingly for the strengthening of the moral and political situation of the troops. Nevertheless, there are cadres who are interested mainly in the technical aspects of military training and show little interest in the education of individuals and in the problems and difficulties arising in this area. Such work practices have their basis in bureaucratic and liberal concepts, in a desire for comfort, in intellectualism and alienation from the masses. Now and then one sees the tendency of some cadres to leave the responsibility to the basic party organization or to handle problems mechanically and report that they are resolved.

In some small units there is a contradiction between the relatively high level of assimilation of military theory by the cadres and their inadequate efforts to carry out military training on the level of their actual potential. The signs of this contradiction are monotony in drills, their execution in a stereotyped form, without creativity, without responding to the needs of the People's Military Art, without conforming to progressive norms and apart from the real conditions of combat.

In light of the fact that in the military units, most of the communists are management cadres, the basic party organizations have increased their demands upon them and continually charged them with tasks which would keep them in close contact with the soldiers, the noncommissioned officers, and the youth organizations, so that they will be able to better hear their opinions. Despite the improvements in this sphere, there are still some foreign practices, instances where cadres remain apart from the masses of soldiers and do not hear their voices as they should, instances of formalism and technocracy, with the belief that the opinions and anxieties of the masses of soldiers should be solicited mainly in meetings with large groups.

Some basic party organizations have tailored their activities to young and older soldiers, to various categories of cadres and have ensured the continual imparting of information by communists, cadres, commands and youth organizations. This has created opportunities to better deal with problems and to resolve them on a timely basis and has created an active climate of opinion, intolerant towards erroneous concepts and actions. Nevertheless, the party organs and organizations must wage a harder struggle against foreign concepts and practices, against the tendency to keep the faults within the confines of the barracks. These tendencies appear in some cases and they result in the accumulation of deficiencies, in the deepening of conflicts and the creation of difficult situations.

Recently, there has been good experience in activating and enlisting the progressive experience of specialists in various military, economic and technical fields. This has raised the level of party work and has made it more scientific and more fruitful. But much remains to be done in this area.

The plans and programs for educational work and military exercises cannot be properly executed unless each communist and cadre evaluates the situation realistically and has a political understanding of his duty, unless he takes full responsibility for executing it and works at a high revolutionary tempo. In order to increase the feeling of responsibility of the communists and cadres the basic party organizations and the party organs have been fighting concepts such as "let the commands solve that" and "I did my duty because I brought the matter to the attention of the basic party organization," and others like them. The attitudes of some communists and cadres who do not worry about their work, who work without norms and without a plan, who make concessions and simplifcations in exercises, have resulted from such concepts. Such things also occur in the work of some staff cadres. They confine themselves to supervising, giving orders and making comments and they do not feel the necessary responsibility when the military drills take place in a monotonous manner, with poor quality and no good results, or when preparedness regulations are violated.

TRAINING OF FOREIGN TRADE UNION FUNCTIONARIES, CURRENT COURSES DESCRIBED

Prague PRACE in Czech 8 Sep 81 p 4

[Article by Jaroslav Kupka, director of Antonin Zapotocky ROH Central School: "Combining Theoretical Know-How With Daily Practice"]

[Summary] Annually, about 2,500 ROH (Revolutionary Trade Union Movement) functionaries and employees graduate from the Antonin Zapotocky ROH Central School in Prague. Beginning 1981, a 4-year correspondence course has been introduced by the school, leading to matriculation. The course majors in social law and economics. Also being introduced is a 1-year correspondence course concentrating on issues of mass work in production; social policy; labor and wages; health insurance and ROH economics and auditing. A 1-year course for ROH women-functionaries has also been introduced this year. The 3-year correspondence study in ideological, educational and cultural subjects designed especially for trade unionists working in the cultural field will continue. In January 1982, one of the 2-year combined study classes will graduate, followed by a second class graduation in June. A 3-month boarding school course for ROH plant and enterprise committee chairmen will also be held this year. The 1-month boarding school courses in political, economic and trade union studies will continue for leading ROH plant committee functionaries. Also held are courses for functionaries involved in arbitration commissions, youth commissions, physical education and other trade union sectors. The trade union school's seven departments teach trade unionists various subjects such as Marxism-Leninism; history of national and international workers' and trade union movements; national economy and work economics; social policy and labor law; Leninist theory; development and activity of labor movement; ideological, educational and cultural work, as well as general education subjects, including classes on improvement of their native and Russian languages, and literature. Also included in the curriculum are practical exercises, discussions, excursions to industrial plants, cultural programs and other programs which are held not only in Prague but also at the school branches in Neratovice, Zlenice nad Sazavou and Potstejn nad Orlici. The school also holds conferences and seminars honoring important workers' and trade union anniversaries. In 1982, a seminar honoring the 60th anniversary of the Red Trade Unions will be held. Besides its traditional contacts with trade union schools in the USSR and other socialist countries, the school has held over 50 seminars for trade union functionaries from developing countries. These functionaries are familiarized with selected issues dealing with Marxist-Leninist theory, namely scientific socialism; experience gained by the CSSR during transition from national democratic revolution to socialistic revolution; successes of socialistic progress and theory and practices of the Czechoslovak trade union movement. The foreign participants regularly visit many industrial plants, trade unions, ROH cultural and recreational facilities in order to familiarize themselves with Czechoslovak life and trade union work.

BIAS AGAINST WOMEN, TU LEADERSHIP NEEDS, ECONOMIC ISSUES CITED

Prague PRACE in Czech 18 Aug 81 pp 1,3

[Article by Maria Trvalova, chairwoman of the Central Trade Union Association of Workers in Textile, Garment and Leather-Processing Industries: "Constant Attention to Economy"]

[Excerpts] At their session in June the central, Czech and Slovak committees of the Trade Union Association of Workers in Textile, Garment and Leather-Processing Industries jointly discussed issues on which we shall focus our attention: how to harness efforts of our organs and basic organizations so that the period preceding the 10th All Trade-Union Congress be inspired by political and work actions which show practical evidence that the program of the 16th CPCZ Congress is also our program.

The branches of our union not only fulfilled but even surpassed their tasks for the Sixth Five-Year Plan. Labor productivity covered the entire increment of production: the deliveries for the domestic market and for exports were fulfilled mainly because of technological advances as well as due to the extraordinary work efforts and devotion of our working people--above all, women. Nevertheless, these results cannot satisfy us completely. On the contrary, they teach us a great lesson because there are still weak spots negatively affecting the overall results and efforts of labor collectives.

We critically and frankly expressed our dissatisfaction with the fact that the necessary changes in the structure and innovation of goods had not been implemented with desirable dispatch. As compared with the world situation, the decline in material costs has not been dynamic enough. Untapped resources still exist for reducing energy consumption, for better utilization of the work-time fund, and for mobilization of available factors to intensify the development of production.

When drafting the plan, the satisfaction of society's needs has not always been successfully approached. Moreover, shortcomings are evident in the rate at which the plan is being fulfilled, and this is adversely affecting the efforts of our working people to fulfill their socialist pledges.

... The workers of the Vinena enterprise in Brno approached the fulfillment of their tasks with the awareness that the principles for improving the system presuppose

creative performance on the part of all managers and their responsibility for the economic outcome of their decisions. They proceed from the premise that it is not enough to know only the indicators of the imporved system but that every individual, from the director to workers in production, should know specific factors in his own sector which should be applied to boost efficiency.

Acting jointly, the economic management and the trade union organization thus succeeded in making most workers in production interested in upgrading the quality, in economizing with materials and energy, and in increasing the shift work....

Thus, we came to the conclusion that our trade union organizations, in cooperation with economic management, must devote constant attention to objective issues of our economy and get whole workers' teams interested in their solution, as discussed also at the 7th and 12th plenary sessions of the URO [Central Committee of Trade Unions].

In this spirit our trade union association approached the discussion of the key tasks in the development of workers' initiative, and focused attention on the main task: to fufill this year's state plan in the stipulated volume, line and quality of goods for domestic and foreign markets.

The fulfillment of this year's plan is closely connected with the fulfillment of the economic plan for 1982. According to the Principle of the CSSR Government and of the URO on Workers' Participation in Planning, Implementing and Controlling the Fulfillment of the plan for 1981-1985, the proposal for the operations plan must be drafted with thorough application of the counterplanning method.

...The economic production units together with trade union officials organizing sectoral activs to discuss joint action not only in counterplanning but also in drafting new collective contracts for enterprises and plants.

It should be stressed that the draft of the plan and of collective contracts for 1982 must focus even more distinctly on improving efficiency, economy and quality of production. Our demanding economic tasks are closely related to better work on the part of our trade unions in their care for our working people as well as in their political organizational and educational activities. We focused on this particular target when drafting operations plans for the period preceding the 10th All Trade Union Congress, so that the trade union organs render assistance to the basic ROH [Revolutionary Trade Union Movement] organizations, especially those facing problems concerning the quality of production, innovation of goods, and shortcomings in the production of appropriate lines of goods, those lacking flexibility in supplier relations, and those fulfilling their plan irregularly.

We are setting these tasks while preparing the agenda, organizing and training the cadres for annual membership meetings, conferences and for the congress of the trade union association. That will require considerable organizational work. We expect more than 40,000 functionaries on all levels to prove their mettle in organizing, directing and guiding the ROH members not only to make correct conclusions and decisions but also to implement those decisions consistently, particularly in their basic organizations.

We must pay special attention to annual membership meetings of trade union chapters and elect chapter trustees from among functionaries who have successfully fulfilled their production tasks, who enjoy informal authority in their work teams, and who are capable of resolving problems with imagination, equanimity and with the participation of workers' teams.

By the same token, we must demand integrity, steadfastness, honesty and other indispensable characteristics from the functionaries of shop and plan committees, of okres and kraj committees, of enterprise and sectoral committees, and naturally, also from the members of national organs and central committee of our trade union association. In organs on all levels we need working and productive collectives capable not only of protecting the needs of our working people but also of organizing their activities so as to fulfill our party's economic and social policies.

We are an association where most women are organized. This reality must be reflected also in the composition of our trade union organs. In this conjunction we should like to underline that we must accordingly enforce the selection of our women for leading economic positions. We cannot be satisfied with the current situation. There is not one single woman serving now in the higher echelon.

On the contrary, when women leave positions in the leadership, men are frequently appointed to fill the spot. Our work in the upcoming period must be more consistently focused on this situation. This circumstance brings to the fore the importance of our work and care for the social development of working collectives by means of the plan for cadre and personnel training, social development and collective contracts.

JULY 1981 ISSUE OF SED THEORETICAL JOURNAL REVIEWED

East Berlin NEUES DEUTSCHLAND in German 9 Jul 81 p 4

[Martin Quill review of East Berlin EINHEIT in German Vol 36 No 7, July 1981, signed to press 10 June 1981, pp 625-736: "Obtain More From What Is Available." Translations and/or summaries of articles by authors cited below, as well as by others, are published in pages following this review]

[Text] "Enhanced Refinement--A Great National Economy Program"--this is the main topic, on which EINHEIT has published five articles. Discussing the SED's economic strategy for developing the national economy of the GDR, adopted by the 10th SED Congress, Claus Kroemke points out under the headline, "Well Equipped for the 1980's," that reserves of even considerably larger volume will become effective for the national economy if the socialist planned economy grows even stronger and if the people develop their initiative in socialist competition to a still greater degree.

In another article, Gerhard Tautenhahn describes the situation in metallurgy and the metalworking industry. He deals with enhanced refinement of raw materials, other materials and products. In his opinion, this is the way essentially to improve the efficiency of the entire reproduction process and to guarantee a high growth of performance. Of great importance, according to the writer, are all progressive ideas, all suggestions for solutions that help ensure that through efficient work each kilogram of raw material will yield as many high-quality products as possible.

Horst Wambutt deals in his article with better utilization of our basic materials, while Karlheinz Jentsch addresses the question of enhanced refinement in our combines. Bernhard Larisch and Winfried Theilig discuss the more effective use of animal raw materials.

John Heartfield's photo collage, "Never Again!'" on the cover of the July issue refers to the articles headed, "Monopolies on Intensified Armament Course" (by Horst Fiedler and Alfred Preusse) and "Who Profits From the Armament Boom" (by Dr Guenter Kalex, economist, sector chief, SED Central Committee; and Siegfried Ullrich, social scientist, GDR Institute for International Politics and Economics [IPW]) [no summary available for this 'Facts and Figures' report dealing primarily with FRG armament concerns]. Other authors describe the tasks of the space sciences (Heinz Stiller), the continued development of the young generation's socialist attitude toward work (Werner Haltinner), and the relationship between a life of culture and creativity (Harald Buehl).

YOUTH ORGANIZATION TO INTENSIFY SED IDEOLOGY PROMOTION

East Berlin EINHEIT in German Vol 36 No 7, Jul 81(signed to press 10 Jun 81) pp 627-629

[Lead Commentary by Eberhard Aurich, member, SED Central Committee; second secretary, Central Council, Free German Youth (FDJ): "FDJ Mission 10th Party Congress"]

[Text] The 11th FDJ Parliament, held a few weeks after the 10th SED Congress in the Palace of the Republic in our capital Berlin, turned into an impassioned forum for the allegiance by our country's youth to the SED and its policy. To the appeal to youth from the party congress the highest organ of the socialist youth organization responded this way: Our youth will lack neither resolution nor ideas and deeds for the GDR to be able to meet the challenges in this decade with success. FDJ members are ready to fulfill any mission conscientiously and resolutely. This was affirmed by the delegates in a letter to the SED Central Committee and its general secretary, Comrade Erich Honecker. In it they thanked the working class party and its leadership for the policy for the good of the people and the consolidation of peace, the great confidence in youth, the great responsibility assigned to it, the love and care by which the youth organization is given the kind of comradely help which fosters readiness for initiative, a spirit of competition and achievements which our whole country is talking about with respect and appreciation.

An overwhelming high point was the speech by Erich Honecker, that distinguished communist and statesman, before the delegates to the 11th Parliament. In the spring of 1946, on party mission, he was among the founders of the FDJ, was its first chairman, and helped youth by word and deed in determining its tasks. When Comrade Erich Honecker, on the recommendation from the SED Central Committee and the GDR Council of Ministers, for the second time in its history awarded the FDJ the highest distinction of the GDR, the Karl Marx medal, the delegates felt pride in what they had accomplished, and it strengthened their resolve to take the lead for all youth in implementing the 10th party congress decisions through still richer initiatives. All included in this sense of their own accomplishments also a feeling of gratitude for the many FDJ assistants, the party organization secretaries and the thousands of propagandists, the state managers associated with the FDJ and the organizers of the Fair of the Masters of Tomorrow movement, and the teachers and educators and many others.

"Never yet could a state on German soil be as proud of its youth as we are in the GDR. This socialist state has been and will always be a state of youth."[1] This certainty was confirmed before friend and foe at the 11th FDJ Parliament. Of it, the 133 delegations of fraternal organizations or friendly aligned organizations were able, not last, to convince themselves. They reacted with great approval to the FDJ's peace appeal to the youth of all continents. Their appearance at the Parliament and in Berlin FDJ basic organizations was a moving expression of proletarian internationalism and anti-imperialist solidarity.

Erich Honecker's speech at the Parliament presented the Marxist-Leninist orientation for our continued work in the field of youth policy as it conforms to our struggle conditions and requirements. The General Secretary said all youth in the GDR should be made thoroughly familiar with Marxism-Leninism, the 10th party congress decisions and the SED's strategy and tactics, and should be mobilized for their implementation. He stated: "It remains the fundamental task of the FDJ to help the party educate the young people into convinced fighters acting in accordance with the world-changing ideas of Marx, Engels and Lenin and advocating the implementation of the SED Program under any conditions. Studying and working for the good of the people, a great efficiency and defense readiness, an unshakable class consciousness and political steadfastness in all situations--those are the things that should distinguish all young people in the developed socialist society."[2] Indeed, that remains the crucial matter, the core of FDJ activity. Therefore the 11th Parliament sparked the "FDJ Mission 10th Party Congress" as an FDJ mass initiative for implementing the 10th party congress decisions. It combines the most important tasks and experiences we must solve or apply in order to further improve the level of communist education--as demanded by the party congress.

The 11th Parliament focused on enabling every young person to appropriate the sense of life of the communists and acquire a firm class standpoint. It has been found useful here to pay central attention to some basic political-ideological matters. The FDJ will see to it that all young people
--understand our era as one of transition from capitalism to socialism and gain strength for their own conduct from the incessant and worldwide advance of socialism;
--realize that socialism and peace belong inseparably together and that they are strengthening peace by their high personal dedication to a strong workers and farmers power on German soil;
--always strengthen the alliance with the Soviet Union and the friendship with the other states in the socialist community and hold high our anti-imperialist solidarity;
--always start from the proposition that the fundamental matter of the socialist revolution is maintaining and consolidating the political power of the workers and farmers under Marxist-Leninist party leadership and its defense;
--help implement through their own performance the policy for the good of the people, the main task in its unity of economic and social policy, as a characteristic trait of socialism and an expression of its real humanism;
--learn to manage the scientific-technical revolution for the benefit of our socialist society; and
--rigorously turn back the enemy's attempts to paralyze the forward march of socialism through ideological diversion, anticommunism and anti-Sovietism.

These targets of political-ideological work are dealt with in the FDJ membership meetings as they have already been through the well conceived idea of the FDJ study year. The Parliament asked the members of the association to take part in a discussion about acquiring the "For Good Knowledge" medal so as to demonstrate their deep knowledge of the content of the central committee report to the 10th party congress. It suggested to all FDJ basic organizations to establish solid contacts with the party veterans, the heroes of the antifascist resistance struggle, the activists of the first hour and the first generation of FDJ members in order still better to appropriate the party's and FDJ's traditional struggles.

The 11th Parliament directed all groups and basic organizations to make a great contribution to the needed economic performance improvements. The slogan of the Hans Kiefert youth brigade in Berlin, "Each every day with a good balance-sheet," became the most popular slogan at the Parliament. It further promotes the performance comparison among the youth brigades and challenges each individual youth to make a great personal contribution to the competition.

The Parliament assigned ambitious five-year plan investment projects and other tasks from the science and technology state plan as youth projects. That sets a standard for directing the capability and performance readiness of youth toward coping with most modern science and technology, especially also through the Fair of the Masters of Tomorrow movement.

The 11th Parliament has derived a fighting program for youth from the party's economic strategy for the 1980's. That is indicated as much by the decision to extend the "FDJ Initiative Berlin" as the central youth project as by the initiatives, "Microelectronics," "Industrial Robots," and the movement of rural youth under the slogan, "Rationalize--Produce More, Better and Cheaper." With justified pride the Parliament was able to report that the FDJ has succeeded in the last 5 years, through party executive support, in strengthening its influence among working youth. This is indicated by growing membership, the increase in the number of youth brigades from 13,194 to 39,200, and the economic initiatives providing increasing economic benefits year after year. The FDJ will thus continue paying special attention to the youth brigades, their target-directed promotion, the replenishing of their membership and the setting up of new ones. Their number is to reach 5,000 by 1985. The motto will continue to be: Have each youth brigade derive its Fair of the Masters of Tomorrow task preferably from the science and technology plan.

Much as for working youth, the Parliament formulated specific tasks for the FDJ members in high schools, vocational training facilities and the colleges and technical schools. The representatives of those segments of youth offered thanks for our having raised the pay for apprentices, having introduced training grants at the expanded high schools, and having reorganized our scholarship system with new initiatives and commitments, considering this an expression of the great solicitude by the party and state for young people in school particularly.

The Parliament made a special point of the FDJ responsibility in running the Ernst Thaelmann pioneer organization. It urged firm contacts with the young pioneers on the basic organizations in enterprises and cooperatives, colleges and technical schools and the armed organs.

Much was said at the Parliament about the readiness by youth to guarantee the military inviolability and security of socialism under all the conditions of the international class conflict. The FDJ, together with the GST, will continue to organize premilitary and military sports training and education in such a way that everyone recognizes the military defense of our accomplishments is an indispensable consequence of socialist patriotism and proletarian internationalism and acquires the prerequisites for it.

The 11th Parliament oriented the FDJ executive boards to creating a substantive intellectual-cultural and tourist and athletic life wherever youth works, studies and meets, and always providing a healthy and happy atmosphere. The more than 6,400 FDJ youth clubs are very important in providing meaningful leisure-time activities. There was, thus, an appropriate response to the SED Central Committee Politburo decision to set up, till 1985, within the framework of comprehensive housing construction, 150 youth clubs in urban new construction areas. They were assumed as FDJ kreis youth projects.

The 11th Parliament, much as the association meetings held subsequently in all bezirks, attested to the great strength of a uniform socialist mass organization in which all strata and age-groups of youth are represented and which act uniformly under party leadership. The FDJ has now 2.3 million members, organized in 27,418 basic organizations and 90,310 groups. The political-ideological and organizational consolidation of the groups and basic organizations will remain one of the most important tasks.

Thus far, 10,000 FDJ basic organizations have been awarded for their exemplary work a red party flag of honor with the pictures of Ernst Thaelmann and Wilhelm Pieck. Others are entitled to struggle for one. The Parliament emphasized the need to go on and work in a discriminating fashion with the different strata and to provide the activists of the association with greater expertise still in their activity.

To implement the "FDJ Mission 10th Party Congress," all groups and basic organizations are issuing accountable and controllable fighting programs. Great help to preparing them comes from the joint party and FDJ executive meetings. The measures by many party executives in support of the FDJ contain, among other things, stipulations for the political training of FDJ activists, the regular appearance of party functionaries before FDJ collectives and youth conferences, the assigning of ambitious and economically significant youth projects, the confirmation and training of propagandists in the FDJ study year, and the support for cadre work in the FDJ. All that helps the FDJ in still better fulfilling its function as the SED's helper and fighting reserve for the fulfillment of the 10th party congress decisions.

In the Central Council status report, the comment on it by Egon Krenz, who was reelected first secretary of the FDJ Central Council, went as follows: "Yes, GDR youth takes up its fighting position today and always alongside the comrades--in everything that still has to be learned and accomplished. For today's members of the youth association--as several FDJ generations that preceded us--find this confirmed: the SED is the party of the future because its Marxist-Leninist program reliably points the way into our communist tomorrow and boldly pioneers this course.

It is the party of the innovators, holding the lead of the socialist revolution in the GDR that transforms its public life and discloses new horizons. It is a party of sacrificial and implacable struggle against everything old, reactionary and looking backwards, which in no disguise and no mode of speech will ever again get a chance in the GDR. That is also guaranteed, not last, by its youth."[3]

ECONOMIC GROWTH LINKED WITH BEZIRK-LEVEL IDEOLOGY PROMOTION

East Berlin EINHEIT in German Vol 36 No 7, Jul 81 (signed to press 10 Jun 81) pp 664-670

[Article by Hans Wetzel, second secretary, SED Cottbus Bezirk Management; member, EINHEIT editorial board: "Political Management--Economic Performance"]

> [Text] This article demonstrates by means of many different experiences in SED Cottbus Bezirk Management how through target-directed political management activity by the party and the application of well tested and new forms of party work the fighting strength in the basic organizations, particularly in the combines, is reinforced, the acceleration of scientific-technical progress is made the centerpiece of party work and reserves are thus being tapped in new dimensions.

As everywhere else in our country, public life in Cottbus Bezirk also is marked by a mass initiative, embracing all fields, toward analyzing the 10th party congress and fulfilling its fundamental tasks. Socialist competition, the debates on preparing the five-year plan and the fighting programs of the basic organizations emanate a sense of responsibility and a certitude in victory. Attitudes and actions impressively reflect the working class optimism about history and its world-outlook and deep confidence in the policy of the Marxist-Leninist party. It cannot be overlooked that qualitative changes are taking place in the people's initiative, under party leadership, toward the implementation of our policy, aimed at the good of the people and the safeguarding of peace, which in turn place new and higher demands on the level of management activity and the development of a mass-affiliated working style by the party organs.

The Central Committee report to the 10th party congress states: "Developing a strong raw material base and comprehensively using our domestic raw materials are a basic prerequisite for continued stable economic development. That is true especially for soft coal the mining of which will by 1985 be increased to between 285 and 290 million tons."*

Wholly in this sense we are enhancing our knowledge and responsibility in our bezirk party organization with respect to that the most efficient use of our large territorial raw material deposits for the energy, glass and construction industries, and

---

* Comrade Erich Honecker, "Bericht des Zentralkomitees der Sozialistischen Einheitspartei Deutschlands an den X. Parteitag der SED," Dietz publishing house, Berlin, 1981, p 63.

a planned fast development of the coal industry and of electrical energy, gas and coke production, of the glass industry and of polyurethane chemistry in our bezirk more and more determine social and economic progress in our country. Our bezirk also was given greater responsibility for consumer goods production in the 1980's and 1990's, mainly by the decisions on setting up a modern glass plant making color-television tubes, and in expanding our chemical fiber and polyurethane production capacities.

Especially strong effects on this mass movement evolve from the peace concept of the 10th party congress and its decision resolutely to continue throughout the 1980's its main task policy in its unity of economic and social policy, and from understanding our grown responsibility for the continuance of the revolutionary world process.

Consolidating the Party Organizations' Fighting Strength

Most of the work is still ahead of us in organizing, long-range, the practical application of the 10th party congress policy in its whole breadth in accordance with the high criteria. Solid preconditions for it exist. For it is shown in practice, after all, that the maturity of the socialist production relations, the high developmental level of the productive forces and the scientific-economic strategy, the working people's performance willingness and the party organizations' grown fighting strength extraordinarily enlarge the possibilities for a high performance growth through the political management of social processes. If we want to exhaust these possibilities to the fullest, we need to penetrate ever more deeply into the nature and objectives of the 10th party congress and further concretize the "how," the best ways and means for implementing the decisions.

All experience thus far tells us: We will get fine results to the extent that we succeed in enhancing further the fighting strength of the party's basic organizations. Through them above all, through a high grade and effectiveness of management work, the application of the Central Committee decisions must be ensured uniformly and cohesively all the way down to the party groups and each work collective. Our deliberations and measures for improving our economic efficiency therefore always connect closely with the planned development of the basic organizations as centers of political activity and close mass affiliation, as engines of the mass initiatives. The point is that in all of the more than 1,300 basic organizations in the economic field in our bezirk the best experiences of party work be applied. Right on the spot they must be helped in finding the crucial interconnecting links in their political-ideological, economic and organizational work, concentrate on them, and boost the communists' power of radiation in the work collectives.

A high responsibility for the great performance improvements in soft coal mining needed is assigned to the party organization in the Lauchhammer Works. More than 4,000 working people in that tradition-rich enterprise in the "little loamy land" develop, produce and assemble the essential open-pit equipment for the GDR and for export. At the same time, that enterprise is the sole producer of bathtubs for the GDR's housing construction program and handles comprehensive foundry assignments for GDR machine building as well as art casting. The new and higher demands placed on the efficiency of large-scale open-pit equipment, its productivity, weight,

costs, microelectronic equipment and so forth certainly were not always easy for everyone in the party organization and the working crews to understand right away. Partly also the target assignments were placed in doubt because, for instance, the assembly of the large excavator for open-pit operations in Welzow-South was in arrears over several months, the bathtub foundry went through reconstruction, and the planned shut-down period of its smeltery was to take 3 months.

Opening Up Reserves in New Dimensions

After thorough deliberations and a mobilizing party debate, the party management then presented its draft fighting program for all these problems. It started from the proposition that even in this enterprise there were still large reserves and issued accurate stipulations on how and through whom the planned tasks could be met and surpassed.

The managements of the department party organizations did more work in the party groups, party orders were worked out more specifically and strictly supervised, and an effective everyday agitation was organized. Capable comrades were, on party orders, assigned at troublesome spots and to eliminating bottlenecks, and party influence was boosted in the research and design collectives. To meet assembly deadlines, extra welders were delegated to the assembly site. They are accomplishing veritable acts of heroism under difficult conditions. Party activists groups were formed for basic and sectional tasks. The work of the science and technology party commission was aimed at the crucial tasks of performance improvement, such as the development of storage-programmable controls for various types of excavators or the development of a control system for an automatic excavation of suitable excavation levels. The technological development collectives received the order to make 15 industrial robots operational in this five-year plan period instead of the five that were originally planned.

As a result of such responsible work, they assumed the commitment to obtain high targets above and beyond the 1981 national economic plan, exceed the planned labor productivity boost by 1.2 percent, and raise output with the "Q" quality seal by more than M 1.4 million. Today it is shown that prudent, relevant and far-sighted political management uncovers considerable reserves and thus provides a high economic performance. The deadline for the excavator assembly, once in jeopardy, now is assured. By reusing the Greifenhain assembly site, M 4.81 million were saved. The shutdown period of the smeltery is reduced by one-third. The development period for another efficient excavator was reduced by 2 months, and they are intensively at work on still more efficient hydraulic rail-shifting devices. For fulfilling new and high objectives, decisions by the departmental party organization managements, commitments by the party groups, plan offers by more than 2,300 workers, numerous engineering qualifications and innovator contracts, as well as 18 Fair of the Masters of Tomorrow tasks act as sure guarantees.

One principle of our political management activity is to organize from the outset and constantly the study of the party decisions, their thorough explanation in the work collectives, and their implementation by the party organizations as a unified process. In this we support and concretely supervise the party collectives in their carrying out their obligations as assumed in honor of the 10th party congress.

The party management of the basic organization in the Finsterwalde welding technique enterprise, e.g., has compiled a book with all the commitmens assumed in honor of the 10th party congress. The work schedule sets down who will have to report about their status where and when, and which comrades energetically assist the work collectives in implementing them, on which matters at times party activists groups or commissions are set up. There are monthly accounts given on the initiatives contained in the brigades' budget books and obligation notebooks. In all the areas of the department party organizations there are "Red Books" which in combination with the departments' tasks publicly inform about the status of fulfillment. So it was already possible, e.g., to figure out that a new welding converter and a new welding compact device were put into series production and that the zero series of some high-grade household welding device was completed of which 500 units will be produced still this year for the public market.

Bezirk management systematically conveys to the kreis managements and basic organizations such and other fine methods of party work, which also are of great importance to the public debate on the five-year plan directive for tapping and using performance and efficiency reserves.

Combines Are Decisive for Performance Growth

The focal point of our deliberations and efforts lies in the development of the fighting strength of the party organizations in the eight centrally managed combines headquartered in our bezirk, which handle 7 percent of the GDR's industrial production. Some 52.2 percent of all who are working in industry and construction in our territory work there, 22,600 communists among them. That comes to 58.6 percent of all party members in those fields. The three coal and energy combines have to provide the GDR with the largest proportions of total energy production: 55.8 percent in raw lignite, 47.6 percent in electrical energy, 72.7 percent in sewer gas and 100 percent in brown coal high temperature coke. The efficiency growth of the GDR economy absolutely demands ensuring a high economic performance boost in such giants through improving the effectiveness of scientific-technical progress and of the growth in labor productivity.

Thousands of work collectives have addressed the issues of scientific-technical progress concretely. That was significantly helped by the membership meetings in the months following the 10th party congress and by the targeted analysis of the central committee seminar with the general directors of the centrally managed combines and the central committee party organizers. A new quality of socialist competition is developing. Qualitatively new features appear in party organization work that wants to use the increased intellectual potential of the working people, their increased socialist consciousness, fine education, experience and technical skills. Thus the party organization in the gas plant of the Schwarze Pumpe [Black Pump] Combine decided to form working teams on which over 300 production management and control engineers, operations and coordination engineers and shift foremen and brigade chiefs work together with concentration and in coordination, mainly to improve the technological level of production. In 1981 these groups, by party order, were assigned 55 tasks, preparing the operation of microcomputer technique, optimizing the running of installations in tar-separating and the dust-heavy tar industry, extending the working life of generators, handling waste and by-products, and other such matters.

Most of these tasks involved arrangements with the area sections of the KDT (Chamber of Technology) and the setting up of KDT projects, so that the engineering organization increasingly became the carrying agent of this initiative, the impetus to work with engineering certifications and the innovator movement got a boost, and the Fair of the Masters of Tomorrow movement received new impulses. The party management of the gas plant saw to it that also in this initiative the communists would always live up to the party's leadership role. "A good comrade is one who draws his own conclusions from the economic strategy of the 10th party congress and not merely repeats its 10 key points by rote," the party secretary of the gas plant affirmed.

Elated with the knowledge of such potentials and their increased effective possibilities, our bezirk management focused on mobilizing all capacities and using all reserves so as to exceed the targets of the 1981 economic plan by at least 3 days of sold industrial output, one percent of industrial labor productivity, 6.85 million tons of raw lignite, 357,500 tons of briquettes, 315,000 tons of sifted coal and 25,000 tons of brown coal high temperature coke. Finished products for the public are to exceed the plan by 3 percent. The bezirk party activists group decided on these high quotas and, with it, have headed the struggle to achieve them.

Proven and New Forms of Party Work

The magnitude and complicated nature of the tasks in the 1980's have the effect that there are also considerable ideological and technical and technological problems in ensuring the necessary high growth of efficiency and productivity. Obtaining the assigned parameters is not assured yet everywhere, and then there also are still significant level differences among the various enterprises. To solve these problems, bezirk management aims its political management activity above all at developing the kind of management activity in the combines and enterprises that will foster effective initiatives and great dedication and, above all, through high scientific-technical achievements, satisfy the economic requirements in the new decade. At these connecting links also is directed our decision to sponsor intensification conferences in the enterprises. There it will have to be considered how, through prudent management, the grown social consciousness and economic potential can be turned to the highest social effect.

This way the content of political-ideological, economic and organizational work keeps developing. Cadre work and training and advanced training receive new emphasis and new dimensions. With help from a working team in bezirk management, long-range cadre policy tasks and requirements have been elaborated for decisive economic areas. Priorities are preparing the cadre and regular working crews for 12 new open pits by 1990, the recruiting and training of the required power plant personnel for the 500-megawatt blocks, the most expedient use of college and technical school graduates, especially in science and technology, and the necessary consequences for training and advanced training of working people and vocational training in the application of microelectronics and robot techniques.

Our growing intellectual and material potential demands and makes possible extending on a higher level the struggle for a massive application of the best experiences and around interference quota zero--an old topic in party work on improving efficiency that has by no means been settled as yet. Differences between levels in making

full capacity use of large-size equipment and installations, in the interference quota and in prime costs suggest there are great reserves: differences in the capacity use in terms of time of the 60-meter conveying bridges, e.g., go as high as up to 30 percent. Outstanding workers, like the party delegates Helmuth Melcher and Georg Rzepka--both are excavators in the Senftenberg brown coal combine--put their own stamp on that movement through new initiatives. Shift guarantees, performance analysis of the equipment every 2 hours, master workmanship in excavating for generalizing on the experiences of the best workers, and close cooperation with the brown coal mining institute provide the collectives with the opportunities to conduct more successfully the struggle for a better use of working hours, for high order, security and discipline, and against interference and breakdown, and better to cope with the complicated geological and hydrological conditions in brown coal mining.

Fostering and generalizing on such attitudes and achievements is one of our most important management task, for it is being comfirmed time and time again that the role of the subjective factor is growing in the development of a high performance boost. The decisions by the party organizations on managing this movement are marked by concrete substantive and lead time assignments for the study and application of the experiences of the best workers. Political work principally is aimed at developing a high performance readiness en masse and making maximum use of objective performance conditions. In our practical party work, new forms and methods in management activity develop along with tried and tested ones.

Scientific-Technical Progress the Centerpiece of Party Work

In bezirk management work we have paid the greatest attention to the party organizations' activities in R&D. Thousands of expert technicians are engaged in it. Those party organizations aim their direction and control at further developing their wealth of ideas and creative capacities and using that potential still more efficiently in accelerating our scientific-technical progress and improving the effectiveness of scientific work. They systematically plan to make up for arrears from the past, expressed by the fact that not all of the scientific-technical application tasks decided on apart from the state plan were in fact met in 1980, and that not a few obligation notebooks were prepared without world standard comparisons. Important work on this is done by the science and technology commissions working in bezirk management and in the kreis managements always under the direction of the first secretary. For the acceleration of scientific-technical progress, the application of microelectronics, robot technique, electronic machine controls and electronic computer techniques are of crucial importance. Bezirk management therefore appointed a working team for microelectronics. Through them and the science and technology commissions, which also exist in the combine enterprises, decisions to be made by the elected managements are being prepared, analytic material is being processed and party control is exercised. Kreis managements conduct meetings on this topic and organize relevant exhibits. All this makes possible to orient the previous conceptions of the party organizations about the use of robots and microprocessors to the new criteria. Based on thorough analyses, they were able to decide on essentially higher targets for the application of that technology. While in the outcome of the party elections the basic organizations in the gas combine had adopted the target of installing 8 robots and 20 microcomputers within the five-year plan period, they now have assumed the task, after analyzing the 10th party congress decisions, to put 145 robots and 800 microcomputers into operation.

Completely new consequences also result from these greatly increased requirements. Each combine has the task to make full use of its intellectual and material potentials in developing and producing robots out of its own components. That also gives rise to measures for changing the managerial and production structure. An independent area is being set up in the gas combine which, subdivided into sections in means of rationalization construction, microelectronics and robot construction, bears the responsibility all the way for the research to production application and cooperation relations. New party organizations and an appropriate party activists group have to be developed. Here in the Schwarze Pumpe gas combine also is a bezirk consultation office for science and technology matters because this party organization has long had good experiences in the struggle for accelerating the scientific-technical progress.

The bezirk party organization has adopted the task to create the prerequisites, through an ever better use of these most modern productive forces, for saving the industry of the bezirk already in 1981 at least 15.5 million working hours and 2,200 jobs and releasing 4,700 manpower units. Other areas have been assigned similar targets.

High Overall Social Responsibility

We are aware that the implementation of the 10th party congress decisions amounts to highly ambitious goals also for our bezirk, the fulfillment of which decisively affects our republic's economic efficiency. For instance, almost 80 percent of the needed increase of the GDR's raw lignite mining has to be handled by the Senftenberg brown coal combine, its annual mining load having to be increased to at least between 180.5 and 182.5 million tons by 1985. Six new open pits have to be started in the bezirk up to 1985. The main increase in the GDR's electrical energy production up to 1985 has to come from the Jaenschwalde brown coal power plant combine, mainly by setting up another power plant there and by a higher disposal capacity of the installations. The Schwarze Pumpe gas combine attains to an objectively new position within the GDR economy. The responsibility of the party organizations in the combine for further great advances in the GDR's carbochemical industry, brown coal refinement, including the gasification of salt coal, is rising rapidly. And its internationalist obligations for developing coal mining in Mozambique are increasing.

The effectiveness of political management in implementing the 10th party congress economic strategy must display itself mainly in these areas and in the whole complexity of this process. That holds true for the needed increase in efficiency and for reducing the needed public investments. It is not longer a matter merely of mining more coal and refining it. This enormous increase, rather, has to come through improved productivity and efficiency in spite of increasing geological and hydrological burdens and the declining quality of the brown coal. At the same time the most thrifty and rational use of all energy sources must be ensured in the energy industry--itself being one of the big energy consumers.

The magnitude of the task and our overall social responsibility for reliably meeting the tasks, proper as to deadlines and demands, categorically require scientific-technical solutions and measures to ensure a higher efficiency, productivity and qualities in the production and work processes. The chief targets of our struggle

are: optimum capacity use of the large-size open-pit equipment and other installations, the gradual introduction of a microelectronically equipped conveyer technique instead of the expensive survey lines on surface, a penetrating rationalization of the maintenance processes which are so especially extensive in the energy industry, and the development of new stages of brown coal refinement. In parallel with it there are extensive measures for environmental protection.

There is in our bezirk no other sector in the struggle for implementing the 10th party congress economic strategy which in our advances requires the handling of our overall social responsibility and complexity as much as the coal and energy industry. New and large regular crews have to be formed quickly for new sites and under new conditions, new residential areas have to be built for them. All necessary prerequisites for forming powerful party organizations have to be created in good time. The party activists have to be regrouped. Thousands of cadre must be prepared well ahead of time.

With it, the point is to mitigate or, if possible, eliminate any negative effects the increased coal mining might have on agriculture and forestry through complex measures and overall social efforts, because agriculture in our bezirk was obligated by the party congress also to organize a new performance growth, increase produced volumes and yields, although 20 percent of the farm acreage in our bezirk is going to be excavated in the decades ahead and another area of the same size will be deprived of much of its ground water. The bezirk party organization has adopted the goal to increase annual grain production up to 1985 by at least 50,000 tons and the annual gross crop production per hectare between 0.2 and 0.5 grain units. Such high objectives demand also of agriculture to accelerate scientific-technical progress, use more consistently and at the whole range the experiences of the best workers, and organize recultivation, water regulation and soil improving measures in new orders of magnitude.

The struggle for implementing the 10th party congress decisions and its results show that a time of creative work and new great initiatives has begun, a time which--to quote the well known words of Friedrich Engels--needs and produces giants in thinking power, passion and dedication. New workers have, alongside tested and tried comrades, taken up the marching speed of the 1980's. All party forces are aimed at promoting what is new, resolutely advancing on our charted course, increasing the strength of socialism, protecting the people's peace and adding to their well-being.

DATA ON YOUTHS' CONTRIBUTION TO ECONOMY ANALYZED

East Berlin EINHEIT in German Vol 36 No 7, Jul 81(signed to press 10 Jun 81)pp 679-685

[Article by Dr Werner Haltinner, economist, director, research program on labor movement and youth, Academy of Social Sciences, SED Central Committee: "Work for the Benefit of the People--A Key Question of Youths' Communist Education"]

> [Text] Through their "FDJ Mission 10th Party Congress," our youths heed the call the 10th SED Congress addressed at them to work for the benefit of the people as a key question of their communist education and personality formation. In the struggle for the shaping of developed socialism new generations have grown up which meet the requirements for a steep increase of our economic performance with a high performance readiness, education and training. In connection with that, experiences and problems are discussed pertaining to socialist work education and the forming of socialist attitudes toward work among the working youth.

Every day we notice the strong response which the policy for peace and socialism, for the people's benefit, as issued by the 10th SED Congress, has found in our young generation's life plans and ideas of the future. Especially working youth heeds the call of the 10th party congress to "the young coshapers of the developed socialist society to prove themselves passionate and happy fighters for our communist ideals in solving the SED Program tasks."[1] Still during the party congress, out of the demonstrations of hundreds of thousands of FDJ members, came the appeal from the Hans Kiefert construction workers' youth brigade, of the central youth project "FDJ Initiative Berlin" to the 39,200 youth brigades and all of working youth in the GDR, for performance comparison under the slogan "Each Every Day With a Fine Balance-Sheet." Meanwhile thousands of youth collectives in all economic branches and bezirks joined this economically so significant initiative and are increasingly putting their signature, great strength and the creative spirit of all of working youth to it.

With its "FDJ Mission 10th Party Congress," the 11th FDJ Parliament provided a target and direction for youth's desire for more great social tests. Many youth activities after the 10th party congress now, in view of the higher demands of the 1980's, receive with this new FDJ mass movement the great promoting and inspirational strength of the socialist youth association. The 11th Parliament

has once again reminded youth: "Every day we shall work creatively, honestly and with discipline, learn persistently and study conscientiously, to accomplish achievements in socialist competition and in coping with the scientific-technical revolution that will further enhance the strength and respect of the GDR, our socialist fatherland."[2]

A New Generation of Young Working People

The affirmative reply by our working youth to the pioneering decisions of the 10th party congress, and its grown dedication and creative participation in the fundamental processes of our social advance in the 1980's, demonstrate that a new generation of young people has grown up in our republic whose thinking and conduct are deeply informed with basic socialist convictions and modes of conduct.

Today's young generation in the GDR consists of more than 6 million children and youths up to 25 years of age. This includes more than 3 million young people between 14 and 25. That is circa 18 percent of the population, which through its work and learning directly participates in the shaping of the developed socialist society. Its social nucleus is the more than 1.2 million young working population below 25, especially the workers' youth, of which over 83 percent works in state-owned enterprises and combines and almost 14 percent in cooperatives. A large group of the working youth is made up of the more than 500,000 apprentices, part and replenishment of the workers class for the years ahead.

Working Youths (Not Counting Apprentices) Below 25 in Selected Economic Fields (1979)

	Total Manpower below 25 (per 1,000 Persons)	Proportion of Total Manpower (in Percent)	Young Manpower According to Economic Fields (in Percent)
Total	1,211,6	14.9	100
Breakdown:			
Industry	505,6	15.9	41.7
Construction Industry	122,0	21.1	10.1
Agriculture and Forestry	103,6	12.0	8.6
Transportation, Post and Telecommunication	90.5	15.0	7.5
Commerce	130,7	15.5	10.8
Facilities of Science, Education and Culture, Public Health, Social Welfare and so forth	162,2	12.0	13.4

If one asks about the political and social sources that can produce such important achievements for and affirmations of socialism by the young generation in allegiance to the working class party and the socialist state, as for example the "FDJ Appeal GDR 30," the "FDJ Party Congress Initiative," and now the "FDJ Mission 10th Party Congress," one finds their explanation in the, in principle, new role of youth, based on equality and participation in socialist society. It is the youth policy

and its fundamental principle of showing confidence in and assigning high responsibility to youth, stemming from all the political, theoretical and practical activity of the party, of the historic advantages and achievements of which the young generation has in all its vital areas taken hold forever and unchangeably in its consciousness and its daily life.

Its level of education and training is among the most important preconditions for further enhancing the role of youth in combining the advantages of socialism with the scientific-technical revolution and its creativity in labor. In the GDR the 10-grade general polytechnical high school with subsequent mandatory vocational training has been brought to realization as an important achievement of socialism for all young people. Circa 99 percent of the graduates of the general polytechnical high schools or the expanded high schools subsequently is trained to become technicians through vocational training or starts college or technical school studies. When concluding vocational training, more than 90 percent of the apprentices passes specialists' tests, circa 50 percent of them with very good or good grades. In the 1976-1980 five-year plan period, more than a million young technicians started jobs in the economy, and another million of youths, the replenishment of the workers class, is being trained between 1981 and 1985.

More than 80 percent of working youth in the GDR has already a completed vocational, technical or college education. "Our socialist educational system provides our youth with modern general education and vocational training in line with the recognizable demands for the further shaping of the developed socialist society, especially for the acceleration of our scientific-technical progress."[3] This educational potential of youth as a scientific and intellectual foundation for its labor capacity, creativity and initiative will in years ahead be one of the decisive conditions and prerequisites for its meeting in the future higher demands in science, technology and economics in production, and as an exceedingly important factor of communist personality development.

Inseparably connected with this development is the far greater social and economic strength of working youth in socialist construction. The economic and scientific-technical initiatives and mass movements organized and led by the FDJ are achieving growing economic magnitudes year after year.

Economic FDJ Initiatives and Their Results in the 1976-1980 Five-Year Plan Period

FDJ Campaign Materials Economy	M 6.1 billion benefit
Saving of Working Hours	287 million
Scrap	1.6 million tons
Old Paper	350,000 tons
Fodder Economy	M 91.7 million benefit
Youth Projects of the Science and Technology State Plan	71
Housing Modernization, Reconstruction and Development	42,000 housing units

Economic youth initiatives provided an additional production growth of circa M 2 billion between 1976 and 1980. These are results that persuasively suggest the skill and energy of youth as important prerequisites for our economy's needed performance improvements in the 1981-1985 Five-Year Plan. Precisely in view of that the 10th SED Congress called youth initiative one of the fundamental guarantees for realizing the party's economic strategy for the 1980's.[4] Many young people acquire social maturity and political experiences early in our society through various forms that foster their performance readiness, assign responsibilities to them, involve them actively in the handling of industrial and social affairs and all matters concerning the development of youth, and this they bring to realization primarily through their work as the most important sphere for their personality development.

The basis for the growing social strength of youth in socialist construction is the young generation's political organization of the FDJ, the uniform socialist mass organization of youth in the GDR. For millions of young people it is the decisive school for their personality development and opens up to them broad horizons and fields for personal maturation and public approbation through the work, production, learning and research process.

Thus if one wants to characterize GDR youth, one must refer to its moral and ethical countenance, marked by awareness, education and skill, and to its active social conduct, its sense of responsibility and performance willingness in the work for the benefit of the people. "Our youth is politically educated youth. It is performance-oriented, self-assured and optimistic. It is dedicated to the socialist revolution and ready to fulfill any task assigned to it by the party and the government."[5]

Work--The Most Important Sphere of Life

Prepared for life by the socialist society and equipped with the 10th party congress decisions, working youth now, with energy and initiative, in implementing the "FDJ Mission 10th Party Congress," undertakes the solution of the ambitious tasks assigned to it for the continued shaping of the developed socialist society. This it does in the awareness that it is making its most important contribution to the preservation of peace through its diligent, disciplined and creative work for the all-round political and economic consolidation of socialism.

In contrast to the capitalist countries, where the young generation is surrendered to mass unemployment, worries about its subsistence and uncertainty about the future, with a social pessimism rooted in the lack of historic prospects for that obsolete social system, the social optimism, social security and certitude about the future by the working youth in the GDR is based on the identity between its vital interests and future plans and the historic decisions of the 10th SED Congress on the further shaping of developed socialism. The 1981-1985 Five-Year Plan Directive, the long-term developmental conceptions for coping with the demands of science and technology, the program for solving the housing problem as a social problem before 1990 and the target programs agreed within CEMA on implementing the basic tasks in socialist economic integration by 1990 are social roadsigns by which any young citizen in our country can orient himself toward a permanent, secure, socialist future.

Peaceful, creative work for the benefit of the people is the only source in socialist society for satisfying the needs of the working people and of all society. At the 11th Parliament, Silvia Ey, FDJ secretary of the basic organization of the LPG (T) in Wattmannshagen, made the following comment on that: "It is easy to talk about this high performance improvement, but it demands a great deal of us every day. For that reason we have found out through personal conversations what our daily work has to do with the struggle for the preservation of peace and the further advance of socialism in the world."

In the realities of life and social progress in our time the young people in our country find out that the unity of peace, work and the future belongs to the crucial values and criteria in determining where we are socially and in orienting our life, as it determines the real attitude by society toward the vital interests of the young generation.

Through their honest and conscientious work hundreds of thousands of young working people have found out through the implementation of the party's economic and social policy that high demands in life require great achievements of one's own, a better efficiency and quality of labor by each individual. They approach the fulfillment and implementation of the 10th SED Congress decisions with the certainty that work for the benefit of the people is the sphere of life for them where they can apply the intellectual and physical skills they acquired at school, in vocational training and during their studies, and where they can perfect their social experiences and occupational skills, their energy and sense of responsibility and other characteristics and facilities of importance to their personality development. It becomes significant to them personally that the measure and quality of their own work become decisively important for implementing overall social goals, and thus also for the satisfaction of their own needs.

Forming Socialist Attitudes Toward Work

This awareness of the vital and creative role of work in the thinking and development of every young person is among the most important basic social experiences of the young working people in socialist society. It is based on the high appreciation work as well as a conscientiously and creatively working man enjoy in socialism and constitutes an important ideological potential for further advances in forming the youth's socialist propensities and attitudes toward labor.

Even the Ninth SED Congress had in its youth policy orientation directed the view of the party, of the socialist youth association and of the entire society at "further improving the effectiveness of education toward a truly communist attitude toward work," and had asked that among youth "the characteristics of young commmunists be molded such as discipline and organization, collectivity, a sense of responsibility and duty, conscientiousness, social activity and creativity."[6]

In talks and discussions the question often comes up what it means "to extend on a higher level the communist education of all youth."[7] The answer to that comes from the classic authors of Marxism-Leninism and from the 10th party congress documents. When V. I. Lenin at the Third Komsomol Congress called upon youth to create the socialist society, he directed its view at once at the most important principle in communist education--the unity between a creative appropriation of Marxism-Leninism

and an active participation in the struggle and work of the million masses of working people in the construction of socialist and communist society. He called upon youth to penetrate deeply the circumstances and interconnections, the store of social insights, and he affirmed: "Without work, without struggle, the bookish knowledge about communism glimpsed from communist brochures and works is not worth a penny." As a key for solving the tasks of socialist construction, he asked them "to make communism the guideline for your practical work."[8] Wholly in this sense the 10th SED Congress emphasized that the main path of communist education was the active participation by all of youth in the working class struggle for the continued shaping of the developed socialist society. "The ability and will to work for society creatively and honestly and with discipline therefore is a key question in communist education," Egon Krenz said at the 11th Parliament. "Because work in socialism creates not only wealth in the material sense. The characteristic traits of the workers class which more and more mark our society are again and again formed by it: an iron plan discipline and bold initiatives for new goals, a high personal responsibility to public property and steadfastness under any conditions."[9]

Work education thus enjoys a high place value in the communist education of youth at a higher level. Only through the unity of the Marxist-Leninist world-outlook, fine education and creative work is the consciousness of young people formed and do they comprehend that only through work the means can be provided for raising their own material and cultural standard of living and that of the entire people. That is why the goal of giving youth a work education is the forming of a communist attitude toward work and public property, with the communist attitude toward work, in the Leninist sense, beginning at the point where man no longer only works to satisfy his own needs but, consciously and creatively, for the benefit of the entire society.

The content of work education, as the 11th FDJ Parliament observed, is using socialist work as a school for collectivism, mutual help and socialist discipline, the forming of such outstanding characteristics and attitudes of the workers class in youth as love for work, respect for any kind of work, steadfastness and consistency in solving the tasks, pride in one's occupation, increasing and protecting socialist property, striving for high achievements and creativity.

Reiner Schramm, youth brigade chief of the VEB Elektrokohle Berlin-Lichtenberg, at the 11th Parliament reported that these high demands for a socialist attitude toward work are implemented in his collective under the motto, "Measure of My Work--Honest, Good and More." He said: "To the members of our collective, being honest means: starting work punctually, full capacity use of working hours, abiding by break periods, the most careful handling of tools and materials and punctual quitting times even on days when one is ahead and before holidays or whenever the foreman happens not to be there. Good to us means: all work with the smallest input and in the finest manner and--if possible--with material saved. And by more we mean accomplishing a maximum of production growth by means of the innovator movement and Fair of the Masters of Tomorrow exhibits out of the science and technology plan."

A higher level of communist education in the work process requires of all party and FDJ organizations and the state managers and economic functionaries to pay more attention to the ways in which socialist attitudes among working youth are really formed while they implement the planned tasks and engage in political mass activities.

All experiences in political mass activity garnered in the labor and production process confirm to us that motives in the attitude toward work based on firm ideological and political knowledge and values are the decisive impulses for conscious work attitudes among young working people and are fairly stable and independent of the concrete working conditions and the content of labor. In practice this factor is positively reflected, e.g., by the results of labor, the elan and activity of many young working people who are still working under objectively unfavorable production conditions or at difficult trouble spots of our economy in youth brigades and on youth projects.

The effectiveness of political mass activity in the labor process increases mainly where the organization of the concrete economic activity succeeds in picking up the potentials and interests in proving oneself through work as formed in the personality of the young working people at school, in vocational training and in the youth association. Such potentials mainly are
--the high expectations of the content and nature of the work activity and the dedication that comes with it toward fulfilling the physical and mental efforts and burdens demanded;
--the curiosity that comes through education and training, the demand for creativity, information and participation in solving new or complicated science and technology tasks;
--a facility in social and occupational mobility and the readiness to change jobs if necessary; and
--a great willingness to struggle for high work achievements through youth-related ways and means, e.g. in youth brigades or on youth projects.

Especially in still young and inexperienced working people who enter the production process, however--and this must always be kept in mind--, negative manifestations may arise in their attitude toward work, if they are left to themselves in problems and difficulties resulting from unaccustomed work requirements and fail to get the necessary help and appropriate information from the work collective or the party, trade union and FDJ groups.

At times there continues to be a greater declared readiness by young working people in some enterprises and combines to take part in economic FDJ initiatives, work in youth brigades and on youth projects, and assume tasks from the science and technology plan than taken account of by the state organs and economic management forces. It is precisely one of the crucial lessons of the "FDJ Party Congress Initiative" that the development of the initiative and activity of working youth and the formation of socialist attitudes toward work inherent in it should more consistently be planned and implemented still as a standard management activity procedure. The direct encounter by the young working people with the objective and subjective production conditions and the labor and skill requirements that belong to them has a great impact on how they evaluate the work in their mind and in their attitude. That applies in particular to the production conditions related to labor organization, the availability of material, the control over a smooth labor process, the enforcing of technological control and other requirements. As has been shown, dissatisfaction among the young working people arises less through excessive demands or illusory ideas about the work than through subjective deficiencies in production management and planning.

Forming socialist work attitudes among the youths is a constant task in economic management activity and everyday political mass activity. And this is mainly so because new age-groups are constantly starting work, and thus the basic questions of party policy and economic activity must under ever changing conditions and requirements be explained through confident and frank dialogue always again.

After the 10th SED Congress and the 11th FDJ Parliament, a more concrete discussion of the socialist attitude toward work has been going on in the basic FDJ organizations and in youth collectives and on youth projects, and a climate is developing that consciously serves to make a planned, complete use of performance reserves, with the new requirements of the economic and social policy being the criterion for the criticism of labor discipline violations and of contempt for social property. Experiences of the most advanced youth collectives and basic FDJ organizations have demonstrated that socialist attitudes toward work form especially in places where through the struggle for highest plan results the realization dawns that the economic and scientific-technical tasks waiting to be solved in the 1980's can be solved only through everyday hard and strenuous work by each individual. The performance comparison initiated by the Hans Kiefert youth brigade concretely expresses how the higher level of communist education the 10th party congress has called for challenges the dedication and energy of the entire working youth.

Deliberations at the 11th Parliament have illustrated to everyone that GDR youth under the leadership of its socialist youth association with initiative and energy faces its challenges in science, technology and economics on tried and new testing grounds. The great upsurge of initiative and energy of working youth in implementing the "FDJ Mission 10th Party Congress" testifies to the zeal and resolve of hundreds of thousands of boys and girls to fulfill in the work for the benefit of the people their sense of life in our socialist society, honorably to fulfill, loyally and actively alongside the older generation, and led by the party, the program for the continued shaping of the developed socialist society, and to help in consistently carrying on, with the elan of youth, the SED policy that is aimed at the benefit of the people.

GERMAN DEMOCRATIC REPUBLIC

SOCIALIST ART, CULTURE TO ENHANCE ECONOMIC PRODUCTIVITY

East Berlin EINHEIT in German Vol 36 No 7, Jul 81 (signed to press 10 Jun 81) pp 686-692

[Article by Dr Harald Buehl, Presidium member and National Executive Committee secretary, Free German Trade Union Federation (FDGB): "Culturally Rich Life Promotes Creativity and Preparedness for High Achievement"]

> [Text] Proceeding from the 10th party congress decisions, the trade unions promote all initiatives causing a stable rise in labor productivity and work qualities and serve the continued development of the people's material and cultural well-being. The "work, study and live socialistically" movement lends important impulses to the working people's creativity, which has to be further developed to that end. Improving our working culture, implementing decisive requirements in our educational policy, and the encounter with art and literature are important intellectual-cultural activities that positively affect the preparedness for high achievement in the work collectives.

An intellectually and culturally rich life is a decisive basis for further social progress. That is a truth confirmed in life which our 10th party congress has reemphazied. "Not only that the further shaping of the developed socialist society places higher demands on men's capacity for high achievement—it makes possible and promotes at once the full development of their intellectual needs and capabilities. We always start with the proposition to raise also, in harmony with the material, the cultural standard of living because we seek in socialism a meaningful and beautiful existence for all."[1]

From the party congress demand to mobilize creativity and preparedness for achievement and develop a rich intellectual-cultural life in the work collectives there also arise, in particular, ambitious tasks for the trade union representation of interests.

Unity of Economic and Intellectual-Cultural Factors

Proceeding from the realization reiterated by the 10th party congress, that the economy is the main field for our further social advances, the trade unions are conducting the socialist competition and are promoting above all those initiatives

that effect a perceptible boost of labor productivity and high labor efficiency and qualities. They direct the working people's creativity at accelerating the scientific-technical progress and further shaping comradely cooperation, mutual aid, innovator spirit and a sense of community.

Thereby we conform ever better to the connection between high economic achievements in socialist competition, its personality forming role, great knowledge and rich culture. That is impressively demonstrated by our people's biggest mass initiative thus far before and after the 10th party congress, particularly in the struggle for the honorific, "collective of socialist work," and in the desire to work, learn and live socialistically. The basis for it have been and are concrete competition programs and, derived from them, ambitious culture and education plans of the trade union groups.

The work collectives take a big hand in molding the working people's creativity and initiative, richness in ideas and preparedness for achievement through the intellectual-cultural activities the trade union promotes. Greater account is increasingly taken of the growing demands the working people make on the level of the intellectual-cultural life in their work collectives and residential areas, on a culturally rich environment and the culture and art society furnishes. That is why the 10th party congress report says: "The trade unions find a broad field of activities open for satisfying the working people's growing needs for high-level intellectual-cultural life and meaningful leisure time activities and recreation."[2]

The culture and education plans ratified and realized within the collective are making a fine contribution to that. Not formal obligations but the differentiated needs of the members of the collective for skills, their needs for improving their working culture, for culture and art, for sociability, sports, entertainment and communal experiences is what controls the content of the cultural and educational plans.

In their plans the trade union groups decide on tasks derived from the concrete requirements of their competition program and their intellectual-cultural needs. The colleagues set down how they will continue to educate themselves throughout the year and what they will do to spend a culturally rich leisure time, and how they want to work, study and live socialistically in their collective.

Rather than existing alongside the tasks in material production, intellectual-cultural activities pervade them and, directly or indirectly, affect them. "For more and more working people dealing with cultural values of the past and present becomes a vital need. The trade unions have made an important contribution to that SED 10th Congress balance-sheet because, together with the material interests, they also always have advocated an improvement in the cultural conditions of life. This is the way to continue for each enterprise trade union management and the kreis, bezirk and central managements. Still existing differences in levels have to be further overcome with it. The trade unions will continue to address themselves with special attention to the intellectual-cultural and sports life in the trade union groups and work collectives."[3]

The desire to work, study and live socialistically has turned out to be also a powerful impulse for satisfying the working people's intellectual-cultural needs. It helps develop and release the creative capacities, in ideas and emotionally.

High Working Culture--A Condition for Creative Work

The level of working culture has much bearing on the working people's overall creative conduct. That is why the various projects that serve to improve our working culture are so important to the life in the work collectives.

In many combines and enterprises the level of the working culture has clearly risen in recent years. That is seen, among other things, in that accidents and illnesses on the job have declined, shift worker maintenance has improved, new technologies have been introduced, production processes been rationalized or automated, and many jobs have been reorganized in terms of scientific labor organization. But still considerable efforts are needed so that--while labor productivity is rising and the efficiency and quality of labor are improving--the colleagues' well-being at their jobs also improves further. Trade union managements and boards thus have to pay greater attention to that, in the design and development of new machines, installations and technologies, not only those science data are taken account of which facilitate a higher labor efficiency, but also those that ensure the working people's technical safety and most favorable working conditions.

Trade union membership meetings must show more open-mindedness and understanding but also more consistency and stubbornness in implementing suggestions the working people are making about their socialist working culture. Recommendations concerning an improvement in working conditions or labor products must for their feasibility be checked by the managements and resolutey be brought to realization. Moreover, it has been shown that preparedness for achievement has reached a noteworthy stage in collectives that are used to high and further growing demands, and where socialist democracy, political responsibility and friendly relations among the colleagues have developed well.

It also is a task of the membership meetings, however, to discuss matters of the work attitude and conduct of each working person and to bring an influence to bear on the cleanliness, order and discipline and the further improvement of interhuman relations within the work collective. The socialist work collective is that sphere of activity in which a man can most decidedly develop his intellectual and physical skills, where his knowledge, skills and experiences are encouraged, his dexterity and imagination are formed, and his will power and character are molded along with it. Mainly through work and in the work collective can man in socialism develop his creative capacities. The better the opportunities are for it, and the more thereby an individual can realize his abilities and facilities, and finds recognition for it, the more he will find hinself confirmed in his work, will sense that he is of use to society, and to himself, and thus he feels good.

That, however, does not confine the creative to the concrete labor process. That in many fields is still limited to monotonous and simple operations. The working people's creative participation in their work largely is also brought about by their involvement in management, planning and production organization, in socialist competition, the innovator movement, and by assuming other social obligations. Other

important elements that are part of the working culture and stimulate the working people's preparedness for achievement and creativity are comradely cooperation and a healthy climate in the work collective.

Creativity Makes for Knowledge and Skills

In the continued shaping of the developed socialist society the place value of education rises, as science and culture more deeply enter life in all domains. A priority task in the trade union representation of interests therefore is to help tap the grown educational potential on behalf of scientific-technical progress, performance improvements in the economy, effective political-ideological work, and a meaningful culturally rich life altogether. Trade union and enterprise managements must more and more orient themselves to that this involves the acquisition of new knowledge as well as the working people's ability to make greater use of what they already know for improving our economic performance and for developing creative potentials. Be it a matter of new basic technologies for microelectronics, more flexible automation solutions, highly productive procedures for the use of petroleum, natural gas or brown coal, new energy-saving methods or the use of highly refined working materials--it always comes down to rethinking technological processes and applying scientific data. It is therefore correct that many trade union groups--on the basis of the economic requirements in their enterprise--give thought to how what their members already know could be maximally used, what one has to do so that the already acquired qualification level crystallizes more effectively still in a higher quality of work and output.

Just like the Komarov youth brigade collective in Schwedt's petrochemical combine, many work collectives have drawn the proper educational inferences from the higher demands placed on scientific-technical progress. That youth collective, by meaningfully using the available educational potential, accomplishes more with less manpower and at the same time, as the members of the brigade can be used more flexibly than in the past, has released manpower for other tasks. Such and similar demands are facing more and more collectives.

New technologies and procedures, new labor processes, a different labor organization, new regulations for operating industrial robots, automats and plants require, because they are opening up new fields of labor, new scientific-technical knowledge of the working people as a rule, personalities, i.e., who will constantly raise the level of their qualifications. What consequences that leads to was most vividly described at the 10th party congress by brigade chief Werner Boltzio of the VEB Robotron accounting machinery works in Karl-Marx-Stadt: "Few specialists and technicians in the field of microelectronics were initially available to us. We all once again had to qualify theoretically and practically. But 4 to 6 weeks was by no means enough for it. Many a leisure hour, quite a few weekends, we had to keep our nose to the grindstone, and that sometimes even without getting all that much backing for it from our loved ones."[4]

GDR Workers Festivals -- Creative Cultural Performanc Exhibit of the Workers Class

	Suhl 1978	Rostock 1980
Events	400	530
Visitors	1,200,000	1,700,000
Participating Popular Artists	10,018	13,000
Professional Artists	1,832	2,000

The dynamic development of science and technology, the complexity of management, planning and production organization, and the task to produce more and better, more efficiently, within briefer time frames and with reduced manpower, changes the occupational and qualifications structure of many working crews in our industrial branches. That is why it is objectively necessary for combine and enterrise managements and the enterprise trade union managements better and always more consistently to derive their educational measures in the work collectives from long-term requirements so that wherever production processes change due to the introduction of new technology working people are in good time prepared for their new work demands. Experiences and investigations indicate that in some enterprises only circa one-third of the qualification measures conformed with present and future economic tasks. That does not conform with the requirements for high performance improvements.

The task to cut back jobs, provide better for other jobs through new technology and have them assigned to working people with appropriate qualifications demands also of the trade union representation of interests to commit itself still more resolutely and consistently to the working people's vocational training and advanced training. It too has to insist that these tasks--which also crystallize in the culture and education plans--are fully integrated within the industrial reproduction process. Many trade union organization have reason to consider more accurately how they can effectively contribute to having the qualification level of workers and intellectuals go up, and this in vocational and adult training as much as in the continuing education of technical school and college personnel.

Art Promotes a Creative Attitude Toward Life

"In the 1980's the demands on the quality and effectiveness of our socialist culture and art will rise further. They, after all, help release creativity in man and enhance the pleasure in work and the well-being of the working people in socialist society. It is a matter of further improving everywhere the intellectual-cultural prerequisites for our improving achievements."[5]

Life in our republic proves that--mainly through the working people's higher educational level--the art interests of the working people are becoming more and more varied and demanding. That embraces literature, theater, music, the visual arts, archicecture and the applied arts, sociability, entertainment and the participation in various artistic interest groups. Through the encounter with art the sense for the beauty and values of our lives will grow, and productive, creative attitudes toward life are aroused. Artistic experiences serve pleasure and balance, they mold the socialist personality profile and also always affect the creative attitude of the working people in the labor process.

Through their culture and education plans the work collectives seek always better to conform with these needs for artistic experiences and to satisfy both the personal and the social demands and requirements. That is an important concern for the trade union representation of interests and for the activity of many of the nearly 290,000 cultural spokesmen in the trade union groups. And here one has to remember that direct relations between the immediate work and the dealing with art normally cannot be established. Especially in the development of artistic needs, the differentiated interests and demands of the various members of the collective

have to receive greater attention. Taking part in artistic activities must never become some "compulsory exercise." Rather one should have to consider which works of art and what forms of engaging in art will in a specific collective contribute to deepening the development of the Marxist-Leninist world-outlook and foster moral value standards and aesthetic sensitivity.

How stimulating the encounter with art can be was shown, e.g., by the Kaethe Niederkirchner trade union group at the VEB NAGEMA in Neubrandenburg. This youth collective, of which more than half the membership is doing outstanding quality work, achieved extraordinary results in the socialist competition and has developed an increasing interest in art and culture. The members of the collectives, even those who do not as yet concern themselves regularly with artistic and literary works, were deeply impressed with visiting the studio of painter Erhard Grossmann and by a discussion with Helmut Sakowski about his novel and television film, "Verflucht und geliebt" [Cursed and Loved].

Among the intellectual-cultural prerequisites which lastingly affect the working people's creativity also are the many different ethical effects derived from important works of socialist realism and from our cultural heritage. Talks about works of art or about the questions raised by them are as much standard everyday procedure in many trade union groups as is the promotion of popular art activity or other artistic activities. Social evenings in the brigade likewise, on a high level, foster the pleasure of living and relaxation, cultivate perception and the mind, and have favorable effects on the sense of community, the work and the work collective.

An essential inference drawn from the 10th party congress is to improve in substance and make more demanding in this direction the culture and education plans of the trade union groups, the offerings from all the cultural institutions--libraries, club houses, theaters, museums and so forth--and the programs of the enterprise festivals.

The Management and Planning of Intellectual-Cultural Processes

To solve the various tasks that serve the further development of our intellectual-cultural life a higher level of trade union management activity is required. That can be gaged mainly against how positively they affect the working people's creative thought and conduct. That is only another reason why culture and education work must not be considered a departmental affair, as is still the case among some managements.

A consequence of the 10th party congress is that the trade union managements must still improve their work with culture and education plans. That calls for concentrating on such activities that can be derived from the economic and political production requirements, the socialist consciousness formation and the application of socialist democracy within the enterprise as well as from the differentiated interests, inclinations and needs the members of the collective want to see satisfied outside of their immediate production activities, in their leisure time, at sports and recreation. And those collectives in which intellectual-cultural life is still insufficiently developed must be given patient and sensitive support in this. Paying attention to the interactions among economic, political and cultural

matters in the planning and implementation of intellectual-cultural life is an essential precondition for overcoming restraints and one-sidedness and more and more do away with formal features in the evaluation of these activities. Purely quantitative evaluation criteria ought to be replaced by qualitative analyses, by assessing and rating the intellectual-cultural development state actually obtained in the entire collective.

Expenditures Paid From Industrial Cultural and Social Funds, 1980

The combines, enterprises and facilities of the state-owned economy had approximately M 3.5 billion available for their cultural and social funds in 1980. That came to an average of M 700 for every fulltime worker.

Out of this total sum, the following was spent:

M 2,450 million for health and social care, which was 70 percent of the total.

M 350 million for vacations, which was 10 percent of the total.

M 175 million for culture, which was 5 percent of the total.

M 245 million for sports and youth care, which was 7 percent of the total.

M 280 million for other matters, which was 8 percent of the total.

Between 1981 and 1985 health and social care for the working people is going to be further improved, especially by a more effective use of available facilities. Tools that are safer and easier to use will be developed and employed to a larger extent.

To meet these higher demands, we must still pay more attention to cadre qualifications. Especially the 350,000 voluntary culture functionaries of the trade unions in the enterprises must get support so they will be able to recognize the growing ideological requirements and more differentiated intellectual-cultural demands and act accordingly.

Cultural and artistic needs can of course not be satisfied solely in or by the collective of a trade union group. The intellectual-cultural life of the working people depends not only on their development in the enterprise but depends on their whole cultural environment (family, place of residence, circle of friends, leisure-time interests and so forth). That is why the trade union management has to give careful thought to how the cultural opportunities in the territory and those of the mass media might still better be integrated with the intellectual-cultural life of their collectives.

Here great tasks arise for the art trade union with its 65,000 members. The trade union organizations in GDR television and broadcasting, in the film studios, in the theaters, orchestras, museums and memorial sites, and the trade union groups of the entertainers should--in order further to enhance their artistic skill and the relevance and ideological and aesthetic radiating strength of their achievements--still more vividly discuss among themselves and with those they address themselves to, the working people, the questions of party-mindedness, solidarity with the people and

the content of socialist ideas. That includes debate about how to artistically represent the workers class, about the massive effectiveness of our art, and questions of how our heritage is appropriated and how we promote artistic gifts among the young. Art institutions must still more clearly figure out how political-ideological and aesthetic questions might more strongly still inform the content of their competition and their performance comparisons. Stagings, concert programs, exhibitions and other art events ought to be still more evaluated in terms of whether and how they affect the working people's thoughts and feelings, and what has to be done to improve their art appreciation and their need for high-level art experiences. Indispensable for that is a deepening of joint partnership work between the work collectives and the trade union boards and managements and the writers, visual artists and composers, and their associations and state organs.

The GDR is a country where the working people have a high cultural and educational level, a country with rich cultural and artistic traditions. In preparation of their 10th congress, the trade unions intend to do still more in opening up these treasures to all working people in order to stimulate the joy of life, creativity and a readiness for achievement thereby.

GERMAN DEMOCRATIC REPUBLIC

PLURALISM CONCEPT SEEN AS ANTISOCIALIST DEVICE

East Berlin EINHEIT in German Vol 36 No 7, Jul 81 (signed to press 10 Jun 81) pp 700-706

[Article by Prof Dr Karl-Heinz Roeder, jurist, deputy director, Institute for Theory of State and Law, GDR Academy of Sciences; and Prof Dr Wolfgang Weichelt, lawyer, director of same institute; corresponding member, GDR Academy of Sciences: "On the Antisocialist Pluralism Concept." For an official SED view of the problem, see translation of an April-May 1981 EINHEIT article by Prof Klaus Heuer of the SED Central Committee, published under the heading, "Socialist Democracy Seen Incompatible With Pluralism," in JPRS 78364, 23 Jun 81, No 1891 of this series, pp 30-37]

> [Text] What is hidden behind the pluralism concept propagated by bourgeois ideologists? In refuting that conception of the state and democracy, the article proves that in socialism the leadership role of the Marxist-Leninist party and the power of the workers class are the decisive conditions for the successful advances of the entire society and for bringing to realization the interests of the workers class and of the entire people. The counterrevolutionary thrust is revealed in the conception of a "pluralistic socialism" that is being offered to real socialism.

Imperialism is responding with its confrontation course and increasing ideological aggressiveness to the advances the socialist world system, the workers movement in the capitalist countries and the national liberation movement have achieved in their struggle for a world without exploitation, suppression and war. "This is an attempt undertaken out of a historical defensive to stop what cannot be stopped--the worldwide transition from capitalism to socialism."[1]

Among the conceptions opposing socialism and its theoretical Marxist-Leninist foundation, so-called pluralistic socialism holds a special place. It is meant to serve antisocialist counterrevolutionary forces, under the cover of a purportedly necessary democratization of the political system of socialism, in taking apart socialism's foundation pillar, whereby to liquidate it. Even back in the early 1970's, when the counterrevolutionary attack against the socialist order in the CSSR had failed, revisionist ideologues had expressed the hope "pluralistic socialism" would still "one day, under more favorable conditions, become practical reality" and "could replace the communist system of today."[2] Quite frankly, Mr. Springer's

DIE WELT announced late last year, in connection with the counterrevolutionary attacks in Poland, that was a matter of changes heading for a pluralism as "typical of 'capitalism.'"[3] That let the cat out of the bag and plainly stated what is hidden behind the pluralism theory that is most warmly recommended to socialism by those who otherwise have no use for socialism at all.

The pluralism conception is based on the allegation, devoid of any reality, that the development of the "modern industrial society" had replaced class division by a motley variety of diverse interests. Therefore no longer classes and strata, but "organized interest groups" were forming the structure of the capitalist countries alleged to be modern industrial societies. Those groups had equal rights and the same chances and opportunities to influence policy. To engage in and settle conflicts among the various social interest groups, one needed certain rules of the game (of bourgeois democracy and its parliamentary rules) and a "balancing" of the interests. The state, according to this theory as developed and disseminated in different versions by bourgeois ideologists of various shades, acted as an organ of "balance," conflict arbitration, and as a safeguard of the "common good."

It is not astonishing that such notions have also been picked up by social-reformist ideologues and included in their conceptions. Even if, in view of the intensifying contradictions in the capitalist world, the class contradiction between capital and labor cannot be placed in doubt, yet the doctrines about state and law as "arbitrator" of diverse interests in a pluralistic society are like tailor-made for the social-reformist ideology of the possibility of a "reconciliation" of class contradiction in capitalism, and of the state as an instrument of this "reconciliation." Ernst Fraenkel, a leading representative of the theory of political pluralism, emphasized already a few years ago: "Pluralism is the political theory of reformism. It implicitly rejects the thesis that the antagonism between capital and labor, which it does not place in doubt, must needs lead historically to being 'suspended' in the classless society. Pluralism views this antagonism rather as a chain of oppositions of interests going through all of industrial class society which are not apt to disintegrate the state and society provided the state has the opportunity to participate in their arbitration--be it on a short-term, long-range or continual basis."[4]

Now the astronomical profits, especially by the monopolies engaged in armaments business and in the neocolonialist exploitation of the developing countries, on the one hand, and the growing social insecurity and the higher degree of exploitation intensification, on the other, show however that the class antagonism between capital and labor still can neither be "balanced" nor reconciled despite all state monopoly regulation measures. On the contrary, it has visibly intensified. The capitalist state, to be sure, more and more strongly interferes with economic life and public relations but, as practice has shown, always on behalf of preserving the capitalist system and securing monopoly profits. No government in any imperialist state has presented any program that could be taken seriously for fighting mass unemployment, while military expenditures have been increased enormously--as in the United States, Great Britain and the FRG. No one will be able to claim seriously that the drastic cuts in welfare expenditures coming together with an explosion in military expenditures by the new U.S. Administration has anything to do with arbitrating the antagonisms between capital and labor, the monopolies and the people's masses. Nor do other state regulations in the capitalist economy

abolish the intensifying social contradictions. "By anti-inflation measures the bourgeois governments contribute to production stagnation and increasing unemployment. Trying to stop the crisis-ridden production decline, they are increasing inflation still more."[5]

Thus the theory of political pluralism is objectively not feasible even in terms of its basic assumptions--the role of the capitalist state as a conflict regulator, an arbitrator, and agent of the common good. Altogether it can ideologically take root only where there are petty bourgeois illusions about some class harmony, a state not depending on classes, a democracy neutral toward classes. As little as there is a state not depending on classes that serves all classes in imperialism, there also is no "equality of opportunities" in the field of democracy or any "democratic balancing of interests." The antagonistic contradiction between capital and labor, between the monopolies and the working people, marks social and political life more than ever. Less than ever is the socioeconomic structure in those countries defined by some "pluralism of organized interest groups" surmounting the classes and strata, or by some "equality of opportunities." One figure alone makes that perfectly evident. In the FRG 1.7 percent of the population owns roughly 70 percent of the industrial and capital assets. Concretely this means: a few make the decisions on the elemental vital interests and living conditions of millions. They decide where to invest, to what extent to use the production capacities or where, due to rationalization, jobs are eliminated. And through this economic power they also exercise their political domination. They have their agents in the government apparatus, they finance election campaigns and political parties and so forth.

Imperialist practice confirms time and time again: whichever political party may be running the government, those who hold the economic power also are the political rulers. Even modest attempts to gain some influence for the working people, toward some genuine say-so in industrial matters, e.g., are opposed by the monopolies in every way.

Looked at imperialism for what it is, the political pluralism theory thus turns out to be an illusion that is meant to disguise the political and economic domination by the monopolies and the crucial contradictions in state monopoly capitalism. In truth it is not the extension and expansion of bourgeois democracy, but its dismemberment, its protracted crisis, what typifies it in the capitalist countries. This is expressed in the limitation and contempt of basic democratic rights, in intimidation, repression, spying and job restrictions, in the inroads made by authoritarian and even fascists methods of government, in the reduction of parliamentary rights for the benefit of expanding the authorizations of the government executive, in frequent government crises, unstable parliamentary majorities and a, partly, drastic reduction in voting, reflecting the citizens' dwindling confidence in the organs of the imperialist state. It is a revealing indication of the crisis of bourgeois democracy in the allegedly freest country in the world, the United States, that the participation in the presidential elections declined from 62.8 percent in 1960 to 52.3 percent in 1980. And that means: by receiving 51 percent of the votes the incumbent U.S. President was thus elected by approximately one-fourth of the electorate.

And this bourgeois democracy, confined essentially to the give and take between the government and its opposition, is offered to the socialist countries as the ne plus ultra for "perfecting" or "modernizing" their order. However much they may embellish it, bourgeois democracy--despite the democratic rights the workers class was able to wrest from capital--always remains a democracy of limitations for the working people. It finds its basis in the capitalist production relations and cannot be transplanted onto a social organism that in its nature and manifestations is contrary to such relations. Socialist democracy, which offers every citizen the real possibility "to participate fully in shaping the political, economic, social and cultural life of the socialist community and of the socialist state," (GDR Constitution, Article 21) is neither a gain in bourgeois democracy nor a perfection of bourgeois democracy. It is historically of a new quality. Socialism has its own principles and traditions which conform to its nature and needs and cannot be gaged against bourgeois democracy, limited by the capitalist private ownership in the means of production and, on top of that, deformed by monopoly rule.

If one listens more carefully and thinks about it more, one finds that the bourgeois proponents of a "pluralistic socialism" are actually not at all concerned with the extension and unfolding of socialist democracy but with undermining it and with doing away with everything that constitutes what is qualitatively new in our democracy and with its strength: the cohesive, uniform democratic actions of the working people under Marxist-Leninist party leadership. Behind the battle cries for pluralism one finds the unequivocally counterrevolutionary designs of imperialist reaction and its ideological henchmen to liquidate the power of the workers class and to "bring back home" the socialist countries into the realm of capitalism.

That antisocialist program has been worked to death with special emphasis in recent times. DIE WELT, for instance, one of the authoritative papers of the monopoly capitalist mass-seduction corporations, now propagates "a departure from that form of Leninism that has been mandatory thus far in the USSR and the whole eastern bloc."[6] This plainly asks for the abolition of the dictatorship of the proletariat and the destruction of the power of the workers class and of the leadership role of its communist party. Approaching that goal they first, by means of political pluralism, want to create "ever expanding free spaces" for anticommunist forces. The FRG's bourgeois press in this context talks of three, four or still more power centers that would be necessary. From there then they would like to launch the next attacks against socialism and its political leadership force, the Marxist-Leninist party.

That was given away fairly plainly by the Springer paper just referred to when it included among "the institutional weaknesses of communist society and of 'real socialism' the lack of any possibility for power balance and succession to power."[7] To create a condition by means of so-called political pluralism which makes possible a "succession to the power" of the workers class and its revolutionary party--that is the ulterior motive when bourgeois ideologues urge a reform of the political system in the socialist countries.

Securing Working Class Power--Basic Condition for Successful Advances

The course we have followed in our country--as have the peoples in the other countries in the socialist community--for more than 30 years now with success confirms

the universal doctrine of Marxism-Leninism that the seizure and consolidation of the political power of the workers class under leadership by its Marxist-Leninist party is the decisive condition for establishing the new socialist order without exploitation and without the suppression of the working people. Only by means of its political power and the socialist state as its chief instrument can the workers class turn the decisive means of production into public property, lay the foundations of socialism and shape the developed socialist society. And only on the basis of the leadership role of the workers class and its Marxist-Leninist party--this is confirmed by all experiences--can the socialist state fulfill its role as the chief instrument in establishing socialism.

For the first time through the socialist revolution a political power is created where the implementation of the interests of the ruling class--wholly in contrast to the exploiter systems--does not contradict the basic interests of all working classes and strata. Because the workers class, with its own liberation, also liberates all other exploited and suppressed. Therefore the dictatorship of the proletariat is the first state in the history of humanity which represents the interests of all working people and in that sense works for the benefit of the people. It is a power in which the will of the state represents the unified total will of society which is worked out through a ramified democratic system and implemented purposefully by the state organs and with support from all citizens. Therefore socialism needs the state neither as an "intermediary" nor as an "arbiter" or for the "balancing of interests" in the last instance.

Our concern is to do everything so that the socialist state ever better live up to its tasks in representing the interests of the working people, as an organ for enforcing the total will in conformity with a total plan, as the chief instrument of the working people, led by the workers class, for the shaping of the developed socialist society. That implies the development of socialist democracy, the implementation of democratic centralism, as much as ensuring the safe protection of socialism from all enemy assaults. That is why Comrade Erich Honecker at the 10th party congress affirmed resolutely: "Only the political power of the workers class ensures the freedom of the people to shape living conditions of human dignity for all citizens and the freedom of personality. Our state, as a form of the dictatorship of the proletariat, represents the interests of the entire people and guarantees freedom and human rights. No one has been and will ever be allowed to touch the socialist state."[8]

The Party's Leadership Role

The political power of the workers class in socialist society is inseparable from the leadership role of the Marxist-Leninist party. Because socialism, based on the public ownership in the means of production, can only be the conscious work of the people. It is the outcome of the unified, purposeful actions of the workers class and the classes and strata affiliated with it. The history of real socialism documents how much of a society-forming strength inheres in this unified, purposeful effort of the people freed from exploitation when it is led by a Marxist-Leninist party that mobilizes and organizes the activities of all the people and guides them toward the tasks to be solved for its economic and social progress. Without such a leading force which as the vanguard of the workers class, on the basis of a scientific strategy and tactics, and by force of its organization, points out the

direction and goal for the conscious and planned activity of the people in enforcing the objective inevitabilities, in accordance with concrete historic conditions, and can lend political effectiveness to it, the complicated tasks in the construction of the new society cannot be solved. Successfully coping with these tasks requires a policy that releases the people's creative capacities and serves its well-being--for which very reason it enjoys the trust of the people.

"In realistically asessing what has been achieved, free from wishful thinking, recognizing in time the needs and problems of the road ahead, creatively applying the Marxist-Leninist science in coping with them, in using the experiences of the working people and deriving benefits from the insights of the fraternal parties, in posing tasks with the proper measure for means and capacities, but mainly in constantly developing and guiding the working people's awareness and activities"[9] we find expressed the leadership role of the party in socialist society and the political level of that leadership.

As the party as a part of the class, its conscious and organized vanguard, in the process of coping with the practical tasks enables the entire class to fulfill its historic mission, it proves itself the most important factor for the successful shaping of socialist and communist society. The solidarity between the party and the people which relies on that, as the 10th party congress has impressively demonstrated, also refutes all claims by the ideologues of pluralism of the party's dictatorship "over" the workers class and the popular masses. How could anyone regulate and dictate that large a mass initiative before and after the 10th party congress? It is rooted precisely in this unity between the party and the people, in that the party policy as directed at the safeguarding of peace, the well-being of the people, and the happiness of the individual, conforms to the interests of the workers class and the fundamental interests of all other working classes and strata. The motive for unanimous action is the identity of fundamental interests, the identity with the general party line seen to be right and conforming with one's own interest, and the common will, resulting from it, to implement that general line with purpose.

The policy of our Marxist-Leninist party, which is based on the recognition of social inevitabilities and their requirements, and in which the interests of the workers class and the fundamental interests of all other classes and strata in our socialist society are expressed, is the outcome of confident and constant dialogue between the party, the entire workers class and all other working people. Precisely also the 10th party congress decisions were prepared by that comprehensive process of democratic discussion in various forms. This has proven itself among us for decades and forms the basis for the relevance of party policy and the massive activities of the working people for implementing it. In that the party congress put up for public discussion its 1981-1985 five-year plan directive one can find another proof for the democratic character of the party's leadership role, as this directive, after all, has already sparked many new activities, suggestions and ideas for the successful implementation of the economic strategy of the 10th party congress.

This--as many other things--makes liars of the bourgeois ideologues who twaddle about a lack of "democratic legitimacy" for the leadership role of the Marxist-Leninist party. Its leading place in the political organization of socialist

society is acquired by a policy that serves the interests of the workers class and all working people right, by its being deeply rooted in the people and its firm ties with all classes and strata.

Our enemies know well enough that precisely in this people-affiliated policy of the Marxist-Leninists and the political-organizational unity in its ranks the guarantee is found for the further successful advances of socialism. Therefore they direct their attacks with special thrust and venom against the communist parties and their Leninist organizational principles, mainly against democratic centralism. They would like to "sneak" their pluralism into the parties themselves, subvert them thereby from within and cripple their fighting capacity. Quite openly capitalist spokesmen talk about the "pluralistic bacillus" that should spread. They seek a "democratizing and pluralizing communist party,"[10] a party that would "quit the road of Marxism-Leninism and largely conduct itself in a revisionist or menshevistic (i.e. social democratic) manner."[11]

The propagandists of pluralism leave no doubt about what they have ultimately in mind: the destruction of the Marxist-Leninist parties and, thus, the political disarming of the workers class. They intend a fatal blow against socialism by paralyzing and weakening its leading force and eventually rendering it impotent. That the class enemy banks on that is not astonishing. It is an expression of the implacable class struggle of our time. Important however is that the Marxist-Leninist parties always be prepared for it and properly turn down the enemy's assaults. With its 10th party congress our party has once again demonstrated its capability and capacity and has proven that nothing and no one in the world can touch the ideological, political and organizational unity of the SED. Its cohesiveness and its loyalty to the principles of Marxism-Leninism are unshakable.

Proven Alliance Policy

The theoretical core of the opposition between pluralism and our Marxist-Leninist social and political conception does not--as often insinuated by the bourgeois side--lie in that the former accepts, and the latter denies, that there exists a variety of interests. Naturally, even in socialist society there exists a great diversification of interests, as between the social classes and strata, between collectives, between society and the individual and also among individuals themselves. Here, however, differences of interests are of a nonantagonistic nature, no unbridgeable contradiction inheres in them, and they need not lead to unreconcilable conflicts because there is no social breeding ground for that. Socialist ownership in the means of production and the socialist planned economy rather effect and promote an identity of interests and a comradely cooperation among socialist producers as a characteristic trait of socialist production relations. Socialism thereby does not cancel the existence of diverse interests in the classes and social strata that shape this society, but it makes possible for the first time their real representation and consideration on the basis of the implementation and protection of common, overall social interests. Undoubtedly also our society will continue to give rise to differentiated interests because socialism creates increasing material, social and cultural opportunities for satisfying such interests. The party and the state take that into account in their policy by various measures. For example, through applying the performance principle the individual is challenged to make a

maximum contribution to the implementation of overall social goals. Our Constitution and other laws guarantee comprehensive rights for realizing specific interests by specific population groups, as long as they do not infringe the goals of socialism. And it meets with the overall social interest of socialism to take account of specific interests, e.g. of the craftsmen, the young generation, people that like sports, young married couples and other groups, by special promotion measures. Not last, this practice in our socialist life brings it about that while socialist social development advances the realization of the identity of fundamental interests also grows.

This is not an automatic process. The decisive principle in the alliance policy of the workers class and its Marxist-Leninist party is to work out on every level of social development and in all domains of public life the identity of basic interests as between the workers class and the other working classes and strata, make all working people aware of it, and implement them through a close and responsible cooperation of all political forces in socialist society. The firm alliance the workers class has with the farmers and other working people also has developed and proven itself in our republic for more than 30 years. It has been and is a basic principle of the SED's Marxist-Leninist alliance policy that every crucial step toward establishing an antifascist-democratic order, in the transition toward establishing the foundations of socialism, and in shaping the developed socialist society has been thoroughly discussed with the parties and mass organizations united in the National Front of the GDR and in the Democratic Bloc, especially with the FDGB and the FDJ, and has been jointly realized by the activities of all involved working people. This procedure conforms with the objective requirements of our social development. It is deeply democratic and embodies the true sovereignty of the people, the active participation by the working people in the process that elaborates and implements our state's policy.

SUMMARIES OF OTHER MAJOR 'EINHEIT' ARTICLES

East Berlin EINHEIT in German Vol 36 No 7, Jul 81 (signed to press 10 Jun 81) 'Resumes' addendum

Well Equipped for the 1980's

[Summary of 'Enhanced Refinement--A Great National Economy Program' feature article by Prof Dr Claus Kroemke, economist, deputy department chief, SED Central Committee; pp 633-641]

> [Text] On the proposition that socialism alone is the order that suits the contemporary state of the productive forces and the requirements for the progress of mankind, the article shows how the economic strategy of the 10th party congress conforms to the altered conditions and higher demands of the 1980's. It explains that the new level of intensively expanded reproduction depends on a combination of new economic and social factors which essentially are a direct expression of the unfolding of the advantages of socialism. Of outstanding importance to it is the enhanced refinement of production--a process for which the combines possess favorable prerequisites.

Enhanced Refinement in Metallurgy and Metalworking Industry

[Summary of 'Enhanced Refinement--A Great National Economy Program' feature article by Gerhard Tautenhahn, member, department chief, SED Central Committee; pp 642-647. A translation of this article is published as part of a series of related items under the heading, "Industry, Agriculture to Focus on 'Enhanced Refinement,'" in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

> [Text] The combines in machine building and electrical engineering and electronics, through their contribution to scientific-technical progress, bear a great responsibility in enforcing our economic program on refining. In which direction must thus their production profile change and how is their work--starting with the scientific-technical tasks--to be focused? Which tasks are to be solved by metallurgy so as to create the condition, through an enhanced refining of available raw materials, for the metalworking industry to be able to reduce its metal consumption and improve the grade of its output?

Our Basic Materials Are to Be Better Utilized

[Summary of 'Enhanced Refinement--A Great National Economy Program' feature article by Dr Horst Wambutt, economist, department chief, SED Central Committee; pp 648-654. A translation of this article is published as part of a series of related items under the heading, "Industry, Agriculture to Focus on 'Enhanced Refinement,'" in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

> [Text] Even during the last decade, when developed capitalist countries were still very wasteful about raw materials and fuels, we gathered useful experiences in refining them thanks to our party's far-sighted economic policy. Which criteria are to be applied today to refinement in the basic materials industry, how do these processes affect the grade of production, and how do they help perfect our economic structure? Why do we prefer the refining of domestic raw materials? Refinement concerns the whole reproduction process, each job, each activity.

What Is the Situation in Our Combine With Regard to Enhanced Refinement?

[Summary of 'Enhanced Refinement--A Great National Economy Program' feature article by Dr Karlheinz Jentsch, professor of political science, general director, VEB Wilhelm Pieck Combine, Mansfeld; pp 655-659. A translation of this article is published as part of a series of related items under the heading, "Industry, Agriculture to Focus on 'Enhanced Refinement,'" in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

> [Text] Refinement metallurgy faces high demands for supplying processing industry with more highly refined working materials. How is the VEB Wilhelm Pieck Combine in Mansfeld facing them? Which economic effects are provided in refinement through modern technologies, methods and installations? How do we manage to achieve important advances in the production of highly refined products and to turn top achievements into permanent and stable achievements through a mass-solidary management of socialist competition?

Get More Out of Animal Raw Materials

[Summary of 'Enhanced Refinement--A Great National Economy Program' feature article by Dr Bernhard Larisch, Institute for Agriculture and Foodstuffs Industry, Ministry for Agriculture, Forestry and Foodstuffs; and Dr Winfried Theilig, chief director, VEB (B) (Bezirk-Administered) Thuringia Meat Combine, Gera; member, GDR Academy of Agricultural Sciences; pp 660-663. A translation of this article is published as part of a series of related items under the heading, "Industry, Agriculture to Focus on 'Enhanced Refinement,'" in a recent JPRS issue of EAST EUROPE REPORT: ECONOMIC AND INDUSTRIAL AFFAIRS]

[Text] Also for the working people in the foodstuffs industry it is a concern of great economic weight to enhance the refinement of raw materials available. How can the production-oriented cooperative associations, through a further development of coordinated technologies, perfect the refinement processes and tap further material reserves? Which rank is to be attributed here to standardized work and the struggle for fine quality? With regard to this, examples are presented from the work of cooperative associations in Gera Bezirk.

Space Science in Service of Our Socialist Society

[Summary of article by Prof Dr Heinz Stiller, member, GDR Academy of Sciences; director, earth and space science research program, GDR Academy of Sciences; pp 671-678. A West German commentary on this EINHEIT article is inserted below this summary]

[Text] "Interkosmos" is one of the many examples of socialist science cooperation which, free from any profiteering, serves scientific-technical progress on behalf of social progress. By the example of earth and space sciences it is being shown how important premises were established in the 1970's for the necessary subsequent improvements of achievements in science and technology. The potentials in socialist science policy, which must be released in the 1980's along with the political, economic and ideological confrontation with imperialism.

West German Commentary

Bonn IWE-TAGESDIENST in German no 99, 8 Jul 81 p 1

[Report from Berlin: "GDR Wants to Intensify Involvement in Space Research." West German commentary on article by Prof Heinz Stiller in East Berlin EINHEIT, Vol 36 No 7, Jul 81, signed to press 10 Jun 81, pp 671-678

[Text] The GDR wants to intensify its involvement in space research and space travel in close cooperation with the Soviet Union. This was announced in the most recent edition of the theoretical party journal EINHEIT. It was pointed out that space research had meanwhile acquired a "fundamental importance for the advance of human knowledge and the development of the productive forces." Thus the solutions of principle on which the space research and space travel devices depend were highly important to applications in the GDR economy. Space research could help accelerate scientific-technical progress in many areas. Its deliberate realization was the decisive problem in fulfilling the considerably higher requirements in the 1980's.

Program of 16th CPCZ Congress for Coming Years

[Summary of article by Dr Norbert Kalusche, staff employee for political affairs, SED Central Committee; pp 693-699]

> [Text] The balance-sheet drawn up for the work done in the last 5 years by the 16th CPCZ Congress and the objectives for the continued construction of the developed socialist society in the CSSR in the 1980's. Experiences in the 60-year CPCZ struggle and the party tasks in further deepening its leadership role in society. Its contribution to the struggle for peace and social progress.

Monopolies on Intensified Armament Course

[Summary of article by Prof Dr Horst Fiedler, economist, colonel, Friedrich Engels Military Academy; and Dr Alfred Preusse, economist, Friedrich List Communications College; pp 707-713]

> [Text] The most aggressive forces of imperialism, especially in the United States, want to achieve military superiority over the Warsaw Pact countries through their peace-threatening confrontation and mobilization course in order to force, from a position of strength, the socialist countries and the peoples' anti-imperialist movement to their knees. The role obtained in this by the military-industrial complex, the core of the most aggressive imperialist forces. As a component of this complex, armaments monopolies also have gained a strong influence in the FRG.

The Strategy of Nuclear Madness

[Summary of article by A. Arbatov, an abridged reprint from Moscow KOMMUNIST in Russian No 6, April 1981, pp 102-111; a translation of the Russian original is available in JPRS 78698, 6 Aug 81, USSR REPORT: TRANSLATIONS FROM 'KOMMUNIST' No 6, April 1981, pp 117-127; German version, EINHEIT pp 714-722]

> [Text] Washington's "new nuclear strategy" aims at making nuclear war "feasible" as a "limited" nuclear conflict. Its centerpiece is the thesis of a "disarming first strike," making a counterstrike impossible, against the Soviet Union, which is supposed to come from the "nuclear superiority" the United States is seeking. The article scolds the unscrupulosity of the champions of that strategy with their gambling with the existence of mankind, shows its illusive and suicidal character, and pits against it the Soviet Union's consistent and realistic advocacy of arms limitation and disarmament.

ANTITANK CLOSE COMBAT EXERCISE DESCRIBED

East Berlin VOLKSARMEE in German No 26, 1981(signed to press 22 Jun 81) p 5

[Eyewitness report by Maj Klaus Koenig and Reserve NCO Norbert Bartnik: "...Not an Easy Matter--Observations and Notes on Effective and Intensive Training in Paul Hegenbarth Motorized Rifle Regiment"]

[Text] A rainy Friday in June. The men of Christophel Company have assembled on the training grounds of the Paul Hegenbarth Motorized Rifle Regiment for the first training climax in the second half-year. The program includes antitank close combat as a whole. At the end of this day a "very good" is expected. That is what it says in black and white in the field newspaper on the wall.

Time 0850. Lt Michael Wenzenlewski, acting company commander, receives the report on training preparedness. His check shows: The group leaders have distributed the leaflets. The material resources are ready. A glance at troop strength indicates: The drivers are in technical training, the directional and Strela rocket controllers are being centrally trained, two soldiers are acting as assistant instructors for the motor vehicle course, two comrades are servicing the company equipment and 14 soldiers have been assigned to the regiment (in the kitchen, the library, the club, etc.). In short, those remaining for training on this morning are a small diminishing population--about 50 percent of the company. But 50 percent firmly resolved to do their best.

1. Observation: Demonstration--Not a Trace

Time 0900. The instruction areas and stations are occupied. It is an unusual sight--one instructor and three soldiers at every station instead of a complete group. Nevertheless, incendiary bottles waver through the air. Hand grenades clatter against steel plates. With howling motors two training combat tanks go their way. Past the stations along the route....

Time 0905. In front of a now useless, wrecked tank Noncommissioned Officer Peter Sablotin laconically explains the actions of an antitank close combat troop. He divides the men into destroyers and security forces. He indicates the forest boundary as the direction of approach. And he lets them train. Not a word about the importance of the troop. No determination of the path of approach, which would teach tactically correct behavior. Not a trace of demonstration! But he really should know better. The badge for superior performance, the classification and the

sixth service half-year distinguish him as an experienced instructor. And the fact that he has so far instructed at this station each half-year speaks for itself.

2. Observation: Time Wasted

Time 0935. Noncommissioned Officer Hans-Peter Hirsch explains at his station the resources available for combating enemy tanks. He demonstrates arming and disarming antitank hand grenades. He points out the security regulations. Afterwards two of the soldiers train up to the signal "change stations." Not a word is spoken over the antitank mines spread out on the adjacent table, and there is no explanation of how to make incendiary bottles, not to mention about their use. There is no time, he says. The question remains: Did he not learn to manage his available time? Was he not obligated to allocate the instructive questions and minutes on the pre-printed leaflet? In preparing for duty did he not have to account for how he planned to organize the training?

He, who is the best and wears the classification, can build on the same 5 half-years of service experiences as Noncommissioned Officer Sablotin.

3. Observation: Improvisation Instead of Combat Realism

Time 1030. Over and over the tank tracks rattle over a fortified fox hole. A shadow jumps up, the weapon aimed for firing. But here no antitank hand grenade whistles through the air. And yet a few meters further on the throwing technique is being practiced with battered imitations. Parachutes no longer open out of them.

But the parachute alone guarantees that the grenades land on the detonator. It alters the trajectory. And it requires perfect throwing technique! Combat realism or improvisation? Half-measures!

And when at last the tank rolls over a cord stretched a couple of inches over the path, the driver can be sure that an antitank mine tied to the end of the cord will end up under the tracks. Substitution for sliding shelf mines! Improvised combat realism....

House wall station. Under the leadership of Private First Class Siegmund Mueller soldiers are training with devices for blinding and combating enemy tanks. He explains. Here and there he points something out.

The torrent of words is nearly endless, but at least his speech ends with: "Have no fear! I myself jumpred for the first time earlier today!" But this is not followed by a demonstration of how one jumps, presses himself to the turret and covers the corner mirror and range-finder. And how would that be possible when Private Mueller in his third service half-year is himself participating in Complex I for the first time?

These are observations noted during the complex training of Christophel Company.

They allowed one to sense in advance what would not be a certainty for the company until the end of the training day: The hoped-for "very good" did not come about.

Even the company's evaluation of "good" is unjustified in the opinion of VOLKSARMEE. For the truth remains: Whoever wants to hold his own against an enemy who is well supplied and well trained must have realstic war training. Where were the pitiless standards of a potential war in this training? Instead there were too many aburdities during the complex training, with half-measures which mean deadly danger to combat.

Certainly Lieutenant Michael Wenzelewski was thinking along those lines when he expressed to VOLKSARMEE his dissatisfaction: The complex was not smooth. The training did not go as planned, although it was not that the soldiers were unwilling. So what was the problem asked VOLKSARMEE.

MATERNITY, INFANT WELFARE DISCUSSED

Budapest NEPSZABADSAG in Hungarian 9 Aug 81 p 5

[Interview with Dr Laszlo Medve, state secretary in health affairs, Mrs Ferenc Nyitrai, Dr, state secretary, head of the Central Bureau of Statistics, Dr Dezso Schuler, director of the National Institute of Infant and Child Health Affairs, Dr Gyorgy Illei, chief gynecologist of Vas megye, Dr Zoltan Bognar, director general of the Center for the Protection of Mothers and Women in Budapest, by editor Kornelia Dolecsko of NEPSZABADSAG, date and place not given]

> [Text] The future of society is determined by the decision to have children and yet the source of this decision is the innermost need of every couple.--What is the role of the government?--What is the current state of maternal and infant care, and what methods are recommended by the health services?--These were the topics of our roundtable discussion.

NEPSZABADSAG: Is it true that the birth rate reached the lowpoint in 1962? What is the demographic forecast? Is it conceivable that the population would decrease by several hundred thousand by the turn of the century?

Mrs Nyitrai: According to the data there were 13.9 live births per 1,000 population last year. This is already a low rate but it is not yet the low point of 1962 when there were 12.9 live births per 1,000 population. An increase was felt in the mid 1970's mainly because at that time the more populous age groups of the 1950's reached child bearing age by then. Now we are heading toward a decline and we will probably approach the 1962 low point. As to the forecasts, I am not pessimistic. In my estimation, the population decline by the turn of the century will be 20-30 thousand at the most.

L. Medve: Our tasks are not only medical but we are also faced with distinct, multifaceted tasks for guiding the demographic situation. It is important to move ahead our social policies and also to further awareness. The health administration is trying to improve the preparedness of youths for family life and to improve the care given by those of adolescent age and older. We want to reach the point where training for family life would not begin with pregnancy care. This we look upon as insurance for the birth of more and more mature, healthy infants. This is very important especially now because, faced with the decreasing number of births, it is not immaterial how healthy the babies are, what their birthweight is and how the women go through their pregnancy.

The Role of Counseling

NEPSZABADSAG: Last year, every 10th child was premature and 23 out of every 1,000 did not live to 1 year of age. How do you see it? Has family and maternity counseling fulfilled hopes attached to it?

D. Schuler: The existence of counseling is very important. In my opinion, these activities can be judged useful throughout the century. What troubles the physicians is the fact that, unfortunately, the participants of these counseling sessions are not those who need them the most. Precisely those women and couples escape our attention who need the information and education most.

Z. Bognar: In my opinion, those with poor health habits cannot obtain sufficient information during 20 minutes of counseling. We can only expect an improvement in the work of counselors if the participants returned more frequently. Also in schools, this "course in living" should be taught less formally.

Gy. Illei: It is my experience in Vas megye that family and maternity counseling is frequented by an increasingly large number of people and the results of these discussions can already be felt.

L. Medve: Indeed, there is still much formality in the work of the institutions. But it is a fact that the number of our participants increase every year--currently approaching 500,000 annually--and of these, only about 100,000 are engaged couples for whom premarital counseling is compulsory. Looking at it this way, counseling fulfills a social need. This is also significant in the villages where such work is done by the district physicians. This is beneficial also because the contact between the physician and the young women who turns to him is already established.

NEPSZABADSAG: During the second half of the 1970's, there was a decrease or at least slower increase in the number of second born children. The number of third children remained the same.

Mrs Nyitrai: Precisely in view of this the families with one child must also be supported more decisively than before. Initial steps have already been taken, first in June 1979, when in association with the partial compensation for price increases, single-child families also received a raise in their income. It must also be carefully considered what size families should be given larger benefits. Obviously, families with three or more children are the primary candidates but it is worth while to pay increased attention of families with two children.

L. Medve: The decision to have children cannot be reduced to factors such as family bonuses, living quarters or other factors important for living conditions and the establishment of a family. For instance, there is no apartment shortages in the GDR and yet we find there one of the worst rates of live births in Europe, 9.5 [deaths] per 1,000 [births] in 1979. A domestic example: in the villages, houses with two or three rooms and bath are standing empty and yet many families have only one child. This all shows that the relationship between family bonuses or housing and the desire to produce children is important but is not the deciding factor. Rather the attitudes should be changed. This, of course, may take decades.

Nursery Care

NEPSZABADSAG: A constantly recurring question is what is the ideal family size in Hungary? One, two, maybe three children?

Mrs Nyitrai: Today the average ideal family size is not the three-child family. That needs to be acknowledged and having at least two children per family should be encouraged. Our earlier view that a family with three children is the ideal failed to gain acceptance. Our actions should be modified to this end.

D. Schuler: There is much talk nowadays about incentives, social benefits, and much less talk about the presence of other restricting factors which make having a family more difficult. One: at the workplace, in general, they are not happy to hear that a young woman is pregnant. There are several reasons for this. The pregnant woman has to be given more consideration; after delivery, the young mother goes on child care leave, and the time spent on sick leave is also more frequent. For a certain time, the child definitely takes the mother away from the job and thus she is less "reliable" at her place of work.

Mrs Nyitrai: Our child care benefits are an achievement enjoying worldwide recognition, together with the fact that it represents a 3- occasionally 6-year absence of the mother from the work force. This could be remedied by expanding the permission to do work at home for a firm or industry during the second half of childcare benefits. This would also have financial advantages for the mothers and families.

D. Schuler: I find the 3 years of childcare leave too long and would reduce it to 2 years. But I would definitely uphold the 2 years because close contact between infant and mother is a determinant in the physical and intellectual development of the child.

Mrs Nyitrai: One should provide the possibility of a choice. Of course, this would require an increase in nursery facilities to make it possible for the young wife to enroll her child in a nursery after age 2 if she wanted to.

NEPSZABADSAG: Accommodating the children is the key problem. Why is it not possible to let a young woman take care of two or three children in her home, in a so-called private nursery?

D. Schuler: I am unenthusiastic about private nurseries because health care and hygiene could not be monitored. It would be better to expand the possibilities of using the home to do some work for an industry.

L. Medve: We also support an increased flexibility of work during child care leave. As to nursery accommodations, during the past 5 years, 15,000 places were established and another 10,000 places are expected by 1985. Today, the nurseries in certain areas are crowded to 120-140 percent of capacity. In other areas, such as certain districts of Budapest and in many provincial towns,

we can already accept all applicants. If the children would be enrolled in the nurseries at 1 - 1-1/2 years of age, not only would their accommodation be solved, but they would also be past the age when infectious diseases are more frequent [sic].

Mrs Nyitrai: In Hungary in 1980, 87.6 percent of children between 3-5 years of age received kindergarten care while only 13.9 percent of the younger children were put in nurseries. I recommend that, with the cooperation of the workplace and by enlisting social resources we should expand nursery construction actions on the pattern of the kindergarten construction actions which proved so successful.

Improvement of Pregnancy Care

NEPSZABADSAG: How does care follow-up on the fate of young women and on the development of the pregnancy? To what extent do harmful influences during pregnancy play a role in premature births?

Gy. Illei: Several concepts must be clarified. An infant is premature whose birth-weight is below 2,500 grams irrespective of the number of weeks of pregnancy. Our country is in 31st place, out of 34 European countries, with respect to premature births. Every 11th child is born with low weight. Therefore, we have much to do with respect to pregnancy care. In Vas megye, several years ago, we enumerated professional and social requirements on the basis of which pregnancy care was organized. Among those women who need it, the number of control visits is increased. The essence of our method is that the young woman is always seen by the same physician during regular checkups and repeated control examination. We have a very good working relationship with related specialties such as the geneticists, internists and the laboratories. In our opinion, joint action is very important during pregnancy because this is the only way to properly pinpoint the dangers in time. We must also have the close cooperation of the pediatricians. A monthly evaluation and discussion is used to analyze the usefulness of the particular therapeutic methods used on the surviving premature infants. We also analyze the circumstances of pregnancy care and delivery. Because of its aura of accountability, this method will also, inevitably, provide experiences of a general validity which can be utilized later. All of these together account for a considerable decrease in infant mortality in the megye to the lowest in the country, and the chances of survival for premature infants have also improved.

NEPSZABADSAG: What is the situation in Budapest? One often hears it here that the pregnant women receive a cursory examination, mostly only to have the correct number of entries in the pregnancy booklet, and they are very seldom dealt with in a meaningful manner.

Z. Bognar: On the average, the young women appear almost 10 times for control examination during pregnancy. The new regulation on hospital admission makes it possible now, in Budapest, to have the high risk mothers give birth in hospitals which also have a newborn section. However, it still remains questionable whether the young women will be willing to deliver in the hospital which could indeed provide the most appropriate care for them. The physicians can be

required to do this to a certain extent but it can hardly be achieved by administrative means that the trust in the gynecologist be transferred to trust in the institution. By all means the importance of pregnancy care must be restored in Budapest.

NEPSZABADSAG: Can we state that, in Budapest, the pregnant women are under the supervision of the same physician throughout their pregnancy?

Z. Bognar: No, but this probably is the situation in the majority of cases. Often it is true that the woman who has "no physician" benefits most because she will go to the pregnancy care service and will always find the same physician there. And should it turn out that there is a problem, she will be sent to the institution where she can be provided with the most help. Those young women who are attracted to some renowned physician cannot be certain of receiving the most outstanding care since not all of the city's institutions have as yet all of the necessary instruments. And we should not bring the instruments to the patient but the other way around. This would be the correct and desirable thing to do.

Gy. Illei: Let us analyze the situation of premature birth. In Vas megye, 57 percent of the births took place in the megye hospital but this also included 80 percent of the premature births. What does this mean for the infant weighing less than 2,500 grams? It means that those born in the megye hospital had a mortality rate three times lower than those born in provincial hospitals. Therefore, it is obvious that preparedness and the availability of intensive care are also of great importance with respect to survival.

L. Medve: The basic requisites of modern pregnancy and delivery care are available nationwide. In Budapest and also in several university towns where 2-3 obstetrical wards are available, we find that the competition among physicians and, on the part of the patients a well-meant but inadequately based selectiveness gets started. Thus, 50 percent of the premature infants are not born at clinics or hospitals where the conditions for modern care are available, although the facilities also exist for them. Therefore, this is a question of medical responsibility, medical ethics. The physician who would send away his patient to the best equipped institution providing the required care, will not be lessened in his professional standing.

D. Schuler: Two important problems are involved: the newborn child must be kept alive in a way that the health of this surviving infant is damaged as little as possible. This requires that a well-trained group of physicians attend the birth to be able to provide the immediate care required. The other--in the case of more serious disturbances--the child be transferred to a suitable institution under safe conditions.

Mother's Milk and Medicine

NEPSZABADSAG: How do you follow up on the care and development of infants with low birthweights? How frequently are they checked, how are they supplied with mother's milk which is a source of many complaints?

D. Schuler: In my judgment, the care of the children meets the requirements. The mortality between 1-12 months is around the middle of European averages. It is important that disorders which can be detected early are diagnosed. In this respect there is progress but there are also things remaining to be done especially with diseases where the introduction of screening tests has been delayed.

L. Medve: Currently it is fashionable not to nurse the infants saying that modern milk substitutes replace the mother's milk. Unfortunately, we are at the stage where, already on the obstetrical ward, a young mother is given injections to stop her milk production. This practice is not forbidden but it is incorrect. In the Western world, they have already returned to breast feeding. In May, the World Health Organization accepted a resolution in favor of breast feeding because mother's milk cannot be replaced by anything. In this respect there are some supply disturbances in Budapest but less so in the provinces. Especially since we raised the price of mother's milk.

D. Schuler: In Hungary, 35 percent of the infants receive human milk up to 3 months of age. However, the following picture is hidden behind the average: in Vas megye, 50-60 percent of the infants are breast fed for at least 3 months. In Pecs, only 10 percent of them are. This necessitates a joint effort between obstetricians and pediatricians; a joint educational effort. The practice must be stopped according to which the new mothers are released from the hospital almost routinely with milk substitute recipes in their hands. This is a very bad method.

NEPSZABADSAG: What is the situation with regard to the availability of medicines?

L. Medve: We will secure all those medications needed by the infants and new mothers. We are here talking about either domestic or imported products, even though we are not wallowing in imported preparations.

D. Schuler: Often a doctor recommends a "fantastic" foreign preparation to "gain respect." Sometimes with one that is exported by our domestic industry. It is hard to gain any ground here but I think it is necessary.

More Than 250,000 on Child Care Leave

NEPSZABADSAG: How much does the government spend on maternal and infant care? Didn't the value of allowances given to families with children lose its value during the past years?

Mrs Nyitrai: In the past, 12.5 percent of the health budget has been spent on maternal and infant care. Last year, 254,000 women took advantage of child care leave. Last year, the money allotments to mothers and families with children came to 19 billion forints of which the sum for family allowance was 13 billion forints. The living standard is significantly influenced by the number of children in a family. Society contributes much to the bringing up of children but it cannot accept complete responsibility for it. And, I think, no parent would demand it. When guided by natural human desires they have brought their children into

this world, they were not calculating whether enough money or such and such an apartment, etc., were given or would be given to them to make establishment of a family remunerative. This is a false approach. Families and the societal acceptance of children must be helped and supported. This is a considerable task requiring societal support. It is my conviction that the societal atmosphere of wishing for and loving children may also inspire the acceptance of more children.

PLANS FOR NEW HOUSING, URBANIZATION DISCUSSED

Bucharest SCINTEIA in Romanian 21 Aug 81 pp 1, 2

/Interview with Romeo Dragomirescu, vice chairman of the Committee on People's Councils Problems, by Florin Ciobanescu/

/Text/ From year to year and from five-year plan to five-year plan the RCP has set more and more challenging tasks in the field of housing construction. This has made radical changes in the urban and rural workers' living conditions by providing comfortable and civilized homes for millions of citizens. Moreover socialist Romania is the first country in the world to regard town planning and development as a uniform and general process including its entire territory and involving all communities.

The proportions of the process of urbanization, systematization and organization of the territory and communities in the 1981-1985 period and the great tasks assigned the home builders according to the Program to Raise the Living Standard in the 1981-1985 Period, drafted upon the initiative and under the direct guidance of Nicolae Ceausescu, fully reflect the importance our party and state attach to the solution of the essential problems of quality of life.

We asked Romeo Dragomirescu, vice chairman of the Committee on People's Councils Problems, about implementation of the provisions of the program to raise the living standard concerning systematization, urbanization and housing construction and held the following conversation with him:

/Question/ How far has the systematization program been implemented now?

/Answer/ A number of highly important measures have been taken as part of the process of planning and development of urban and rural communities initiated at the direction and under the direct guidance of Party Secretary General Nicolae Ceausescu, president of the republic. The buildable limits have been set for all municipalities and cities and also for the villages with possibilities of socioeconomic development. By this action the buildable limits were restricted and a reserve of 455,000 hectares of land was created that is now occupied by mediocre constructions with a low density and will be gradually restored to agriculture. The systematization outlines for all municipalities, cities and communities that have been prepared to become urban centers have been drafted and finalized, as well as the systematization specifications for 180 industrial areas and districts. I might also mention the programs to prepare

129 rural communities to become new urban centers with industrial or agroindustrial functions. The economic and social proportions of these programs are illustrative: The population of these communities comes to 958,000 inhabitants, there are 450,000 jobs in industry, agriculture and services, and the total population in the polarized rural area benefiting by industrial development, equipment with services, and the new kinds of social-cultural activities in these strong urban centers amounts to 3,023,910 inhabitants.

/Question/ What are the parameters of the new stage of the urbanization process corresponding to the 1981-1985 period?

/Answer/ It is intended to form systems of communities providing for better and easier use of the economic, social-cultural and municipal capacities by the entire population. To this end it is planned to develop some economic functions by introducing new industrial or agroindustrial capacities, creating at least 8-10 convenient connections between them in every county, locating them near the main transportation routes, focusing the interests of more communes upon strong centers, and providing for complete use of the labor force as well as access of most of the population to characteristically urban facilities and services.

The emphasis upon urbanization does not mean that the particular problems of development of the villages as such will be overlooked. On the contrary, the rapid growth of the productive forces and the technical-material base, the growth of the national income and the public's incomes, the new agrarian revolution, and the modernization and intensive development of agricultural production will mean more new dwellings and cultural, health and trade facilities as well as adequate technical-municipal equipment for both urban and rural communities. The agrarian revolution and the radical change in agricultural working conditions are actually the controlling factors determining the planning and development of the Romanian village.

/Question/ Urbanization is inseparable from the rate of social-cultural and housing construction. What prospects in this area are opened up by the 1981-1985 Five-Year Plan?

/Answer/ Implementation of the program to construct housing and social-cultural, trade and service capacities as well as technical-municipal facilities will enhance the equipment of the communities and will help to improve the living standard of all settlements in Romania. Moreover they will be constructed at a rate that is coming to be commonplace for Romania of the last two decades even though such a huge volume of construction is inconceivable for other countries that started out ahead of us on the path of industrial development. And through continuation of the high rate of construction, it will be possible to largely solve the housing problem in socialist Romania by 1990.

To return to the 1981-1985 Five-Year Plan, we point out that fulfillment of the plan provisions will permit a corresponding increase in comfort. In urban areas, for example, the per capita dwelling space will be over 10 square meters. Note that a large number of apartments will be built in small and medium communities, thus equalizing the housing conditions among different communities.

/Question/ What do the provisions of the new five-year plan mean for the comfort of the dwellings?

/Answer/ In order to improve housing conditions, the types of apartments have been diversified according to the number and age structure of a family's members, with an increased proportion in the current period of apartments with fewer rooms and apartments with three, four and even five rooms. The electrical installations in apartments have been improved in keeping with the increased number of electrical-household appliances in current use. The space has been organized in order to provide the dwellings with modern household equipment. The apartments are provided with rationally proportioned storage space. The entrance halls are designed to provide sufficient space for minimal functional equipment, and housing and suitable finishing have also been provided for installations. And there are also other improvements. They will all be found in the dwellings that will be built in both urban and rural areas. Housing construction, from design to construction properly speaking, will make new progress with more emphasis upon the authentically traditional architectural features, use of local resources for construction materials, modern and economical heating methods, and proportioning and treatment of space in keeping with the changes that have taken place in the family structure and in the present functions of the dwellings. In other words, they will meet the increased demands of the workers, the beneficiaries of the dwellings, for the construction of which the state and society as a whole will make a particular material, financial and organizational effort during the current five-year plan.

Some Provisions of the Program for Urbanization and Development of the System of Communities by 1990

- In the 1981-1985 period 900,000 more dwellings will be built out of state funds, the equivalent of 30 cities of 90,000 inhabitants each.

- Community development includes construction of at least 14-15 urban communities and strong agroindustrial centers in all counties.

- According to the changes that have taken place in the family structure, the average number of rooms to an apartment will be increased from 2.35 in the 1976-1980 period to 2.42 in the 1981-1985 period. In Bucharest the average number of rooms to an apartment will be 2.6 at the close of the same period.

- In all counties at least 10 square meters of dwelling space per capita will be provided in urban areas in 1985, and even more space in some urban centers.

ROMANIA

EFFORTS OF DOCTOR TO PUBLICIZE ROMANIAN MEDICAL ACHIEVEMENTS

Bucharest SCINTEIA in Romanian 11 Aug 81 p 2

/Interview with Dr Ioan Puscas by Anghel Paraschiv/

/Text/ We inquired for the institution we were looking for and were shown a building with nothing to distinguish it from the houses along the narrow street. "There?" "There!" "It cannot be," we thought, "It does not look like a hospital." But we entered through a passageway, climbed a few stairs, came to a lobby and were face to face with Dr Ioan Puscas. He held out a huge hand to us, cordial as a child's, while his blue eyes and relaxed smiling face lit up the room, into which the sun did not reach very far. Dr Puscas needs no introduction. He is known to thousands of people who found the cures here for long-standing ailments that they no longer hoped for. He is also known to tens and hundreds of thousands of other people, and the press and Romanian Radiotelevision have widely publicized the efforts and internationally reknowned successes of Dr Puscas and the collective he supervises.

In the midst of the hills that surround it, Simleu Silvaniei is like a penny tossed among tapering hats. It is a clean and pretty but busy town. And the building in which we were does not look like a hospital except that it is clean as a pharmacy. Otherwise it is an old building of the law court and prosecutor's office, converted ad hoc to a hospital.

/Question/ You are almost cut off from the world. (We were trying to tease Dr Puscas.)

/Answer/ Perhaps it looks that way to you, coming from Bucharest. (He replied, going along with the joke.)

It was 14 June. On the table in Puscas' office we saw the 8 June 1981 number of the journal CURRENT CONTENTS published by the Institute for Scientific Information in Philadelphia. Dr Puscas intercepted our somewhat surpised look and as if in response to our remark about being cut off from the world, he told us that he regularly receives 12 foreign journals of the highest scientific prestige in his field. He corresponds with dozens of specialized institutions in Europe and America, with hundreds of scientists throughout the world, and with hundreds of Romanian scientific researchers and scientists. With teams from his collective, he attends dozens of national and international seminars and conferences as well as congresses, and he publishes in many technical journals abroad.

/Question/ Do many colleagues and other specialists visit you, Dr Puscas?

/Answer/ Certainly they visit us, and we visit them.

/Question/ Foreigners?

/Answer/ Foreigners too. The director of the International Center for Medical Research and Discoveries with headquarters in New York has already visited us 3 times, in 1975, 1977 and 1979.

We are waiting (with great interest and without losing hope) for just one director from the Ministry of Health to visit us, because they have not done so since our section has been in operation and we have been working on our studies and the treatments we apply, with a good deal of success as you know. But if one comes let me tell you that he would have something to see and especially something to help us with, because we are in great need of help.

/Question/ You headed a delegation of Romanian specialists to the last Congress on Gastroenterology and Gastrointestinal Endoscopy held in Hamburg last year. How was our delegation's contribution received and, in general, how is the Romanian school of gastroenterology regarded abroad?

/Answer/ Highly, I may say even very highly. That is evidenced by the fact that the administration of the International Gastroenterology Society as well as the administrations of the national gastroenterology societies of 11 member nations (England, Austria, Belgium, Bulgaria, France, the GDR, the FRG, Italy, Yugoslavia, Spain and Hungary) out of the 22 entitled to vote asked the Romanian delegation to transmit to the Romanian authorities their proposal to conduct the proceedings of the 12th International Congress on Gastroenterology and the Fifth European Congress on Gastrointestinal Endoscopy in Romania in 1984. This proposal caused the English delegation to withdraw its offer to host the said congresses.

/Question/ Does this mean those congresses will be held in Romania in 1984?

/Answer/ No, I cannot answer that. I can tell you only that I notified the competent authorities, namely the Ministry of Health, of the proposal and they agreed but told me that the Romanian Gastroenterology Society must rule on it first. I do not want to go into too many details but only to say that I made persistent efforts, wasting a good deal of time, to discuss it with the society's administration, to determine the Romanian specialists' opinion, and to send the Romanian state administration a substantiated and documented proposal. But this proposal has not yet been forewarded, despite several months' efforts, because in the first place, although some comrades in the society's administration agreed with the proposal initially, I was finally notified that the society, which has about 20 members in its administration, has not met for a very long time. Then I found that the society has had no president since the death of the late Prof O. Fodor 5 years ago. After this first unsuccessful attempt, I tried again to arrange a decision-making meeting of the members of the society, but only three of them assembled and finally there were only two. Finally I was told, "We cannot give a positive answer because no one is organizing these big congresses." This view is in complete contradiction with that of the representative of the Ministry of Tourism, whose functions include the organization of such meetings and who declared himself entirely in agreement, pointing out there is every possibility for the best organization of those congresses. I proposed another meeting after

2 weeks, which was enough time for all members of the society's administration to be invited in writing to attend a session and to thoroughly and responsibly analyze the proposals made to us. After the 2 weeks passed, I visited the Union of Societies for Medical Sciences on Progresul Street, where the second meeting with the administration of the Gastroenterology Society had been announced, together with Dr Ovidiu Pascu of Cluj-Napoca Medical Clinic No 3, Dr Petre Contrasiu of the Salaj County Hospital, and Dr Augustin Lenghel of the Oradea County Hospital, all of whom had attended the last congress in Hamburg. To my surprise there were only four members present. Not to prolong the story, the reply was as follows: "Organizing the two congresses means at least 6 months' work for us actually spent on the medical organization of the congresses. And you, Dr Puscas, can see how difficult it is to assemble people whom we have never succeeded in convening."

/Question/ Perhaps there are some more difficult problems, like financial ones for example.

/Answer/ There is no financial obligation! On the contrary, the only "burden" is the medical and administrative organization of those meetings, and we have facilities for all of that to be done on the highest level. Even a novice can easily see the importance of organizing such meetings in Romania. Let us consider one point alone: Is it a small matter if all the leading representatives of this field of world science come to your home and offer hundreds of thousands of Romanian physicians the opportunity to learn directly of the discoveries and interests of some great medical schools? And there are other arguments too.

/Question/ What would you like, what do you think should be done now?

/Answer/ What do I want? I want what is rational and correct to be done. That is, such a highly important question should not be decided by two or three people. The community of medical specialists should meet and then present the state administration with an opinion and a complete, precise and objective report. That is all I want.

/Question/ Let us hope it will happen, Dr Puscas. It will benefit Romanian medical science and it will benefit Romania. One last question: What will Dr Ioan Puscas' research team produce for the years to come on behalf of the Romanians' health and the preservation of our so hardly won international scientific prestige?

/Answer/ Many new and, we believe, important works for this field of medical research and practice and for human health, because that is the purpose of our work. But I suggest we talk about that on another occasion.

ROMANIAN CHARACTER OF TRANSYLVANIAN PRINCIPALITIES, VOIVODESHIPS STRESSED

[Editorial Report] An article by Emil Lazea, of the "'Nicolae Iorga' Institute of History," "The Transylvanian Principalities and Voivodeships--an Expression of the Independent Development of Romania," published in Bucharest ERA SOCIALISTA in Romanian No 14, 20 July 1981, pp 29-32, cites the importance of the principalities and voivodeships as "original political formations which came into being at the same time as the Romanian people." Excerpts from the article follow:

The principalities and voivodeships were the original and direct creation of our ancestors. They were not a foreign imitation as has been said here and there. The foreign origin of the terms "cnez" and "voivode" (German for the first and Slavic for the second) cannot serve as a sound argument against the indigenous character of these institutions. The tendency to adopt terms with the widest possible circulation was always a common phenomenon in the lives of peoples. The natural conclusion in regard to the origin of the principalities and voivodeships among the Romanians is, as the erudite historian Ioan Bogdan has said, that besides the name, we do not find anything specifically Slavic in the entire development of these institutions.

After Transylvania fell under the domination of the Hungarian feudal kingdom, the majority of Romanian princes and voivodes were forced to submit to the authority of the Hungarian kings. However there were cases where voivodes or princes opposed with arms in hand, the consolidation of the authority of the Hungarian kings and the aggravation of feudal relationships--not only at the time of the conquest of Transylvania but even in later centuries. Those who could not be reconciled to the new situation went over the mountains to the other historic Romanian provinces where they made a valuable contribution to the development of the life of the Romanian state to the south and to the east of the Carpathians.

Examined from the aspect of all their powers, duties and activities, the Transylvanian princes cannot be categorized merely as "a wealthy peasant class" or as "outstanding village dwellers," as they have been characterized by some of our historians.

Even more devoid of all scientific basis is the viewpoint of some foreign historians that the Romanian princes and voivodes of Transylvania were only "guides" or "chiefs of immigrants" who came as leaders of groups of nomadic Romanian shepherds from the Balkans to ask the Hungarian feudal lords for permission to settle on their estates in Transylvania. The existence of princes and voivodes in the other two Romanian countries--Moldavia and Wallachia--negates such an interpretation.

Before concluding this brief history of the Transylvanian princes and voivodes, I feel that it is necessary for me to emphasize two things. First of all, one should stress and keep in mind the fact--which has been proven clearly and powerfully by historic sources--that, in Transylvania, both the institutions of the princes and voivodes and the ethnic composition of the peoples who lived in the villages were always and everywhere exclusively Romanian and that neither Hungarians nor Saxons, who came to Transylvania under well-known historic circumstances, had princes or voivodes as the heads of the settlements in which they lived. Secondly, one must keep in mind that, in the Romanian milieu, the princes and voivodes had a specifically Romanian character and served the vital interests of our ancestors, in accordance with the conditions and possibilities existing at that time. This explains their broad territorial distribution, their viability and the fact that they lasted so long, until the eve of the modern period.

FAZLIJA REPLACES ZOGAJ AS DIRECTOR OF 'RILINDJA'

Belgrade BORBA in Serbo-Croatian 11 Sep 81 p 3

[Text] A report from the 10 September meeting of the Presidium of the Provincial Committee of SAWP of Kosovo says that on the basis of consultations with all provincial organs, sociopolitical organizations, and other organs of the province, as well as consultations in the "Rilindja" newspaper publishing and printing work organizations, the above presidium selected as director of this organization Aslan Fazlija, member of the Kosovo Provincial Committee of the League of Communists, and Maksut Shehu, a journalist for many years and editor of this paper, as chief editor of RILINDJA.

During the consultations and decision on this cadre solution in RILINDJA, the Presidency proceeded from the need to strengthen the cadre and secure the conditions for effectively implementing the tasks which face this newspaper publishing work organization.

Redzep Zogaj, director up to now, and Fadilj Bujari, former editor-in-chief, have left for other work.

EXPANSION OF HIGHER EDUCATION IN MACEDONIA EXAMINED

Skopje NOVA MAKEDONIJA in Macedonian 11 Jul 81 SABOTA supplement p 5

[Article by Ivan Angelov, M.A.]

[Text] The number of students at Macedonian post-secondary, advanced and university-level schools is a hundred times higher today than it was at the time of the formation of the Cyril and Methodius University.

The bases for long-term economic and general development of Macedonia included a policy for increased development of education, other training and necessary personnel. Such a determinant was dictated by a sharply apparent deficit in specialized personnel after the liberation of the country. The result of that long-term policy decision was an unprecedented expansion of the overall system of education and personnel training, particularly for higher education.

Table 1. The number of students per 10,000 inhabitants, attending post-secondary and higher schools and universities in Yugoslavia in academic 1979/80

Yugoslavia as a whole	201	Macedonia	259
Bosnia and Hercegovina	115	Slovenia	164
Montenegro	137	Serbia proper	245
Croatia	152	Kosovo	299
		Vojvodina	215

As an example of that incredible growth, let us consider increases in the number of students. In 1946/47, there were but 530 students at all institutions of higher education; in only 10 years, by 1956/57, that number had increased by more than 10 times, reaching a total of 5,559 students.

By the university's twentieth year (1966/67), there were 16,101 students in attendance. That meant 30 times more than in 1946/47. With this type of expansion of higher education, Macedonia was able to take its place in Yugoslav developmental processes in terms of personnel, but there continued to be a lag in economic and general development in comparison to the rest of the country.

That was a convincing indicator of the need to undertake measures in the direction of planning the development of education, or coordinating the formation of highly specialized personnel with the actual needs for it. Yet instead of implementing

a scientific approach in this highly sensitive area of public life, the following year 1968/69 open enrollment was proclaimed, the only instance of it until today in Yugoslavia. From that time right up until the present, the number of students in Macedonia has grown without limits and has surpassed all expectations.

In the 1979/80 academic year, there were 49,531 regular and special students attending advanced schools and universities in Macedonia. According to data of the republic self-management interest community for education, on 31 December 1980 there were 60,784 regular and special students at the two universities in Skopje and Bitola. This number does not include the students at centers for regular and special studies of the workers' universities and other organizations outside the universities at Skopje and Bitola; they number about 2,000. There are another some 2,000 students from Macedonia attending the university at Pristina.

In the 12 years since the introduction of open enrollment, every year from 12,000 to 15,000 graduates of secondary and intermediate specialized schools and trade schools have enrolled at advanced schools and universities in Macedonia. That represents 85-90 percent of the entire class of secondary school graduates. As a result of this extremely rapid expansion of the number of enrolled students, despite the lowest study effectiveness in the world, every year some 5-6,000 students receive their degrees. Thus, today the total work force contains more than 7 percent of personnel with higher education. In the overall Yugoslav labor force, more than 5 percent of the people possess higher education, while in Slovenia the number is 4 percent.

Where to Go After the University?

In the last few years in Macedonia about 18,000 persons have found new positions or changed their jobs each year, while some 6,000 have been receiving degrees. That means that for every new job, one out of three candidates has advanced or higher education. In the coming five-year plan period, some 30,000 students should receive degrees, while about 90,000 will enter the labor force. Here again, every third job will be occupied by someone who has completed advanced training or higher education. If these trends in the spheres of advanced and higher education continue for the next few years, the proportion of totally employed persons with higher education in the total labor force will reach 10 percent or higher.

Parallel to the numbers of students and employed persons with higher education, the number of organizations of higher education in Macedonia has also grown. In the year analyzed, 1979/80, 37 organizations of higher education were operating in Macedonia, of which 6 were advanced schools and 31 were university departments. There were also interdisciplinary studies in journalism, production and technical education.

For the uninformed or the insufficiently informed, this imposing expansion of general, and particularly of higher education in Macedonia will surely be taken as an enormous accomplishment, which will inspire a feeling of pride. When, however, the matter of the value of this educated, specialized personnel and its contribution to the economic and general development of the republic is considered, one must keep certain principles in mind. There are categories and quantities that can be developed without limitation for the general good of the

community and the individual. That is the case with the development of basic and general education and training, which every society seeks to develop to the highest possible levels in terms of both quality and quantity, to the end of the complete liquidation of illiteracy. This relates to basic and general education and to the greater, or total, involvement of a generation in this level of education.

The Needs That Remain Before Us

Education, however, for all levels of specialized personnel, and in that context education of highly specialized personnel, is not a matter that can develop without reference to the possibilities and especially the needs for utilizing the persons so trained. That is strictly determined and cannot in any circumstances be left to the chance of personal wishes. All modern societies keep strict control of that crucial factor in determining strategy for developing higher education.

Table Two. Even in world terms, Macedonia occupies a very high place in the ranks of number of students, as shown in the following survey:

Total number of students per 10,000 inhabitants, in advanced schools, higher educational institutions and university departments, in certain typical countries.

Austria	129	Egypt	124
Belgium	163	Canada	355
Bulgaria	148	FRG	136
Czechoslovakia	105	GDR	230
France	201	USSR	194
Italy	174	England	143
		Sweden	198

Let us now turn to analyze problems in the developmental possibilities of higher education. The FRG, which has about five times as high a GNP and a corresponding total level of capital accumulation, could certainly open many more institutions of higher education so that it could accommodate more than 80 percent of each generation's finishing secondary schooling. But this country sends barely 15 percent of its secondary school graduates to higher education, and has only half as many students per 10,000 inhabitants as does Macedonia.

According to that, a country's ability to provide education is not a decisive factor for determining developmental strategy for higher education.

Finally, we would pause at the indicator of the needs of the society for a highly specialized pool of personnel. Such needs are determined by the level of production capacity, or the technical and technological equipment available for labor, by investments in economic development, by the social product, GNP and industrial production, as well as by other factors that are closely connected to the ones already mentioned, such as imports and exports.

According to these key indicators and in relation to Yugoslavia as a whole, Macedonia stands as follows: It has 8.4 percent of the total inhabitants, 4.2 percent of total investments in production (the most important index), 6.2 percent

of total investments, 5.6 percent of total social product, 5.5 percent of industrial production, 5.1 percent of exports, and 6 percent of imports.

These indices show that Macedonia stands below the Yogoslav averages, while in terms of the number of students, employees with advanced education, the number of unemp'oyed persons with higher education, and the number of illiterate citizens, Macedonia is far above the Yogoslav averages.

TEMPORARY RATIONING DECREED IN SLOVENIA AFTER PANIC BUYING

Ljubjlana DELO in Slovenian 19 Aug 81 p 1

[Article: "The News about the Proposal for Raising the Prices of Oil, Sugar and Milk Caused Abnormal Buying"]

[Text] Ljumljana, 18 August--The chairman of the Republic Committee for Marketing and General Economic Affairs, Lojze Klemencic, made the following statement in connection with the proposal of the executive council of the General Association of Agriculture and the Food Industry of the Yugoslav Economic Chamber for increasing the prices of oil, sugar and milk:

"Yesterday and today the public information media published a report from the session of the executive council of the General Association of Agriculture and the Food Industry of the Yugoslav Economic Chamber, during which, among other things there was a discussion about an increase in the prices of sugar, oil and milk. This was only a proposal which the association intended to discuss with the appropriate federal organ. It is known that prices are controlled and prices cannot be increased as long as there is a discussion in the appropriate organs of the federation, republic and autonomous province and as long as these organs do not approve the agreement of the republic and provincial councils and of the Federal Executive Council in regard to the price policy for this year; this prevented such an abnormal and irresponsible price increase.

This news caused a reaction in some circles in Slovenia and some members of the community bought sugar and oil in quantities which are not the customary quantities for households.

The Executive Council Assembly of the Socialist Republic of Slovenia and the Economic Chamber of Slovenia studied the situation, for the purpose of establishing the facts, and why there were, in some opstinas of Slovenia, disruptions in the supply of these foods, although we have sufficient supplies in Slovenia. With abnormal buying it is not possible to provide supplies for all shops on a regular basis, although the trade organizations are delivering the products to the shops quickly. Therefore, the Executive Council Assembly of the Socialist Republic of Slovenia and the Slovenian Economic Chamber approved the order agreed upon in order to achieve a more uniform supplying of the entire area of Slovenia and they recommended that the opstinas and the organizations of associated labor, which have not yet understood, understand the [need for a] temporary restriction on quantities

sold and purchases, until the situation in the markets becomes normalized. So, it is possible to buy, at one time, 2 kg of sugar and 2 liters of oil in plastic wrapping, or refills of oil in bottles.

Since it is a matter of temporary measures, in order to normalize the supply process and prevent speculative buying, we are convinced that the workers and the members of the community in the Socialist Republic of Slovenia will accept the measure with understanding."

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

HISTORIANS ANALYZE NEED FOR GDR NATIONAL, PRUSSIAN HISTORY

West German Commentary

Bonn IWE-TAGESDIENST in German No 98, 6 Jul 81 'iwe-kultur' supplement

[Report from Berlin: "Propagation of Entire German History to Promote GDR National Consciousness." A translation of the East Berlin SONNTAG article by Prof Walter Schmidt cited below follows this commentary]

[Text] A stronger appropriation and propagation of all of German history has been demanded of the SED Social Science Academy by historian Prof Walter Schmidt. This was necessary, he wrote in East Berlin's SONNTAG (No 27, 5 Jul 81), to "consolidate the socialist German nation in our country." "Gaining a national identity" implied that the GDR citizens should know about their historic presuppositions. What was needed therefore was "a national history of the GDR written from the positions of triumphant socialism on German soil." Such a national history should have to face all of German history, chronologically, territorially and socially-structurally. No constriction of this "prehistory" of the GDR, going back a thousand years, to the German areas that today are part of it ought to be allowed. To the end of World War II it should also territorially embrace all of German history, even if the history of the GDR territory was calling for "essentially a much more thorough study" under the aspect of homeland history. Furthermore, the historic activities of all classes and strata of the German people should have to be examined with the question in mind of what of positive value was included in them that should become part of "our store of traditions." That was true even of a "discriminating appraisal of certain representatives even of the monopoly bourgeoisie."

The "central place" in GDR history propaganda, however, in Schmidt's view, should be occupied by the actual history of the GDR. In this context the GDR citizens should be made aware that between the FRG and the GDR there was nothing they had "any longer in common," in terms of historic experiences, norms and traditions. That would promote "most and most profoundly the development of a new, socialist German national consciousness."

SED Scholar on 'National History'

East Berlin SONNTAG in German Vol 34 No 27, 5 Jul 81 p 9

[Article by Prof Dr Walter Schmidt, director, Institute for German Labor Movement History, Academy of Social Sciences, SED Central Committee: "The Past Is Never Finished--What Must Be the Basis for a National History of the GDR?" For other

writings on related subjects by the same author see translations published under quoted headings in the following JPRS issues of this series: "Prussian Progressive Traditions, coauthored with Horst Bartel and Ingrid Mittenzwei (pp 20-33), part of "Prussian History to Be Accepted as Part of GDR 'Heritage,'" 76749, 3 Nov 80, No 1823, pp 16-34; "Nation Versus Nationality Concept Analyzed" (with Alfred Kosing), 74590, 16 Nov 79, No 1738, pp 44-60; "Historic Development of Socialist Traditions Analyzed" (with Helmut Meier), 72782, 7 Feb 79, No 1644, pp 15-24; "Development of 'Socialist German National Consciousness' Discussed" (with Horst Bartel), 71116, 15 May 78, No 1534, pp 46-55]

[Text] Anyone who attended the excellent Schinkel exhibition in Berlin, which to see one had to line up, will have noticed the exciting atmosphere and great interest of the many visitors who wanted to familiarize themselves with the creators of historic testimonials belonging to their immediate living environment. That was hardly any different with the Menzel exhibit in Berlin and the Gottfried Semper exhibit in Dresden. It is also shown by many citizens attending to cultural and historic traditions in their region, be it in the Erz Mountains or along the Baltic coast. These are by no means narrow-minded homeland history ambitions. These are needs resulting from the emergence of a new, socialist national consciousness. To satisfy and foster them is all the more important since thereby the citizens' ties with their socialist fatherland of today become closer and firmer.

If you wish, the debate about our attitude toward our cultural heritage, which started in the early 1970's in aesthetics and literary sciences and has recently been revived, has spread to our historical science and has been expanded into the question about our entire historic legacy. This debate was sparked and initiated, as one knows, by the demand of the working class party around the ninth party congress--most strikingly formulated by the SED Central Committee General Secretary--to tap all traditions without restraint. The central committee status report to the 10th SED Congress likewise indicated this orientation toward the broad range of our store of traditions. In his speech at the social science conference in December 1980, Kurt Hager provided important impulses by clearly indicating that in history the past is never finished but that history must always again be newly questioned in terms of any changing conditions and requirements. What is the whole point?

The starting point lies no doubt in the needs of the 1980's for ideological, consciousness-shaping work resulting from the new internal development conditions of socialist society in the GDR taking shape on their own foundations. Many factors should have to be mentioned in this context, but I want to confine myself deliberately to one aspect: the consolidation of the socialist German nation in our country. A most essential element in the formation of the socialist nation, especially in this phase, is the development of a socialist national consciousness. The citizens' identification with their socialist nation, the gaining of a national identity, which fully turns the GDR from a "nation as such" into a "nation for itself" (to apply the distinction Marx made for the development of the proletarian class to this area), also includes, along with many other factors--but certainly not as its least important one--this knowledge about the historic presuppositions of this nation of ours. Thus we need a national history of the GDR written from the positions of triumphant socialism on German soil. To that end, an unequivocal answer has to be given to the question about the historic ground of the GDR.

To become clear about that is all the more urgent because the bourgeois history ideology in the FRG--irrespective of all superficial allegations of a purported "historically grown German community of destiny"--leaves no stone unturned in grossly falsifying the GDR's relationship with German history in other ways. Since Karl Jaspers first tried in 1960 to attribute to the GDR a historic basis of its own that, for all intents and purposes, consisted of Prussian and Saxon history, bourgeois attempts at narrowly confining, in a cheap manner, the historic roots of the socialist German state to the history of Prussia never completely vanished. The political meaning of such constructs is obvious. As one can no longer help recognizing the state sovereignty of the GDR, the socialist German state is to be presented as such as a continuation of Prussia, or rather, is to be maligned as the successor to reactionary Prussianism. At the same time we have to take issue with a "Prussia Wave" that has for some time been going on in the FRG.

Clear Positions

In wanting to become serious about a national history of the GDR, we need a clear definition of positions--also, and especially, for taking issue with bourgeois misrepresentations, suspicions and calumnies. I shall try to outline a few basic positions. Three such positions appear indispensable to me.

Such a national history has to face all of German history, and this in three regards: first chronologically, then territorially, and third, socio-structurally. This means: this national history cannot and must not be understood, first of all, as a direct genesis and development of the GDR but must include German history since the emergence of the German people as an ethnic entity. GDR history does not start as late as in 1949 or 1945. Among our historic premises also is the entire "prehistory" of the first complete break with our reactionary past on German soil which the working people of the GDR accomplished through the socialist revolution under working party leadership. And that ranges far back into German history, all the way to the time of primitive society and the origin of the German people. Socialism on German soil has evolved out of the struggle, of almost 150 years, by the German workers class, but it is likewise rooted in the aspirations of the progressive bourgeoisie and the democratic lower middle class in the 18th and 19th centuries, the Reformation and the Peasants' War of the 16th, and in the peasant uprisings, plebeian revolts and anti-feudal heretics movements in the Middle-Ages.

Second, we must not permit this "prehistory" that lasted over thousand years to be narrowly confined to the German territories which today are part of the GDR. To the end of World War II it must also embrace, territorially, all of German history. The historic roots of our nation are of course not only to be found on German territories in which socialism has already become reality. It includes the operations of the German Peasants' War of 1525 in southwest Germany as much as in Thuringia; the activities of the South German Jacobines after the Great French Revolution and the Mainz Republic of 1793, the first bourgeois-democratic republic on German soil, as much as the Saxonian peasants revolt of 1790 and the big uprising of the weavers in the Silesian mountains, of 1793; the Silesian weavers' uprising of 1844 as much as the miners' strike in the Lugau-Oelsnitz region, in 1867, and so forth.

Equally from the socio-structural vantage point, we must, thirdly, also examine the historic work of all classes and strata of the German people and ask what it contains in progressive, positive elements that have to be included in our store of traditions. Socialism is the inevitable outcome of the entire process of history. But it is an entity full of contradictions the dialectics of which have to be comprehended as a whole. Even if the predecessors of socialism have to be looked for in the progressive classes of the people, yet their physiognomy and role become clear only if one knows what they struggled for and against.

Much remains to be done mainly where it involves the activities of exploiter classes in power or seeking power. On this field of our historic heritage, where progressive elements come most closely and inseparably combined with reactionary ones and frequently enough--if certainly not always--the latter dominate, wherefore it is more difficult than elsewhere to track what is worthy of our tradition, the historians' deliberations and discussions have largely concentrated in recent years. The debate about our Prussian heritage and the traditions inherent in it falls to a good part under this mode of questioning for us(even if not on a priority, let alone exclusive, basis). But it must, naturally, not merely involve the Hohenzollern rulers of late absolutism. Of greater interest to us ought to be a number of medieval German kings and emperors, such as Henry I, Otto I, Henry IV, and certain representatives of the German middle class (Luther, for example), and representatives of the liberal aristocracy in the 19th century. But we must also extend our efforts to appraise with greater discrimination certain representatives even of the monopoly bourgeoisie who were not only imperialists but also great technicians and scientists, such as Abbe and Siemens.

In short, putting it on a common denominator: our view that in the GDR the socialist German nation is developing, that is to say, a nation socialist in character and German in origin, has the consequence that this nation, in its consciousness, as a historic component of its own identity, as it were, has to come to grips with all of German history.

Special Interest

That all of German history until 1945 is our historic ground does not mean we could be indifferent, nihilistic, about the history of the German territories forming our state and nation today. On the contrary, our own view at German history asks for absorbing much more thoroughly the history of our own territory. What has happened here simply is more important to the GDR citizens than are events in Bavaria, Baden or Schleswig-Holstein. Integrating Prussia or Saxony with German history, appraising the Hohenzollern, the Wettin Dynasty or the dukes of Mecklenburg means more to them than do the Wittelsbach or Welf families. And, it seems to me, this specific historic interest is going to become still more pronounced, the more and longer the GDR develops as an independent state and national organism. This one can grasp already if one looks around. A great interest in it exists, as mentioned above with regard to the attendance of the exhibition.

Two things are needed to satisfy this interest:

First: This cannot be managed by simply returning to traditional local history. No narrow parochialism must constrain it. Historic events on our territories must, rather, be shown as part of German history in their significance in setting the stage for socialism on German soil.

From that vantage point, our special attention has to be directed at historic testimonials, processes and personalities that are tied in with the territories now parts of the GDR. They must be given priority in our national history. Looked at it like that, greater interest is warranted in the early feudal state organization under Henry I and Otto I, whose power centers were located in GDR territories, but whose work mainly had to do with enforcing social progress, embodied in feudalism, in the territory of today's GDR, and in the medieval cultivation of the land, which had a lot to do with turning our land into the cultural landscape it is today. To a still higher degree this holds true for Luther's Reformation which, together with the German Peasants' War, marks the first bourgeois revolution in German history, and its localities are found almost exclusively in the GDR territory. Special attention must continue to be paid to the activities of the Prussian reformers and, mainly, to the struggles by the popular masses for enforcing bourgeois progress in the last 18th and in the 19th centuries, such as the Saxonian peasants insurrection of 1790 or the centers of the 1848/49 revolution on GDR soil in Berlin, Dresden and Erfurt. Priority attention is warranted for the major areas of the revolutionary German workers movement in Saxony, Prussian Berlin and Thuringia. The Communist League had important bases in Leipzig, Berlin, Magdeburg and Schwerin. It was in Leipzig where the General German Workers Association was founded. In Eisenach the revolutionary Social-Democratic Workers Party of Germany was founded.

Secondly, however, we also need Marxist local histories. It simply is a fact that on today's GDR territory several territorial states existed in the past, for centuries. We are, of course, not interested in reviving provincial particularism. We must continue resolutely to oppose the anti-progressive elements in feudal German particularist statehood. Yet the history of Saxony, Prussia and the Thuringian and Mecklenburg states was more than just particularism and feudal reactionary misery. In those territorial states, social progress advancing toward capitalism did also prevail, and progressive classes were struggling against reaction. This heritage must mean something to us. Nor can the development of those states in their transition from feudalism to capitalism be gaged solely, or primarily, with the yardstick of national state centralization in terms of the German Empire as constituted in 1871. The debate that has started on the socialist society's attitude toward the historic heritage of Prussia also stands up against that background. It need not be explained that our coming to grips with what the territorial states have handed down to us through history must not be confined to Prussia but must also include the history of Saxony, Thuringia and Mecklenburg. We have to catch up a lot in this respect, no doubt.

Unmistakably

Third: what with all our emphasizing our relationship with all of German history and the particular place value of the historic heritage from the territorial states, GDR history proper must of course occupy the central spot in our history propaganda. For the development of our national consciousness it is by far the most important because this amounts to our own, unmistakable history which differs fundamentally from historic processes in the former Germany and, more importantly still, in the other, imperialist, German state. Here for the first time, in the real historic process, which is truly decisive for the development of historic consciousness, there is nothing any longer we have in common. Instead, both German states have

for over a generation already been following their own historic ways. That has essential implications for the consciousness development of the GDR people and the FRG people. Because history has been experienced differently, contrastingly, each already has significently different historic experiences, norms and traditions. Today, they must already be reprocesses and conveyed as historic values. In making people aware of them, they, among all values of historic experience, can most and most profoundly foster the development of a new, socialist German national consciousness.

Frederick II Biographer on Prussia

Leipzig LEIPZIGER VOLKSZEITUNG in German 15-16 Aug 81 p 11

[Slightly abridged version of interview with Dr Ingrid Mittenzwei, GDR historian, biographer of Frederick II; by Guenter Labudda, correspondent, Duesseldorf UNSERE ZEIT, organ of (West) German Communist Party (DKP): "Why Are We Preoccupied With the Prussians?" For a discussion of Mittenzwei's Frederick II biography see translation published under heading, "Prussian History to Be Accepted as Part of GDR 'Heritage,'" in JPRS 76749, 3 Nov 80, No 1823 of this series, pp 16-34. For various references to other items of related information see translations published under quoted headings in the following JPRS issues of this series: "Clausewitz Accepted as 'Reformer and Patriot' in German History," 77538, 9 Mar 81, No 1855, pp 10-21; "West German Appraisal of GDR Historiography" (book reviews), 78871, 31 Aug 81, No 1914, pp 1-3; "Importance of National, Local Patriotism Explained," 76749, 3 Nov 80, No 1823, pp 35-39; "Values, Dangers of Regional Patriotism Disputed" (roundtable discussion, interviews with GDR academic and political personalities)]

[Text] [Question] GDR and FRG historians are increasingly preoccupied with the topic of Prussia. What causes that?

[Answer] There is no direct cause, such as an anniversary, excepting the Schinkel anniversary. Nor is the planned Prussia-Show in West Berlin, which has produced a flood of literature, the cause but a reaction to certain phenomena in the FRG. I find a whole bunch of causes of which the various "writers," the historians or journalists, may remain perfectly unaware.

Some reasons for the show planned for the summer of 1981 were mentioned by the former governing mayor of West Berlin, Stobbe, himself. Through the Prussia topic, with reference to the unification of the empire under Prussia's leadership, they want to assist in "keeping the German question open." That connects with the attempt to reappraise West Berlin by means of history. And finally they are likely to hope they can fight against a certain gloominess about the state by mobilizing the so-called "Prussian virtues."

The GDR's interest in Prussian history is old. It noticeably increased in the last 2 or 3 years, at the same time as in the FRG. In this contemporaneousness I find their only parallel.

Our Entire History Is Our Heritage

As German history was that of territorial states over long periods, our interest is concentrated on the areas that have become parts of the GDR: Prussia, Saxony, Thuringia and Mecklenburg. With a Prussia Wave that has nothing to do.

The greater interest the GDR population has in this part of our past expresses a greater consciousness of history and a broader understanding of our heritage. That calls for taking a clear standpoint of course on each individual part of this heritage. The ideological confrontation going on in this field also imposes further obligations on us.

[Question] In 1947, the Allied Control Council abolished the state of Prussia because it had "always been the buttress of militarism and reaction in Germany." Your biography of Frederick II, called "the Great," has also received great attention in the FRG. Not last because a highly discriminating picture of Prussia was drawn in your book. Must the progressive forces change their judgment of Prussia?

[Answer] You cannot suddenly turn black into white. In that respect the progressive forces need not change their picture of Prussia. The military tendencies that manifested themselves in the age of absolutism in many countries, in Prussia, for definite social causes, became a system that shaped everything. Via intermediate steps these tendencies continued into the 20th century. Which does not mean that militarism was the same in the age of imperialism that it had been in old Prussia. But one of its historic roots undoubtedly lies in Prussia.

Militarism in Prussia shaped the life of the entire population and characterizes an extremely important aspect of Prussian development but not all of Prussian history. Prussian history must not be confined to presenting the Hohenzollern Dynasty. Focusing on the other class forces that lived, worked, thought and fought in that state, whereby they contributed to social development, has for years been a particular concern of Marxist historians. That includes also examining how the ruling class at certain times, under the compulsion from objective necessities, contributed to advances and development.

[Question] You describe Prussia's King Frederick II as a man full of contradictions to whom initially bourgeois liberals related themselves and later, reactionaries of all shades. Many legends have grown up around him. Can he actually be included in German history as a great one?

[Answer] The designation, "the Great," comes out of the 18th century. Contemporaries called Frederick II the Great starting after the Silesian wars. They would admire the conqueror of Silesia, his military talent. Some may later also have thought of his domestic policy. Among the Hohenzollern Frederick II probably was the greatest. He surely towered above the mediocrity of all the other German princely personages. Yet the misuse of his name by the most extreme reaction all the way to the fascists counsels us to be cautious. I therefore, and for many other reasons, plead for a discriminating appraisal of that Monarch. In stressing his aggressive foreign policy and his conservative domestic policy, progressive tendencies must not be overlooked.

The Hohenzollern Dynasty Was Not All

[Question] Prussia and social progress--there are people that have trouble finding a common denominator for that. Which personalities, events, and developments are there that would give evidence for Prussia's share in making social progress prevail?

[Answer] If one accepts as a fact that Prussia must not be held to be one and the same thing as the Hohenzollern Dynasty, and that progress in a class society is a contradictory phenomenon, then one will find in the history of this state personalities, events and developments relevant to the enforcement of social progress: the representatives of the rising bourgeois class in the 18th and early 19th centuries, mainly its ideologists, the men of the Berlin Enlightenment, say, proclivities and propensities within the popular masses which, together with economic requirements, forced the ruling class to adapt itself to new exigencies in the transition from feudalism to capitalism, the liberal aristocratic reformers who significantly contributed to enforcing capitalist relations in Germany, the young workers class in the 19th century, and the developing workers movement.

Reaction and progress were not always diametrically opposed in the past. At times they were intertwined. Instead of many other events I would only remind you of the unification of the empire in 1871. Overcoming the national fragmentation it achieved was definitely an advance. It stimulated a rapid development of the capitalist mode of production and of a modern industrial proletariat and offered the working class a new basis to form on a national level. Along with it, however, Prussian reaction triumphed. Such a dialectical view, disclosing the limits to progressive developments, such as in the Prussian reforms, and examining phenomena which in their basic tendency were reactionary but possibly also had positive social effects, guards against any one-sided glorification or defamation.

No Equivocation About Militarism

[Question] Appraisals of the history of Prussia and the intentions connected with them do not conform, as between the FRG and the GDR. Which essential differences do you detect?

[Answer] In bourgeois historiography it goes in a number of different directions. Apart from clearly conservative historians, who unequivocally mean to paint a rosy picture of Prussian history, there also are more flexible forces that maintain a critical distance from Prussian history. Yet even between the latter and the Marxist historians there are of course unbridgeable contrasts.

If I--and this one should actually not do--disregard all those differentiations, a number of salient points are crystallizing at present in the debate. By overemphasizing the seeds for reform under Frederick II and underrating the activities in the class struggle, the history of Prussia in the late 18th and in the early 19th century, as many FRG historians see it, gives the picture of a continuously "peaceful" development, without any revolutionary leaps.

The tendency to rid Prussia of the odium of militarism finally continues and is led to a high point in the consideration of the relationship between fascism and Prussianism. There, by a one-sided stress on the "Prussian" resistance and by equivocating about many facts to the contrary, they then even "prove" Prussianism and fascism incompatible. All in all--without closing one's ears to voices of warning in the FRG--this amounts to the first large-scale attempt at a "rehabilitation" of Prussia since the end of the war, which in its extreme manifestations not by chance reminds us of what is being published in your country that paints a rosy picture of the Nazi past.

PRINCIPLES OF AUTHORITY IN SCIENCE REVIEWED

Warsaw KULTURA in Polish No 26, 28 Jun 81 pp 4, 5

[Review by Wiktor Osiatynski of book "Authority in Science"

[Text] The concept of authority is derived from the Latin "auctoritas," which in a broader sense is respect based on authority. Authority is possessed by that person who awakens in us respect, esteem and trust because of his recognized superiority in knowledge, ability, experience and other values.

Authority is not always indispensable for living, or even for success. A top athlete or an outstanding actor can enjoy prestige based on an emotional response, but the professional achievements do not necessarily constitute a base for authority. If such people do acquire authority, it is most frequently thanks to their actions or attitudes inspiring moral recognition; anyone can become a moral authority, regardless of his profession.

There are at least two reasons why science cannot exist without authorities. The first is the economics of cognition. If every person were singlehandedly to prove all the truths that he uses in living, he would not get very far. He thus has to accept on faith that which previous generations have found as well as what his contemporaries have proved. He must trust their authority.

Similarly, authority is an inalienable component of the very scientific procedure that verifies knowledge transmitted by tradition and expands it to include new assertions. In the natural sciences, the most effective method for substantiating a theory is to confirm it experimentally or to fail repeatedly to refute it. Even in this case it must be determined whether the premises of a theory have been properly selected, whether the conclusions drawn from experiments are correct, and whether all arguments contradicting the new theory have been considered. Verification of theories is, therefore, to a large degree a question of faith, even in the natural sciences.

It is even more so in the so-called humanistic and social sciences, in which neither an experiment nor an attempt at falsification can be applied to a theory. The acceptance of the theory is largely a question of subjective evaluation.

Evaluations are an inalienable part of any scientific activity. Who, then, does the evaluating? The history of science rather unequivocally answers this question.

Those who are to be most trusted possess the most extensive knowledge and the greatest expertise in their specialty. In other words, trust an authority.

The emergence of authorities, their scope and type, the role and functioning of authorities in scientific communities and other problems with the concept of authority in science are the subject of a collective work AUTHORITY IN SCIENCE edited by Pawel Rybicki and Janusz Gockowski and published last year by the Ossolineum Publishing House, The book, containing papers by 19 scholars, resulted from the initiative of the Polish Sociological Society's sociology of science section. This book involves nearly all vital problems of the functioning of scientific authority and, at the same time, rather clearly reflects the atmosphere, the fears and the desires permeating our scholars in recent years.

Referring those interested in all these problems to libraries (the book was printed in a miniscule number of copies, even for the scientific community that it concerns), we shall pause at a few issues.

Authorities in themselves are neither good nor bad. They are necessary in pursuit of science: without them, there would be no major breakthroughs or daily scientific activity. At the same time, serious dangers are related to their existence.

Authorities are the elites of the world of scholars. Membership in such elites gives birth to certain privileges and guarantees an elevated status. Therefore, many would like to make their way into such an elite. Nor is it surprising that existing authorities desire to maintain their elitist position. Hence, on occasion, a sense of personal threat, as well as a tendency to conversation in science, arises in the face of new theories.

Such hazards are supposed to be prevented by the democratic and egalitarian nature of the very pursuit of science--the right to express one's own views and the right to have unhampered scientific criticism, with a collective assessment of rationalizations and arguments (of those who criticize as well as those who are being criticized) by a competent group of specialists.

One assumes that, thanks to the principles of conduct of scientific activity, the scientific community, if left alone, will produce the most appropriate and competent authorities, who will function in a manner most favorable to the progress of science.

But the scientific community is seldom left to itself.

Science as a social activity has always been tolerated, supported and maintained, provided that it furnishes specific benefits to society, more precisely, to institutions and persons controlling societal resources. Science has been required to have practical and ideological usefulness. The first is based on supplying technological, social, political and other solutions; the second, on supplying justification for actions of the authorities, that is to say, on transmittal of a part of the prestige and trust that science enjoys to those exercising power.

The second role assumed a special meaning in the current era of the cult of science. Scientific sanction has replaced religious sanction. Everyone who makes even the most minor decision wants it supported by the majesty of science. Every social organization wants to have scholars in its ranks, while political and social activists aspire to self-ennoblement by acquiring scientific titles.

The fullest consequence of this cult of science is the striving of institutions and persons exercising power toward control over the very organization of science and over the mechanism through which scientific communities function, including conferring titles and academic degrees. The detailed management of science, curricula, research programs and expenditures of institutions is conducive to such control.

This is dangerous insofar as a scientific career must be ruled by principles other than those governing an administrative career. In science, the basis of success most frequently is an open mind, a critical attitude toward oneself and others, and nonconformism and independence. A bureaucratic career on the other hand is conditioned by the very passing of time, loyalty and conformism toward the authorities. After the erasure of the border between science and administration, for the most part opportunists and careerists rise to the higher positions in science. Operating in a domain governed by the principle of authority, they try to obtain official proof of recognition, academic titles and awards. Exactly in this manner, careers without authority are born, in other words, alleged authorities.

A career without authority gives birth to uncertainty and a sense of endangerment. These feelings are often accompanied by envy, fear of open competition and attempts to take advantage of accumulated influence against probable competitors who threaten not only a careerist's authority but also his position. A careerist usually opposes not only novelties in science but in general anything that could undermine his alleged personal authority (e.g., "his" theory or method) and also that which he himself does not understand. He thus tends to limit the freedom of scientific debate and dampens criticism. In effect, criticism ceases to be a selective screening in the process of accumulating knowledge, becoming at best an instrument for personnel infighting.

Only in extreme cases of the disintegration of values, moral debasement and intellectual decadence do alleged authorities fight for privilege, money, fame, power and other benefits, ignoring public opinion. They usually try to gain social acceptance for their scientific achievements and intellectual and moral worth. That goal is served by the phenomenon of creating a scientific legend (analyzed in the already mentioned book by Adam Podgorecki).

Most frequently, legends appear in social and humanist sciences, in which it is naturally more difficult to assess precisely the merit and truthfulness of a theory; therefore, a greater role is played by authority. At the same time, precisely in these fields the strongest trends toward administrative intervention occur, not only in the organization but in the very substance of science. In these, too, alleged authorities are the most numerous.

Even an established scientific legend cannot, however, assure its creator of lasting glory and fame. This is pointed out by Krzysztof Pigon, who writes about careers without authority: "...this kind becomes the more abundant the softer is the voice of the scientific community vis-a-vis that of the institutions deciding about titles, awards and distinction. Such careers used to be made in monarchies by glib courtiers, servile types and sycophants. We know only too well that such careers have not vanished even now. Everyone could cite examples of such careers and, notably, they would be examples of our contemporaries. This is not surprising, since such careers wilt as rapidly as do the flowers on the graves of their creators, frequently even sooner. Nothing remains after these careers, just as nothing remains after mediocre poets, praised beyond measure during their lifetimes and forgotten even by historians of literature several decades later."

This provides a sensible caveat for careerists and a consolation for honest men. Yet when justice is meted out in the form of historical oblivion, the damage inflicted on science by parasitic elites of alleged authority is not checked.

The conditions hindering the formation of such oligarchic (that is, pursuing their own advantages) elites, which are inevitable in science because they have an aristocratic (that is, useful for science and scientific community) character, are the focus of all the papers in AUTHORITY IN SCIENCE. Abridged and somewhat simplified, these conditions can be defined in the following manner:

Science can develop only with freedom of expression and equality, as all participants share equally in raising problems, searching for answers and criticizing proposed solutions. In bureaucratic administrations of all descriptions, however, a hierarchic structure and a consequent tendency to limit the freedom of criticism must exist. For this reason, the impact of the bureaucracy on purely intellectual matters and also on the organization of science itself should be minimized, in the interest of science.

Appointments should be replaced by choice; rotation should be instituted as a principle within the collegial management. A partnership, rather than supervisory relations, should exist between scientific administrators and the scientific community.

As Bohdan Suchodolski said in his preface to John Ziman's book, "Governance over science should not be--as, lamentably, often is the case--a reward granted to those who either have still not demonstrated their skill at the scientific workbench or have already failed."

From a purely institutional standpoint, the decentralization and competition among scientific institutions working on parallel problems would do well to guard the proper functioning of science, selection of proper authorities and "debunking" of scientific legends.

Of course, this would have to be accompanied by genuine, rigorous and impartial, rather than pretended, criticism along with free expression of independent opinions.

The healthy growth of science in general and of each particular discipline is predicated on science being untrammelled. The scientific community must be open to those who recognize prevailing views or scientific theories as well as those who question them. The latter also have a right to present their concepts for assessment by recognized authorities and to claim impartial evaluation.

Openness in science is also fostered by nonprofessional social criticism, especially in the humanistic and social sciences. This is particularly important when professional scientific criticism becomes enmeshed in the bureaucracy and overlooks the deficiencies of these sciences.

Of course, there is no need to explain further that the state of science is directly related to the general condition of society. It would be banal to try to prove that all official authorities in egalitarian and democratic societies find it difficult to abuse power because people reckon less with them or, in any case, are less afraid of them. In democratic systems, there is also a more frequent

concurrence of personal and official authority. In Science, democracy--just as the other mechanisms mentioned here--favors the emergence of an "aristocratic elite," in other words, the selection of proper authorities.

At this point, however, the question arises. What does "proper authority" mean? On what principles and what criteria should the scientific community itself select those proper authorities?

In general, there are no objections to a basis of a genuine scientific authority in knowledge, scientific achievement and skill in transmitting knowledge and developing new generations of scholars. Thus, authority may have its source in the discovery of a new theory as well as in the exemplary conduct of minor research, design of experiments that revolutionize science, ordering and systematizing of knowledge accumulated by others, lectures that fascinate listeners and laborious, systematic training of young apprentices in specific methods of scientific work.

However, a fairly clear distinction exists between the possibilities of assessing a scholar's achievements and genuine merit in the natural sciences and in the social and humanistic sciences. In the former, the criteria are more precise and the assessment is easier. In the latter, the criteria are more fluid; it is not easy to immediately distinguish a genuinely valuable theory from refined speculations bringing little new into science or from downright jugglery with words and concepts. Much more often the question arises in such cases; What measure of merit should be applied?

An unusually valid proposal on this issue was advance by Podgorecki in his paper on scientific legends. He concluded that in the case of social sciences a scholar's personality can become a valid criterion for evaluating substantive merit: "...an essential question emerges: How are we to determine in the social sciences which is the product of solid scientific activity and which constitutes infiltration of unverified concepts supported by a helpful legend? Of course, legitimate methodologies should provide the early screening, selecting out unsubstantiated and poorly verified concepts. As is known, the scientific method can carry out a negative selection. How are positive selections to be made? Apparently, in the area of the social sciences a reasearcher's integrity is of particular significance. An outstanding physicist or chemist may be a complete rascal, yet, despite this, he can accomplish major discoveries based on his having mastered scientific techniques. A scholar in the social sciences is not automatically distanced from the subject of his scrutiny in the same way. He is existentially involved in the research matter that he analyzes. Although in the area of social sciences a scholar may use research results obtained by others, he still draws from his own existential experience the principles for organizing these results in a comprehensive systhesis.

"A paradox of American sociology, notwithstanding all its excellence (visible, for the most part, in an unprecedented flourishing of empirical studies and in the pluralism of concepts used to interpret them) is that the individuals who are carriers of that sociological knowledge have relatively poor social and political experience. A scholar in the social sciences is, in a way, self-contained; he can justifiably interpret only those phenomena within the range of social realities that he earlier absorbed in his individual experience. In this situation, a scholar's integrity emerges as the principal criterion for assessing what is significant in the social sciences."

In other words, in the social sciences a total wretch, scoundrel, cycnic or unethical person cannot be a prominent scholar. This contention deserves some reflection. Although at first glance there seem to be exceptions from this rule in the social-humanistic sciences, especially in modern times, the history of human thought (even of fairly recent times) has recorded a great number of major scholars with the integrated personality of a scientist and an honest man loyal to self-imposed ethical values.

In the nautral sciences as well, the researcher's personality is a significant factor. Even when someone becomes recognized as an authority solely on the merits of a major discovery or a revolutionary theory, an eminent and powerful personality is needed to accomplish such a discovery or to create and then uphold a new theory.

Podgorecki's stipulation combines the problems of authority in science with ethical requirements. This combination--though forgotten at times--is as old as science, society and ethics. The unity of truth, goodness and beauty derives from Plato. In the "portrait of a Greek scholar" traced by Jerzy Lanowski, the qualifications for an exemplary scholar include not only the curiosity and incisiveness of a scholar but also his moral attitude. Elzbieta Kaluszynska and Nina Krasko on the other hand, refer, to modern times when they say that "championing a just cause increases a scholar's prestige, even though he has already accomplished major scientific achievements." Jerzy J. Skowronski, in turn, while regarding the issue in moral terms, views the moral profile as a foundation on which all scientific authority is based.

As seen by Jan Szczepanski, a scientific authority is subordinated to ethical values found beyond science. "Authority in science," Szczepanski says, "is attained by persons with an intellectual horizon broader than that of others, marked by honesty toward their subject matter, courages enough to defend it and willing to adhere to the principle that it dictates."

This definition of authority generates significant conclusions as to how it is acquired. Authority is revealed, for the most part, in critical situations in which the interests of research and science, endangered by popular views or dominating forces, must be defended. A scholar who opts for the interests of research or scientific truth, who courageously propounds his views regardless of the risks, is the only type of scholar to gain authority.

Certain character traits favor this type of attitude and, consequently, an authority. Risks of this kind are likely to be taken by persons who are primarily geared toward the creation of an opus, rather than their personalities or careers. "A man who is geared toward upgrading his resume or promoting his career, Szczepanski says, "will, at times of crisis, rarely put himself uncompromisingly on the side of genuine values. A stance of this kind calls for total self-identification with one's work."

In brief, authority in science can be won only by a person more devoted to science than to his individual social position. To people of this kind, more than any other, we owe the progress of science.

Yet in this fact, a major difficulty for science is ensconced. Bona fide authorities are needed in science not only as outstanding scholars. They are also needed as defenders of values vital for science itself and for the conditions under which science is pursued. The more these values are endangered, the more such scholars are needed, because they are more competent than anyone else to defend them.

At the same time, however, "total identification with the work" and total devotion to its creation do not encourage outstanding scholars to social activity--frequently brutal and sometimes humiliating--that could favor the defense of supreme values. When relationships in science become increasingly poor, when science is subjected to increasing control, when the part played by spurious authorities expands, genuine authorities quite naturally become discouraged and retire from action. At such times, involvement alone becomes morally suspect. When those best-qualified retreat from public activity, the place due them is taken by others who can hardly wait for the opportunity.

This internal motivational contradiction presents a major problem and danger for science. Perceiving this contradiction could expand the scholar's moral accountability. Possibly, this accountability should include the responsibility for the status of science as well.

There is no mention of these things in AUTHORITY IN SCIENCE. This is not surprising, because the book was written at a time that did not foster involvement, a period when there was a proliferation of spurious authorities, careers with no authority and similar phenomena. The most urgent matter has been (and still is, perhaps) to restore conditions for the development of science. For these reasons, too, the book does not devote much attention to the dangers related to the existence and operation of even the most reliable authorities. This, however, is a separate topic.

The Polish Academy of Sciences. Science Exploration Committee-"Authorities in Science." A collective work, edited by Pawel Rybicki and Janusz Gockowski, Ossolineum Publishing House, 1980, 237 pages, 3,000 copies, price 30 zlotys.

SPORTS AS TOOL IN INTERNATIONAL RELATIONS

Warsaw SPRAWY MIEDZYNARODOWE in Polish No 3, Mar 81 pp 123-138

[Article: Discussions - Sport in International Relations*]

[Text] Michal Dobroczynski: Perhaps the position of sports in international relations is not sufficiently appreciated, at least in public formulas that, in general, yield to the authority of other areas of international relations. However, sports have a colossal range of social and political action, and they influence friendships and international conflicts in a specific manner. Undoubtedly, there already is some scientific agreement on this; however, there constantly are many misunderstandings or conflicting opinions. Sometimes the position of sports in international relations is approached in an extremely idealistic way, and the merits in bringing nations together and pacifying feelings are the only things emphasized. But it is no secret that sports also lead to conflicts and temporary antagonisms. Finally, sports are treated as an instrument of international policy in almost all countries. This appears very clearly in some cases and not so strongly in others, but, overall, perhaps more strongly than at any previous time.

Sports also entail some consequences of a cultural nature, which to a certain extent results in transmitting certain defined patterns of life from one country to another.

Franciszek Ryszka: I am not really an athlete, although when I was young I participated in different sports. Now, like everyone else, I am a sports fan. I write a sports column twice a year for ODRA, which has 9,000 readers.

Much is said about the dependency between mass sports and record-seeking sports. Much is also written about the shortcoming of mass sports and the costly preference for record-seeking sports. The costs are calculated on the basis of stars; this is one of the favorite subjects of newspapers, and not just of sports publications. It is said that funds appropriated for mass sports were taken by stars. Perhaps they did take something, but not that much.

---

*Participating in the discussion were Prof Dr hab Michal Dobroczynski, editor-in-chief of SPRAWY MIEDZYNARODOWE; Dr Franciszek Ryszka, professor at the Institute of History, Polish Academy of Sciences (PAN); editor Leslaw Skinder, sportswriter; Prof Dr Janusz Symonides, director of the Polish Institute of International Affairs (PISM); and editor Maciej Wierzynski, writer; Dr Andrzej Ziemilski, writer, sociologist and worker of the Institute of Culture.

I was always interested in two mutual dependencies: that of record-seeking sports on mass sports, and vice versa. First, the extent of mass sports is an independent variable. The number of people who go in for boxing, skiing, skating, swimming, bicycling, etc., can be ascertained. Record-seeking sports would be a dependent variable. The first hypothesis is the higher the value of the independent variable, the higher, the dependent variable. There is an added high correlation: perhaps it is functional dependence.

However, that is not the way it is, and mass sports are not a recruiting base for stars. These are individual matters and there are no reasons for record-seeking sports to be developing from mass sports, without individualizing the case of each future star. Sports traditions and sports culture play a certain role but not the kind allowing the responsible education of exact dependencies.

Let us try the other way around. Let record-seeking sports be the independent variable and mass sports the dependent variable. Motivation and star models have an influence on the masses. In fact, the idea was expressed that when Fibak placed in the top 10 of world tennis, young people began to play tennis; this field is weakly adapted for mass sports in Poland. This argument was very frequently bandied about in newspapers and immediately negated because it had no basis; the thesis is a false one with seeming merit, because the very example of a star is a weak "factor" (in a methodological sense).

Leslaw Skinder: There is a dependence between mass and record-seeking sports, and conversely. There is no lack of examples of outstanding individuals who appear in sport disciplines not practiced in great numbers: not reaching far, already we mentioned Wojciech Fibak. But in most cases the birth of stars is a consequence of a given sport. We draw from the mass of those practicing, under what in our case unfortunately is a very poor system of selection, the most capable individual, endowed with such motor attributes as speed, vivacity, strength and proficiency, that help to climb the rungs of Olympus more quickly. An example is the nationwide young peoples' athletic meets. These mass spectacles helped to discover many subsequent Olympian medalists, world champions, etc. In turn, the international successes of stars influence the popularity and interest in a given sport discipline. Fibak's successes increased interest in tennis among young people as well as adults. Nationwide tennis court construction increased our playgrounds by some several hundreds in a short period. Let us recall the glamor of the Peace Race years. Almost every boy wanted to be another Krolak. Thus arose the followers: Szurkowski, Szozda, Jankiewicz and other splendid Polish cyclists. I could furnish a substantially larger number of examples. A dependence between mass sports and record-seeking sports does exist.

Dobroczynski: What is the international significance of record-seeking sports and of mass sports? What is the difference between them from the standpoint of external relations?

Ryszka: The international significance of mass sports depends on notions that there are "nations developed sports-wise." The word "sports"--which, note well, once meant a loose love game--is associated with Anglo-Saxons. In fact the Anglo-Saxons passed as an athletic nation; it was precisely this label that international opinion stuck on them very early. In LES SILENCES DU COLONEL BRAMBLE,issued right after World

War I, Andre Maurois writes about the difference between Englishmen and Frenchmen (the action takes place during the war): Frenchmen treat sports as a war, while Englishmen treat war as a sport. Possibly something like that was evident during World War I.

Andrzej Ziemilski: If one wants to the French to become enthralled about a sporting event, one must tell them that the national honor is involved. But if one wants to encourage an Englishman to go to war, one tells him that war is something like sport.

Ryszka: These notions functioned in relation of nation to nation, because notions can be expressed as behavioral motivations. Perhaps people are not "the way they are" but are created that way, and at a given moment they become that way. There is a grain of truth in each stereotype.

Record-seeking sports are very characteristic. The function of record-seeking sports in international relations is extrasporting, but much less important than those who organize, stimulate and administer sports and who want to exploit them for political purposes, believe is the case. The sports power--the GDR--is not rated highly by Western nation opinion while the FRG is rated highly. To be sure, these are the opinions of a certain cultural circle and are politically conditioned, but even among nations that ought to be for or against Germans in general, again, the GDR's attainments do not mean much.

Dobroczynski: However, thanks to sports, a given country can be come world famous.

Skinder: The GDR exerted a great deal of effort to obtain world recognition and its proper position in international relations. What would we say about the effectiveness of the weapon of sport when, thanks to it, the GDR began to be felt despite a conspiracy of silence. The leaders of that country bet on the dynamic development of sports. They knew that, despite various barriers, despite the avoidance by some nations of contacts with GDR athletes, those athletes would be registering their presence with their attainments during the European, world and Olympic championships. And that happened. That triumphal march toward the peaks of world competition began in 1968 in Mexico, where GDR athletes appeared for the first time as an independent, separate representation (previously, they had appeared together with the FRG as an all-German group). A hymn played a dozen or more times after Olympic victories is a promotion of a world breakthrough position. And sports were that breakthrough force. GDR rightly bet on sports, and its action paid off a hundredfold.

Janusz Symonides: Let us consider the role that sports play in internal and external relations. Sports, or rather record-seeking sports, can fulfill a defined function in international relations and can also be an element of confirming national identity.

Some sports disciplines are international, like soccer, but there also are national disciplines, if, at least, Mongolian wrestling. In the latter, the sport plays a certain role above all for a specific community and a specific nation. When I speak of sports as an element of international relations, I have international sports in mind, and, above all, record-seeking sports practiced in many countries.

Can such sports also fulfill positive functions? They can, for they can be an element of rapprochement between nations, the springing up of a feeling of a certain union, an element creating a feeling of belonging to given regions. If representation of one continent against another is presented, if our soccer player is included in a European team, if various European cup matches are played, then unavoidably we begin to think in broader, European terms. In addition, sports become an element for the formation of certain ties on a regional scale. From this viewpoint, perhaps sports are a positive element that brings nations together.

However, first, sports are rivalry. All international games do not bring positive results. Even without the famous soccer war, many international games can be cited where the public reacted in a highly unobjective, chauvinistic way; when this reaction was transmitted by radio and television, it created definite adverse reactions among listeners and viewers in other countries.

Sports functions can be positive, and usually are, but, in some situations, sports can also play a negative role.

Prof Dobroczynski said that sport is treated as an instrument of foreign policy. If the instrument is the means to attain a given behavior of another subject (country), it is doubtful that certain national goals can be attained through sports. Internally, yes, the consciousness that a representative of the country stands at the highest level gives satisfaction that can influence production results. Does it, however, influence others? Most often, it does not. In a certain sense a defeat can exasperate or irritate. Nobody likes to lose: the defeated party in one or more fields of sports does not have to feel at all defeated on other levels.

Ryszka: Sports can contribute to a confirmation of national identity. On the other hand, sports will not increase the country's international prestige nor increase the other qualities attributed to it.

Symonides: Perhaps sports might not arouse love for that country, but a certain prestige, yes.

Ziemilski: If mass sports and record-seeking sports in one country were to be treated as two independent variables that characterize that country, then we could talk about four kinds of countries: Those with mass and record-seeking sports; those with neither; those with mass sports but not record-seeking sports; and, finally, countries with record-seeking sports but not mass sports.

It is quite easy to assign poor African states to countries without sports. It is equally easy to find countries such as Switzerland or Sweden where there are mass sports, while record-seeking sports are marginal. There are countries with both: Finland, the USSR, perhaps the GDR. Finally, there are countries such as Poland where record-seeking sports are healthy but mass sports are deplorable.

What does the "image" of such countries look like on the outside? It is not a matter of indifference whether both elements or one come into play. If we were to study public opinion, would the English having good soccer teams in any way influence the evaluation of England's place in the economy and politics? Is confirmation of the Soviet Union's very strong position in record-seeking sports necessary to characterize that country?

Perhaps the role of sports in the image of the country is overrated? Finland's image is not the tradition of Viren or Nurmi but of order, advanced civilization and a rich heritage of customs.

However, on whom, outside one's own country, do record-seeking sports have an influence? Sports influence on the emigration, for example. This is a classic example for Poland. Sports found their way to Polish emigre centers before culture. The Polish Olympic Committee found itself in the United States amid groups that were not too friendly before others got there, before the groups became convinced about Lutoslawski and before Rozewicz began to be presented.

But one other matter comes into play. Did not Professor Ryszka exaggerate in speaking of nations? To whom are sports addressed--to nations? Is it the English people, its middle class, sitting in the shrieking grandstands? In the FRG, gastarbeiters are among the spectators. Who are the kibitzers in Poland? In most cases, they are vocational school pupils, who are asked to be mannerly, polite and not to use dirty language. Take care in identifying a sports arena with a nation. There is a great deal of male chauvinism in this. If women were asked what they thought of a spectacular sport, our entire world outlook in this regard would fall in ruins. In addition, some social groups regard sports only as amusement. It is nice when there are good results, but, when they are not there, they somehow manage to suffer through that with the help of prosperity. This stopgap of circumstances, wellbeing and stability in Poland managed, at this moment, to arouse such great animosities because there are limits to compensating activities, externally as well as internally. Sports are a compensation of a world without war, but to certain limits.

Maciej Wierzynski: Above all, sports have a compensating character. The greater the compensating character is, the more a community, a society, a nation needs sports as an "opium." To be sure, if authority needs something like that, it also has a compensating character.

What is the range of effective action of that opium? This can be investigated, using the example of reaction to great sports affairs, the coverage by various mass media; this opium functions, first of all, for use by one's own society. On the other hand, it has an extremely limited effectiveness on external, international use.

It is one of those myths supported by sports activists and sportswriters, that a sports score has such a stupendous impact, insofar as the propaganda of a given country on the international arena is concerned, and so on. That is not so.

What are the premises of an appraisal that sport as an instrument of international propaganda is a faulty instrument? The first premise--as in any field--is that there must be a possibility of an understanding with the recipient, of reaching him. Sport is universal only on the face of it. Even soccer is not that kind of sport; for example, it is a marginal sport in the United States.

Recently, a list of the 10 best athletes of the last 25 years was published in the United States. Borg's name headed the list. It was followed by the names of nine athletes whose names are now known to anyone in Europe. There were reports in European newspapers, as well as in Polish, that this was a misunderstanding. It was not so. Different sports are practiced in the United States; namely, baseball,

football, tennis and basketball. Even the name of a swimmer as popular as Spitz was not on that list.

If we wanted to convince the world with the help of sports how fine a nation we are, we would have to send sumo wrestlers to Japan, a baseball player to the United States, a skier to Switzerland and a toreador to Spain. That is not possible.

What happens in such a situation? When large international affairs take place, each country plays up to its own public through newspapers and television stations. Not only venal Polish journalists go to the Olympics and write exclusively about our representatives. The sportswriters of other countries are doing the same thing. During the Moscow Olympics I learned about such an unusual event as Komar's victory from a three-line note in THE INTERNATIONAL HERALD TRIBUNE, which has a large sports section. On the other hand, there was a great deal in that paper about how the American sprinter was delayed at the start of the race, something that was of little significance anyway, because Borzow was beyond the reach of the competition.

On such occasions, every country writes primarily about its participants and about those sports that are practiced and popular in its country. An awareness is created in this way, with respect to the uninformed part of the public, that the world lives on our triumphs.

Sports do not have as great a breakthrough power as believed insofar as international triumphs are concerned. I made an experiment when we were reveling in the Polish soccer team's triumph. It won thrid place in Munich. I asked friends who won third place in the preceding championships. No one knew. That country was Portugal. Perhaps you will recall the waves of mad, megalomaniac propaganda that ensured at the time. If we were to devote the same amount of effort to the Portuguese triumph, we would die laughing.

Ziemilski: During the Moscow, Olympics, I read NEUE ZURCHER ZEITUNG. On the front pages, the GDR was upbraided for being politically hardheaded, while on the sports pages it was praised for its results. This is a deviation from practice. For example, there were photographs that introduced GDR swimmers (female) as beautiful girls. Perhaps there is a mechanism operating here, helping the Swiss compensate for their own weaknesses?

Wierzynski: From my presentation it could seem that sports have absolutely no significance. Here is a deviation. The great champions--Comaneci, Borg and others--still arouse admiration in the entire world. But that is "individual" admiration, which is not registered to the national account. Are Comaneci's triumphs added to the account of Romania's triumphs as a country? I am not certain.

Dobroczynski: Those arguments convince me. Sports do not directly influence opinion-making groups.

Symonides: And they are not an instrument of foreign policy in the literal sense of the word.

Dobroczynski: Probably nothing concrete or tangible can be attained in external relations with the help of sports. However, there of course needs and means of

indirect action on foreign societies. This does not concern anything immediate but that the country be noticed and appreciated somewhere or, conversely, as the Republic of South Africa felt the condemnation of international opinion. Sports do not lead to concrete results. But this also pertains to other spheres. Let us compare sports with the arts. A substantially larger number of people in the world knew the names of Polish athletes than of artists.

Ryszka: But what people are they?

Symonides: In some situations the masses decide everything.

Dobroczynski: Is this question already so deeply and closely examined? Sports do not clear the road directly for policy; however, do they not in some sense create a favorable climate for becoming interested? It is important not only that something is resolved right away but, for example, that the country be noticed on the outside as frequently as possible and treated at least with a modicum of recognition. If a country is powerful and developed, it has other trump cards, and the question discussed here may not have greater significance. On the other hand, if one does not have other arguments, why should sports at times not be a useful opening tool?

Skinder: Sports with triumphs that are of significance in the world, like attainments in the field of culture or science, create that friendly climate facilitating talks on international subjects by politicians and statesmen. Otherwise, the composing triumphs of Penderecki, the popularity of our distinguished conductors--Krenza, Korda, Wislocki, Rowicki, Maksymiuk--the appearances on the world's leading opera stages of Zylis-Gara, Szostek-Radkowa, Donat and Ochman are without significance, as are Grotowski's theatrical spectacles, the concerts of the Grand Symphony Orchestra of Polish Radio, the Mazowsze, or Wajda and Zanussi films. In other words, only the negotiations of politicians and diplomats would influence the course of events.

To be sure, there are countries in which sports are not regarded very highly, in which the triumph of an outstanding Polish athlete is acknowledged by a two-line notation in the press. Sports have become a phenomenon of the 20th centruy and they evoke an enormous amount of interest. More than one billion people in the world watch the television transmissions of the Olympic games. Can a triumph achieved before such an enormous audience pass without any echo? I do not diminish this phenomenon, and I do not intend to magnify it. Everything needs to be seen in proper proportions. A sport can create--and in our case, it does create--a climate that clears the way for politicians. Otherwise, the foreign affairs minister of the Polish People's Republic would not be honoring outstanding people from the world of sports each year. Laureates were Szewinska, Rutkiewicz, Chojnowska-Liskiewicz, Teliga, Szurkowski, Kozakiewicz, volleyball players as world and Olympic games champions, etc. Do their names mean something only in Poland, or are they known and appreciated worldwide? Irena Szewinska is an award laureate of the French Academy of Sports; she was presented the award by the French Republic's President Valery Giscard d'Estaing. Is this without significance in international relations?

You have reflected, gentlemen, whether a sports triumph can have an influence on raising international prestige. It can. Of course, you can look at Wladyslaw Kozakiewicz's gold medal--one of the greatest and most worthwhile victories during the summer games of the 22nd Olympics in Moscow, linked with setting a world record--as his personal triumph. His triumph, and his trainer's--a physical education

teacher who taught him has sporting ABCs --is the triumph of a Polish athlete, not necessarily of Poland itself. Poland's position and recognition in the world do not depend directly on such attainments. But I would not belittle this type of event. The triumphs of Kozakiewicz create the favorable climate around Polish questions in the international arena. The level of sports in a country reflects the overall cultural level of a given country, in the eyes of other nations.

From another viewpoint, young liberated countries, proud of gaining independence, wish to confirm their identity as rapidly as possible. They are aware of the fact that they can do this easily and quickly through sports. Thus, in the past quarter century we have witnessed an ever more lively participation by developing countries, particularly African, South American and Asian, in international sports competition and above all in the Olympic games, which constitute the best opportunity for demonstrating achievement in the widest possible forum. Beginning with the summer Olympic games in Tokyo in 1964, we are witnessing the massive participation of developing states in the Olympics--on the order of 60 percent and more of total participation in athletic contests--and also dazzling triumphs--for example, the long-distance runners of Ethiopia, Kenya, Tanzania, etc. Sports there grow to the status of a state symbol, and the dependence of sports on politics is particularly large. Frankly, in the present state of relations between people, sports are not and probably cannot be a neutral phenomenon. Sports cannot be separated from the struggle for progress and social rights.

Can sports constitute a weapon in the hands of politicians, and is this weapon effective? I do not intend to exaggerate the events preceding the Olympic games in Moscow, but we ought to look at them closely. President Carter, Mrs. Thatcher, the West German government and other allies of the United States, acting on an assumption that was not aimed at the international Olympic movement, but against the Soviet Union, utilized a boycott of the greatest and noblest sports spectacle as a means of attaining a specific political goal. Although the success of this undertaking was only partial, although it met with a protest by many activists in those countries, particularly a protest by embittered athletes who were brutally deprived of an opportunity to display their skills at the games, this was indubitably an example of utilizing sports as a weapon in the hands of politicians.

Ziemilski: Was this more significant internally? Carter boycotted the Olympics because this was painful internally for the Soviet Union and not for the Olympic movement as a whole worldwide. He wanted to "punish" the Soviet Union.

Skinder: It did not have internal significance. Only a blockade of various types of export deliveries associated with organizing the Olympics to 3 August, that is, to the end of the games, could be treated in that way. Washington's call to boycott the games in Moscow threatened the entire international Olympic movement with collapse. During the 83rd session of the International Olympic Committee (MKOl) at Lake Placid in February 1980, after an unprecedented political, aggressive presentation by U.S. Secretary of State Cyrus Vance--a precedent in the history of the committee's deliberations--Lord Killanin, the helmsman of the international Olympic movement, delivered a dramatic appeal not to use the Olympic games to divide the world but to unite it and not to use the athletes for resolving political problems. In consequence of government decisions of a political, economic or administrative nature, representatives of many countries were missing from the games in the Moscow arenas, but the idea of the Olympiad was saved. There was the threat that the games would no longer be able to take place.

The Olympiads have been a convenient platform for a long time for all kinds of political demonstrations. The history of the modern games at the turn of the 19th century notes symptoms of German-French and Anglo-American conflicts. In 1936, efforts were made in Berlin to use the Olympiad for proving the superiority of the German race and for proclaiming fascist ideology. In 1956, in Melbourne, tendencies were manifested to capitalize on the Suez conflict. The bloody massacre on the Place of Three Cultures just before the 1968 games in Mexico; during those games, the silent protest of the U.S. black athletes against racial discrimination in their country; the act of terror and force against the Israeli athletes in Munich four years later; the unprecedented boycott of the 21st Olympic games in 1976 in Montreal by 27 African countries, with slogans calling for war against racism and discrimination; and finally, the boycott of the 1980 summer Olympics initiated by President Carter--these are the successive manifestations of that tendency.

The Olympic games, which until yesterday were an athletic affair with certain political consequences, have changed their character. They are being used ever more frequently for immediate political purposes.

Wierzynski: Insofar as African countries are concerned, sports are treated as an instrument of national identification. Young nations need a binding agent and heroes.

However, if this is a problem associated with culture, the mechanism is extremely similar. The various triumphs with which we intoxicate ourselves, even if they be the film triumphs of recent years, when Polish films won awards at all film festivals--these are a joy that is principally ours. Polish films hardly exist in worldwide commercial cinematography. Even the Nobel prize for Milosz, in the main, was our holiday. Let us remind ourselves of the kind of response here for the Nobel prize for Quasimodo or for that Greek poet whose name I do not remember. I do not belittle those triumphs; I only want us not to live by illusions.

Symonides: In our discussion we seem to govern ourselves by the assumption that a defined mythology exists around sports. So many opinions and exaggereated ideas have arisen, that we ought to debunk their role and significance. It is difficult not to agree with the view that sports have a compensating character, with all the pluses and minuses of that phenomenon. If a country has no other possibility of finding itself in [press] agency news headlines, then sports create such an opportunity.

Perhaps we also justly called attention to the fact that sometimes sports can lead to the development of nationalism. Situations in which one's own sportsman is mentioned without regard to the position that he held, while the top three who won medals are not mentioned, or when evident defeats are interpreted in various ways, do not teach objectivity but are examples of extending the methods of manipulation and propaganda to sports.

Do sports create culture in the broad meaning of that word? Sometimes they do. The rather select audience at a tennis match that demands greater expertness behaves differently than an audience viewing a discipline that does not require training. The viewers of elite matches behave differently from mass sports viewers. Sometimes sports lead to highly reprehensible behavior, to the primitive discharge of emotions.

It should not be forgotten, however, that, above all, sports are amusement. They are an amusement with the greatest audience--often many millions--simultaneously following the sports events in front of television sets or radio receivers.

If it is such massive amusement, then certain consequences are associated with it. A sports triumph is a fleeting thing, but at a given moment it reaches millions. When I was in South America in 1974 during the world soccer championships in Munich, what I heard on the streets and on the radio and what I read in the newspapers in Poland--and the names of the Polish soccer players. Along with this, there was talk not only about soccer; to some extent all sorts of information about Poland were published. I do not want to exaggerate this, but for some time, perhaps a half-year or several months, our sports triumph paved the way for an interest in our country.

What I want to call attention to is the promotion possibility, so to speak, of the sports function. This pertains particularly to specific fields of sports identified with the use of specific equipment: car racing, gliding, cycling, etc.

Very frequently in international relations, we have to deal with negative stereotypes. A particular nation is considered to be incapable, not very industrious, disorganized, etc. In certain situations, athletic attainments can lead to breaking negative opinions. If it is thought that Poles on a given team cannot accomplish anything and a soccer or volleyball team plays well, this can lead to some extent to a refutation of that stereotype. Sports do not have to teach love but in certain instances can verify judgments and teach respect and objectivism.

Ryszka: We ought to distinguish clearly between elitist culture and mass culture, with this caveat, that elitist culture people can take an interest in mass culture. The reverse is rarely true. Elitist culture can step down while mass culture rarely rises.

It is necessary to differentiate between foreign policy as the conscious activity of a state and the universal conception of another state. We all transmit ideas on a state about which we know something. With the aid of appropriate arguments, we also want to overthrow ideas existing in another state. As a historian of the most recent times, I know of no instance where this had a positive influence. On the other hand I know of instances where it had a negative influence.

The 1936 Olympiad in Berlin was one of the best organized Olympiads. There was no boycott, no disturbance. Seemingly, there was an atmosphere of brotherhood and understanding: black, yellow, "non-Aryan"--all found a place. The organizers acquired the greatest number of medals--I think it was 2/3--that is, they acquired 33 medals, because there was substantially less competition. What was the outcome of that? The incredible masquerade was supposed to conceal the illegalities behind the facade of that athletic holiday. A French team marched in front of the grandstands with their hands raised in a Hitlerite greeting, something thoroughly registered on film.

Mass culture is based on idols. Frequently, irrational segments prevail. An idol, who is an ordinary scoundrel, is loved. This can be a film star (female)--a drug addict or an alcoholic. It can be someone like Muhammad Ali, who serves various gods, principally mammon. It can be a mercenary machine, like Borg, or it can also be a much more authentic figure like Niki Lauda. The personalities of stars vary.

Thus, it differs from an elite culture, where primarily a product is purchased. The act of creativity is more important than the subject of activity.

Dobroczynski: Perhaps the subject also is important.

Ryszka: That is not so important. Actions are more important than people. However, more frequently national problems and national or group affiliations are included, even if artificial, as in the case of Muhammad Ali. In sports, as a component of mass culture, people are also defined by symbols worn on shirts, although frequently these are advertisements of products that have nothing in common with sports--for example, the advertisement of Gitanes cigarettes in the Tour de France.

An identification that flows from a symbol does not necessarily add any importance to a nation. A nation that attains great triumphs in record-seeking sports can be treated as a nation of acrobats, and not a nation in which confidence is placed because it is politically responsible. The criterion is real, which does not mean that we should agree with a stereotyped division of nations into important and unimportant. The dimensions of the nation, its actual superiorities and power status do not remain in dependence or in symmetrical relation with that opinion.

What convinced me? It was the dualism of opinions, that at times something is treated worse as the product of an elitist culture. This is clear with films. It is almost a rule in films that those films that won awards, are boycotted by the public, while the films that make money, as a rule, win no awards. I know of no instance of a film attaining great fame worldwide and receiving an award at any festival. Instead, films that no one goes to see receive awards.

What is the situation with respect to sports? What is the source of rivalry started at a very high elitist level? Obviously, it is a triumph defined by the measure of the achievement, for which its originators must pay dearly by merciless training from early childhood. A matter that is coming back, and which now is particularly fashionable, is the rivalry of both sexes. I read somewhere that Johnny Weissmuller--later famous for his role as Tarzan--today would not win a place in a ladies' 100-meter freestyle race. What is the result of this? Should women necessarily be encouraged to attain such results? I do not know how to reply, although I am afraid that sports attainments can blatantly swerve from aesthetic principles at a given moment, and then record-seeking sports turn against the conventional notions of femininity. This is how men see it, but it would be better if women expressed their opinion.

Ziemilski: I will propose a certain list for consideration: Fibak, Penderecki, Wajda, John Paul II, Kozakiewicz, Milosz. After September, I would add Walesa. This is a list of persons whose names frequently appear in the columns of foreign newspapers and who create a characteristic "image" of our country.

At one time consideration was given in German sociology as to the basis for the feeling of, for example, Poland or Germany "winning" a match. Why can it be said that we won? Why do we identify ourselves? According to the opinions that emerged, what is involved is identification not only with the success itself but also with the process of the selection and training of the elite. Every society creates elites, thanks to which it can survive: leaders, professionals, creative groups. When a

Polish team wins a match, we half-consciously feel that the mechanism of creating the elite in our country (production, selection, training) functions well. We can be proud of our nation because it was capable of forming such elites.

If we look at the list, then I would partially agree. Actually I would be ready to see proof in Fibak that a Polish athletic family functions well. Insofar as the pope is concerned, he fulfills all values esteemed in our national life. He confirms them by his way of life, views, likings and even his origin. All of this is splendid. The same would in some measure pertain to Kozakiewicz (Polish athletic school), Milosz (a great body of national poetry values, its independence), and so on.

However, does not our inability to create other elites, leaders and managers, simultaneously have an influence on our "image?" the inability of leaders to select groups of dependable people? our inability for good management on a macro- and microscale?

The entire personality context existing in a given epoch contributes to the "image" of a nation in the opinion of outsiders. Sports contribute a kind of note, opportunities and possibilities to that. If, however, a series of other elements disputes this, if it turns out that we do not know how to shape all of the important elite in social life in an equal manner, then the role of sports diminishes.

Our aspirations are culturally justified. Society justifies them. Astigmatism in organizing the economy spoils the image. A nation's varied abilities to utilize various prospects contribute to its image. The problem pertains not to talents but to the possibilities of their development, skill in their utilization and incorporation into nationwide functions.

We know how to incorporate nationwide culture and art into functions, despite the difficulties that we have. We also know sport. There are many other fields that we cannot manage. It would be worthwhile someday to investigate how this "image" balances abroad with respect to those prospects, abilities and their realization.

Ryszka: That "image" is created by transmission. We live in a world of increased, faster and better news.

Here is an example from a few years ago when the propaganda of triumph was beginning. A color film about Poland was made. There were pictures from a helicopter: monuments, the Warsaw Castle, Tatra Mountains, the sea and smoking chimneys. During a Polish national holiday in July, I found myself in Paris, French television showed a film about Poland. In general, the tone was sympathetic. But what did it show, what "image"--in the literal sense of the word? A streetcar with "grapes" is moving, there are queues--smaller ones than now, however--in front of stores, lopsided homes in the capital, people in average or worse than average clothes, the kind of morning crowd that spills from the downtown railroad station. And this is Warsaw "in French." To be sure, the commentator said some smooth phrase about a heroic and splendid people. As for me, I flared up in anger because it sounded like irony. Then I thought, yes, that is how it looks on weekdays, not from a helicopter that selectively chooses images for the camera. And here came an ordinarily spiteful reporter with a camera, who photographed what he saw on the ground. It is no matter; such an image is more likely to win over a forewarned receiver.

Does the addition of stars to this image change anything? Perhaps it does in certain opinion-making circles. But it does not change the basic image. The country looks just as it is shown on television.

Dobroczynski: In general, broad opinion is not shaped on comprehensive discernment but on its elements. What does a model of the GDR mean for the many? As a rule, it means not hard work, and not alienated neighbors who do not know how to establish contact with similarly alienated neighbors. On the other hand, it means several selected, spectacular elements such as market supply and excellent organization. Those are selected elements, not the totality. Frequently, the outside world makes the greatest impression on those segments in which one himself is weak. In turn, many people in Western societies are fascinated with the fantasy of a life whose accessibility is so difficult for them. They are not impressed because someone else also has an automobile. In short, they are seeking some kind of compensation. Can sport be a specific form of compensation not only internally--to cover one's own weaknesses--but externally--to pit oneself effectively against those who demonstrate superiority in so many segments? Who can be impressed in this way? The first indication that one is equal frequently is of a fragmentary character. How is it that a nation generally considered as backward, has substantial attainments in soccer or other sports? Does this lead to the conclusion that, if a given society were organized as well in other segments as in sports, it would attain equally as much as highly developed nations?

Ziemilski: In other words, do you treat sport as information about potential? That potential is very specialized.

Dobroczynski: I am constantly concerned about the first signal, about the fact that suddenly these marginal people feel the equal of Englishmen in a given segment and that they are noticed by the world.

Wierzynski: Bikila Abebe started running while Haile Selassie was emperor.

Ziemilski: But what does "becoming noticed" mean? A long time ago, I collected postage stamps. I noticed the French Ivory Coast colony because I had stamps with a picture of an elephant. That is the experience of many people. An entire ideology of philately existed. I would like to see the difference here between sport and philately.

Dobroczynski: Sports are an attempt to compare national qualities. A true athlete of Kenya is compared with an athlete of Great Britain. In postcolonial philately, stamps designed by Europeans and printed in Europe dominate. That is the difference.

No group in any field appears officially as the representative of the nation as a whole, not in science, culture or technology. On the other hand, a soccer match advertises itself as a meeting of Poland versus Italy. That means a Poland as a state and as a community against an Italy of the same type. However, in actuality, 11 Polish boys play against 11 Italian boys. And I have not been aware of any protests to date that this is not Poland but 11 men whom some association selected. Broad identification with the nation and the state takes place on both sides.

Ryszka: This is a contribution to the history of symbols. That is how states and state cultures developed.

Dobroczynski: Exactly why does it develop in sports?

Ryszka: Sports were convenient for that purpose. Sports inherited it from the history of tournaments.

Ziemilski: Let us recall Stanislaw Mariusz's jump from Montelupich prison in Krakow in 1940 and think of the strange connections between a (ski) jump at Krokwia, gliding for abstract purposes, and the jump to save life, a battle jump. This type of symbol is easier where physical activity comes into play. Sports have that tough biologism, the authenticity of existence. But it is equally easy to overinterpret this.

Wierzynski: Do sports bring nations together? I have a hypothesis to propose: At the international level, sports depend on various circumstances, or simply on political manipulations. On the other hand, on a personal or interpersonal level, sports create opportunities for close relations. In short, we meet our colleagues and we strike up friendships.

Ziemilski: This fits the thesis that if a shoemaker from New Zealand meets a shoemaker from Guatemala, there is a common subject pertaining to shoemaking. Despite everything, sports are something a bit higher than this.

Wierzynski: I agree.

Ziemilski: This would create the impression that sports are a kind of community of quasi-professionals, and sometimes entirely professional interests. However, it is a little more.

Wierzynski: Let us return to the role of sports as a specific instrument of international relations. The boycott of the last Olympiad by the United States did not attain the intended goal, which was lowering the status of the games primarily in the eyes of the Soviet society and to affect Soviet pride. The absence of a series of serious contenders could simply strengthen that society's feeling that "we really are strong" and that the Americans did not come because they were afraid of defeat.

Ziemilski: However, it was not so. The absence of the Americans weighed heavily, it touched the entire Soviet society. I was there, I had contacts with various friends in Moscow. It is not true that the boycott did not affect them, or that the absences in the march past (the grandstands) was unnoticed. This gesture did touch them.

On the other hand, it was an inconsequential gesture because many Western countries were represented and also because, in some measurable sports, as being important as never before. In the end, the Americans did not forbid American tourist travel to the Soviet Union. The government did not exercise pressure on scientists or authors--just sports.

Ryszka: We need to consider when the problem of state identification first existed in sports. The institution of traditional, national and folkloristic symbols is a new thing. The Polish national anthem was introduced between the world wars; previously there was no occasion for it. But other national hymns were also introduced

rather belatedly. There is, of course, a parallel "channel," when people of various nations meet, when no one identified himself with a nation but only with himself, that is, his group. This "channel" is older. The history of the organization of sports fascinates me. Which came first, the sport club or national representation? And which is more important?

Ziemilski: In England, probably the club came first.

Ryszka: England is the fatherland of sports, and sports had social roots. Rugby is a simple game, soccer is more complicated. But actually rugby was first adopted as a game by an elegant group of sportsmen. Soccer arose in labor centers in Germany, Poland, Belgium, Spain, Austria, Hungary and Czechoslovakia.

Every identification has significance. If there is a national identity, politics has already made an appearance. If you dress soccer players in shirts and play the national anthem, then naturally the public sees a rivalry between nations in the match. Everyone says without thinking that "we gave the Germans a thrashing" or "that was a Polish-English battle at Wembley," etc.

Dobroczynski: At one time pedagogues said that it is better if people fight in the ring than with knives. Should sports in this sense also be considered as a form of compensation?

Ziemilski: After the famous match at Wembley, I read a commentary in a West German publication that consisted of one sentence: "What did not succeed for the Great Armada or Napoleon, and tripped Hitler, was accomplished by a certain Domarski emerging and submerging again in a sea of forgetfulness." We are inclined to overstretch English katzenjammer, which supposedly encompassed only certain spheres. I do not know if all Englishmen knew that there was something like that at all.

Dobroxzynski: In an international sense, it is not just matches, it is also the so-called demonstration effect. In less-developed countries one accepts certain cultural forms of more highly developed countries, and perhaps vice versa. More than one sport, for example, badminton or turf hockey, was taken over from less developed countries by more developed ones. Thus, sports can be some kind of a factor leading toward equalization, a life style, a way of self-glorification, organization, form of action, adaptation. People in highly and weakly developed countries, more or less equally, want to get organized and trained and to observe the rules of the game in order to attain comparable results. It may be that these traits are subsequently carried--subconsciously--from the sphere of sports to other fields. Has that been studied? Can anything be said on this subject?

Ryszka: Today's record-seeking sports demand heaps of money, and only record-seeking sports can create models.

Dobroczynski: I am concerned with the second stage, the long-range cultural consequences.

Ryszka: People have to see that at the stadium. Very poor countries like India can afford a good turf hockey team. The team will beat others and eventually be heaten. Will people viewing this in stadiums be able to emulate the team? Will they

themselves play, or will they behave as if they practiced sports? They will do neither the one nor the other. Receipt does not evoke repercussions. I repeat: There are no dependencies.

Dobroczynski: It is not the moment that is concerned. What is concerned are changes observed in life style, aspirations, discipline and society's interests.

Ziemilski: Look at student discotheques, see what they are like in America and in Poland. Some types of activity are identical, taken over, remodeled. The discotheque is an excellent example. If you examine the type of action, relationship to improvement, attitudes toward work, it must be acknowledged that sports do not have a great influence.

Dobroczynski: But do they have any kind?

Ziemilski: Yes. Sports have the kind that assures that a soccer player who is trained in the Polish soccer school and goes abroad has identical technical elements as others. However, the way he works, acts, improves himself and his attitude will be different.

Dobroczynski: Many of the consequences of international sports contacts still remain an area of unfinished studies. Many extreme opinions are still held, not only exaggerated ones but also those rejecting the positive consequences of the development of this sphere of international relations. I would side with those who see substantially more social benefits than losses resulting from international competition in the field of sports; however, the matter certainly demands comprehensive studies and cannot be adequately explained via impressions.

I have several observations on the political aspects of this issue. No one negates that sports--in the intrastate as well as interstate dimension--remain the domain of policy, whether one likes it or not. A policy is conducted in various forms and with varied intensity, aimed at various goals--but it is policy. It is sometimes aimed at raising spirits to compensate for one's own weaknesses and at times aimed at an overall increase in the country's prestige in the international arena. And in some instances, it is interested in very clear, concrete results. For example it can be aimed at compromising and isolating political adversaries from the international community (the policy of many world states against South Africa or Chile, the position of the United States toward the Moscow Olympics, etc.) or attaining integration goals, such as those of close relations with African or Asian countries through regularly organized continental games, bringing allied armies closer together through organizing periodic championships, etc. Sports can also constitute an instrument for breaking up various systems and types of barriers between countries, if only to mention here the noisy ping-pong diplomacy, as well as the Balkan games, and other events of this type. Finally, if sports facilitate society's integration, that phenomenon also, of course, has international dimensions and international significance, which surely influences the balance of power in a modest way. Sports under a national flag prevent cosmopolitanism better than they favor nationalism. Perhaps this is a pertinent thought, although it too must be subjected to verification in time as well as space, just as the other effects of an international sports relations policy.

MARXIST PHILOSOPHY IN THE MODERN WORLD

Bucharest ERA SOCIALISTA in Romanian No 13, 5 Jul 81 pp 21-22, 44

[Article by Radu Florian]

[Text] We do not feel that a philosophical and social-political work exists in the history of culture whose imprint has marked a century of history with such vigor as Marx' works have done in our century. The main transforming processes which irreversibly changed the direction of man's history and the political map of the world were and are linked with Marx' works. Also they were and continue to be in the center of the most important and significant theoretical confrontations of the age, rousing more than a few various, often divergent interpretations accompanied by big bitter disputes as well as true streams of hope and innovative searches as well as furious and fanatic adversities.

A future historical goal of the spirituality of this time, the watershed between two directions of social development, cannot help but find that the overall ideas and values worked out by Marx and Engels, implicitly or explicitly, have been the reference system for the most impassioned ideological conflicts of the century, while, in a mediating way, the source of the varied ramification of non-Marxist currents.

For that reason one may state that the decisive influence of Marx' works on this age, sometimes plain and sometimes less visible, but no less constant, is one of the "keys" to deciphering the history of our age, in which man has seen heights but abysses which were hard to imagine before.

That is why to understand our own time, with its contradictory happenings, means, among other things, to know the entire diversity and wealth of ideas of Marx' thought.

The assertion may seem to some people forced and presumptive, since an idea being broadly spread today and maintained by many adherents of bourgeois ideology claims that we no longer can find out anything new about Marx' thought and that all its secrets are more than well known. This viewpoint feels that Marxism, having been a process of the 19th century, no longer has anything or almost anything new to tell us, those who are going through another period of history with many specific problems, to which Marx could not have found an answer.

Two primary facts are forgotten in making this assertion: the first, that the most important scientific discovery of Marx, which made possible all the other ones, is his philosophy. Although worked out in its basic outlines in the 19th century, it

uncovers, through the overall determinations of social existence, the methods for scientific knowledge of the various stages of human history, from the past as well as from the present. Other facts were added to the ones known in the last century and they, however, have confirmed all the theoretical grids formulated by Marx and its nature as an objective truth, a permanent tool for knowledge. It should be noted that the accumulations from various branches of science, including the true information explosion of the last four decades, did not question the of Marxist explanation but merely brought out the need to increase its degree of suitability.

A second basic fact, not taken into consideration from the viewpoint mentioned, is that despite the many changes which occurred in the presentation of history in the 20th century compared with that of the previous age, the determining features of the capitalist system and its social reproduction have remained unchanged in its broad lines or, using a current term,have demonstrated unchanging. For that reason, aspects of the need to replace capitalism with a new society, the socialist one, as well as some of its notes uncovered by the creators of Marxism retain their complete viability today, also. A relevant proof in the regard mentioned is basically the varied phenomena of crisis, from economic to spiritual, in modern capitalism--which not even its apologists can deny any longer--as well as the political trends and movements aimed to changing the world in the direction of socialism.

Another element, most times overlooked, must be added to this and that is the degree of communicability of a philosophical and social-political work with a historical era depends on the thoroughness of its knowledge, of the discovery of its many aspects. Without any exaggeration, in my opinion, one may see that a long road still has to be travelled until the full scientific exegesis of Marx' work.

Many cases, which we mention merely in passing, have contributed to the creation of this situation: the late publication, in our century, of some of Marx' primary works, such as "Economic-Philosophical Manuscripts of 1844," "German Ideology," written in collaboration with Engels, "The Bases for Criticism of Political Economics,"without which his works could not have been studied in their totality and for that reason some of his ideas could not be discovered in their original grid, even in the last decades of the last century, establishment of a positivist and economistic interpretation of Marxism as a result of failing to understand the specific original nature of the thought worked out by Marx and Engels, a fact which placed its imprint up until today, being admitted as the only authentic one; the domination of dogmatism for a period of time during the 20th century, which underestimated the importance of a scientific, critical study of the ideas of Marxism on the basis of Marx' and Engels' original works, in exchange, frequently being a vehicle for theses lacking coverage in their texts. An analysis of Marx' and Engels' works involves utilization of scientific-critical methods intended to discover the diversity of formulations of an idea and to compare them plus disengaging the permanent components from the accidnetal, circumstantial ones.

It is an illusion that a simple reading of a Marx text permits a critical identification of his ideas and their originality and significance in the field of philosophy or social-political thought.

Reciting a work by Marx in the spirit of scientific-critical methods leads not only to broadening the area of communication with it, that is, to uncovering a contemporary Marx of a much greater wealth and depth than that accredited two decades ago, as well as an understanding of its historic destiny, a cardinal problem for the life of many generations in this century, which is nearing its end.

The discovery of initial and original Marx works and the return to the source of Marxist thought are an obligatory condition for understanding the real features of the various political currents formed in its field and facilitate a study of their path, elements for theoretical development and practical opening as well as the way in which simplistic and ecclectic interpretations joined with practices which were either wrong or even deforming.

This direction of research is all the more necessary since an extremist viewpoint--that of the so-called "new philosophers" but also shared by many others--attributes to Marx the theoretical responsibility for the breakdowns in operation, deformations of all kinds recorded in the transition process to the new system, since it did not interpret any eventualities and risks of the dialectics of this process and the means for avoiding them. Through a subtle ideological manipulation, ,it is sought to bring on what at another time I would call the "guilt complex" of all those whom the thought of Marx filled with the socialist ideal and guided their political action.

The subject, in the forefront of many current analyses and controversies regarding Marxism, is too broad to discuss here in all its scope. We shall illustrate just several ideas which I propose to bring out some of the less known aspects from Marx' works but, at the same time, ones which are deeply significant in their contemporary nature.

At a time like right now, when efforts are being made in Europe to bring back into circulation some "philosophies of existence" as the nucleus for a new existentialist metaphysics, a special mention should be made of the fact that Marx is the creator of a highly original ontology replaced basically by a metaphysical and scholastic materialist vision of the existence of reality.

Concisely, the idea of Marxist ontology consists of conceiving of existence in general, man's existence in particular in terms of the special features of relations between men and not as a metaphysical antithesis of matter and spirit. Thus, Marx early arrives at defining the human existence by "praxis" and, within the framework of its form, by practice in particular, that is, by its permanent self-production at all levels of manifestation. This particular feature becomes intelligible only included in and in proportion to the objective existence in its totality. If such an existence would not exist, it would not be possible to create an objective human reality, either, indisputably proven by the historical evolution of the human species or the independent manifestation of man's spiritual state.

These ideas initially expressed even in the "Economic-Philosophical Manuscripts of 1844" have only been capitalized on only partially as landmarks of Marxist ontology (philosophy). Three of them, through their openings and resonance, deserve to be recalled in this framework.

A first statement establishes that "man is a generic being and not only because both theoretically as well as in practice he makes race--both his own as well as that of other things--one of his goals as well as because he behaves before himself as a person of the current, living race, a person of universal being, thus free." The characterization of man as a generic being (existence), implicit in the above lines, is explicitly explained in the following. "The practical creation of a world of objects and the processing of nonorganic nature are the self-assertion of man as a conscious generic being, in other words, a being who sees in race his own being or who sees a generic being in himself. For that reason, precisely by processing

the world of objects, man asserts himself for the first time as a generic being. Due to this production, nature appears like a work of his and a reality of his." Thus, man is a generic being, since by processing nature and its objects, he creates an objective reality of great differentiation--which exists as race--and because he sees in his own existence as a race his essence, from where the result is also the overwhelming dimension of his spiritual creation, forms for manifestation of subjectivity and the works it gives birth to.

The third statement from this same work, completing Marx' concept of existence, states that "the nature which develops within the framework of human history--this origin of human society--is the real nature of man."[1] These statements represent the true rupture between Marxist ontology and the previous or later ones, the non-Marxist ones, which should be the beginning for presenting his authentic form. They mark the substantiation of ontology on foundations of scientific knowledge, outlining a direction of great euristic productivity, still not developed today, in the diversity of multiple aspects which it contains.

This direction, thus, is clearly different from the one of the philosophers of existence who, by restricting existence (being) to that of man alone and only to his exclusively spiritual hyposthasis, cultivate a subjectivist and reclusive orientation, inherently arbitrary and transcendental, but not lacking in a clear ideological transparency, at least in some of his representatives.

Also, the rationalist and scientific articulation itself of Marxist ontology is the one which causes dissatisfaction and reticence among those who do not feel that knowledge is the single grounds for revealing the ontological and his determinations.

Another characteristic direction for the modern controversy about Marx' works refers to his contribution in defining the values of democracy in general and the socialist values in particular. In this regard one must observe the insufficient knowledge of and capitalization on Marx' role as a theoretician of democracy, both with regard to an analysis of aspects of exercising popular sovereignty and the mechanisms of working out political decision by the action of social collectives as well as with regard to the attention given to the individual as the central value of democracy and his creative assertion.

So, in one of the works of his youth, "Contributions to a Criticism of the Hegelian Philosophy of Law," in which he produces a break with Hegel's political thought, without any ambiguity Marx shows his choice for democracy, his method for conceiving of it as an expression of popular self-determination: "In democracy the state system itself appears merely as one of the determinations, that is, the people's self-determination. Democracy is the resolved enigma of all forms of the state system. Here the state system is continually reduced to its real basic nature, to real man, to real people and asserts itself as his own work."[2]

Marx' option for democracy is based on considering it as a work of the people themselves, in direct and indirect forms as an antithesis to the bureaucratic state, whose methods of exercising power, defended by Hegel, subject them to sharp criticism.

1. K. Marx, F. Engels, "Writings From Youth," Political Publishing House, 1968, pp 554, 556, 582.

2. K. Marx, F. Engels, "Works," Volume 1, Political Publishing House, 1960, II Edition, p 256.

Bureaucracy represents "the state's awareness of itself," "will of the state," "power of the state" as a corporation. The state must be a corporation and,as a result, an exclusive, separate society, in the state. Even for a non-specialist in an analysis of Marx' texts, the formulation is required through a criticism of the idea of the state as the power resulting from the society and over it. It illuminates the fact that the bureaucratic state is one of divine authority exercised in a corporative spirit. "The spirit of the state, if it is known by everyone, as well as the state feeling appear to bureaucracy as a treason of its mystery. As a result, authority is the principle of science and divine authority is the sentiment of it," which is expressed in the fact that "general matters are carried out without being real matters of the people. The people's real matters are carried out without the people's intervention."[1]

These ideas would be taken and developed by Marx during an analysis devoted to the first historical form of a socialist state in the world, the Paris Commune. Marx conceives of the socialist state as a "true self-governing," as an organism in which exercising of the central jobs of the political leadership cannot lead to the placing of its followers over society so that they continually are subject to effective checking. Public jobs would cease to be private property any longer, conferred by the central government on its people."[2]

With regard to Marx' emphasizing the individual's role as the central value of democracy, it is enough to recall just several of his theses. Even in the "Economic-Philosophical Manuscrip s of 1844" Marx rejects as unfounded the opposing of society to the individual, a viewpoint which may lead to the cult of society's political institutions in relationship to the individual's rights and freedoms. The idea is all the more precious since even this work formulates the thesis of the social determination of the individual, which brings out that the two levels cannot be confused, that the social determinism in which the individual is included cannot be an argument for minimizing him , for underestimating his area of manifestation. By guessing some of the dangers which could appear in planning this component of social relations, Marx called it rudimentary that a future society which denied man's personality would exist. Continuing, the text states: "Rudimentary communism is just accomplishment of this leveling trend, proceeding from an imagined minimum. As little as this eradication of private property is, a true approach proves to us precisely the abstract denial of the entire world of culture and civilization and the return to the unnatural simplicity of the poor man lacking needs, who not only has not overcome private property but has not even arrived there yet."[3]

The idea is not in the least accidental. It returns in one of Marx' and Engels' books of 1873 which, commenting on some anarchist texts which outline a social organization which regulates on the basis of military discipline up to the smallest detail, the behavior of individuals without taking into account the need for their free development, categorically observed: "An admirable example of barracks communism!"[4]

2. K. Marx, F. Engels, "Works," Volume 17, Political Publishers, 1963, p 627.

3. K. Marx, F. Engels, "Writing From Youth," p 574.

4. K. Marx, F. Engels, "Works," Volume 18, Political Publishers, 1964, p 425.

The fact that Marx and Engels wrote in "Manifesto of the Communist Party" the thesis that socialist society must represent "an association within whose framework the free development of each person is a condition for the free development of everyone"* shows once again the attention they gave to achieving this aspect of the future of society.

Another direction in Marx' works which is of profound modern interest is the one which brings out that aspect of building the socialist society is in accomplishing the leap from social and in ividual alienation to disalienation. The process is guessed at in many of their own elements, from having society take over its dialectics in achieving a democratic planning of social relations and choices for their operation to the change in appearance of activity and training of society's members with a view to their participation in all the processes of society's leadership up to the leap of the people's transformation with the goal of social operation and development, of their involvement in exclusively and directly creative activity. The development of socialist society in Marx is indissolubly linked with the progress of disalienation, while this is not an automatic phenomenon but means cultivating and making objective the values of total humanization of social relations.

All this shows that Marx' works not only cannot be considered in any way responsible for the accidents which have occurred in the historical process of creating the new system but, on the contrary, one may find the conclusion--even without going further with the analysis--that they to some extent are due to failing to understand and to carry out some of the landmark ideas in Marx' works.

This conclusion appears as a central argument in the need for the current recital of Marx' works and of a scientific and critical reading which, without making them absolute in any way, without making them sacred, should lead to a fertile enrichment of their dialogue with modern spirtuality. Of course, the transition from a philosophical or social-political idea to practice is not a simple process, since a philosophical idea is not of a normative nature and does not necessarily indicate the mediated links in the technique for carrying it out. A specialized investigation is needed for each package of ideas with a view to working out techniques for action intended to provide adequate implementation of them.

Of course, a reading of Marx' works does not in any way mean falling into another extreme idea as if it would cover the ready answers to the diversity of questions and problems of our time, which, even as an hypothesis, is a theoretical and political impossibility. For that reason, a reciting of Marx' works in order to be productive must be combined with research, in the spirit of it, into the problems of our century, a working out of solutions which correspond to the demands of the current stage of development of society and the complex modern social problems so that , in turn, they mark a new page in the history of human knowledge.

SIGNIFICANT NEW CONTRIBUTIONS OF ROMANIAN ARCHEOLOGY

Bucharest ERA SOCIALISTA in Romanian No 13, 5 Jul 81 pp 28-30

[Article by Dr Radu Harhoiu of the Institute of Archeology in Bucharest]

[Text] The problems of social-political and economic life on the territory of our country at the beginning of the first millen um, particularly during the period following the withdrawal of Roman authorities to the southern Danube,were studied in detail decades ago. Traces of uninterrupted inhabitance were found in the space which always belonged to the natives and independent forms of their existence were stated precisely under the harsh conditions created by penetration of the migrating populations into the Geto-Dacian hearth. On the basis of many archeological discoveries made in the years of socialism, it also was possible to outline aspects of the relations between the natives and the migrators, with important contributions being made to an understanding of the Dacian-Roman continuity in the Carpathian-Pontic-Danubian area and, indirectly, to an explanation of these interdependent complex phenomena at the European level.

Whereas in the years of socialism, research into our people's past achieved important progress, however it is no less true that there still are a number of gaps in the scientific information accumulated. This in particular is due to the momentary stage of research, that is, to the fact that all the sources existing on the territory of ancient Dacia could not be explored exhaustively or that, in some cases, all the conclusions which can be drawn from the material research were not drawn. For example, few people know that the first archeological sites in Romania dedicated to researching some of the basic aspects of the Romanian people's story were opened only toward the end of the 50's or that only in the last decade was sustained activity reached at other similar sites, which meant that the number of archeological complexes would reach more than a hundred discoveries about the 3d-7th century A.D.

The colloquium of researchers in the area of the country's archeology and history during the period of the first millenium, which took place in Tirgu Mures between 16-19 April 1981,with the subject "The Continuity of the Native Population in the Carpathian-Danubian-Pontic Area and Its Relations With Some of the Migrating Populations," concentrated its attention on five big subjects concering the demographic realities of deep significance which existed in that era on the territory of our country.

A first subject discussed was the continuity of the native population on the territory of the former province of Dacia in the 6th century. An important element in the "file" of this subject was the analysis of written information on evacuation of the province of Dacia (271-275). A critical examination of the literary sources

led to the conclusion that the sources should not be interpreted "ad litteram." They present the event from the viewpoint of the Roman imperial ideology, which was seeking to justify the abandonment of Dacia as a political act demanded by the situation of that time, which would have led to a total evacuation which would not have abandoned the inhabitants of the province to the barbarians. Actually, merely a partial abandonment took place, with only the authorities, army and part of the urban population leaving the province. There are no indirect sources (edicts, laws, inscriptions) or archeological documents proving the actual exodus of the population and, as a result, a massive demographic increase to the right of the Danube at that date, which would have had to occur if a "total" evacuation had taken place. When such an event is produced, a classic example being the move of the Visigoths to the right of the Danube in the year 376, the sources of the era record it promptly and with a wealth of details.

Proceeding from these observations of domestic criticism of written information, the problem was posed of to what extent archeological research reflects this picture or not. A direction of the investigation was guided toward an analysis of the activity of the former urban centers of Dacia. In most of these centers researched until now, it was possible to find a habitat on the path of ruralization of the local population. For the time being there are rather few of these results, since in the case of older research it was preferable many times to follow the imposing Romanian complexes to the detriment of this fragile place, one which was of capital importance for us. So, an orientation would be needed predominantly of the archeological research in the urban centers toward the habitat characteristic of the 4th century. The results existing until now--from Apulum, Sarmizegetusa, Potaissa, Napoca and so forth--must be studied more thoroughly, completed and corroborated.

In exchange, a research and analysis of the settlements in the rural environment permitted a clearer understanding of the continuity of the Roman provincial population both in the old settlements as well as some established following abandonment. We have available a quantity of informative material, richer and richer as the days go by, which permits the formulation of sometimes more circumstantial conclusions. But in order to explain this facies in all its complexity, it would be useful to have the existence of annotated catalogues of the discoveries (settlements, burial places, isolated discoveries, coins, paleochristian pieces and so forth) between the year 275 and the end of the 4th century, comprised according to international scientific standards. Only in this way will this pertinent information become accessible to the scientific world and can it become convincing. Also it is clear that archeological research would gain if it would direct more attention to the habitats with their complex problems, giving up minor and disseminated investigations.

An element of major importance in defining the customs of the native population in the former province of Dacia in the 4th century is the funeral rite and ritual. In the current stage of research one can document the continuing use of former provincial necropoles (for example, Cluj-Napoca, Turda-Potaissa). On the other hand, it was possible to identify and define the burial customs of the population from the rural environment, as illustrated to a large extent by the necropolis No 1 in Bratei. The information obtained in these two cases can be made complete by making the research more thorough and extending it to other regions in Transylvania and Oltenia. At the same time, the need is felt for more fine methods in order to individualize the rite and ritual demonstrations characteristic of the population which, actually, had burial customs at that time with harmless funeral catalogue but which differ from the funeral rite and ritual of the migrating populations. This objective situation is not limited just to the former province of Dacia but is a general European

phenomenon caused, among other things, by the transition to Christianity by the populations in the provinces of the empire.

Significant aspects on the continuity were revealed in Banat, where archeological discoveries confirm that the late Roman fortifications continued to operate a long time along the Danube and where monetary circulation proves an intense economic life by the large quantities of bronze coins used.

Also, in Oltenia, fortresses along the Danube continued to be used until the first decades of the 5th century. Then following a short period of interruption during the 5th century, they were repaired and used in the first half of the 6th century. This state of affairs proves the political-economic position of the Roman-Byzantines in the first half of the 4th and first half of the 6th centuries and their determination not to give up the Danube or the territories belonging to it along the left bank. One of the effects of this situation was the fact that--even if for short intervals--the locals from the former province could regain sociocultural contacts with the Roman-Byzantine population on the right Danube, which permitted to a certain extent a strengthening of their difficult position. With regard to Oltenia, although research of the territory still is at its beginnings, it can be affirmed that the results of archeological investigations in Locusteni-Gropani and Gropsani-Olt have permitted identification of the cultural characteristics of the native population in the 4th century.

A second big subject discussed was the continuity of the native population of Moldavia and Muntenia in the 4th century.

As we know, as a result of the Goths' movement toward the regions in the northern Black Sea and from the Lower Danube at the end of the 3d and beginning of the 4th centuries, an apparently united culture in its general features was born over an extended area between the Olt and Dnepr; however it was not nited in a number of particular aspects: the Cerneahov-Sintana culture of the Mures. One of the basic problems concerning us in this framework is the contacts and relations between the culture mentioned and the culture of the free Dacians, in the case of the Carps, dating mainly in the 3d century. Although in a number of archeological situations somewhat of an interruption was observed in the cultural evolution during the 3d century (which in a certain stage of research permitted the hypothesis of a cesura of residence) today, following accumulation of new discoveries and, at the same time, use of a more improved working method, it has been possible to show the continuity of indigenous demonstrations and even more, some typical local customs within the culture of Sintana de Mures. In other words, at the moment, besides the Gothic and Sarmatic composition in the particular demonstrations of this culture, a clearly native one also is formed.

Undoubtedly, publication of the two big plots of recent discoveries will contribute to a broader and more complex knowledge of this mixed cultural facies: the Carpic necropolis with around 650 graves in Valeni (Neamt County), dating to the 3d century, as well as the vast necropolis with its settlement like Sintana de Mures, from Valea Seaca (Vaslui County) from the 4th century. In this way, the permanence of the Dacian-Roman element in the particular period, currently proven in particular indirectly through the presence of ceramics attributed generally to the free Dacians, as, for example, the Carps, can be demonstrated on a much more solid documentary base. A certain type of ceramic or object restricted zonally cannot offer sufficient foundation for an ethnosocial determination. A well-based analysis of

various types of customs (costume, burial), of cataloguing and so forth can lead much further. From this viewpoint, the two necropoles and the settlement mentioned are an inestimable treasury of information.

The discussions also analyzed the characteristics of the culture of the free Dacians in western Romania. Many archeological discoveries made in this zone of the country, particularly the complex at Mediesul Aurit (Satu-Mare County) has permitted a much more exact definition of the population mentioned. The appearance of elements characteristic of the Przeworsk culture during the 3d century are integrated into a general phenomenon characteristic of the zone from the middle Danube, the cause for which should be sought in the disturbances of certain ethnic groups caused by macromanic wars. It is important that the Germanic elements penetrating our land do not affect the cultural background of the free Dacians; on the contrary, they had a contribution not lacking in importance over the demonstrations within the Przeworsk culture (for example, the introduction of the potter's wheel in the second half of the 3d century).

A third big subject for the colloquium in Tirgu Mures referred to the Sintana de Mures culture, attributed years before to the Goths. Clearly it has resulted that various types of customs (costume, forms of rite and ritual) as well as various forms of housing reflect a polyethnic culture, a fact also proven by the ancient sources. In a monograph dedicated to the history of the Goths which appeared recently ("Geschichte der Goten," Munich, 1979), the Austrian professor, Herwig Wolfrom, shows very convincingly that the different versions of the Gothic nation (Gutons, Gotitervings, Greutings, Visigoths, Ostrogoths) actually are stages of migration accompanied by phenomena of aculturation in the immigration areas, where a determining role belonged to the native populations over which the Goths settled. Within this broad and diverse process, the role of the native Dacian-Roman population, in this case from Moldavia and Munteia, takes on particular importance.

With regard to the period of demonstration of the Sintana de Mures culture, the conclusion has been reached that the earliest stage may be established around the year 300, while the higher chronological limit corresponds to the last decades of the 4th century. At the same time, it has been defined that the area of spread of the particular culture does not affect Oltenia (Lower Dacia), while with regard to the intra-Carpathian Dacia its penetration may be determined only in the second half of the 4th century, with this not changing the cultural background of the local population.

After the end of the 4th century, it is possible to record the continuation of certain cultural aspects related with the Sintana de Mures culture but which, through their internal structure, may be attributed to a great extent to the Roman population.

The continuity of the natives' housing in the 5th century established the fourth big subject discussed. Throughout central and eastern Europe, the penetration of the ethnic congolomerate headed by the Huns caused serious ethnic disturbances. Archeologically, the situation in the zones mentioned is carried out by a considerable thinning out of significant traces. Except for some complexes attributed to the Huns or Alano-Ostrogoths,the other discoveries are few and hard to decipher. Clearly, this general archeological situation also to a certain extent has been expressed on the territory of our country. Yet, recently, both in Transylvania as well as outside the Carpathians, a number of settlements have been identified recently which date either to the end of the 4th century and beginning of the 5th century or toward the end of the 5th century: Bratei (Sibiu County), Sighisoara (Mures County), Soporu de Cimpie (Cluj County) in Transylvania; Ciresanu and Tirgsor (Prahova County) in Muntenia; Costisa (Neamt County) in Moldavia. The still small number of these

discoveries cannot be interpreted automatically as a result of a historical reality, since, undoubtedly, in many regards it reflects the current stage of research. Links between the complexes which can be dated to the beginning or to the last decades of the 5th century will be able to be found in the future through rsystematic investigation. An important step forward thin the problem concerning ius can be made by intense research of microregions, characterized by intense housing. Promising prospects are seen in Tirgsor and Budureascar (Prahova County) in Muntenia, Bratei or Sighisoara in Transylvania and Davideni (Neamt County) and Costisa in Moldavia.

On the other hand, certain relations between the cultural heritage of the 4th century and that characteristic of the 6th century show that the native Dacian-Roman element was present without interruption in the zone mentioned. Publication of the results obtained following digs done in various archeological complex in this age can lead to more solid conclusions on the aspects mentioned.

Another big subject for the colloquium was the continuity of the native population in the 6th-8th centuries.

The results of archeological research in Transylvania, along with identification of Germanic archeological complex (necropoles and settlements), have permitted definition of various forms of ethnocultural demonstration of the Romanized Dacians even in the residences attributed to the Germanics, as proven graphically, among other ways, by the Moresti archeological complex. Also, the demographic rise found in the first half of the 7th century (the number of graves nearly quadruples) may be explained only by a greater archeological expressiveness of the local residents, as an effect of living together and mutual influences between the native and migrating populations. A similar phenomenon also is found in other former provinces of the empire (Gallia, Germany). Appropriate utilization of the results of the research done within the necropoles in Bratei and Noslac (Alba County) as well as picking up the research at the Unirea necropolis (Alba County) again will make important statements on this problem.

With regard to the penetration of the Avars into Transylvania, the conclusion has been reached that they were able to settle approximately around the year 680 and only in a region restricted along the middle course of the Mures.

An important observation which may be made on the basis of our current knowledge on the period of the 6th-7th centuries is that a number of phenomena on the outer Carpathian territories were produced which were similar to those in Transylvania and that these phenomena, against a common ethnic background, are related to the ethnocultural demonstrations appearing in the zones mentioned even in the 5th century.

During the current stage of our information, we do not know one habitat in Oltenia which could be attributed to a migrating population during the 6th century. The few foreign discoveries are totally isolated and refer to the 7th century. Important research from Craiova, in the Facai and Fintina-Obedeanu zones as well as the ones in Gropsani-Olt present forms of the cultuere of the local population and its ties with the Byzantine Empire during the 6th-7th centuries.

The research done in recent years in Muntenia and Moldavia has brought out the originality of the forms of archeological expression of the local population's culture.

Digs from Budureasca,Tirgsor, Baleni-Romani (Dimbovita County), Sima (Prahova County) and Dulceanca (Teleorman County), in Muntenia, Davideni, Suceava-Sipot in Moldavia d cument a chronological level specific to the 6th century, characterized, among other things, by an advanced pottery-making technique, the practice of the craftsmen and of agriculture. This cultural facies is clearly different from the forms of archeological demonstration of the Slavs from the upper Dnepr, culturally very different. The first demonstrations of Slavic culture in their primary form are found on the territory of our country toward the second half of the 6th century, while more certain dating is restricted just toward the end of that century. This situation, for example, is also found in Poland. Together with rise in the elements of culture characteristic of the Slavs, a cultural regression also is observed.

Participants in the Tirgu Mures colloquium gave special attention to the results obtained in the station of Sighisoara-Catunul Viilor. Here, on the right bank of the Tirnava Mare River, immediately neighboring on the municipality of Sighisoara, a native settlement very probably from the last decades of the 3d century has been found. In other words, not much after the province of Dacia ceased to be administered by the Romans. Inhabitance on the same spot also continues in the 4th century, then in the next century and does not interrupt even in the period of the 6th-8th centuries. The 60 archeological complexes discovered until now (homes with ovens or hearths, household pits and so forth) together with their remarkable inventory bring new and important information to the documenting of the phenomenon of the continuity of the Dacian-Roman population. This successive inhabitation throughout the 3d-8th centuries is in a rich zone of discovery from the period of formation of the Romanian people: Just 30 km downstream on the Trinava Mare is an important inhabitation of Bratei, while field research in the area of Sighisoara has identified inhabitation in the period which concerns us. In this way, the Sighisoara microzone seems to be, in Transylvania, one of the most important areas from the period of formation and crystalization of the Romanian people, currently being the subject for broad interdisciplinary research. This research must take place at the broadest possible level by attracting a greater number of specialists. In general it should be stressed that the complex microzonal research is able to offer us a clearer picture of the phenomenon of the continuity of the natives. Due to the increase in population and system for cultivating the land or other economic reasons, the settlements from the 3d-8th centuries are characterized by a certain mobility within a microzonal stability. From this viewpoint, the realities from the Sighisoara zone seem to be relevant.

The documented reports and discussions carried out along with them during the Tirgu Mures colloquium certainly have made important contributions to bringing out important aspects in the history of the Romanian people, to a more detailed knowledge of their various relations with certain migrating populations. Proceeding from the results obtained and with the goal of deepening the scientific research of the country's history, it was decided to organize other discussions on the Carpatho-Danubian-Pontic area in the period of the 4th-8th centuries, discussions to take place in the future.

KOSOVO LEADER VLASI INTERVIEWED ON CAUSES OF CRISIS

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croatian No 1598, 16 Aug 81 pp 8-11

[Interview with Azem Vlasi, president of the Kosovo Provincial Conference of the SAWP, by Aleksandar Novacic; date and place not specified]

[Text] Azem Vlasi, chairman of the Kosovo Provincial Conference of the SAWP and until recently a member of the Kosovo Provincial Party Committee, a lawyer by education, was born in 1948. Vlasi is known to the Yugoslav public mainly as the dynamic former president of the Youth League.

Today Vlasi is one of the key political figures in Kosovo, very much involved in the struggle being waged by progressive forces in that province.

"I look with optimism on the process of consolidation of the situation in Kosovo, since the League of Communists and the other progressive forces have finally adopted a strategy for permanent stabilization. To a great extent a new awareness has now become prevalent, above all among party members, concerning the true causes of the 'events in Kosovo,' concerning nationalism, technobureaucracy and other adverse phenomena. And what is most essential, it has become clear to people that this course must be pursued to the end by the League of Communists if conditions are to become stable, since there is no alternative or other way. No one can live any longer in any suspense and say: Well, if we succeed, that will be fine, and if not, perhaps some solution will be found that will be better....

"There simply is no alternative."

[Question] Perhaps this is the first optimistic statement by a leader from Kosovo, or it is at any rate a fairly rare one, one that was made without hesitation and with strong inner conviction. We asked Vlasi to begin the interview by summing up what had been achieved in Kosovo over the last 4 months. To comment on his judgment that the "results are evident, but the situation is still complicated...."

[Answer] The first result lies in the greater awareness of the working people and citizens of Kosovo concerning the true character and nature of the hostile and counterrevolutionary activity. We have managed to expose and clarify the

goals of all the forces which were preparing an attempt at counterrevolution. This was achieved thanks to the intensive and well-organized sociopolitical campaign, which was indispensable. We would not have been able to achieve the victory without the support of the enormous majority of the population.

Later, as time went on, we entered a struggle which is very complicated and difficult, since it is necessary to eliminate all the causes which over a long period of time resulted in the events in Kosovo.

[Question] How is the support of the majority of the population for the new policy manifested?

[Answer] In various ways. I would point to the high level of politicization of the masses. We live in an exceptional atmosphere in which every citizen is closely following everything that is happening, every action, every move we make.... Everything that is being written or said about Kosovo.

[Question] Nevertheless, the situation is still judged to be complicated?

[Answer] Yes, since in essence we are talking about a hostile action which was prepared for a long time, one into which various forces were drawn over a lengthy period of time, along the line of Albanian nationalism and irredentism. Those forces forged a conspiracy against Yugoslavia and were waiting for that X day, as experts in matters of security put it, which for those forces was the period after Tito's death. It would be unrealistic to expect that we would be able to quickly repair the situation regardless of the intensity of the action....

[Question] It is being said that the enemy is changing his tactics.

[Answer] We have cut short the activity such as demonstrations or street disorders and suppressed it. But hostile action is continuing through other forms and in other ways. For example, deliberate misinformation is being spread, slogans are written....

[Question] Is this on a large scale?

[Answer] We have quite reliable figures that these slogans are being written by small organized groups at various places in order to give the public the impression that it has some dimension, as though a large number of people were involved. That is not the case.

Our economic problems, our real problems, are being used in the misinformation which is being spread. The hostile forces are spreading pessimism, a feeling of futility, especially in connection with the economic difficulties that Yugoslavia now faces. It is clear, then, that along with continuing the action against the hostile forces, we must vigorously undertake to resolve the acute problems of our social development.

The greater the speed and effectiveness with which we do this, the more successful we will be in achieving stabilization of the political situation as a whole. Here we proceed on the premise that there is no consolidation of political conditions in Kosovo without achieving economic stabilization, overall improvement of the situation in the economy and society, and advancement of the relations of socialist self-management....

[Question] One of the slogans which is still relevant is "Kosovo a Republic." Where did that slogan come from, and how is it that that slogan emerged?

[Answer] The character of our system and relations within the country are such that the preconditions have been created for the full national affirmation of all the nationalities and ethnic minorities. From that standpoint the slogan "Kosovo a Republic" is invented and artificial. The main slogan of our system is: power to the workingman, and not power to the Federation or to the republic, to the district or to the opstina. No one can say today that the provinces are in a subordinate position, that within Serbia and Yugoslavia they cannot exercise rights just like the other nationalities and ethnic minorities in the republics.

The nationalistic forces deliberately launched this slogan, expecting that this slogan would be acceptable to a certain number of people and they would not see it as an aspiration to break up Yugoslavia, nor a step toward Kosovo's separation. It is becoming clearer and clearer to people what the forces behind that slogan are after. In any case, that slogan offers a different class concept, one that proceeds from the positions of dogmatism and Stalinism.

I should also say that the slogan "Kosovo a Republic" did not emerge as the only and isolated slogan, but was lumped together with other anti-Yugoslav and anti-self-management slogans, which in fact exposes its nature.

Full equality and freedom of the nationalities and ethnic minorities is not realized on the basis of republic or provincial boundaries, but on the foundations of the system of socialist self-management, the class commitment of socialist ideology, policy and relations.

Personnel Changes and Responsibility

[Question] How do you evaluate the major personnel changes in Kosovo which have now been rounded out in the radical changes in the Provincial Party Committee?

[Answer] When we undertook the differentiation, we inevitably realized that specific individuals were responsible for the specific situation. Either they bore personal responsibility, or, if I can put it that way, they bore objective responsibility, since they occupied prominent positions.

There was a need to measure both the individual and the collective responsibility, which we did in fact do. The public was informed about this, and I can say that these personnel changes are truly important and that they have covered all the structures and levels in the province.

[Question] There was probably also resistance to these changes.

[Answer] I cannot say that there was any organized resistance. But there were certain manifestations that were consequences of a lack of understanding on the part of individuals and certain collective bodies.... In actuality, they did not understand the level of responsibility for the situation of which the enemy took advantage, the problems that had been unresolved for years.... But I think that this responsibility should certainly be distinguished from direct responsibility for hostile actions and also from the responsibility of people who had a duty in the field of education and in similar institutions.

As for the responsibility of individuals who held sociopolitical functions, I think that this has been realistically measured, and they have contributed by their self-critical attitude to successful performance of the process of differentiation.

[Question] Does the impression that this has gone slowly nevertheless still prevail with a portion of the public?

[Answer] More essential than that, I think, is that we did not have political deserters. I am certain that many people who had to leave their posts will remain and within the limits of their opportunities will be useful and will remain on the line of the League of Communists.

[Question] It is thought by some that the differentiation went slowly because there are not enough personnel in Kosovo who could replace the team that was previously in power. In other words, that there is a deep personnel gap.

[Answer] Perhaps such arguments have been made, but they are basically unacceptable. First of all because the present actions which we are conducting have shown that there are a large number of party members and others in Kosovo who are ready to undertake an open campaign against the hostile forces. One thing is true: For years, and not just in Kosovo, we have been favoring tendencies which have been narrowing the personnel base. We have always cast our eyes on one and the same group of people in high positions. All the shuffling of personnel came from them, which was a mistake. Nevertheless, in the campaign which we are waging we have discovered a number of people able and willing to carry on the new political line. That is, the personnel do exist, but they need to be given an opportunity to show what they can do....

Too Much Verbalism

[Question] Can it be said that the tendencies which erupted in Kosovo are also present in other communities of our country and that there was a break in Kosovo because that link was weakest?

[Answer] If we are to speak about the deeper causes which favored the strengthening of nationalism in Kosovo, we must examine trends and occurrences more broadly in the country. For a long time now, for example, we have been faced with the tendency toward exclusiveness both in the economy and in other fields.

This could result in nationalistic occurrences within the republics and provinces.

This has been condemned in political forums, but in all of this there is too much verbalism. When the causes that result in exclusiveness are examined in more detail, one comes upon the fact that this is sponsored to the greatest degree by the tie-up between the technobureaucracy and the political bureaucracy. I think that no one in this country believes that such exclusiveness is favorable to associated labor. On the contrary, work organizations are fighting fiercely against this, but the technobureaucracy and political bureaucracy are driving associated labor, are simply forcing it toward exclusiveness, which could be dangerous in many ways.

[Question] Are those the roots of nationalism?

[Answer] Yes, but we have been inclined to underestimate it and we have been quicker to note and issue warnings about "that other" nationalism rather than the nationalism in our own community.

We have done much to set ourselves apart from one another, to shut ourselves off from one another, we are spreading an atmosphere of self-sufficiency even in culture, in creativity, in education.... Take education as an example. We have awkwardly rounded out eight systems of education and in practice we make it impossible for young people from one province or republic to continue their schooling in other communities. We have posed thousands of problems and erected thousands of barriers. And this has had the result that young people have the feeling that everyone is sufficient unto himself in his own republic or province.

We have to take as our point of departure that Yugoslavia is a natural community created by the common will and through a common struggle, on the basis of the common interests of all the nationalities and ethnic minorities. Accordingly, nothing that happens in one part of the country can be an isolated case which does not concern the other parts of the whole. Wherever something happens, this objectively has its roots in contradictions which, at least partially, are uniform and characteristic of the entire country.

[Question] It is not just Kosovo, then, that is exposed....

[Answer] It would be an illusion to believe that Kosovo is alone in being exposed to the contradictions which resulted in the escalation of nationalism. There are many problems and contradictions which represent potential causes of similar manifestations in other communities.

On the basis of everything that happened in Kosovo, we should all draw certain lessons, though it is clear that a single negative tendency need not manifest itself in the same way in all communities. But if we examine more deeply the causes of everything that is leading toward the destabilization of our community, regardless of whether it involves nationalism and anarcholiberalism or something else, we can always exposed to the dangers of a tie-up between various

domestic and foreign forces which are objectively working against that kind of Yugoslavia.

[Question] You are speaking about the lessons of Kosovo for Yugoslavia as a whole?

[Answer] We in Kosovo have drawn lessons which apply to many periods of time and to many issues. It is not just a question of nationalism. We suddenly understood that we cannot live so comfortably, in the belief that nothing can happen to us. And as for the entire country, I hope that we have drawn the lessons related to the role of the League of Communists as the leading ideological force. The LCY must strengthen its unity in the base, democratic centralism, since in difficult moments, and even generally, the League of Communists is the force that eyes turn to. Of course, the campaign cannot be carried on by party members alone, but the mobilization of the broad masses depends on how the League of Communists guides that campaign and whether it is up to its tasks. Here again we have drawn lessons in Kosovo, but on the basis of that our entire community and the entire League of Communists have also drawn lessons.

[Question] As a former president of the Youth League, how do you explain the fact that the young generation came under a high degree of influence of nationalism in Kosovo?

[Answer] I would first like to say that the number of young people who consciously became involved in hostile activity, recognizing clearly the goals and intentions of the organizers, is really not great. In that we are fortunate. However, we must be disturbed by the fact that the young people did nevertheless become involved, though only partially, in that kind of activity, even though they were unaware of the kind of game they had become involved in. This category is primarily made up of those young people who are confronting various problems and difficulties on an everyday basis, who are looking for answers, but not getting them. We have been working a bit with them, we have done a bit to improve their social status, their uncertainty about jobs and the like. This remains one of our chief tasks.

We have harbored too many illusions to the effect that since we are a democratic, socialist and self-managing society, this will automatically mean that young people will be brought up properly. It has turned out not to be the case, and nationalism knew how to take advantage of that.

I would also say that nationalism is basically a class enemy and that it should be treated as such, regardless of the ethnic community in which it occurs. It always goes against the foundations of our community, against brotherhood and unity. There is no well-intentioned nationalism, no nationalism that is more or less dangerous, but if we have to make some distinction, then it is only that the nationalism of a majority ethnic community in a community is nevertheless the most dangerous, since it directly jeopardizes the interests of those other nationalities and ethnic minorities in that community, who are in the minority. Taken as a whole, every nationalism is equally dangerous to our community.

[Question] To return to the problems of young people. What is the way out of the present difficulties, as you see it? Tens of thousands of people are graduating or have graduated from higher educational institutions, mainly in the humanities, and they have no opportunity to find jobs in the province.

[Answer] Their prospects for employment are not good, to be sure. Everywhere more people are deciding to study the social sciences than are needed. In the process of planning personnel we must combat that tendency. Second, there is a need for reorientation and indeed retraining of young people for occupations and specialties which are in demand even today and of which there is a shortage in both Kosovo and Yugoslavia.

I think that this problem can be solved quickly. This must also be accompanied by a restructuring of the economy, of investments, by an orientation toward tertiary activity, toward agriculture.... This is not a job which can be accomplished overnight. But I think that the main lines of development are fairly clear. This means a different distribution of investments than up to now, a distribution that would make provision for more jobs. Then, there is also a stronger orientation toward agriculture, toward faster exploitation of the natural resources of the province, the aid of the broader community is still necessary, but the channels through which it comes must be different, primarily through associated labor.

On the Writing of the Press

[Question] We would like to hear your opinion about the writing of the press and in general about the job which the news media have done in connection with the events in Kosovo. I think there is no need to issue a reminder that recently there has been quite a bit of argument over these matters.

[Answer] When all that happened, we saw that we were also unorganized with respect to the press, as indeed in certain other areas. To put it simply, the mechanisms failed, and this was not the fault of the news media alone. Later, and over this entire period, it was better, since there was quite a bit of news from Kosovo, an abundance of news about everything that happened and what was done and is being done by the organized socialized forces.

I think that the news media should continue to be very much involved in informing the public about the campaign being conducted in Kosovo. But I would like to say that there have also been articles which were not on the line of the League of Communists of Kosovo, the League of Communists of Serbia or the LCY, and there were articles as well which did more harm than good....

I am not in favor of us becoming concerned with those articles at this point, nor of getting into a discussion of those articles which, we might say, are irresponsible. Instead of that, it is much better to examine what line of commitment by newsmen will objectively and directly promote the process of stabilizing conditions and favor the efforts of the progressive forces in the province and throughout the country.

I have already said that an amazing politicization of the masses has been created and that every word, every article, is followed closely and analyzed. You can imagine that in this situation every failure, every unobjective piece of reporting, essentially represents pouring oil on the fire. Certain articles carried utterances of those with whom the LCY had settled accounts even earlier, forces which judged that their moment had come, that they could reactivate certain of their arguments and views....

[Question] Would you please give an overall assessment of the writing of the press about Kosovo?

[Answer] In their frankness and public presentation of the problems, the news media have been helpful to the socialized forces in Kosovo in winning the battle which has begun. I think that because of certain unacceptable articles the sources of news cannot now be shut off, nor should any campaign be conducted to criticize the press. There are still less grounds for doing this across the board and on the basis of certain divisions which are not valid.

On the contrary, the sources of information should be opened still more, and that greater openness should always be accompanied by greater responsibility and responsiveness to the real political situation and a sense of the need for what could truly help the consolidation. I am not in favor of dressing things up, of making them look better, I am not in favor of keeping things quiet because they are difficult, because they represent something that is not good in our practice or in our present campaign, but the principal preoccupation of both the news media and others must be the interest in stabilizing the situation, the interest of brotherhood and unity, the interest of strengthening mutual trust.

After all, in all difficult situations, this one included, in our Yugoslavia the decisive thing has been that mutual trust among our nationalities and ethnic minorities. Wherever anything unpleasant has happened, the progressive forces from that community have found support in the progressive forces and efforts of people from other communities.

In that context it meant a great deal to us in Kosovo that we had the sincere support of both the working class and all the working people and citizens, members of all the nationalities and ethnic minorities all over our country. That fact is contributing a great deal to the stabilization of the situation. We are encouraged in our actions when we also have the support of the news media in our efforts and in the struggle which is now being waged by the League of Communists of Kosovo and by the progressive forces in the province.

KOSOVO PAPER REPORTS ON CONTINUING 'DIFFERENTIATION'

[Editorial Report] The 13 August 1981 issue of the Pristina daily RILINDJA (page 7) reported that in Istok Opstina 43 people had been expelled from the LC (largely from the villages of Kovrage and Prigoda where the basic LC organizations have been dissolved), including three from the Opstina LC Conference, three heads of LC Conference commissions, and seven secretaries of basic LC organizations in this opstina (the latter, for failing to take "necessary action" in condemning the demonstrations). Also, 10 workers, including 6 teachers from the "Vellezerit Ribar" secondary school, were suspended and disciplinary procedures opened against seven others at this school where over 80 have now been identified as demonstration participants. No information has been forthcoming as yet, it was reported, regarding the cutting down of 64 fruit trees belonging to two Serbian families in Kashica and Kovrage. "Serbian nationalism has taken various forms recently" in the opstina. Two Serbian youths in Crkolez set fire to animal feed on the farm of Vukomir Tijanic "in order to start a conflict between the Balaj and Tijanic families who are living as good neighbors."

In another report from Istok Opstina which appeared in the 5 September 1981 issue (page 5) Bajram Vuthi, head of the Opstina LC Central Committee, said that the appearance of hostile slogans had increased recently; those responsible in Banja and Malo Dubovo "were discovered immediately. But in some areas action has not been satisfactory. The situation is still complicated in the villages of Kovrage, Tomoc [Tomance?], Trbuhovac, Crni Lug, etc., where border and more concrete ideological-political action must be intensified." Azem Vllasi, head of the Central Committee of the Kosovo SAWP, who attended the meeting from which the above report was taken, said "one must raise the level of information at the base, clarify the background of hostile slogans, such as "Kosovo republic," etc., behind which are hidden all hostile actions. Rigorous measures must be taken against the abuse of national symbols which contribute toward destroying inter-nationality relations."

The 13 August issue (page 9) said that in Presevo Opstina in Serbia proper on the Kosovo border 20 demonstration participants had thus far been identified (six of whom were sentenced to 30-60 days in prison) and four persons, on whom hostile material had been found, were expelled from the LC, even though "thanks to the vigilance and mobilization of Communists and other progressive forces, the enemy did not succeed in finding refuge or organizing hostile demonstrations in this opstina."

The 14 August issue reported (page 5) that in Glogovac Opstina 105 LC members had thus far been expelled for "passivity, opportunism, and failure to carry out necessary differentiation." Two basic LC organizations have been dissolved (in the "Marshal Tito" secondary school and the "Emin Duraku" elementary school in Orlate). Also, two teachers have been suspended from work, including nine secondary school professors for organizing and participating in demonstrations. "The enemy is seen in various hostile slogans appearing in some local communities in Orlate, Trpeza, Nekovce and other places."

RILINDJA of 16 August 1981 (page 2) reported that in Suva Reka Opstina 15 members had been expelled from the LC, five were given warnings and eight were given final warnings. Those expelled included the director of the "Jeta e Re" secondary school and secretary of the school's basic LC organization which has now been dissolved and replaced with new members. The 5 September issue (page 6) said that between 11 March and 31 August 32 party members had been expelled in this opstina, 41 had been given warnings, and 27 final warnings. It said all schools, including the above, had started on time and instruction was proceeding normally; and "no Serbian family or individual has recently moved out, but...according to Stanislav Andjelkovic, there are about 30 requests now pending to leave, but for purely social reasons, such as school, marriage, a job offer.... But up to now we have not approved any of these requests," he said.

In Orahovac Opstina, according to the 18 August issue (page 8), 16 members have up to now been expelled from the party and 10 have been given warnings in about 12 (named) villages, and the 12-member basic LC organization in the village of Maralija has been dissolved. Hostile slogans continue to appear in these places, it said, and in Zrze "propaganda material from Albania, typewriters, and other hostile propaganda matter were found." The opstina court has sentenced 27 persons, including 17 secondary school students, to 15-60 days in prison for participating in the demonstrations in Prizren, Pristina, and Suva Reka, and for trying to organize demonstrations in Malisevo, Orahovac and Ratkovac. Also, six teachers, an administrator, and a medical technician were fired for hostile action.

Both RILINDJA and JEDINSTVO (Pristina) have also been carrying numerous announcements of job openings for teachers at all levels, as well as for clerical help and an unspecified number of guards at the reformatory in Lipljan (RILINDJA 9 August 1981 p 15) and for a prison guard commandant, a physician, administrative workers, criminal technician, and teachers (18 openings in all), in addition to "an unspecified number of guards" at the Djurakovac section of the Pec district prison (RILINDJA 20 August 1981 p 16).

CENTRIFUGAL, CENTRIPETAL TENDENCIES IN LCY ARGUED

Confederative or United Party

Belgrade NEDELJNE INFORMATIVNE NOVINE in Serbo-Croation No 1594, 19 Jul 81 pp 8-10

[Article by Stevan Niksic]

[Text] "We must definitely determine whether we are members of republic organization leagues of communists, in which case we should change our membership cards to show that, or we are members of the League of Communists of Yugoslavia...."

This question, recorded in the preceding issue of NEDELJNE INFORMATIVNE NOVINE, was posed by Sreten Petrovic at a session of the "ideological" commission of the Central Committee of the League of Communists of Serbia, during recent discussions of international relations, following recent events in Kosovo. The same or a very similar question could be heard recently at a number of political gatherings, in discussions that basically were quite different.

Several months ago, at a session of the Central Committee of the League of Communists of Bosnia and Hercegovina, there were warnings about "unacceptable tendencies toward federalization or even confederalization." At the time of the Kosovo events, the discussions at sessions of the highest party forums of that province, of Serbia and of the federation included many words on the responsibilities of party organs in the republics and provinces to the LCY as a whole. The theme of party unity has become very current, in a totally relevant way.

Last week at the session of the LCY Central Committee Commission for Organizational and Statutory Matters, several once again directed attention to the danger from "federalization" of the LCY. The purpose of this session was to formulate proposals for changes and additions to the LCY statute, which will be considered at the 12th Party Congress. Certain chapters of the statute will certainly be changed. First, after the death of comrade Tito, the LCY president, the LCY Central Committee passed temporary measures that established the organization and scope of operation, or the responsibilities, of the highest party agencies. Final decisions on those matters, however, can be approved only by a congress.

The commission will propose that the decisions be retained, i.e., a collective political executive council will remain at the "top" of the LCY, and the council

will be composed of representatives of the LCY organizations of each republic and province and one from the Yugoslav National Army. Certain details, however, may be somewhat different than in the present statute. Modalities and alternatives of specific decisions discussed at the commission session still have to be clarified by the LCY Central Committee Presidium. After that, proposed changes in the statute will probably be quickly sent for public debate, as required by existing regulations.

Within the debate on statute changes, there was also talk of the principle of democratic centralism. France Popit, president of the LCY Central Committee of Slovenia, noted that democratic centralism must remain as the basic principle for the relationships, organization and functioning of the party.

He further stated that is not only a statutory but also an essential principle, a key condition for the functioning of the political vanguard of the working class and thereby a condition for the further development of socialist self-management. Considering the current political situation, Popit at the very beginning of his presentation uttered a warning. "Naturally," he said, "statutory norms in themselves cannot either prevent or deflect tendencies to disunity or irresponsibility in implementing adopted policy."

"A Holy Alliance"

Dragomire Draskovic, a sociologist from Belgrade, added to Popit's evaluation. He regards "federalization" of the party as a real danger and said that attention must be paid to that during the formulation of provisions of the LCY statute. Specifically, Draskovic sees a "dialectical unity" between the principle of democratic centralism and the principle of negotiation and the seeking of agreement, but one cannot supplant the other. If negotiation and agreement-seeking were to be legalized in the LCY (as being done in political institutions) instead of being unified, the party would be transformed into a "confederation" of republican and provincial parties. In that context, he warned picturesquely about the danger that a "holy alliance of national bureaucracies" could rule the League of Communists of Yugoslavia.

In seconding Draskovic's evaluation, Popit asserted that such manifestations as "localism," "republican particularism" and the like do not come only from failure to respect the principle of democratic centralism in the party. He agreed, however, that "drowning communists in particularist interests" was a real danger and that the League of Communists must "rise about particularist interests and defend the mutual interest."

Slobodan Filipovic of Titograd at that occasion saw a great problem because "everyone passed judgment on himself" and there was not always sufficient readiness and ability to admit one's own weaknesses and omissions. He advocates having the work of individual party organizations evaluated "in all enrivornments," even if such evaluations disagree with those "that we give ourselves." Filipovic is convinced that there would be no danger to the independencies of republican and provincial organizations and that, at the same time, it would be very helpful if the implementation of mutually agreed-upon policy were regularly evaluated in "higher" agencies than those today, as a rule evaluate themselves.

"The Leaders" and Their Ambitions

The Sarajevo journal OPREDELJENJA recently published a thematic discussion on democratic centralism in the LCY; once agin the dominant theme was "party federalism." Fuad Muhic said that the roots of the "party federalism" ideology appeared at the beginning of the 1970's, and coincided with the advent of the mass movement in Croatia and "liberalism" in Serbia. Considering that some elements of federalist or even confederalist behavior within the LCY are in current practice, Muhic warned of attempts to "achieve a legal theoretical articulation through demands for revisions of the principle of democratic centralism." Specifically, Muhic condemned the replacement ("substitution") of democratic centralism in the LCY by the principle of self-management negotiation and agreement-seeking. That, he said, would quickly spawn a platform of "party federalism," with prospects for "confederalism."

A definition of republic and provincial leagues as sovereign parties, which would replace the present definition of the LCY as a "revolutionary and unified organization and the leading ideological and political force," would be the start of the "decomposition of the LCY as a revolutionary, integrative and cohesive factor of the Yugoslave community," continued Muhic. "Negotiation and agreement--seeking, without a majority right to authoritiative action in crisis situations, would bring the very existence of Yugoslavia into question," he concluded. In his opinion, "federal party behavior is of a subjective nature and is identical with the ambitions of leaders and the desire to create 'one's own party' and 'one's own place in history'."

Franjo Kozul at the same meeting said that any damage to unity within the LCY "in the name of national equality" would eliminate its basic role in current Yugoslav society. He continued, "It would be realistic to hypothesize a situation where, without the League of Communists, we would already have several Yugoslavias, or states; instead of an integral community of peoples and nationalities, we would get a confederation or something similar; primarily, we would not have a self-management, unaligned socialist community of the type that we have been building since the revolution."

Hamdija Pozderac disagreed with the conflict of the principle of democratic centralism, which should prevail in the party, and the principle of negotiation and agreement-making on the basis of consensus in the delegate system. For him, "the highest form of democratic centralism is unity of decision," which excludes overruling a minority.

Pozderac went on, "At the level of the federation and in the party, there is a process of reaching agreement and reaching unanimous decisions."

Raif Dizdarevic differentiated between the two principles: "No social negotiation and self-management agreement-seeking can replace democratic centralism within the League of Communists. If things were to head in that direction, we would make the LCY into a debate club or something worse." Nevertheless, Dizdarevic recognizes the legitimacy of the principle of negotiation in the party but only in two circumstances: first, at the level of the federation and, the second, "within the framework of a republic that has autonomous provinces." In his opinion, everything

else should presuppose "democratic encounter of all opinions for the sake of taking a united position that must then be implemented."

In the March issue of OPREDELJENJA, Branko Mikulic, a member of the LCY Central Committee Presidium, said that "in this historical period the role of the League of Communists is still irreplaceable, not only as the leading ideological and political force but also as a cohesive factor in our society. The undermining of that unity and that role for the LCY will challenge the unity of Yugoslavia and attack all the achievements won by our joint struggling, under the leadership of our party."

The "Federalist" Tradition

In any case, federalization tendencies have a peculiar continuity in the history of Yugoslav communists. In all the statutes of the Communist Party of Yugoslavia, or the League of Communists of Yugoslavia, from its first congress in 1919 until the eleventh in 1978, democratic centralism was recorded as one of the basic principles. (Only at the fourth congress in Dresden in 1928 did the delegates fail to approve a statute; rather the statutory materials were regulated by 2 resolutions.) The principle of democratic centralism was not, however, always interpreted the same way.

At the Fourth Party Conference, held in Ljubljana in 1934, a decision was adopted on the formation of national parties within the framework of the unified Communist Party of Yugoslavia. That decision was confirmed at the Split plenum of the Central Committee of the Yugoslav Communist Party in 1935. In April 1936, however, the party Central Committee session decided to analyze the resolutions of the Split plenum. It was concluded that the only way to achieve a policy of national equality would be to dissolve Yugoslavia.

That same year, in June, the famous Moscow consultation took place with the participation of Tito, Edvard Kardelj and Blagoje Parovic. Under Tito's influence, the position on party unity was revised and the decision of the Split plenum confirmed; that is, the CPY must be a unified party that would struggle for the realization of revolutionary goals within Yugoslavia as a whole. After that, Tito returned to the country, where he soon took over party leadership. Although it included a number of national parties (the Communist Party of Slovenia, the Communist Party of Croatia, and others later), the Communist Party of Yugoslavia, as a unified, revolutionary force under Tito's direction, prepared the revolution and led to victory.

"In the party or the LCY, there has always been strength and wise people," Mikulic said, commenting on the history of "federalistic tendencies." These people "rejected such tendencies as conservative, reactionary and counterrevolutionary. At this time as well, such tendencies, if eventually they emerge, will be rejected, for all republic and provincial LCY organizations have enough wise people who are capable and inclined to resist them."

In the lecture "International Relations within Yugoslavia," presented in the 1975-1976 school year at the Josip Broz Tito political school of the LCY in Kumrovec, Dr Dusan Bilandzic, a member of the LCY Central Committee of Croatia and professor at the department of political science in Zagreb, analyzed recent

"federalistic tendencies" in the LCY. He reminded the audience that the national question was discussed as an open question for the first time since the war at the Eighth LCY Congress in 1964. At that time, besides talk of "classic" nationalism, the discussion also touched unitarism. Bilandzic asserted that at the congress "no one disputed the theses of the LCY leadership, but they were not met with enthusiasm. The delegates were very reluctant to speak on these topics, they were probably caught off guard, because no discussion in such terms and with such content had been heard in the LCY for nearly 20 years."

Bilandzic considers that at the time of the constitutional changes of 1967 and 1968 (which emphasized the rights and responsibilities of republics and provinces), the "federalization of the LCY actually began as well. This factor established the direction for constitutional reform of the governmental structure of the federation that was to be put into effect in 1971."

On the same occasion, Bilandzic turned his attention to the tenth session of the Croatian LCY Central Committee, in January 1970, when it was decided that "unitarism as an ideology was the dominant political tendency and danger for the social development of Yugoslavia." Bilandzic said, "Such an assessment by the Croation Central Committee was not previously submitted for approval to the leagues of communists of other republics. That was the first time in the history of the LCY that, at the republic level, the direction of long-term Yugoslav development and its momentary problems and relations were discussed. This was received with great distrust by the Yugoslav public."

The Universal Significance of the Debate

Certain associations along this theme are suggested by the debate on the constitutional structure of the Socialist Republic of Serbia, following the Kosovo events. Although the provincial committee of the Vojvodina League of Communists on 2 July reached a different conclusion on this subject than in some discussions at sessions of the Serbian LCY Central Committee on 6 May and the LCY Central Committee session of 7 May, direct polemics on a public scene have been avoided. The rebuke is directed primarily at the press for "opening the subject for debate."

In expressly accepting only the paper presented at its fourteenth session, according to the public report from the Vojvodina LCY Central Committee session, the Serbian LCY Central Committee indirectly protested the discussions held in the 2 highest political forums of the republic and the federation concerning the constitutional structure of Serbia.

As early as the end of May, a session of the Serbian LCY Central Committee Presidium decided (and a task force formed to implement the decision) that a basis should be prepared in short order for discussion of relations within the League of Communists of Serbia. At the same time, "in the further building of community in the republic as a whole, there must be systematic and organized work to overcome the problems that appear in conscientious implementation of the constitution. For the League of Communists, it is essential that that discussion be conducted in a spirit of complete openess and adherence to principles, understanding and mutual trust."

The debate on democratic centralism in the LCY and on the application of the principle of negotiation and agreement-seeking, or "consensus" in the party, as well as the warnings on the danger of "federalization of the party," will certainly continue until the twelfth LCY Congress. Its significance will likely surpass the dimensions of discussions of some momentarily crucial themes of Yugoslav political life. Problems of democratic relationships in the party, the relationship between the majority and the minority, and similar themes have lived and been resolved in the workers' movement, from the time of Lenin until today. Certain communist parties in Western Europe have deserted that principle, which is tied to the name of Lenin in the workers' movement. They consider it antiquated in modern circumstances. Yugoslav communists, however, have their own, different view, which has not changed.

Last April, Stane Dolanc, a member of the LCY Central Committee Presidium, spoke on that topic in a lecture for the jubilee of the law school in Ljubljana: "Bureaucratic and dogmatic tendencies and conceptions of democratic cnetralism have, in fact, been predominant in the history of the labor movement; Yugoslav communists, regardless of the formally recorded principles of democratic centralism found in one way or another in statutory documents, have in their daily lives, both before the revolution and especially during the course of the revolution and immediately after, been first started to resist such tendencies subjectively and objectively."

Without denying that the danger of bureaucratic and dogmatic tendencies continues, he perceives that in practical life many still think it much easier and quicker to dispose of actual problems by discipline, central leadership and apparent unity. Dolanc asserted, "It is different with those who conscientiously wish to change the principle of democratic centralism into an instrument of centralism, unitarism and statism. There, of course, it is no longer a problem of democratic centralism, but a problem of the conception of the League of Communists role, the denial of our basic programmatic goals and, in essence, counterrevolutionary activity."

The statutory provisions on the position of the republic and provincial organizations of the League of Communists as individual organizations within the framework of the LCY are absolutely clear. Indeed, no one has even attempted to question that. The problem, however, is that the statutory norms do not always coincide with what happens in everyday practice; since there is general agreement that the statutory norms are good and should not be changed, something in everyday practice should be changed.

Democratization or Decentralization

Belgrade NEDELJNE INFORMATIVNE NOVINCE in Serbo-Croation No 1596, 2 Aug 81 pp 15-16

[Text] Is is permissible for internal LCY relations (democratic centralism) to be less democratic than relations within society (self-management socialist democracy)? On the eve of the Eighth Congress, the critics of democratic centralism were particularly insistent about that dilemma; as in all discussions on the history of the Yugoslav party, the issue was regarded as an artificial one, inasmuch as it separated democracy from centralism. That in itself would not justify placing the same question on the agenda today. Disintegrative processes in socioeconomic life and tendencies to party federalism seem unambiguously to point to the need for strengthening both democracy and centralism as essential preconditions for realizing the

the cohesive role of the LCY. The relationship between democratic centralism and self-management agreement-seeking and negotiation was recently put into a completely new form. These 2 principles are regarded as complementary, which means that they are neither mutually exclussive nor subsitutable for one another.

The Yugoslav constitution provides that, if in the Assembly Council of Republics and Provinces the delegates do not agree according to the established procedure, the Yugslav Presidium (by a majority) may pass a so-called temporary decision. In the same way in the delegate system, if the process of agreement-seeking and negotiations reaches a dead end and threatens to block the functioning of the system, a type of democratic centralism is employed as a corrective mechanism.

Analogously, if democratic centralism is practiced in the League of Communists as an organizing principle for the activities of communists and if decisions are approved by a majority, in optimal situations it will not be necessary to overrule. Specifically, in democratic discussion, if complete agreement and unity are achieved through negotiation and consensus, then there is neither a majority nor a minority; also there is no overruling. In such cases, in the League of Communists, negotiations and agreements take place so that every constructive debate always seeks final agreement of all participants, without the majority seeking to impose its position on the minority.

This view of democratic centralism and self-management negotiation as complementary categories is completely acceptable and theoretically interesting. Its practical shortcoming, however, is its validity exclusively for so-called extreme situations: extremely unfavorable ones, when representatives in the delegate system in the Council of Republics and Provinces cannot reach agreement, and extremely favorable, when through discussion communists in a party reach a unanimous decision without resorting to the authority of the majority.

Principles Being Tested

The protagonists of this view consider, on the other hand, that it is not only functional in extreme situations. They say, "The principle of negotiation and agreement consensus is legitimate in the party as well, but only at the level of the federation and within the framework of a republic with provinces. All other situations are subject to democratic centralism. At the top of the LCY--the Central Committee and Presidium--there is a provision for negotiation and agreement consensus as a procedure for reaching a decision."

Although we disagree with this interpretation, we consider it exceptionally supportive for the further course of pre-congress debates. Directly or indirectly it opens a whole series of questions of significance for our party life and other important considerations.

Would not the installation of the principle of self-management negotiation and agreement-seeking in the LCY, with the principle of democratic centralism, nevertheless question the latter? Instead of a single principle, we would have 2 parallel principles of relationships, organization and party functioning, which would be unprecedented in the international communist movement and would bring not inconsequential difficulties for preserving unity in the LCY.

If as proposed, however, these two principles did not function in parallel, but democratic centralism were a principle only for republic and provincial LCY organizations, while negotiation and agreement consensus were exclusively for the LCY Presidium and Central Committee, then the unity of the party would be unambiguously destroyed. The parts and the whole would not be organized in the same way. Specifically, a number of republican and provincial parties would be organized on the identical, classic Marxist-Leninist principle that has been valid throughout the LCY, but the top Yugoslav party organization would be a mere loose coordination.

Finally, what would happen when members of LCY agencies, such as the Central Committee or Presidium, fail to reach a consensus? Since democratic centralism would no longer be a next resort, or majority overruling, nor would there be any higher level that, like the Yugoslav Presidium relative to the Council of Republics and Provinces, could make at least a temporary decision, the League of Communists would be paralyzed, and its eight parts would begin to function independently of the others.

Any overruling against equality has already been rendered impossible by the personnel structure of the highest party agencies. The composition of the LCY Presidium and Central Committee include equal numbers of representatives of republic and provincial organizations regardless of the fact that the number of communists that they consist of is far from equal. The introduction of yet another mechanism, such as negotiation and agreement consensus, would thus be superfluous; not only would it undermine democratic centralism and thereby the homogeneity of the party ranks, but it would directly open the way for centrifugal tendencies in the LCY, under conditions in which we are constantly emphasizing the need for stronger integrative or cohesive roles for the LCY in society.

It remains to document the assertion that "negotiation and agreement-seeking already exist in the LCY Central Committee Presidium." To the degree that this is an expression of established unity of opinion among communists, reached by democratic debate, there is absolutely sufficient room for it within the framework of democratic centralism. To the degree that no dialogue would take place in the LCY Central Committee Presidium between the most distinguished activists who have the confidence of the overall membership just because they "had risen above particularist interests" (but rather the positions of republic and provincial organizations are brought to agreement through them), that would not be good. Class interest would be pitted against national and republic or provincial interests, or subordinated to them. That would lead to compromises, accommodations, compromise decisions, contention and the like. It would also be against the statutes, for at least in its proclaimed internal structure the LCY is a uniform organization; its leadership cannot be a collective of representatives of the party interests of individual republics, but rather a homogeneous body in which every member, no matter where he originates, represents the interests of the LCY as a whole.

If the truth be told, what is not good, can also exist in the League of Communists, at least as a tendency. It is not difficult to find examples that indirectly at least predict that perhaps negotiations and agreement processes will take place in the highest party structures; the unfavorable consequences can also be found.

Almost every week, film reports from sessions of the LCY Central Committee Presidium vividly show that members of the uniform leadership of the uniform party regularly sit in strictly separate groups by republic and provincial delegations. Furthermore, it is a true rarity (other than during celebrations and crisis situations) for a member of that same central LCY agency to address a broad political gathering in a republic or province that is not "his home." In the same way, it is striking that the mdeia devote markedly greater attention to addresses by "their own personnel" at central party tribunes, than to presentations by members of the same forums from other parts of the country. All that is true, although, at least according to the statute, no member of the LCY Central Committee or Presidium is a delegate of any republic or province, but rather each member's electoral party base consists of all the communists in the country. These obervations certainly are not sufficient to draw any conclusions, but they offer food for thought.

More Democracy--More Centralism

The thesis "the more democracy, the less centralism, and the obverse," is erroneously used to pit democratization and centralization against one another, for democratism in the LCY refers to the free, equal, active and direct involvement of the broadest membership in the creation of party policy, while centralism refers to uniform, firmly coordinated, consistent and disciplined implementation of what has been decided democratically (by a majority). The more democracy in the agreement process, the more centralism there will be in action, for the communists will not regard party positions as decrees imposed from above but as their own. The expansion of democracy to the process of implementing decisions would, however, lead to anarchy at the base, just as the transfer of centralism to the basis of decision-making would threaten absolutism by the highest party agencies. Decentralization or polycentrism in a uniform party such as the LCY, as defined in its statute, not only would not be an indicator of its democratization but on the contrary would represent party federalism tendencies.

The insistence on the absolute autonomy of republic and provincial party leadership as independent political centers in relation to the LCY organization and agencies is accompanied by militant repression of every dissonant voice at the base. It may appear that we are proposing absolute responsibility to the party for things outside its ranks, but that is not the case. In Kosovo, the line of differentiation was not party members opposed to nonparty members; rather; adversaries were divided equally into each of those categories. If not actively, at least by its passivity, the provincial LCY leadership contributed to the hostile activities. Most people, and especially the communists of Kosovo, were not infected by chauvinism and irridentism. We are publishing ever more direct reactions of workers, farmers and youth, as well as remarks by cultural creative artists, political workers and others, but the question arises as to why their voices were not heard earlier. That was certainly a consequence of the pressures that were exerted, and of their opportunism, but why at that time, as today, wasn't the Yugoslav public scene open to them (including the media, political forums, social tribunes and scholarly gatherings).

Here we reach the warning on the overall Yugoslave situation that emerges from the Kosovo events. That is the dangerous notion of political fair play in interrepublic and provincial relationships, and even within the LCY, according to which everything

becomes an internal matter of the concrete milieu, and any sort of interest "from outside" represented unprincipled interference, paternalism, hegemony, false solicitude and the like. Should one of them dare eventually to make a sound, any public means of information in the country that would publish anything would risk violating the rules of the game or damaging the principle of the peaceful coexistence of our regional narcissism.

Such extremely negative situations--no matter how good they may be as illustrations for theoretical argumentation that federalistic tendencies in the LCY are always the cause and the consequence of parallel violations of both democratic and centralist components of democratic centralism--are equally unfavorable as orientation points for political practice. In other words, it is risky to wait for these disintegrative processes in some segments of the League of Communists of Yugoslavia to reach a culminate before turning to decisive action. This is more true since our recent history shows that, when the opposition forces and ideologies (nationalism, liberalism or technocratism) attack, in extremely offensive form, on some narrow, peripheral zone, we never lack parallel symptoms of the same deviations in other environments, although at somewhat lower stages of development. In practical terms, in a certain way, and not only indirectly, the whole is always infected. At this particular moment, that is a symptom of a unique decentralization and de-democratization of democratic centralism and that naturally represents two sides of an identical process.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

BRIEFS

WFTU DOCUMENT DRAFTED IN PRAGUE--An editorial group of representatives from 21 national trade union centers, international trade union associations and CSSR's Central Trade Union Council (URO) met in Prague on 7 September to draft the main document "Trade Unions and Problems of the 80's", which will be presented at the Tenth World Trade Union Congress in Havana next February. Leading the discussion was Chairman of World Federation of Trade Unions (WFTU) Sandor Gaspar, assisted by WFTU Deputy Chairman and URO Chairman K. Hoffman, and WFTU Acting Secretary General Ibrahim Zakaria. [Prague PRACE in Czech 8 Sep 81 p 1]

SOVIET AWARDED T.U. DECORATION--On 16 September the secretary of the USSR Embassy in Prague J.V. Medvedev received the Antonin Zapotocky commemorative medal from URO (Central Trade Union Council) Secretary V. Kozik. Secretary Medvedev is ending his tour of duty in the CSSR; the decoration represents appreciation for his personal contribution toward the development of cooperation between the Czechoslovak and Soviet trade unions. EVENTS OF BERLIN WALL CONSTRUCTION RELATED

East Berlin DER KAEMPFER in German vol 25 no 8, Aug 81 p 1

[Article signed 'ot': "Twenty Years of Anti-Fascist Protective Wall"]

[Text] "Here are the combined stations of the German Democratic Radio Network." The voice of the newscaster came over the radio on the morning of August 13th with the same calm matter-of factness as ever. "In order to put a halt to the hostile activities of the revanchist and militaristic forces of West Germany and West Berlin, a control system has been introduced on the border of the GDR, as is the practice on the borders of every sovereign state." He was reading the resolution of the GDR Council of Ministers concerning the measures taken for the security of its borders with West Berlin and the German Federal Republic and, following this, a declaration by the states signatory to the Warsaw Pact.

In Mid-Summer 1961

It was clear for all to see, that the aggressive preparations of the West German imperialists and militarists aimed at the GDR were pressing toward their final stages. The Bundeswehr and other strong NATO forces had taken up their final assault positions close to our borders; West Berlin was in readiness as the fuse. The organizers of this adventure, including the rightist SPD and trade union leadership, by their plans to destroy for once and for all the GDR that they so hated, were posing the most serious threat yet to the peace of Europe. They knew without any doubt that the GDR was firmly integrated into the Warsaw Pact and that the Soviet Union and the other states of the socialist community would act in accordance with their treaty obligations. Yet the imperialists fancied that they were the stronger. Besides that they were firmly convinced that they had taken all steps necessary to soften up the GDR for their assault. The ruling circles in Bonn and their NATO allies were absolutely sure of themselves. In anticipation of their success it was no accident that the West Berlin "Industriekurier" was already hoasting of a "march of the Bundeswehr through the Brandenburg Gate with bands playing" and of a great victory parade down the boulevard Unter den Linden.

Then the Clock Struck 13!

On that night of August 12th lights were ablaze in every SED office in Berlin ... at midnight traffic on the elevated and subway systems was abruptly halted ... buzzers were sounding in the apartments of members of the Berlin workers' militia ... there

was a knocking at doors, telephones were ringing: Alarm! Comrade, to your post!

On that night tanks and artillery of the National People's Army took up their positions close to the sector boundaries facing West Berlin ... thousands of members of the militia of the working classes, together with their comrades from the People's Police and the Border Police formed a living protective wall ... the then Chancellor of West Germany, Konrad Adenauer, fetched rudely from his bed, replied in shock to the reporters of our border security measures, "That just can't be true!" ... the then chief of the West German intelligence services, Reinhard Gehlen, was in a rage because once again he knew nothing of what was going on ... a senior officer of the West Berlin police, gazing at the construction work being carried out by members of the militia, stammered in total consternation, "Are they really permitted to do that?"

On that night commuter traffic for all residents of Berlin's border regions had to be rerouted ... more than a hundred thousand border hoppers, who had sold themselves for a few marks to their class enemy but continued to live among us without qualms of conscience while taking full advantage of all our social programs, were turned back in dismay ... thousands of black marketeers, speculators, body snatchers and other low-life were tearing their hair in desperation because we had so thoroughly spoiled their "piece of the action" ... and the dream of the West German imperialists and militarists of a "Bundeswehr march through the Brandenburg Gate with bands playing" had faded away forever.

When daybreak came, the 25-mile long border between West Berlin and the capital of the GDR was closed. Without the enemy ever having had the least inkling, it was firmly secured and under tight control by the units of the National People's Army that had been alerted shortly before midnight, together with units of the workers' militia, the Border and People's Police, all supported by troops of the Soviet Army stationed in the GDR. The measures taken by our party and our government were, in all improtant respects, carried out in a disciplined and precise manner.

On That Morning

The citizens of the capital read with relief and satisfaction in the slightly earlier editions of the city's papers the declaration of the member states of the Warsaw Pact, in which it stated, "The governments of the Warsaw Pact states address themselves to the People's Chamber and to the government of the GDR, to all the working people of the German Democratic Republic, with the recommendation that a system be established at the West Berlin border, as well as around the region of West Berlin, including its borders with democratic Berlin, that will effectively block the subversive activities aimed at the countries of the socialist camp and that a reliable guard force and an effective border control be guaranteed."

On That Morning

A crew-cut teenager called out from the other side of the wall to a militiaman carrying a submachine gun slung over his shoulder, "What do you think you're doing with that queer looking instrument around your neck?" The militiaman replied with a grin, "You can play some sweet tunes for your Franz Josef Strauss on this thing. Didn't you know that this is a Dawai-guitar?"

With the measures of August 13th our party and our government underscored their determination to do everything necessary to safeguard the accomplishments of our socialist resolution and the peaceful life of our citizens and to show that they were serious in the resolve never again to allow a war to break out on German soil.

A Secret

was reveled by Comrade Walter Ulbricht at a reception of the party and state leadership, which took place on the fifth anniversary of that August 13th in conjunction with a mobilization rally of militia units and to which veteran members of the militia cadres were invited. Comrade Erich Honecker, member of the Central Governing Committee and Secretary of the Central Committee of the Socialist Unity Party, sought the floor in order to propose a toast. An attentive silence filled the hall. But before Comrade Honecker could begin, Comrade Walter Ulbricht, pointing to Comrade Honecker, said, amid the ringing applause of these present, "This man was our chief of staff on August 12th and 13th."

Today

it is apparent to everyone that the measures of August 13th were objectively necessary and historically correct. They have become a milestone in the history of our socialist fatherland. They made it clear that socialism had attained its ultimate victory in the GDR, that the country was strong and capable of defending itself. It was a victory for both socialsim and for peace, just as it was a painful defeat for all the forces of imperialism. It gave lasting proof that the GDR will never be defeated, that this country is a very real force in the service of the peasants and workers, which can rely upon its strongest allies in the Soviet Union and in the socialist community.

At This Moment

imperialism is flaunting its ragged banner of anti-communism and its age-old lie of the "Danger from the East" more boldly than ever before. Arrogantly and blindly it is seeking to make one last venture at the last hour to turn back the wheel of history. With cold-blooded cynicism it is ready to thrust mankind into the inferno of a nuclear war that would annihilate everything. If only they were able! But those days have passed forever. In their place we see a balance of power on the side of progress, with the Soviet Union in the van, the strength and power of the peace-loving peoples of this earth, those who seek to live in peace and not to die in violence; there is no doubt that they are now in a position to force to the peace table those monsters in human form who once had planned to bomb Vietnam and even now the entire globe "back to the Stone Age."

The arms of the imperialists were too short, even at the time of the Great Socialist Revolution of October, to strangle socialism in its cradle. Even more so today. And it fills us with satisfaction that, under the confident leadership of our Marxist-Leninist party, we have been able to make our contribution through the measures of August 13th and through the constant and all-pervasive strengthening of our socialist German Democratic Republic.

We know full well the enormous danger posed by imperialism even in its ever more rapidly ripening final phase; we do not underestimate it by any means. The proof

of this is to be found in our struggle for the realization of the resolutions of the tenth party congress of the SED calling for a further strengthening of the GDR, in our constantly high state of revolutionary alertness and our combat-readiness, in our translation into action of the watchword -- "No quarter to the enemy!" And last but not least it is for us to make clear to younger generations what a heavy responsibility they bear as heirs to the victorious class struggle that took place on that August 13th.

'PROGRESSIVE,' 'REACTIONARY' CONCEPTIONS OF PRUSSIA CONTRASTED

West German Commentary

Bonn IWE-TAGESDIENST in German No 114, 3 Aug 81 p 1

[Report from Berlin: "GDR Reservations About Prussia-Show in West Berlin." The article cited below is one of a series of three articles on the "'Prussia Wave' in the FRG" by Dr Siegfried Schmid, history professor, Friedrich Schiller University, Jena, published in the Erfurt daily DAS VOLK. Translations of all three articles follow this commentary. For various references to items of related information see translations of East Berlin articles published under the heading, "Importance of National, Local Patriotism Explained," in JPRS 76749, 3 Nov 80, No 1823 of this series, pp 35-39]

[Text] With growing suspicion the GDR is evidently watching the "Prussia Wave" in the FRG. Jena historian Prof Dr Siegfried Schmidt (SED) has now announced political reservations about the FRG's "Prussia hubbub" and the big Prussia-Show about to open in West Berlin. In an article series he has alleged that the "Prussia Wave" in the West had "altogether unequivocally reactionary intentions," it being the first big rehabilitation attempt for Prussia since the end of the war. "Reactionary historians and journalists" in the FRG were trying to draw a rosy picture of Prussian history and "rid Prussia of the odium of fascism and militarism." The Jena professor attacked the Prussia-Show in West Berlin and the events going along with it primarily because "behind this hubbub" allegedly stood the political intention "to reappraise West Berlin by means of history and lend the Prussia Wave all-German nationalistic accents by including the GDR capital in the program, for example." (Erfurt DAS VOLK, 29 Jul 81)

GDR Focus on Prussia

Erfurt DAS VOLK in German 22 Jul 81 p 3

[First article of series on "'Prussia Wave' in the FRG" by Prof Siegfried Schmidt: "Not a Revival of Bourgeois Parochial History--Our Criterion for Any Type of Historical Research and Heritage Appropriation: What Was the Ancestors' Contribution to Social Progress?"]

[Text] Still this summer, a big show with the theme "Prussia--Attempt at a Balance-Sheet" will open in West Berlin, close to

the GDR's national border. That will mark the climax of a whole "Prussian Wave" in the FRG and West Berlin. Is it a coincidence or a political design that this is happening just at the same time that among citizens in our country, due to their growing interest in history, the myth and reality of Prussia also has become a topic of conversation? We asked comrade Prof Dr Siegfried Schmidt, historian, Friedrich Schiller University, Jena, to inform our readers about this and other matters on the subject of "Prussia."

Our adversary, engaged in a big attempt for circa 2 to 3 years at rehabilitating Prussia (more than two dozen books on Prussia were published in the FRG in 1980), would like to impute to us we are "reassessing" Prussia socialistically. Western media have come out with sensationalist headlines such as "Revision of the Image of Prussia," "Comrade Frederick II" (ZDF), or "Prussia's Gloria the Socialist Way" (Deutschlandfunk). There is no truth in any of that. It makes no sense to look for any opportunistic conception of Prussian history, or any other history for that matter, among us because our point of departure in all matters concerning Prussia and Prussian history differs totally from what is reflected by the "Prussian Wave" in the FRG--despite the simultaneity that has occurred.

Rooted in the Progressive Traditions of All of German History

In our country, the socialist German nation is under development. That is a lengthy process which attaches special importance to the development of a socialist national consciousness. As we have to write a national history of the GDR, we also must provide unequivocal information on the historic roots and foundations of the GDR.

Our position of principle has been set down in the SED Program, as issued by the ninth party congress in 1976: "The GDR's socialist culture is committed to the rich heritage created throughout the whole history of the German people." A few comments on that.

The image of history of the socialist German nation embraces all of German society, starting with the genesis of the German people, and it includes territorially, up to the mid-1940's, all areas that were united in the German Empire or, before 1806, in the Holy Roman Empire of the German Nation. This is a very important and inviolable element of the socialist German nation's sense of identity. This is a nation which is of a socialist nature and of German origin. The consequence of it: only from the lofty vantage point of triumphant socialism can all of German history make sense to us. I make a special point of this also because there has been no lack of attempts by bourgoie ideologues in the FRG grossly to misrepresent the GDR's attitude toward German history.

So they are disseminating the notion that in terms of national history the GDR is a neuter, without historical roots. Or they seek to confine the GDR historically. Karl Jaspers in 1960 tried to define the GDR as, more or less, "Prussian-Saxonian." And sure enough, a few years ago a book about the GDR was published, entitled "Half Prussia--Half Saxony." The political intent is obvious. The socialist state

is meant to be defamed as the successor of Prussia, or more precisely, of reactionary Prussianism. Yet the GDR is conceivable only as the outcome of all of German history. Its historic roots lie in the struggles by the progressive forces of the German people in their totality (including representatives of exploiter classes in certain phases of history) for social progress.

Territorial States Were Not Only Impediments

And then there is another point to be made. As the GDR is rooted in the progressive traditions of German history, we must account for the whole complexity of all achievements and traditions that have objectively contributed to social progress. But that also means that we must not only look at everything progressive from the vantage point of the centralized national state, as has often been done up to now. The German territorial states under feudalism and during the transition from feudalism to capitalism were not only impediments to the realization of social progress, but progress still prevailed even then, albeit in a deformed condition.

The increasing intrinsic weight of GDR history and the identification of the GDR citizens with the historic areas and landscapes in which they live and work make for the great and growing interest in the history of those regions. And there are objective reasons for it. Socialist society is especially interested in the history of those territories that compose the GDR region. That explains why we are more concerned with the history of Prussia, Saxony, Thuringia, the states of Mecklenburg and the territories of Anhalt, than with Baden, Bavaria or Hesse, for instance.

A Complex Dialectical Image of History

It is perfectly obvious: we seek no revival of bourgeois parochial history, which ultimately aimed only at the glorification of any given territorial princes. In terms of a complex, vital, that is, also dialectical image of history, we seek to get hold more intensively of the progressive traditions in the history of the territorial states, while focusing more strongly on, and differentiating in our evaluation of, that historic legacy that was marked by the intertwining of process with reaction. Thus the question has to be asked which essentially, and partly unintentionally, reactionary phenomena and personalities objectively still had positive effects. That would certainly apply to representatives of the ruling class, not last to feudal rulers like Frederick II, August the Strong, or Carl August of Saxony-Weimar.

These then are no manifestations of superficial "fashion," no political designs such as those of the FRG's "Prussian Wave," but a long-range task of GDR historians in their shaping a complex image of history.

Socialist Premise for Historiography

Erfurt DAS VOLK in German 25 Jul 81 p 3

[Second article of series on "'Prussia Wave' in the FRG" by Prof Siegfried Schmidt: "Without Any Magic Wand on the Way to the Factual Sources--On Prussia's Role in German History"]

> [Text] The legend and reality of Prussia, historical research among us and historical distortions in the FRG, in this context, are the subject of an article series for us by Prof Dr Siegfried Schmidt, historian at the Friedrich Schiller University, Jena. In his first contribution (DAS VOLK, 22 July), under the headline, "Not a Revival of Bourgeois Parochial History," he presented the point of departure in socialist historiography and historical research with respect to the "Prussia Wave" in the FRG. The present contribution furnishes extensive answers, rich in facts, to questions by our readers about the role of Prussia in German history.

We are concerned with the progressive heritage of all German territorial states (thus not only of Prussia), especially those that composed the area of the GDR. Yet it would be inaccurate, were we to give the impression that the history of Prussia did not essentially differ from the history of Saxony or the history of the Thuringian principalities. It must be remembered that Prussia was a territorial state with a long medieval "prehistory" as the Electorate of Brandenburg, had more to do with the history and development of the German nation than any other German territorial state, and, especially in the 19th century, was a state of super-national character already before the German national state was founded in 1871. Included in Prussia were East and West Prussia, the Rhineland, the Lower Rhine (Mark and Kleve), Brandenburg, Pomerania, Silesia and--since 1815--the Province of Saxony.

That explains the special weight of the problems around Prussia. Our efforts at tapping the progressive traditions of Prussian history make it necessary for our interest to be concentrated on the transition from feudalism to capitalism, mainly on Prussian history since the end of the 17th century up to 1871. But I would like to make it perfectly plain that the gathering of progressive traditions will not cause us to ignore even for a moment our confrontation with reactionary Prussianism, because in Prussian history as in German history there were altogether two different class lines. For that reason we must oppose any attempt by bourgeois ideologists to uncouple Prussianism from imperialism and fascism.

Exposing Progressive Lines

The existence and effect of reactionary Prussianism must not prevent us from exposing the progressive lines in Prussian history. Included also the positive achievements of the exploiter class or of particular representatives of that class. But our procedure must not be subjective, of course. Anyone who studies the biography of Frederick II is likely to find him rather repugnant as a human being, in terms of our humanistic image of man (one may mention his profound misanthropy). Nor was Queen Louise, despite the ingrained legend, exactly a splendorous figure but,

though rather attractive in looks, quite a mediocre lady who did not really understand her time. But let us not apply such criteria. Instead, we are interested in their objective contribution to social progress. We have to inquire into the use of the surplus product worked up by the exploited classes and strata in social progress (e.g., in shaping the infrastructure or developing the land and so forth). Thus we must look at the producing of a surplus product not merely under the aspect of exploitation. And we must also ask about the "historic mission" of exploiter classes, especially of the middle class in the rising phase of establishing the new social order.

Such criteria, naturally, are no magic wand either that would turn the expansion and deepening of the Marxist-Leninist image of history into an easy job for the historians who--the enemy alleges--were reappraising Prussian history for "reasons of a favorable market trend." All this calls for is scientific work, an accurate tapping of sources, the known ones and the ones not yet explored.

Questions About the Relationship Between Progress and Reaction

In all the questions about the relationship between progress and reaction in Prussian history the point has always been properly made that the history of Prussia was not only a history of the Hohenzollern Dynasty. To us, for an understanding of history in the socialist German nation, it mainly also was tied up with the great revolutionary traditions of the class struggles of 1848/49 (Berlin) together with the class battles of the workers class in Prussia since 1830, not last in Berlin.

Even so, Prussia is not conceivable as a state without the activities of the Hohenzollern who came to play an important role in the empire not until the 18th century when absolutism was coming fully into its own in Prussia. On the one hand we now find their accommodation to the bourgeois evolution, the transition from feudalism to capitalism and, on the other, the shoring up of their feudal class domination.

While being thus discriminating in looking at the historic role of absolutism, we yet make no allowances in viewing Prussia as an aggressive military state. Frederick II belongs in the reactionary line of German history. Yet it must also be clearly stated that Prussian militarism of the 18th century is not identical with the militarism marked by German imperialism in the 20th century.

After 1815, however, Prussia becomes the main base of reaction until 1848, and again afterwards. Official politics is determined by a gradual Prussianization of Germany. Yet we must not only look at the Prussianization line that was "crowned" in 1871. We also must look at the Prussian reforms after 1806 which were an essential step toward the bourgeois transformation in Germany (liberal aristocratic reformers, wars of liberation containing essential elements of the popular movement and the bourgeois reform movement and connected with names like Gneisenau, Stein and others). Principally since 1830 Prussia takes the lead in industrial development. From it grew the leading role of the Prussian bourgeoisie with vast implications for education (Wilhelm von Humboldt) and the promotion of science, for example. Finally one must refer to the unification of the Reich in 1871, which offers a most conspicuous example of the complicated dialectics of progress and reaction. Overcoming the fragmentation initially was an important step ahead. It stimulated a

rapid development of the capitalist mode of production and of the modern industrial proletariat. It offered the workers class a new foundation for forming on the national level. At the same time, however, reaction won by Prussianizing all of Germany.

We have started thoroughly coming to grips will all these traditions. But to say it once more: if we draw contradictory matters with discrimination, rich in contrasts and vividly, we never yet forget the legacy that belongs to the core of the whole tradition of the GDR, the legacy of the revolutionary workers movement and its struggles.

FRG Historians' 'Distortions'

Erfurt DAS VOLK in German 29 Jul 81 p 3

[Third and final article of series on "'Prussia Wave' in the FRG" by Prof Siegfried Schmidt: "How Window Dressers Present a History Picture"]

> [Text] Prof Dr Siegfried Schmidt of Friedrich Schiller University, Jena, who has already in recent days (cf. DAS VOLK 22 and 25 July) answered some questions from readers about the legend and reality of Prussia, and about historical research in the GDR and historical distortion in the FRG, examines in this final article in the series today the backgrounds and intentions of the "Prussia Wave" in the FRG and West Berlin.

The "Prussia Wave" in the FRG has altogether unequivocally reactionary political intentions. This is the first big attempt at "rehabilitating" Prussia since the end of the war. Warning voices have been raised, to be sure, even from leftist bourgeois historians and journalists. But on the other hand, even in the extreme forms of manifestations it is hard to overlook parallels with painting the Nazi past in rosy colors, which is quite common in the FRG.

Hoping for "All-German" Accents

The design to make desires and imaginations of the present come true is also apparent in the big "show" West Berlin is holding this year. Along with many other things, theater performances and special exhibitions, there comes this big "show" in the immediate vicinity of the GDR's national border entitled, "Prussia--Attempt at a Balance Sheet." It is scheduled to open on 15 August. Behind this hubbub stands, principally, the intention to reappraise West Berlin by means of history and lend the Prussia Wave all-German nationalistic accents by including the GDR capital in the program.

Looking at publications and television programs in this field, divergencies become visible. There are various kinds of flexible interpretations of social history. Wehler, Buesch and others maintain critical distance from Prussia. Yet they still remain unbridgeably contrary to Marxist historians because, ultimately, the critical analysis of Prussian history by Wehler, Buesch and others also only serves to justify and legitimize the imperialist system by detaching it from the reactionary manifestations of Prussian history.

Reorchestration into "Peace Militarism"

And then there are historians who have somewhat of a critical view on some aspects of Prussian history. But then there also are reactionary historians and journalists at work in the FRG who draw a rosy picture of Prussian history and try to rid Prussia of the odium of fascism and militarism. Haffner, for example, writes in his book about Prussia that was already mentioned Prussia had not only merged with Germany in 1871, but the "long dying of the Prussian state" had begun in 1871. Then, according to Haffner, no historic line exists either between Prussia and Prussian-German imperialism. Others have echoed Haffner and somewhat modified his views.

The historian Christian Count von Krockow claims Prussian militarism has always been "peace militarism," even in the time before World War I, for instance. The glory of the Prussian army had been to be good for parades and march music but not for warfare. This risky trend is then extended into the thesis that Prussia had nothing in common with fascism, indeed was diametrically opposed to fascism.

Our Marxist view is not mechanically to identify fascism with Prussianism. But acrobatics in the art of interpretation would be needed indeed to "prove" Prussianism and fascism incompatible. That is what the historian von Krockow is trying to do, buttressing the supposed contrast between fascism and Prussia by making the point that of the big Nazi bosses and leaders of the SS only 17, i.e. 3.4 percent, had been Prussians.

What Corresponds With Our Picture of the World

Finally I would still like to call special attention to the attacks against our conception of Prussian history as against our historical image of the progressive line of tradition in German history as such.

In his interview with publisher Maxwell, Erich Honecker has clearly pointed out our attitude toward the legacy and tradition of Marx and Engels, Mehring, Liebknecht to this day. When new problems mature we shall continue to proceed from the basic principles in the Marxist-Leninist conception of history, which are controlled by the interests of the working classes and strata, mainly the working class. Our answer depends on the criterion of social progress, on the theory of classes and class struggle and the sequence of forms of society. They remain the foundation in our evaluation of the role of Prussia.

But every era asks new questions of history. After 1945 the priority was the struggle against fascism and imperialism and reactionary Prussianism. Today, under the aegis of the developed socialist society, new questions come up for discussion. We are getting the time and opportunity to deal with them because of the ongoing rapprochement among the classes and an important increase in knowledge. To quote from Erich Honecker's biography, "From My Life": "It conforms to our picture of the world to comprehend history in its objective, actual course, in all its dialectics."

TRAINING AT MILITARY INSTITUTES DESCRIBED

Budapest NEPHADSEREG (SUPPLEMENT) in Hungarian No 28, 11 Jul 81 p 1

[Article: "A Profession"]

[Text] In our country a career soldier of the armed forces is a political factor and a man of public life, in whose actions and example one sees and expects our party's policies represented and served. This respect and confidence manifested by the entire society lends weight to the career as a professional soldier, and broad based social appreciation to the ranks of officer and junior officer. To live up to and satisfy this respect and confidence is truly a manly task requiring a whole man.

The military colleges and junior officer training institutions of the Hungarian people's armed forces continuously provide training to youth suitable for the career of professional soldier, thus providing the replacements for the Hungarian people's armed forces.

The armed forces is waiting for, and invites the young people chosing their careers to join it!

Military Colleges

Favorable family and social environment of the young person, unquestionable political and moral reliability, no criminal record and an unblemished past are important requirements when applying to the military colleges. Military service is also physically taxing on the professional soldiers, therefore a military medical screening group evaluates the physical condition and endurance of the applicants. The basic conditions are that the young applicants have no organic ailments, have perfect sight and hearing, and have no physical handicaps. Being no older than 23 years of age and single are also among the application requirements.

The general requirements for application are made public each year by the Ministry of Defense in the form of competitions. Students of schools can receive the application documents from the principals of secondary schools, while young soldiers get them from the commanders of their service units. In addition to this, interested parties may request the documents from the personnel departments of the megye military recruitment and regional defense headquarters, and

in Budapest from the educational department of the Capital City Military Recruitment Headquarters. These organs will provide detailed information about applying, branches of service, circumstances of the training in the military training institutions, and the order of reporting for service.

The goal of the military colleges is to train officers who are faithful to the principles of socialism and communism; who profess a solid materialist ideology; who live according to the socialist moral standards; who profess as their own the goals our party and of our government; who know and love their vocation; and who, on the basis of their overall personality and training are able to organize and lead the training, activity and combatability of their subordinates.

The location of the Lajos Kossuth Military College is Szentendre. The college trains officers for assignments as subunit commanders in the people's armed forces and in the BM [Ministry of Interior] Border Patrol in the following disciplines: mechanized artillery, tank personnel, reconnaissance, rocketry and artillery, roadway technician, machine operator and above ground construction, BM border guard. Graduates will also receive civilian diplomas in the mechanized artillery, tank personnel, rocketry and artillery, group reconnaissance and border guard disciplines as general mechanical plant engineer; those studying in the mechanical discipline will get diplomas as road construction engineer, above ground construction engineer, or plant engineer.

The location of the Mate Zalka Military Technical College is Budapest. The college trains subunit commanders, technical and troop management officer specialists for the branches and specialized divisions of the people's armed forces. Commander training is conducted in the areas of: troop aerial defense rocketry and artillery, communications, and chemical defense. The graduates will also receive civilian industrial engineering diplomas in control technology or radiochemistry. Technical training is given in the areas of: domestic aerial defense rockets, locator technology, battle vehicle and motor vehicle technology, and general weaponry. The graduates will also receive civilian industrial engineering diplomas in traffic engineering, or in instrument and control technology. Economics and supply training is conducted in the disciplines of military feeding and military finance.

The location of the Gyorgy Kilian Aviation Technology College is Szolnok. The college trains aviation technology and fighter control and observation officers for the flying divisions of the people's armed forces. The airplane and helicopter designers also spend the first year of their studies here, after which their advanced training is conducted in the Soviet Union. The aviation technology training is conducted in the areas of: airframe and engine maintenance for airplanes, airframe and engine maintenance for helicopters, airborne radio technology equipment maintenance, airborne instrument technology equipment maintenance, airborne weapons technology equipment maintenance. Graduates will also receive civilian diplomas as elementary school Russian language teachers, mechanical engineers, and industrial engineers in control technology and communication technology.

The time for training is 4 years consisting of eight academic semesters, each semester containing 600 hours of training (for a total of 4,800 hours). The academic year begins on 1 September and ends on 15 July. During the time between the academic years the students receive 1 month of vacation.

Junior Officer Schools

One must be at least 17 years of age to apply. In addition to graduation from the eighth grade of elementary school which is the mandatory requirement, the armed forces also expects knowledge and practical experience to have been gained in vocational training institutions and in productive work.

The departments at the junior officer training school can be broken down into groups of commanding, technical and management, and supply. The commanding departments are: mechanized artillery, tank personnel, reconnaissance, rocketry and artillery, and defensive. The technical departments are: technician, motor vehicle technology, armored vehicle technology, communication technology, weaponry technology, aviation technology, and radio reconnaissance. The economics and supply departments are: feeding, clothing supply, transportation, quartering, health care, fuel, and business management.

The material taught at the junior officer schools includes all the political and military-professional knowledge in possession of which the graduate junior officers can confidently train, educate and direct their subordinates, and use the battle technology equipment entrusted to their care. During the course of the training the students receive broad based political knowledge. They receive methods and opportunities for active participation in public life and to practice it; to develop their talents and satisfy their spheres of interest.

A significant portion of the training is in specialized areas. Within the framework of this the students familiarize themselves with the modern combat procedures, and with the tasks related to leading and directing the enlisted men in their command; they also learn the jobs related to the operation, maintenance and repair of the battle equipment and the organization and supervision of the repair work.

The training time is 2 years, divided into two semesters for each academic year. The training runs from 1 September to 31 July in the first school year, and to 15 August in the second school year. At the end of the first school year--in August--the students get a 1-month vacation, while the second academic year ends with their graduation as junior officers.

YOUTH MUST ACCEPT MORE RESPONSIBILITY FOR ITS FUTURE

Budapest NEPSZABADSZAG in Hungarian 20 Aug 81 p 5

[Article by Istvan Koncz: "Responsibility for Youth--Responsibility of Youth"]

[Text] Of all the key questions of socialist national unity, one of the most exciting is surely: how will the ranks of the rising generation be integrated into the national unity which is now becoming a socialist one; how will society's socialist characteristics be strengthened among the youth; to what extent will the future that is being built for and in behalf of them be built by them as well? Every fourth Hungarian citizen is a youth between 15 and 30 years of age, and 40 percent of the Hungarian workers are under 30. It is not possible to think in terms of "people" and "nation" with out them. It is necessary and worthwhile to think and act not only about them and for them but together with them.

In a socialist society dedicated to the future of humanity, it is self-evident that the youth are t be given special care. Most recently this was pointed out by the declaration of the twelfth congress of the Hungarian Socialist Workers Party in accordance with its uniform policy dating back many decades: "Care for the new generation and education of the yough are a concern for the entire society." And this care is guaranteed not only by our constitution but by the law on youth as well. And we do not just preach principles. They are verified by the actions of a whole range of state measures, party organizations, councils, social organizations, enterprises and institutions. Without exaggeration, and keeping in mind the deficiencies, we can state that much has changed even in the thinking of the public, our realistic judgement of the situation of the youth is mostly appropriate, and a feeling of responsibility toward youth permeates deeply the way the older and middle generations are thinking. Even not infrequent anxieties are turning rather into an anxious love.

With the experience of the party

But this is only one side of the mutual responsibility. The other side--namely, that "the youth are also responsible for themselves"--has been formulated in the report of the Central Committee at the 10th Congress of the Communist Youth League [KISZ], and it received emphasis and many-sided clarification in speeches and resolutions as well. Incidentally, it is especially encouraging that voice was given to the responsibility of youth by the youth themselves, [through] KISZ, which is not only a group of communist youth but represents all our youth.

It is true that the responsibility of youth is not a new thought, we have never thought otherwise. We are only talking about the fact that in recent years--appropriately and necessarily--we have put more emphasis on the responsibility of society. And though we have made real progress in this area, and favorable changes have occurred in the situation of our youth and in the judgement of society, on the other hand--not everywhere, but in many places, and not always, but often--the requirements of the responsibility of youth were only quitely assumed and did not receive sufficient emphasis. But this was never superfluous; in the present circumstances it is especially important.

Today, social responsibility toward the youth requires us first of all to educate the youth for greater responsibility. Responsibility for themselves, for their future, for the people, and for socialism.

What is meant concretely by this connection, the two sides of this mutual responsibility, in the main questions concerning the youth?

Our party, [that is] the party members of the older and middle-aged generations, have the heavy obligation to transmit its political experience to the youth. But not even this can be treated as a one-sided responsibility. In a favorable political-social atmosphere it can be expected that the youth themselves will be responsive and receptive to these experiences and to truly learn from them and apply them in a creative way to today's new and changing circumstances--and even more so tomorrow. One reason for the negative features that can be found in certain circles of the youth is precisely the fact that their experience and responsibility have not always and not everywhere been sufficient.

Of course we are not thinking about the kind of endless sermons that start out "Verily in our times..." under the pretext of transmitting or receiving historical experiences. Exhortations and insults of this kind--on the basis which some people dispute the requirements of youth that can be realistically attained and their healthy impatience--will fall on deaf ears with no effect. In fact they have rather a opposite effect, and arouse feelings of opposition.

But no matter how ineffective this kind of talk and stiff obtuseness and distrust are in the face of the different, freer style of the youth who have grown up under socialism, the lack of interest shown in many youth groups toward the lessons of our past and toward our political education in general is even more uncalled for and harmful. The youth frequently say, "Don't teach us to death, " and if in this way they are objecting to a patronizing manner of thinking, and not to education for independent responsibility, they are right. But to question education in general, including the necessity of political education--as many youth do, mostly influenced by some kind of fashionable nonconformity--is wholly unjustified. No one, old or young, can extract himself from the complex influences of education taken in its broadest sense; reality educates all of us; and young people of have the special advantage to creatively accept these influences with flexibility and curiosity about new things. But obviously few of them possess the actual life experience necessary to choose from among these influences.

With Political Maturity

We can only adjust confidently to present tasks, if we also understand the motive, and we can only prepare for the new things to be done in coming years though they cannot be foreseen in detail, if the youth thoroughly know the history of our people, including especially the lessons of the decades of the building of socialism.

Our youth can--and must--obtain political, intellectual, and moral inspiration from struggles and results of indisputable historical importance, from everything that we have successfully solved and which is recognized in the world not only by our friends but also by our enemies. And the youth must also learn from the mistakes as well, so that they will not commit the same errors that their predecessors did in travelling along the unbeaten path of Hungary's peculiar conditions.

And not incidentally: they must learn to discriminate between errors and steps that today, decades later, may have unfavorable consequences, but which were necessary in their time and appropriate, and worthy of pride. Among these latter, for example, we are thinking of certain rigid characteristics of the structure of our economy and production, some of which developed during the initial, intense period of socialist industrialization. We must admit these--we cannot do otherwise--and we can admit them with pride, because backward pre-war Hungary rose through them to become a socialist country with at least average development. We can admit this with a clear conscience, even though perhaps the most difficult--and most painful because of regrouping of the work force--task of today and coming years is perhaps the modernization of this structure of production.

Not only our teenagers but also those between 25 and 30 have no conscious and clear recollection of what the small-peasant agriculture and way of life were like or what a Hungarian village was like at the beginning of 1959. Or of what the housing situation was in the cities in 1960, before the period of the first 15-year housing-construction program. Or of when the scarcity in meat supply ended quietly, almost imperceptibly, or of when and how the flood of automobiles swelled from a few thousand to today's million.

Children of Our Time

Today's youth formulate their thoughts, feelings about life, questions, and doubts openly, freely, without fears or inhibitions. This is natural, since without exception they are the children of the most recent quarter-century. They know only this political climate; only this time, favorable and encouraging to every new influence, which is under a sky that is alternately sunny and sometimes cloudy, but essentially unchanging. They have not , cannot have, and should not have a conception based on personal experience of what kind of strom we had to weather and then start anew--a genocidal, tragic, situation, threatening the foundations of socialism--and what kinds of dark forces had to be defeated and what kinds of causes had to be eliminated. But they must have a clear knowledge of them indirectly, learned from their elders.

The youth, lacking experience from life--and also because of their impatience; an impatience justified in view of the errors, neglect, and backward steps, but an unrealistic one that does not always respect the limits of the possible--are most susceptible to and defenseless against bourgeois propaganda and attacks on socialism. These are without doubt more vehement that a few years ago and more

susceptible to and defenseless against bourgeois propaganda and attacks on socialism. These are without doubt more vehement than a few years ago and more subtle than anything before, which can be seen not only from enemy propaganda in [the] Hungarian [language] and not principally from attacks directed at Hungarian youth. To see through these unambiguous intentions and to arm ourselves with principles against that propaganda which ultimately serves the interests of imperialism are the common task of the youth and of everyone who is responsible for them: older people, family, school, KISZ, party organizations, and state and social organs.

We are also faced with a sea of worries and a situation that makes it difficult to start young people on their way to an independent life. But in order for them to deeply appreciate our own conditions, it is enough for the young people to look at the world around them, enough for them to think about the dangers that threaten peace and international detente, enough to see the uncertain lives and unemployment of the youth in capitalist countries or, keeping "within the family," to observe the experiences of certain other fraternal parties. Every problem concerning the youth can be solved within socialist conditions, only on this ground can they be really solved, and sooner or later, depending on possibilities, with their help and cooperation, we shall solve them. Only let the two most important conditions for it be guaranteed: peace and firm socialist power of the people [with] internal political stability, order and tranquillity. This is our dearest treasure, the vital interest of our entire society, including the youth. The youth must also accept responsibility for it, thinking maturely, independently,in an adult manner.

What kinds of worries are we referring to? Let us just mention the two most important. The most important condition for establishing a family is an independent home. It is true that the youth of the old Hungary could not even dream of the satisfying today's demand for housing quantity and quality, and most of the youth of the capitalist countries still cannot dream of that, except perhaps for certain strata in the economically most developed countries. We know that neither this nor the fact that our state, as it has always done for many decades, is continuing construction at the upper limit of productive capacity in the midst of present economic difficulties is any comfort for today's Hungarian youth who are waiting for housing. But to respect this [situation] and to show understanding for it is absolutely necessary and requires political maturity. The KISZ congress demonstrated the independent sense of responsibility in our youth when it urged a more intense unleashing of youth's own efforts and, to this end, an improvement in economic and organizational conditions and exposure of the grest deficiencies in the management of housing market, instead of working like firemen to solve petty problems.

For Their Own Future

Much is being said nowadays about helping the youth become integrated into the workplace--or to generally integrate them into the working lifestyle. Every supervisor, every recipient collective, and everyone who directs instruction or management of the work force has a political responsibility for this. But this is just one side of the question; it would be a mistake to emphasize it one-sidedly. Let the youth themselves feel a responsibility for themselves and make efforts to integrate themselves, adapt to the realistic requirements of the

workplace and the national economy. We have often heard it said that youth everywhere should be given meaningful tasks. But is is just as important for the youth to seek the tasks, to undertake difficult tasks as well, and to put forth rational initiatives and recommendations. By fulfilling their duties--work, study, defense of the homeland--at the best possible level, they will be acting not in the interest of others, not for their fathers' and grandfathers' generation, but most of all in their own interest; they owe themselves this sense of responsibility.

Today's Hungary is a young Hungary. Not in terms of its composition by age, but first of all in the historical, social, and political sense of the word. It is young because here is the society of the future, a developed socialism is being built. Last but not least, this future will be whatever kind the youth make it for themselves--and for their future children, grandchildren, and generations after them. Our youth are entrusted with responsibility for this future.

WESTERN COMMENT ON TRIAL OF MARKO VESELICA

Vienna DIE PRESSE in German 11 Sep 81 p 3

[Article by Christine von Kohl: "Extreme Harshness Against Dissidents--Different Style Governs in Croatia"]

[Text] The last in a series of political trials of critical intellectuals in Croatia which had begun this spring ended with a draconian sentence this week. The former university lecturer in economics Marko Veselica was sentenced to serve 11 years in a penitentiary. Nobody had expected that harsh a sentence.

The sentence corresponds to the average sentence being meted out these days against young people of Albanian origin in Kosovo. The indictments against these charge that they violently rebelled against the state and social order, erected barricades in the streets, pelted cars with rocks, wrote counterrevolutionary slogans on walls, forced citizens to participate in demonstrations and the like.

Marko Veselica, on the other hand, had never used any means other than the spoken and written word. He was indicted here because of an interview which, it was charged, he had given to the weekly magazine DER SPIEGEL. The fact that it appeared not there, but in various publications of the emigre press, did not cause the prosecution to become interested in the "German journalist" Hans Bornemann who had told Veselica that he was a SPIEGEL correspondent. The fact that the indictment did not raise any question about this aroused the suspicion that it might know better than Marko Veselica who the person was.

The interview whose extracts constitute the nucleus of the indictment of Veselica in fact does not make pleasant reading for the politicians in charge in Yugoslavia. Nor will all other readers agree with him on all points. However, Veselica is charged with "preparing inimical activity in connection with anti-Yugoslav circles abroad with a view to inimical activity and stirring up hatred between the peoples of Yugoslavia." Without ado, the public prosecutor identified Marko Veselica with the terrorist actions of the anticommunist emigre organizations, liberally connecting events in Lebanon, [Northern] Ireland and Kosovo--all in relation to the defendant.

The defense rightly drew attention to the fact that in the interview--and in his utterances in general--Veselica explicitly dissociated himself from any violence, from any terrorism and from the extremist emigre circles, who he thinks are only creating further mischief. It was pointed out that beside the very harsh criticism

of many phenomena of the sociopolitical and economic system and everyday life in Yugoslavia, the politically constructive elements of the interview clearly predominate. Veselica does not want to change the system but wants the constitution to be followed. He does not want a revolt of any kind but demands a free dialouge between those in power and the rest.

But above all the defense took apart completely the so-called evidence, including statements by witnesses, of the prosecution of Veselica's contacts with the extremist emigration. Three elderly women, who in line with their statements in the preliminary investigation were produced as witnesses for the prosecution, turned out to be witnesses against it. The principal witness was a seriously ill woman whose evidence appeared to be unreliable in every respect. When confronted with the defendant, who she claimed had given her "illegal" material to take abroad, she burst into tears and had to be placed under medical care when Veselica told her that she was lying.

In such political trials it is customary for there not to be even a semblance of any influence by the court on the extent of the punishment. Only outwardly does such a trial proceed correctly. In the case of Veselica, for example, the defendant was allowed to go on talking for 4 1/2 hours--a torture for the entire audience.

Croatians, Serbs and foreign observers agree that trials such as those against Tudjman, the author Gotovac and former high party official Veselica could hardly be imagined in Serbia these days. In Croatia evidently a different style governs these days--one that is expressed also in relations with the Catholic Church. It remains to be seen why the Croatian leadership considers this style, which is arousing violent criticism at home and abroad--as well as the creating of martyrs--proper and useful.

Aside from the political and legal aspect, the case of Veselica also has a human one. Like Gotovac, Veselica reported in detail about the incredible conditions in the Croatian penitentiaries and the arbitrary actions to which political prisoners are exposed. It does not require much imagination to assume that these are hardly likely to face any better treatment when they have to start serving sentences these days.

ACTIONS ON BEHALF OF SERBIAN PRIEST CRITICIZED

Sarajevo OSLOBODJENJE in Serbo-Croatian 28 Aug 81 p 3

[Editorial: "Lawyers Representing Benightedness"]

[Text] Something absurd has happened these past few days, something which at first would seem to concern only SVIJET, but which in essence is not something that concerns us alone. SVIJET, there it is, has been taken to court. We had something to say about this in our last issue, and perhaps that would have been the end of it if the suit against us had been filed by anyone other than Nedjo Janjic, former Orthodox priest in Borike, near Rogatica, organizer of the nationalistic feast which is already well known and has been described in the press. It is true that for all the things that happened at that time the priest is now in jail in Zenica, but his attorney is still busy (nor is he alone).

So, we have been taken to court by a person convicted of nationalistic behavior because we stated in our paper what had also been written in the indictment and what ultimately landed him behind bars. The formal pretext for the suit, we have learned, is that our newspaper was unwilling to publish a "correction" to the little sketch we published entitled "The Orthodox Priest and the Lawyer." Actually what we were unwilling to publish was an ill-composed letter of sorts which called the truth a lie without offering a single supporting argument (in any case why should we concern ourselves once again with proving what the court has incontestably established) but containing the threat that we would be taken to court if we refused to publish it.

So, we have actually been taken to court!?*

Since a suit is a suit and is to be taken seriously, we are forced once again to say a few words about Nedjo Janjic and the dance around him which is being led and encouraged on the one hand by extremist members of the Chetnik-Fascist emigre community and on the other by certain cleronationalists here in the country, and yet again, unfortunately, by certain of our "native" journalists, and finally by some of Janjic's relatives. All this, of course, is fairly well synchronized and done on behalf of some sort of "justice" for those "innocent people languishing in prisons."

---

* The next issue of SVIJET will carry the editors' statement composed as a response to the suit.

"Harmless" Songs

And what actually did happen in the parish house at Borike on 23 September 1980?

After the religious service of christening Janjic's child, the relatives sat down at the dining table together with their friends and those of like mind to "celebrate" this event. But the party took a particular turn and became nothing other than an unrestrained chauvinistic outburst complete with curses, yelling, and pistol shots. It is of interest to mention at this point that one of our "distinguished" journalists wrote in a letter to the editors of SVIJET that this was nothing more than a small family gathering in someone's house where, they did do some singing, the way one does for the pleasure of it, and how now, my lord, some great scandal has been trumped up out of it.

The participants in this "nice family gathering" at Janjic's house also included Milomir Asonja, a hostelry worker of Rogatica, Momcilo Janjic, a merchant from Ilijas, and Vojo Neskovic, a teacher from Borike. Those "harmless" songs which, it was proven in the trial, were struck up mainly by Nedjo Janjic, who competed with his fellows, were songs well known to our nationalities all over Yugoslavia from the blackest times we remember: "In the middle of Foca I looked around and who did I see but a hodja at the trough with a boar.... He kept on nibbling the boar and biting him, and elbowing him away." It is not certain who began it, but it is quite certain that all joined in the song "Romanija, Leaf Out Early, So That We Can Herd Catholic Girls on Your Slopes." The song "Isn't It Heavy on You, Desimir, That Fur Hat That Weighs Three Kilograms" recalled a Chetnik cut-throat well known in those parts. It is not difficult to recognize in the lines "Shall we build a church for young people in Kaljina" the obvious intention, since it is well known that Kaljina is a village inhabited mostly by Moslems. Finally, it is really difficult to keep from being sick at the very mention of the verse "There is no Moslem now in Foca, the water of the Drina carried him off ...," with which the Chetnik butchers "spiced" every one of their bloody feasts along and down the Drina near Foca.

The Epilogue Is Well Known

What is one to call all this, then, if not an urging of the Chetnik spirit and fratricide? The court has made its pronouncement. And, incidentally, it also seems as if the people of Borike and nearby towns on Romanija have also stated their opinion.

In all of this Janjic has among other things abused in the most arrogant way the confidence of the people who had given him a wonderful welcome in their region. Instead of displaying the nobility of a priest, he attacked one of the greatest achievements of the National Liberation War and socialist revolution, the fraternity and unity of our nationalities and ethnic minorities. With his comrades of like mind, through songs, he recalled those raving "mutterings" with which the Chetniks, with blood on their hands, would accompany their marches. Is one, then, to believe Janjic when he says in the court that "at that moment I did not realize the spirit and meaning of all that," since the singing was done in a state of "loss of self-control and thoughtlessness." What the people think of all this is sufficiently indicated by the words of one individual, a church

member, who said in a meeting of the local chapter of the Socialist Alliance: "Songs as horrible as that did not come from the head of someone who is drunk, but represent a deliberate act."

The epilogue is well known. The court established beyond question that these and other songs with which Janjic's house reverberated are because of their content profoundly offensive to all honest citizens, that they provoke and irritate members of all our nationalities, and that they were calculated to arouse ethnic and religious enmity and disunity among Serbs, Croats and Moslems. With their singing their obvious purpose was to arouse a pro-Chetnik disposition within the hearing of a large number of persons, to call up the ghost of the past, and to glorify the "courage" of the degenerates of the Serbian people.

What happened has been categorized as the crime of arousing ethnic and religious enmity and discord under Article 134, Paragraph 3, and related to Paragraph 1 of the SFRY Criminal Code.

This activity motivated by chauvinism, Serbian hegemony and the Chetnik spirit was punished: Janjic was sentenced to 6 years in jail and Asonja, M. Janjic and Neskovic received 4-year sentences. In ruling on the appeal the court in the second instance reduced Nedjo Janjic's sentence from 6 to 4 years in prison. In so doing it was thinking primarily of Nedjo Janjic's age.

The Manufacturing of an Incident

When the convicted persons went off to serve their sentence, a clever campaign began whose organizers, already mentioned above, tried, as they are still trying, to proclaim that Janjic is innocent, saying that he was "convicted because he sang songs," and they appealed to the freedom of religious profession. Within Yugoslavia Janjic's Belgrade attorney has been very active along this line, as has the newspaper of the Serbian Orthodox Church PRAVOSLAVLJE and also individuals in the Belgrade patriarchate, and, as we have said, Janjic's relatives as well.

It has also been written that the lunch in the parish house was not political, that the priest did not abuse religion, and that the event described was a "quiet and modest celebration." It is also added that all this has been invented by a newsman, who was snapping at Nedjo Janjic."

Reactionaries in the world, the Chetniks particularly, are trying very hard to represent Nedjo Janjic as the victim of a persecution of religious officers in Yugoslavia, and they are spreading rumors about supposed restrictions in our country and so on. They even go so far as to refer to the United Nations Declaration on Human Rights and the League for Peace of the United Nations?! The same is being done by the organization Amnesty International, whose membership all over the world is sending out a great number of letters to our authorities out of "humanitarian motives" in which they call for Janjic's pardon, since he is "in prison though blameless." Certain newspapers of the Chetnik-Fascist emigre community are also writing about the "innocent Yugoslav priest." The fact that is "forgotten" in all this, of course, is that the court did not try a priest, but a person who is obviously an inveterate nationalist, a man who

yearns for the specters of the past. In the behavior for which he was tried Janjic betrayed not only his own people, but above all his calling as a priest. So, the insinuations about the "trial of an Orthodox priest" are transparent and untenable.

All this together will not free Nedjo Janjic from serving the prison sentence he deserves. He will not be released, first of all, by the judgment of the people of Romanija and over a broader area. Nor will he be helped, we are certain, even by the fact that he is taking SVIJET to court (either at his own wish or at the instigation of others).

In all of this there are many more arguments for the assertion that Janjic is a pawn in the hands of reactionary forces of recognizable extremists abroad who for years now have tried desperately to frustrate our development. That is why from an epilogue that is clear to us an attempt is being made to fabricate an incident. The attempt to manufacture the incident is continuing even now with the ostentatious collection of money in the circles of the extremist Chetnik emigre community, supposedly for the aid and salvation of Janjic's family. The same is true of the jeremiads and again collecting of "aid" in the ranks of certain cleronationalists of the Serbian Orthodox Church. There probably should also be a case made on the basis of some sort of "ethnic parity" in criminal prosecution. As though people forget that an enemy of the people and of everything which is most sacred to us is always an enemy and that here there is no "parity," nor will there ever be. Whatever is involved and whatever are the conditions.

And finally, let us return to the beginning of this article: that the convicted person, it turns out, has decided to take us to court. SVIJET is being charged by one who is in prison because of his guilt. The charge is absurd. We are convinced, however, that this absurdity will not be long-lived.

'ISLAMIC NATIONALISM' OF IMAM DENOUNCED

Sarajevo OSLOBODJENJE in Serbo-Croatian 28 Aug 81 p 3

[Article by Dj. Ss.: "The Imam's Label"]

[Text] The working people and citizens of Novi Grad Opstina in Sarajevo vigorously oppose any activity by religious communities outside the religious domain, and recently there have been such attempts.

In Novi Grad Opstina in Sarajevo, as elsewhere in our social community, freedoms exist for religious profession. This is incidentally the result of the democratization of our society, of the positions that we have all adopted together. Religious persons--just like atheists--have all the rights of other citizens as individuals, as members of the Socialist Alliance and as self-managers.

The members of the Presidium of the Novi Grad Opstina SAWP Conference did in fact act in accordance with the fundamental principles in a recent meeting, stating at the same time that the Socialist Alliance is opposed to any form of activity of the religious communities outside the religious domain, since this leads to clericalism. That is, they openly displayed their sensitivity to all attempts at politicization of religion, advocating--exclusively--the freedom proclaimed by the constitution and the basic principles governing relations between the religious communities and society. They also named names in speaking about cases of so-called extrareligious activity (this has unfortunately been manifested in a certain in certain parts of that commune) or abuse of religion.

A serious case was recorded in the Pavle Goranin I Local Community. Here an imam Azem Krupalija maliciously and untruthfully portrayed the situation in our country to children assembled for religious instruction, detracting from the sacred achievements of our society: brotherhood, unity and the cohesiveness of our nationalities and ethnic minorities, socialist self-management ... suggesting to them that they should look for all this in the "world of Islam," that is, in an "Islamic republic." He even went so far as to "put labels" on the children on a religious basis, "condemning" their failure to bear the name of "their own" religion and ethnic community. Those attending the religious instruction themselves fiercely opposed the clericalistic and nationalistic behavior of Azem Krupalija.

There was also discussion at that meeting of certain examples of staying outside the limits of religious activity by other religions in that opstina.

Members of the Presidium of the Novi Grad Opstina Conference of the SAWP are united in condemning these developments, nor are they alone. And they say: they need to be constantly monitored and analyzed so that what is religious is kept separate from what is clericalistic and so that religious people are informed in time as to who at a given moment is playing on their religious sentiments.

CONCERN VOICED OVER REFUSAL TO DISCLOSE INFORMATION

Belgrade BORBA in Serbo-Croatian 6 Sep 81 p 6

[Article by D. Nikolic: "The Truth Under Attack"]

[Text] In a meeting of the League of Communists of Macedonia Central Committee a few days ago Vaska Duganova cited several unusual examples of "covering up information" and of extraordinary reactions by local authorities to the publication of certain "undesirable information." For example, there was the fierce reaction because TV Skopje published statements by people living in the village Bogorodica to the effect that no one had asked them anything about forming a new opstina. The reaction was not fierce because the people had told the truth, but because what they said had been published. NOVA MAKEDONIJA found itself under "attack" because it had published a question by the delegate from Djevdjelija. The delegate had "only" asked why an award had been made to someone who was being prosecuted on criminal charges. The delegate also found himself under "attack" in that a local court sentenced him to 3 months in prison for putting such a question. The director of the local station in Djevdjelija was called to account only because the local radio station carried the news that in a meeting a question had been put as to whether it would be worthwhile to have discussion in the League of Communists before new opstinas were formed. It was also decided in that no information about these "cases" could be issued by anyone other than the chairman of the Opstina Conference of the League of Communists!

The confinement of information to the limits of a factory or the limits of an opstina is by all appearances a disturbing development which has become rather common. The Central Committee of the League of Communists of Macedonia, for example, provides detailed information to opstina party organizations about all its activities, but the information sent in by opstina party organizations consists mainly of formal announcements. If the central committee were to plan its activity on the basis of that information, it would have to conclude that no sort of significant activities are even required because there are no problems whatsoever "in the field."

In many factories the only one "authorized" to issue information is the general director, and sometimes he does not contact newsmen or does so with reluctance. When two BORBA correspondents went to a factory in Skopje to talk with a delegate to the Congress of Self-Managers, the director burst into the office where this conversation had already begun and asked the delegate who had given him permission to make a statement.

BOSNIAN OFFICIAL POLEMICIZES WITH BELGRADE PAPER

Sarajevo OSLOBODJENJE in Serbo-Croatian 21 Aug 81 p 3

[Letter of Milan Uzelac, secretary of the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP, to Bozidar Bogdanovic, editor in chief and responsible editor of POLITIKA EKSPRES, accompanied by an explanation of the background furnished by OSLOBODJENJE: "Whose Opinion Is Whose?"]

[Text] OSLOBODJENJE Background

Milan Uzelac, secretary of the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP, has sent to OSLOBODJENJE a letter addressed to the editor in chief and responsible editor of POLITIKA EKSPRES, asking that our paper publish it since the editors of POLITIKA EKSPRES had refused to publish it.

We want to familiarize readers of OSLOBODJENJE with what preceded this letter of Comrade Uzelac:

i. A commentary by the editor in chief and responsible editor of POLITIKA EKSPRES on 29 July of this year entitled "New Games Concerning Kosovo," in which he mentioned among other things a meeting of the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP, putting the question "Why comrades in the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP were expressing doubt that the political leadership teams of the other republics are capable of coordinating the operation of the news media concerning Kosovo and therefore feel that in evaluating their own, they are at the same time called upon to make a judgment of others, making it known to them that their performance is not good and that they ought to copy the quarter from which the criticism is coming?"

ii. Comrade Uzelac responded to this comment or portion of a comment by Bozidar Bogdanovic on behalf of the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP. In his letter, which POLITIKA EKSPRES published on 4 August, Milan Uzelac said among other things: "In a meeting on 24 July the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP took up certain topical issues concerning newsgathering concerning the events in Kosovo, its principal purpose being to derive the necessary lessons from those events for the purpose of political action. In that discussion it could not avoid an assessment of the reporting of the events in Kosovo by all the media involved in informing the

population of Bosnia-Hercegovina. In setting forth its assessment of newsgathering the presidium pointed to the need to enhance responsibility for furnishing timely and objective information by people with class and ideological commitment, based on the positions of the League of Communists and the need for all the media to be involved in the fight against the counterrevolution, Albanian nationalism and irredentism, but at the same time the struggle against all nationalism and irredentism, wherever it might be, and first of all in their own respective community. The presidium at the same time expressed critical evaluations concerning some of the stories carried by certain of the media. Allowing for the possibility of a different opinion concerning the assessments, we want to mention that the presidium did not make a distinction between the media on the basis of the republic or autonomous province they belonged to, but that this was done by the commentator, which in fact he did in an impermissible and offensive manner, comparing anyone who disagrees with him to the propaganda machine in Tirana. One must ask what purpose that serves?

We deem it an impermissible act for the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP to be put in the context of those who are "playing" games with Kosovo, be they old or new, for Yugoslavia to be divided into those who "look on" and "amuse themselves" and those who wage an uncompromising fight against the counterrevolution. In his letter Uzelac also noted that in Bozidar Bogdanovic's comment there is by some strange logic an examination of the question of responsibility for events in Kosovo, both past and present. "The Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP rejects any connection whatsoever between its debate on newsgathering with questions put in that way. Concerning these and other arguments contained in the commentary, especially those which raise the question of the SFRY Constitution, of the accountability of the supreme federal authorities, and of the accountability of the republics and provinces, when and if they are debated, we will present our views in the appropriate place," Milan Uzelac says inter alia in his first letter.

iii. In publishing this letter POLITIKA EKSPRES immediately added its own comment, which we give in its entirety:

"The only reason why we have published the letter above is that Comrade Uzelac has taken the liberty to speak on behalf of the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP.

"In any case, Comrade Uzelac's explanation and arguments are not on a level which would make a worthwhile dialogue possible. Especially since the purpose of the commentary entitled 'New Games Concerning Kosovo' was not to open up polemics with the personal opinions or peripheral responses, but to indicate the current political digression, which can be corrected only by a thorough analysis of the causes and by an open-minded facing of the truth."

This kind of comment by POLITIKA EKSPRES accompanying Comrade Uzelac's first letter motivated and obliged him to make another statement. However, as we said at the outset, POLITIKA EKSPRES, after holding the letter in the editorial office for 10 days, let it be known that it would not publish it, and we are therefore publishing it in today's issue.

Letter From Uzelac to Bogdanovic

I am grateful that on 4 August of this year you published in the newspaper POLITIKA EKSPRES a letter which I sent concerning your comment entitled "New Games Concerning Kosovo," and I also read the brief comment concerning my letter. In that connection I must write once again and state the following:

1. I was not presenting my personal opinion. The positions presented in my letter to the newspaper POLITIKA EKSPRES are the positions of the Presidium of the Bosnia-Hercegovina Republic Conference of the SAWP, and I therefore signed it as the secretary of that presidium.

2. We did not favor, and we do not now favor the opening up of polemics in the press with personal or any other opinions. You state, however, that you would not have published my letter if I had not "taken the liberty to speak on behalf of the Presidium of the SAWP Republic Conference." Does that mean that only your personal opinion can be published in your newspaper?

3. If as you say the "purpose of the commentary entitled 'New Games Concerning Kosovo' was not to open up polemics with personal opinions," why is it, then, that you publish your personal opinion? And if that is not merely your personal opinion, it would be honest, so long as you are publishing it, to state whose opinion it is. Since it is a question of serious assertions and dangerous arguments which you have presented in your commentary and which encourage quite definite ideological and political dispositions and enflame extremely harmful and dangerous passions, we feel that the place for them to be debated is first of all in the sociopolitical organizations and appropriate institutions of our system. I must state in conclusion that however indispensable it is to carry on polemics with your positions, it is yet impossible to do so because of the tone of arrogance, insult and conceited inviolability making up the substance of the text with which you accompanied the publication of my letter.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

PROBLEMS OF STANDARD OF LIVING, CONSUMPTION OF GOODS

Bucharest VIITORUL SOCIAL in Romanian May-Jun 81 pp 487-495

[Article by Dr Constantin Grigorescu: "The Way of Life and Consumption in Romania (Theoretical and Methodological Problems);" a text completed on the basis of a study carried out within the framework of the theme "The Population's Consumption of Non-Food Goods and Services," contained in the Institute of Socialist Economy's 1979 plan]

[Text] As an objective reality, the way of life refers to the overall group of conditions of the human community's existence, to man's needs and the manner in which these are satisfied and to the people's behavior in the sphere of social relations. As man's needs become more diversified and involve a broad field of action, life becomes richer in content and man can express fully his creative potentials.

The building of socialism in Romania has brought about the improvement of the well-being of all the people, the formation and development of a new way of life and the ever more fuller satisfaction of the people's material and spiritual needs.

The documents of the 12th Party Congress foresee raising all the facets of the socialist way of life to new levels. The objectives and goals contained in the Directives, as well as in the Program-Directive and, especially, in the Program-Directive for raising the standard of living in the 1981-1985 period and continuing to improve the quality of life, show that along with increasing material production and improving economic and social relations there will also be an improvement of the well-being of the people and the level of culture and civilization for all the people.

The socialist way of life evolves and is gradually being transformed into the communist way of life. For our country, an essential moment in this regard will be marked by the achievement during this decade, roughly speaking, of a multilaterally developed socialist society. As is known, keeping in mind the achivement of this strategic objective, the 12th Party Congress approved the decision to draw up a new Party Program by the year 2000 or 2010. Referring to this problem in his report presented at the Congress, comrade Nicolae Ceausescu stated that the new Program will have to deal with the ways and directions of continuing to consolidate a multilaterally developed socialist society and of "gradually moving to the fulfillment of communist principles for working and living in our country."[1]

The ever stronger affirmation of the new way of life in Romania raises numerous problems for the social sciences, including the economic sciences. In this field, according to the guidelines given by comrade Nicolae Ceausescu to the social sciences, it seems necessary to further the original thinking of our party regarding the formation and development of the socialist way of life and to thoroughly study from a theoretical point of view those changes that are taking place in the people's way of life and that of the social classes and categories. The furthering of the studies regarding the socialist way of life is, similarly, of interest in combating the myth of the "capitalist consumer society" which allegedly would ensure the well-being of society, would eliminate the alienation of work and would change the "homo faber" worker into the "homo ludens" worker.

1. The Content and Area Encompassed by the Category Way of Life

Recently, specialized literature has demostrated man's condition in society through a number of ideas: "way of life;" "quality of life;" "well-being;" "material and spiritual standard of living;" "life style" and so forth. With regards to the content and area encompassed by these ideas, there is no fully unanimous opinion, and discussions are still going on about them, especially in reference to the idea of "the quality of life." Regardless, however, of the opinions of the diverse specialists, the essential fact is that the diversification of the ideas regarding man's condition in society has, at the same time, meant a diversification of the thematic area of study. We are referring, for example, to the problem of the environment, as well as to those studies regarding social indicators. As has been pointed out, all the above-mentioned ideas refer to man's condition in society, a fact which causes the existence of certain similarities between them. At the same time, there are also differences between these ideas resulting both from the areas they cover and from their intrinsec content.

In order to avoid slipping into a sterile discussion, we feel it is necessary to deal with the content of the mentioned categories according to objective criteria. Principally this refers to: 1. the people's needs; 2. the conditions and factors available to the people in the process of satisfying needs; 3. the quality and capacity of the conditions and factors used by man to creat an agreeable, pleasant life; and 4. the people's behavior.

As is known, man has on one hand a biological nature and on the other a social nature. As a social being, people have a multitude of needs grouped according to very different criteria. With regards to the objective of this study we must remember one of the groupings made by K. Marx, that is, physical, spiritual and social needs.[2]

Needs of a physical nature involve needs for food, clothing, shelter, air, water, sleep and so forth, and their satisfaction ensures the existence itself of man as a biological being.

Spiritual needs involve principally man's needs for communication, knowledge and beauty.

Social needs, like spiritual needs, stem from the essence of man as a social being who enters into diverse types of relations with his fellow man: family, work, community and so forth. Among other things, we have in mind these needs, such as the need for comradeship and friendship, the need for esteem and respect or the need to participate in the organization of social affairs.

Speaking of man's needs, it is appropriate to stress that these are indissolubly linked to the fact that by his nature man is a creative being and a being who works and organically feels the need for equality, and that man is developing as a powerful political and moral being.

The characterization of the manner in which man's needs are satisfied naturally requires the use of certain different categories. This is even more true with regards to the quantity and quality of the goods and services available in a society, as well as the social framework (traditional or legislated) in which different types of social relations are achieved, when they do not always correspond to man's needs. Thus, the idea having the most restricted area encompassed is the material and spiritual standard of living. This category covers the degree of satisfying the people's material and cultural needs, including the consumption of food and non-food goods and services, the meeting of requirements for living space, the degree of education and culture and the status of health.

Well-being is a notion that has a broader area of coverage. In addition to the problems that define the so-called material and spiritual standard of living, well-being refers to an equal degree to working conditions, to the length of the work week, to the organization and zoning of the country and to the environment within which man lives, as well as to the social framework for the workers' participation in the management of economic and social activities.

The category way of life covers the forms of activity and the people's behavior in the process of satisfying their needs and in interactions with the social and natural conditions of existence of society. We are referring to the people's activities in the sphere of production and, beyond this, during work hours and free time, and to man's behavior in the work group, in his family and in society. An essential role is played by the people's behavior as producers of material goods and services, as well as their behavior as consumers of material goods and services. Way of life is the category that reflects the unity between the objective and the subjective and between the conditions that society makes available to man and man's vital activities. Moral norms, ideological values and cultural values of society, social classes and individuals, as well as the hierarchy of these values, have an essential role in the formation and development of the way of life. According to the aggregate level through which people's activities and behavior in society are viewed, we can distinguish: the way of life of each individual taken separately, the way of life of the social classes and categories and the way of life of society overall.

Many years ago the founders of scientific socialism substantiated the category way of life and the dependency of this category upon the dominant social-economic conditions. In this sense, in their work "German Ideology" Marx and Engels pointed out that the means of production must not be viewed only as "the reproduction of the physical essence of individuals. It is to a greater degree a determining means of activities of these individuals, a certain means of expressing their lives and a certain way of life for them."[3] The historic nature of the means of production and the social-economic conditions permit the way of life of individuals to have a historic nature and to bear the imprint of the nature of the social classes and groups to which they belong. Under this aspect, Marx and Engels fought those concepts saying that the way of life of individuals could not reflect changes and transformations along with changes in social-economic conditions. The theses of Marx and Engels have fully proven their validity. The affirmation of socialism in an ever greater number of countries has meant, at the same time, the affirmation and development of a new way of life.

Currently in the specialized literature in the socialist countries there are still discussions with regards to the content of the category way of life. These discussions especially deal with the fact whether the conditions of the existence of man are or are not an integral part of the content of the category way of life. Clearly, the problem also deals with the relationship between the standard of living and the way of life. In addition to the opinions that say the way of life expresses the behavior of man in interaction with his conditions of existence, there also are opinions that say that the way of life also includes man's conditions of existence, including those elements that define the people's standard of living. It is in itself understood that we cannot speak of man's behavior outside of his conditions of existence and outside of natural, technical, economic and social conditions, as well as outside of spiritual values. For example, one is the behavior of man in production when he is the owner and when he is the salaried employee. One significant influence on the behavior of the producer is the fact whether he works manually or uses mechanized equipment and whether throughout his entire life he works on one simple single operation or alternatively takes part in carrying out a number of operations. These relationships are clear but they do not lead us to consider the above-mentioned conditions of existence of man as a part of way of life. It would mean we would have to reduce the basic economic and social categories to the category way of life. Things appear more complicated, however, when we analyze the relationship between the standard of living and the way of life and the behavior of man in society.

A. P. Butenko maintains that the standard of living is a condition and a result of the way of life and not a constitutive part of the way of life.[4] A different position is expressed by Maria Boiceva-Mihaleva who feels that only the level of consumption of material goods and services are conditions of the way of life, with the structure of the consumption being part of the way of life.[5] Without a doubt, the thesis that says that the people's consumption is a condition and premise of the way of life is a just one. The achievement of a food consumption

according to physiological norms, for example, ensures a harmonious physical and intellectual development of man and contributes to the development of creative activities both in production and outside of production. On the other hand, the development of creative activities and the ever fuller satisfaction of the people's cognitive and esthetic needs contribute to the rationalization of consumption, the placement of this consumption on strictly scientific bases and to a certain volume and certain structure of food consumption.

Similar correlations can also result with regards to the level and structure of the consumption of non-food goods and services. And, what characterizes the way of life is not the people's consumption as such, but man's behavior regarding material goods, a behavior that determines a certain level and a certain structure of consumption. We are referring, for example, to the fact that in societies based on exploitation and inequality, especially in capitalism, the consumption of material goods is a symbol of wealth and a sign that shows success in life. This is the source of the cult regarding material goods and the alienation of man regarding the material world and the transformation of consumption from a means of development into a purpose for living. This also explains the waste of material goods, a waste denounced even by specialists who do not share the ideas of scientific socialism. A graphic example in this regard are the works of Philippe d'Iribarne, of which we will mention one that is significant by way of its title: "Le gaspillage et le desir," which appeared in 1975.

Quality of life is an idea that has been less developed. Some specialists place quality of life at the junction between the characteristics of material goods and services, on one hand, and the needs and desires of the people on the other hand. For B. de Jouvenal, for example, quality of life represents the totality of opportunities offered to the individual by society to manage his existence, to make its products available to him and to make its services available in order to organize his own individual existence according to this own needs and desires.[6] A similar position is expressed by K. Baier, who understands quality of life to be the totality of natural and cultural threats and the variety, quantity and quality of goods and services available to all the members of a given society.[7]

Other specialists place quality of life at the junction between the properties of all of the conditions of the existence of the people, including social relations, and man's needs and requirements. Mihai Draganescu and Stelian Beldescu, for example, feel that "for man in society quality of life represents the totality of those elements that ensure his biological integrity (or biological life), to which we can add the degree of satisfying his demands of a social-economic nature and of fulfilling ethical and moral principles and exigencies, as well as the synergetic and concentrated action of the demands that the social arena place on man."[8] The authors feel that the idea in itself can be viewed from two points of view, in relationship to the individual and in relationship with society. Under this last aspect, in the authors' view, quality of life depends upon: 1. the economic standard of living; 2. the ecological standard of living; 3. the variety of life and 4. the quality of human relationships.

A significant contribution to defining the category "quality of life" has been made by professor Ioan V. Totu. Totu stresses: "Quality of life synthesizes the organic interdependencies between the level and quality of all the conditions of social life and the degree of satisfying the needs (requirements) of the members of society and the essential qualitative characteristics of the existence, development and improvement of the individual personality and human community."[9]

Other specialists restrict the content of the category quality of life to the nature of human and social relations and to the capacity of these relations to satisfy the people's needs of a social nature. Thus, professor Vl. Trebici maintains that "the standard of living refers to material needs while the 'quality of life' deals especially with human and social relations."[10] Sometimes directly and other times indirectly the specialized literature has dealt, as seen in the above-quoted reference, with the relationship between the category quality of life and the other categories which define man's condition in society. Professor Emilian Dobrescu, recognizing the proble of the quality of life, feels that this is included in the category dealing with social well-being defined in its broadest meaning.[11] A similar position is held by professor Vl. Trebici with the note that in his view quality of life also includes elements of human behavior, those elements that consider the way of life.

We note, at the same time, that for other Romanian specialists, like those quoted above, the sphere encompassing the category of quality of life is similar to that for way of life. Naturally, one could ask: the category quality of life has its own independent existence alongside of the other categories and, if so, what elements distinguish it, which elements characterize it? In our opinion, quality of life cannot be treated separately from the problem of man's needs, from the physical, spiritual and social needs and from the conditions and factors that ensure satisfying the mentioned needs. The problem of quality is not defined by the sphere or area of reference of the needs and conditions for achieving this quality, but by the degree in which the material and social conditions and factors available to the people correspond or not to the needs and aspirations of the members of society. Quality of life applies to an equal degree both for the problem that defines the material and spiritual standard of living, and, thus, social well-being, and for the problem of the way of life. Moreover, the idea of quality of life has appeared in the specialized literature in the developed capitalist countries precisely as a result of the deterioration of certain fundamental conditions of the existence of man in these countries. We are referring, first of all, to the pollution of the environment and to the formation of certain large human concentrations in a restricted amount of space, a fact which creates numerous problems of a social nature, as well as to the unilateral development which capitalist society places upon man. And, given the multilateral essence of man and the fact that this is defined not only by physical needs, but also spiritual and social needs, the improvement of the quality of life is ensured both by the satisfaction of each need and individual aspiration under the best

possible conditions and by the satisfaction of all human needs and aspirations in their overall aspects. Like the other categories that define man's condition in society, the category quality of life also has a dynamic, specific historical content and a class content. The history of mankind and the realities of the contemporary world offer sufficient examples.

As has been said, the content of the category quality of life is not fully elaborated and there continues to be different points of view about this. Despite all this, the elements to which we have referred offer us sufficient grounds so as not to share the opinions of those specialists who say that quality of life if a bourgeois alternative to the Marxist concept of "way of life."[12]

Romania has gone through significant stages in the formation of the socialist way of life and in the improvement of the quality of life.[13] The Program-Directive for raising the standard of living during the 1981-1985 period and continuing to improve the quality of life, approved by the 12th Party Congress, is a new expression of the unity between economic development and the well-being of the people and of the indissoluble tie between the development of the socialist way of life and the improvement of the quality of life.

2. The Model of Consumption - A Component of the Socialist Way of Life

The consideration of the elements that define consumption in the countries where socialism has been built reveals the formation of a model of consumption different from that in the capitalist countries. The theoretical bases and traits of this model were foreseen by Marxist socialism long before the division of the contemporary world into two systems and the affirmation of socialism on an international level. On one hand, Marx and Engels fought the ideas that stated that the future society, socialism, would be characterized by a "harsh" regulation of people's activities and by austerity, where people would strive "to work more in order to consume less."[14] On the contrary, taking into consideration the elimination of capitalist property and exploitation, Marx pointed out that under socialism the consumption of producers would no longer be limited by the surplus product held by the capitalists, but it would broaden its limits to that volume which, on one hand, would be permitted by the existing social production forces and, on the other hand, would be required by the multilateral development of the members of society. At the same time, socialism based on the Marxian concept is alien to waste and luxury since, as Marx mentioned, "luxury is the opposite of that which is necessary from nature."[15]

Under socialism and through its nature, consumption is not an end unto itself, but a means for the multilateral development of all of the members of society. Moreover, this also defines the general, essential characteristic of socialist consumption. Consumption is designed to ensure the harmonious physical development

of man and to permit the satisfaction of the requirements and aspirations of each person. For its part, consumption is a powerful factor for economic and social progress. Through its decisive contribution to the harmonious physical development of man, to the maintenance of the people's health and to the formation of the workforce, essential premises are ensured for the growth of creative activities and the increase in the efficiency and rational use of the resources available to society.

Research into the problem of consumption in Romania took on a significant expansion after the 12th Party Congress. In this regard, it is appropriate to stress, first of all, the decisive contribution made by comrade Nicolae Ceausescu in the theoretical elaboration of the problem of increasing and improving the structure of the people's consumption. We are referring on a priority basis to the theses regarding the optimum relationship of investments-consumption and the organic unity between the improvement of the people's well-being and the development of the forces of production; to the optimum use of material production by branch and throughout the country through the prism of satisfying the people's needs; to the creation of the people's incomes, that is to the relationship between the maximum and minimum salary and to the relationship between those incomes stemming from work and those from the social consumption funds; to the placement of consumption on scientific bases which exclude waste and consumption for the sake of consumption; and, to the optimum combination of raising material well-being with developing those conditions for broadening the people's horizons for knowledge and full participation in social-political affairs.[16]

The stage that our country is currently passing through requires a new approach to the problem of the people's well-being and, within this framework, to the problem of consumption so that this will fulfill its fundamental functions under the best possible conditions: satisfying the people's needs, that is, contributing to the multilateral development of the human personality. The development of research into this subject would permit: a) a more rational use of existing means and a greater concordance between the possibilities of the economy right now and the people's demands; b) a more thorough scientific base for following the trends that develop in the people's consumption and c) the formulation of a long-term policy on comsumption that will lead to a model of socialist consumption specific to our country. Any consumption model and, as a result, a socialist consumption model is defined principally by the level and structure of the consumption of material goods and services. In our view, the model is viewed both at the national level and at the level of the social classes and categories. The problem presented is one of ensuring a more profound understanding of the current models and the factors that determine them and of foreseeing future trends under the conditions of furthering the process of social homogenization. A series of economic and extraeconomic factors have an affect upon the formation of a consumption model, including factors of a psychological nature and an ideological nature. The

formulation of a long-term consumption policy requires, in our opinion, the furthering of research into: a) the people's needs under socialism; b) the general functions of consumption and c) the role of consumption both in the incomes stemming from work and in those from the social consumption funds.

Specialized works, including those from our country, contain numerous pertinent ideas regarding the people's needs. Needs have been defined, classifications have been made and ideas have been advanced regarding their measurement.[17] Nonetheless, currently we do not have a unified theory on man's needs in the context of the socialist way of life. Clearly, this requires a thorough, inter- and pluridisciplined study. One particular problem regarding needs is that of creating a hierarchy of needs and the role that different needs have in the life of a person in socialist society. Long periods of existence in societies divided into classes have pointed out that for the moneyed classes the priority needs are needs of a material nature. For the owner classes, needs of a material nature are not confined to the physical, vital needs and to the satisfaction of physiological needs. Their needs become a purpose unto themselves, a means through which they determine social status and differentiate themselves from the other social classes and categories. For that reason, what characterizes the moneyed classes is luxury, waste and ostentatious consumption.[18] In exchange, the needs for work, creativity and knowledge in general have an extremely weak intensity for the moneyed classes.[19] Naturally, there can be individual, separate cases, but they do not render void the general characteristics of the moneyed classes.

Contemporary capitalism has raised these characteristics to a higher plane, while currently the competition in the capitalist markets is so powerful that the domination of material goods is nearly absolute. In order to achieve a need to use capital and certain profits that are as large as possible, new products are constantly created (sometimes without a practical use and even some that are damaging to the physical and psychological health of the people), and artificial needs are stimulated.[20] One could ask: What is the hierarchy of needs under socialism? As has been said, man through his essence feels the need for knowledge and culture and work and creativity, as well as the need for communication and society. The problem that arises is for society to offer an adequate framework so that these traits and potentials which exist in each person will be developed and truly provide a multilateral flourishing of the human personality. Otherwise, we arrive at the restriction of the creative forces, a multilateral development and even the phenomenon of dehumanization.[21]

Given the economic and political-ideological bases upon which socialism is founded (public property and dialectic and historical materialism), we can state on firm grounds that, in differing from those orders founded on exploitation, in the new society needs are structured (as possibilities for achievement) in a new hierarchy. They are developed and expressed in accordance with the essence of

man, of the total and complete man, not the partial and unilateral man. There are specialists who feel that in the new order cultural needs should have equal importance with those of a material nature. Even more, the ideas has been advanced that socialist society should be characterized, in opposition to the capitalist consumer society, as a society of culture and creativity. Being fully in agreement with this opinion, we stress that under socialism the thesis remains valid regarding the requirement to give priority satisfaction to those physical needs for food, water, air, clothing and shelter, those needs which, in specialized literature, we encounter under the name of natural or physiological needs. But, differing from capitalism and other ordersbased on exploitation which bring about an unequal or partial satisfaction of physical needs, socialism creates the possibilities for all people to have material living conditions that are appropriate and to permit the development and flourishing of the human personality. Within this framework, at least two aspects of a principal nature seem to us to be worthy of note: a) socialism is incompatible with luxury and waste and with ostentatious material consumption. This is the result of the fact that under socialism the exploiting classes are eliminated, that a social homogenization process takes place and that the sole criterion for evaluating man is work and his behavior in society and his contribution to economic and social progress; and b) the objective of socialist society is to provide all the members of society a rational, scientifically determined consumption of material goods and services, and not to limit consumption like in the societies divided into antagonistic classes, where these limits sometimes reach the level of survival needs.

In our reference to the problem of the people's needs under socialism, in a practical sense we also dealt with the problem of the functions of consumption. First of all, there is the fact that under socialism consumption is no longer the criterion for evaluating the status of a person. Second, we referred to the utilitarian function of consumption and to the satisfaction of the physical, scientifically estimated needs of the people.

Life shows that outside of the strictly utilitarian function of satisfying physical needs, consumption also has other functions, including that of satisfying certain needs of an esthetic and artistic nature. Most frequently this requirement appears in regards to clothing. Specialists point out, for example, that among the reasons for clothing an essential place is held by those of a practical, moral, social, communicational, psychological and esthetic nature. This is also the source of the requirement regarding the creation of a wardrobe that will satisfy both the useful demands of a practical nature and those of the other demands of the people. Within this framework of ideas, it is appropriate to also mention the fact that equality is a trait of man, that he tends to imitate, to be in step with others and, at the same time, to be different.[22] The interaction between imitation and differentiation generates fashion as a social-objective phenomenon, with implications for the people's consumption and for determining the rational norms of consumption.

New problems are also raised by the fact that fashion has a periodic nature which presupposes that products are morally used up prior to reaching a point of complete physical use. As such, those products replaced are to be subjected to a recycling process. It is presumed that in the future the esthetic feeling will be developed and that the problems raised by the recycling of products will not be more reduced.

The requirement of taking into consideration the diverse functions that consumption has also appears in connection with other products - furniture and durable goods. Housing, however, raises special problems. More than half of one's life is lived within the framework of a housing unit and it must provide a framework and an environment that will satisfy the biological requirements for space and shelter, as well as the requirements for psychological space that is necessary for each individual.[23] Correspondingly, it is necessary for the housing unit to also satisfy requirements of an esthetic nature, a fact that will influence approved construction solutions.

In some works, there is talk about the function of avoiding consumption and it is left to be understood that this is characteristic of all social orders.[24] Among others, there is talk of using certain items or consuming certain products (drugs, alcohol) in order to allegedly eliminate certain tensions generated by hunger, insecurities, lack of affection and so forth. Not by chance, the consumption of drugs has become widespread in the capitalist countries. Under socialism, there is no room, however, for avoidance consumption to become a characteristic of consumption.

The achievement of the socialist consumption model is a complex and long-term problem. The complexity of creating the socialist consumption model stems from a number of circumstances:

- socialism has succeeded in countries which in the past, in the majority of them, were poorly economically developed, a fact which generates a contradiction between the real needs of the people and the objective possibilities for satisfying them. The solution of these contradictions is a dynamic process ensured by the rapid growth of the production forces under the conditions in which (precisely for stimulating the production forces of society) the principle of paying salaries according to the work done is applied. This is the source of the differences and inequalities in the incomes and consumption of the population. Although these differences and inequalities are continuously being reduced, they are a trait of the socialist consumption model. In Romania, for example, the 5.5 to 1 ratio between the maximum and minimum salaries will continue to exist for a long time in the future.[25] In the future of creating a communist society and of carrying out a distribution according to need, there will be a full equality for the population in the area of consumption;

- in the countries where socialism has succeeded, there continues to exist by virtue of inertia a series of practices and customs from the old social order, practices and customs which slow the process of creating the socialist consumption model. In some cases, there can be an appearance of contradictions, recrudescences and prestige consumption, especially in the ranks of those categories of the population having higher salaries. There continues to be, however, phenomena of alcoholism. Similarly, in the area of food consumption there are customs and practices which slow the achievement of a consumption based on scientific norms, including in the developed socialist countries which have an appropriate material base. Changing these practices requires a modification of the psychological position regarding food and the replacement of a quantitative concept with a qualitative one. Deficient culinary practices and customs also exist in Romania.[26]

The creation of the socialist consumption model requires, on one hand, the careful study of the people's requirements and the confrontation of these with the recommendations of scientists and the values of socialism, and, on the other hand, the offering of material goods and services in such a volume and in such a structure that will correspond to the people's demands and the recommendations of the scientists and the values of socialism. Respect for these demands leads to a rational socialist consumption model.

The large outlines of this model stem from the combination of the forecasts for consumption on the basis of explorative methods and on the basis of normative methods. The use of both methods requires taking in calculation as many factors as possible that have an influence. In the case of the explorative methods, we have in mind such factors as: income, prices, urbanization, production and so forth. Projections can be made through unifactoral consumption functions, as well as through multifactoral consumption functions. Clearly, the cognitive value of the multifactoral functions is far superior to the unifactoral ones. The normative methods are based on the findings of specialists regarding the consumption of materials goods or services which will fully satisfy the socially determined needs of man. They analytically take into consideration the multiple functions that a product will fulfill: utilitarian, social-esthetic, psychological and so forth. By their nature, the normative forecasts for consumption are the product of certain interdisciplinary research projects which can involve physiologists, nutritionists, commodity specialists, economists, sociologists, psychologists and so forth. As a result, in recent times in some socialist countries, especially for the development of normative estimates, a new instrument is being developed for guiding socialist consumption - the rational consumption budget.[27] In Romania, beginnings in this regard have been made at the Institute of Planning and Forecasting.

Given the above-mentioned, especially the fact that in the real consumption of the people there are also elements that do not adhere to the socialist consumption model, the normative methods remain decisive in determining this model. Naturally,

the normative method excludes luxury, waste and ostentatious consumption, as well as avoidance consumption. As such, through its essence the socialist consumption model is a rational consumption. Rational consumption requires the full satisfaction of scientifically determined needs, a broad range of products of appropriate quality offered to the people and the individual decision of the consumer to buy one product or another in the quantity and of the quality that he considers necessary. Rational consumption, thus, has nothing in common with a strictly regulated, rationed consumption, with supplies marketed on the basis of coupons or cards. Naturally, under certain special moments situations can appear which require the temporary regulation of the consumption of certain products.

Recently, especially in connection with the aggravation of the energy and raw materials crisis, representatives of political and scientific circles in the developed capitalist countries have advanced the idea of achieving a rational consumption in the capitalist societies (including in the field of producing and consuming material goods and services for the public). Along this idea, Edmond Lisle, research director of the National Council of Scientific Research in France, speaks about the need to move from a consumer society to a society of economy.[28] Although the capitalist state can intervene in the regulation of the operation of certain economic sectors and in the use of resources, the bases of capitalist society continue to exist along with waste, luxury and flagrant inequalities in the living conditions of the people.[29]

The creation of the socialist consumption model will be achieved gradually through economic and social policy measures. The programs regarding the growth of the standard of living, the five year plans and the annual plans for economic and social development are steps which contribute to the modernization of consumption in light of the rational socialist consumption model. The consumption levels outlined in the programs and five year and annual plans mentioned are considered by us to be optimum consumption levels capable of being achieved in the respective stages in accordance with the level of development of the forces of production and the dominant economic and social factors. In the process of creating the socialist consumption model a decisive role is played by the incomes stemming from work, with these being, as has been said, a powerful factor which stimulates the efficient use of material and labor resources. At the same time, an especially important role is played by the social consumption funds which reach the people in the form of money or in the form of services. The fact they are principally distributed according to "the criterion of need" and not according to "the criterion of work" contribute to a diminuation of the differences in the incomes and consumption of the people. Through these funds, society contributes to the creation of equal chances for the development and formation of all citizens, regardless of the size of incomes stemming from the work of the families or the number of members making up the family.

Speaking about the creation of the socialist consumption model it is appropriate to stress the ever larger contribution that public food supply is to have in this regard, including public food supply in schools, factories and institutes. The public food supply units are to have the job of being in the vanguard of placing food consumption of scientific bases and of contributing to the elimination of deficiencies that exist in the food supply system. In this direction, that is, of creating a rational consumption, we can have the common use of certain facilities that satisfy important needs of the people (transportation, cultural-education service units, as well as sport and tourism units). This type of consumption which, normally, is called inappropriate for social consumption, can provide access for a larger part of the population to these services, under conditions of being economical.

The extension of satisfying certain essential needs of the people through the public food supply or through the common use of certain facilities is influenced, however, by the achievement of at least two parameters: a) the cost of this service must be less than in the case of achieving it within the family or through the use of individual resources, and b) the quality of the service must be better. Common transport, for example, must be achieved during a useful time of the day and under conditions of comfort, at lower prices.

The development of socialist consumption requires the use of value and educational key factors in structuring the behavior of consumers in the direction of the model designed. We especially have in mind the use of retail prices and credit as factors of indirect influence on the consumer. These factors can play a more active role in the promotion of the consumption of certain products and services that satsify the natural needs of the people under better conditions and in the slowing of the consumption of other products and even in their substitution. Similarly, the means of mass communication can make a greater contribution to the education of the people in the spirit of the values at the base of the socialist way of life and socialist consumption. The efficiency of the education actions for consumers are helped, however, by the existence of an appropriate offering of goods and services.

21. The facts point out that in extreme cases removing the individual from contact with his fellow man and from social relations that involve language, attention and affection can result in death and the loss of the individual as such. In this regard, there is significance in the experiment conducted by the German Emperor Frederich, 1194-1250, where he placed 18 newly-born children under excellent conditions of physical care, but conditions where they would not hear a single word from the persons with whom they came in contact. The idea was to learn which language they would speak when they grew up (Greek, Latin, Hebrew, Arabic or the language of their parents). They experiment could not be carried out to conclusion. From a lack of affection all 18 children died between their 9th and 18th month from birth (see, "Man in the Contemporary World," by academcian St. Milcu, Bucharest, Scientific Publishing House, 1972, p 34).

23. See "Man in the Contemporary World," by academician St. Milcu, Bucharest, Scientific Publishing House, 1972, p 34.

24. Philipp d'Tribarne thus characterizes avoidance consumption: "When it is impossible to sufficiently reduce the causes of the general tensions of existence (forms, insecurities, lack of affection and so forth), the psychological state of balance may be sought somewhere beyond these tensions... All people more or less use this type of avoidance to compensate for the most diverse type of shortcomings. Man's desires are frequently placed upon certain substitutes or symbols which he cannot really obtain" (in REVUE D'ECONOMIE POLITIQUE, No 1, 1972, pp 38-39).

25. The work done by the Central Directorate of Statistics regarding the family budgets of workers and peasants offer a rich statistical material for evaluating the existing differences in the people's consumption.

MEASURES TO STRENGTHEN DEFENSE CAPABILITIES EXAMINED

Bucharest VIITORUL SOCIAL in Romanian May-Jun 81 pp 516-519

[Article by Col Mihai Arsintescu and Lt Col Gheorghe Aradavoiace covering a scientific session held in April 1981: "The Romanian Communist Party's Scientific Policy of Strengthening Our Socialist Country's Defense Capabilities"]

[Text] In honor of the 60th anniversary of the founding of the Romanian Communist Party, the Ministry of National Defense organized, together with the Academy of the Socialist Republic of Romania, the Academy of Social and Political Sciences and the Institute of Historical and Social-Political Studies of the Central Committee of the Romanian Communist Party, a session to hear reports and papers on the theme "The Romanian Communist Party's Scientific Policy of Strengthening Our Socialist Country's Defense Capabilities."

On behalf of comrade Nicolae Ceausescu, secretary general of the Romanian Communist Party, president of the Socialist Republic of Romania and supreme commander of the armed forces, comrade Ion Coman, a member of the Political Executive Committee and a secretary of the Central Committee of the Romanian Communist Party extended a warm greeting to the participants in this event.

The reports and papers presented in the plenum and the sections broadly and argumentively depicted the role of the Romanian Communist Party in Romania's modern and contemporary history and its vast political and organization activities dedicated to carrying out the great goals of the revolution of social and national liberation for the democratic and social transformation of Romanian society and for the consolidation of the country's independence and sovereignty, as well as its scientific policy in the area of strengthening the country's defense capabilities and of creating and training a new type of army.

Within the framework of the problems discussed, an especially important place goes to the presentation regarding the decisive role played by comrade Nicolae Ceausescu in the substantiation and promotion of our party's and state's military policy and his constant concern for supplying and increasing the combat force of the army and for raising the level of training for the partriotic guards, the young people's training detachments and the other formations within the framework of the national defense system. At the samt time, the reports revealed

the patriotic and political-moral significance of the army's participation in carrying out the country's programs for economic-social development, the indissoluble unity between the people and the army and the correlation of certain branches of science with strengthening our socialist country's defense capabilities.

The report, "The Romanian Communist Party - The Founder and Leader of Socialist Romania's Army," presented by Major General Dr Constantin Olteanu, the minister of national defense, covered the basic points our our party's activities in founding the people's army and the process of the democratic and, later, socialist transformation of the army during the years of the revolution and socialist construction. As in all other areas of the country's affairs, the development of socialist Romania's army experienced a turning point at the Ninth Party Congress. Because of the creative activities of our party and its secretary general, comrade Nicolae Ceausescu, we have a thoroughly substantiated concept regarding national defense and an original military doctrine comprising a body of principles, guidelines and options that ensure a unity of action in the area of the armed defense of the country and that are equally valid for all the elements and factors that determine the country's military power. The author showed the special importance of the party's leadership of the army and the fact that this is expressed and exercised at all levels.

"The Position of the Romanian Communist Party Regarding the Role of the Army in the Country's Social-Political Affairs and in the Struggle for the Country's Defense of Independence and Sovereignty (1921-1944)," presented in the paper by Major General Dr Ilie Ceausescu, was broadly argued with facts and proofs which graphically attest to the party's concern for attracting military personnel to the struggle of the popular masses for democratic rights and a better life and for educating the soldiers in the spirit of understanding and helping the aspirations of those who had been exploited, and for blocking the repressive actions of the ruling classes and developing and broadening the revolutionary battle front. Although the removal of the communist party from the ranks of the legal parties in the summer of 1924 made the carrying out of its work in the army very difficult, this activity was not interrupted. The author of the paper stressed the objective principles of the party work in the ranks of the army and the broad variety of forms and methods used for the purpose of carrying out this work, especially during the period of the growth of the danger of fascism and the fierce struggle against the military-fascist dictatorship and for the overthrow of the Antonescu regime and Romania's alliance with the anti-Hitlerist forces.

In the paper, "The Romanian Communist Party's Activities for the Creation of a New Type of Army. Socialist Romania's Army, a Significant Creation of the Revolution and the Process of Building a New Order" Major General Constantin Antip and Colonel Ion Mihalcea showed the originality of our party's concept

and, furthermore, the means of achieving it regarding the creation of a new type of army in the sense of ensuring a complete agreement between the missions and aspect of the military organism and the nature of the social order that is being built in our country. The process of democratizing the army, a process specific to the first stage of the revolution, was principally achieved through the political and ideological persuasion of military personnel, concomitantly with the gradual establishment of the Romanian Communist Party's control and authority over the army and, in the end, with the army being taken under the direct leadership of the party. The socialist stage of the revolution gave an adequate content to the revolutionary transformation of the army and considerably accelerated its rate.

In the paper "The Determining Role of Comrade Nicolae Ceausescu in the Substantiation and Application of Our Party's and State's Military Policy," Colonel General Vasile Milea outlined the defining characteristics of socialist Romania's current military policy and the fact that this policy, being an organic part of our party's and state's general policies, is naturally defined by the same values as the system to which it belongs: realism, a scientific nature, a lasting substantiation based upon the realities of domestic affairs and the conclusions resulting from the analysis of the evolution of the contemporary international situation, a receptivity and an adaptability to new requirements and a true reflection of the vital interests of our nation and the cause of detente, active collaboration between peoples and peace in the world. In all these defining characteristics, the paper pointed out, it is easy to distinguish the fundamental characteristics of the daring, profoundly revolutionary thought and actions of the secretary general of the Romanian Communist Party, comrade Nicolae Ceausescu, the inspired creator and active promoter of these constructive policies.

Lieutenant General Gheorghe Gomoiu's paper, "The Indissoluble Unity Between the Army and the People - the Basic Source of Our Army's Strength and Its Ability to Defend the Country," pointed out the fact that the unity between the army and the people, an intrinsic component of the socialist unity of our nation founded on lasting economic, ideological, political, social, moral and organizational bases, a unity with strong and multiple roots in the long history of our country, represents a guarantee for strengthening the defensive power of the country and for ensuring its independence. In the concept of our party and its secretary general, comrade Nicolae Ceausescu, the fulfillment of all of the army's functions is conceived and directed to always be carried out in close cooperation with the people.

Dr Florin Constantiniu's paper was entitled "Romanian Historiography About the All People's War as a Means of Defending National Independence." In it he presented the defining characteristics of Romanian historiography regarding the all people's war and the development of this approach in the specialized

writings after the Ninth Party Congress, which also stimulated the theoretical and scientific investigations into this field of broad interest, and the concerns stimulated by the clear concepts of our party and state regarding the defense of the country by all the people and by the guidelines of socialist Romania's military policy.

In the paper "Profoundly Educational Values in the History of the Romanian People and Its Communist Party," Dr Nicolae Copoiu dealt with this group of values, impressive through their humanist dimensions, through the prism of the influences exercised on the political-moral make-up of the country's citizens. He argued the fact that the work of the secretary general of our party, comrade Nicolae Ceausescu, had projected a new picture not only of the present and the future, but also of the history of the party and the Romanian people, with the great values of history being defined and evaluated in a unified view in accordance with materialist-dialectic philosophy and the fundamental truths of the historical existence of our people.

Rear Admiral Iosif Pricop presented the report "The Army - An Active Factor in the Development of Young People's Social Awareness, A School of Revolutionary and Patriotic Education in the Spirit of Socialist Ethics and Equality." In this report, he showed our party's and comrade Nicolae Ceausescu's concept regarding the objectives and principal directions of action for the communist education of the young people who are trained under the battle flags of the army for the defense of the country.

The multiple interdependencies between mathematics and military science were outlined in the paper "Mathematics and Military Science," by academician Gheorghe Mihoc. He pointed out the fact that more than a few mathematical advances have found their effective application in the military field, which, for its part, gave mathematics diverse theoretical and practical problems. In this context, he presented the value and multiple possibilities opened by gaming theory, which has permitted the analysis of sequential conflictual situations using mathematical models.

In presenting the report "The Creation and the Development of the National Defense Industry - An Expression of the Constant Concern of the Romanian Communist Party and Comrade Nicolae Ceausescu for the Strengthening of the Country's Defense Capabilities," Lieutenant General Nicolae Popa and Colonel engineer Nicolae Barbat argued the fact that the progress made in the industrialization of the country and the growth of our economy's technical and technological potential also permitted the development of our own production of defense equipment, which represented, in our times, a requirement for the consolidation of national independence.

"Physics and Military Science" was the theme of the paper by academcian Serban Titeica. In his paper, after he presented in summary several of the significant discoveries of physics with broad applicability in the construction of military equipment, he gave priority attention to the achievements of solid body physics which led to the construction of certain rapid and small-dimension processors and to the progress in the field of decimeter electromagnetic waves with applications for radar.

Major General Alexandru Petriceanu presented the report "The Patriotic Guards - An Important Component of the National Defense System of the Socialist Republic of Romania," referring to the objectives and tasks of the patriotic guards, according to the Directive of the Supreme Commander, during the current five year plan and to the principal means of action for the organizational consolidation of the patriotic guards staffs, for the training of cadre, for the raising of the patriotic guards' capacity to intervene and take action and for the improvement of their cooperation with military units and the other defense formations.

Captain Teodor Tufan's report was entitled "Formations for the Military Training of Young People - A Significant Potential Force of the National Defense System." In his report, Tufan stressed the major directions of action for fulfilling the role given to these formations within the framework of the national defense system through the continued improvement of the methodologies used in the process of training young people and the spread of the positive experiences accumulated both in the military training of young people and in their patriotic, moral and military education.

Professor Emanuel Sahini, in presenting his paper "The Contribution of Physical Chemistry to the Science of Materials," revealed the fact that within the framework of a broad interdisciplinary synthesis certain important fields of physical chemistry, as well as the physical chemistry of macromolecules and colloids, electrochemistry, radiochemistry and photochemistry, all have significant possibilities for applications in different areas of military activities.

Colonel General Marin Nicolescu, in presenting the paper entitled "The Patriotic and Political-Moral Significance of the Army's Participation in the Carrying Out of Programs for the Country's Economic-Social Development," reported our party's concept regarding the army's social functions. Within this framework, concomitantly with its training for the pupose of carrying out its basic missions, there also is the task of actively participating in the achievement of our party's and state's economic objectives, showing the multiple significance of the army's participation in production activities as the clearest expression of our army's patriotism during peacetime.

In the sections dedicated to the principal fields of concern - military art, military equipment, social sciences and economic-financial activities, the 43 reports and papers showed the directions of effort for bringing about the

requirements as outlined by our party and the supreme commander in the army regarding increasing the combat capacities in the commands and major units [mare unitate] and all activities for training young people for the purpose of defending the country.

In the closing speech at the end of the proceedings of the scientific session, the president of the Academy of Social and Political Sciences, university professor Dr Docent Mihnea Gheorghiu, noted the fact that through the reports and papers presented the participants had outlined the laborious activities of the Romanian Communist Party and its secretary general, comrade Nicolae Ceausescu, to strengthen the country's defense capabilities as an integral part of the work of building a new society and the especially rich value in the significance and theoretical and practical ideas and conclusions of the problems discussed. At the same time, it showed the fruitful and becoming traditional cooperation between the Ministry of National Defense and the most prestigious institutes of science and culture in our country, a cooperation which has proven fruitful in other areas as an expression of the active presence of the army in all the country's political, scientific and spiritual affairs.

The proceedings of the session, one of the events dedicated to the 60th anniversary of the founding of the Romanian Communist Party, constituted a vibrant expression of the unlimited feelings of love and recognition which the soldiers of the country and all the people have for our glorious party and its secretary general, the supreme commander of the armed forces, comrade Nicolae Ceausescu.

VIEWS OF FOREIGN HISTORIANS ON UNION OF PRINCIPALITIES COMBATTED

Bucharest REVISTA DE ISTORIE in Romanian May 81 pp 853-880

[Article by Viorica Moisuc: "The Year 1918 in the History of the Romanians. Viewpoints"]

[Text] The result, conforming with objective laws, of the social, economic and political evolution of the Romanian nation, a united national state whose establishment was concluded on 1 December 1918 included between its borders the entire Romanian nation. The union of the Romanian principalities of Moldavia and Muntenia in 1859, an act carried out by the popular masses and recognized as such by the big powers, was consolidated by eliminating Ottoman suzerainty and establishing full state independence in 1877-1878. As previously, this "fait accomplis" was sanctioned at the international legal level. At the end of the 19th and beginning of the 20th centuries, in eastern Europe, where the big Hapsburg and tsarist backward multinational empires kept a large number of nations and peoples under their domination, the national liberation struggle took on an unprecented scope under the conditions of the sharpening interimperialist contradictions. The establishment of the independent national state had become an imperative of that historical stage. Lenin correctly noted that "very many Romanians and Serbians (in proportion to the total number of Romanians and Serbians) live outside the borders of "their" state and that generally "the construction of a state" in the national-bourgeois direction did not end in the Balkans."[1] The observation was just as valid for the Czechs and Slovaks, under Hapsburg domination, and for the Poles, divided between three empires; the Ottoman empire, dominating nations and peoples in Europe and Asia, had reached an advanced state of destruction and backwardness regarding their own people and the natural framework for their development, the national state; in the Hapsburg empire, the dominating Austrian and Hungarian classes, concerned with "how much" and "how" to exploit the land obtained through force and the peoples deprived of freedom more and more efficiently, were annihilating the creative capacity of their own nations, a capacity that could only be asserted in the framework of sovereign, national, independent states; aggravated up to its culmination in the years of World War I, the economic-political-national crisis in the Austro-Hungarian empire and the tsarist and Ottoman empires could no longer be held back by any kind of repressive, administrative military or other measures. The collapse of tsarism under the blows of the socialist revolution was followed by the collapse of the Austro-Hungarian empire. By the end of 1918, the Republic of Czechoslovakia, the Serbian-Croatian-Slovenian kingdom,and the Polish Republic were acts achieved.[2] With regard to us, on 1 December 1918, the 100,000 Romanians representing the will of "all Romanians from Transylvania and Banat" decreed the union of all the territories they inhabited with Romania, thus concluding the last stage in establishment of the

Romanian united national state.[3] "The flow of historical events demonstrates most categorically that the union was not the effect of an accident, the product of a simple favorable circumstance or of understandings which occurred at the treaty table, but the result of the decisive struggle of the broadest masses of people, an act of profound national right, the achievement of a legal agreement between the objective reality and the people's inalienable rights, on one hand, and the national framework demanded stringently by these realities," stressed Comrade Nicolae Ceausescu, secretary general of the Romanian Communist Party, continuing to state the undeniable truth that "the peace treaty later concluded only legitimized the existing state of affairs."[4]

The progressive forces of the time, the illuminated people with progressive views and keeping up with the big revolutionary changes unfolding rapidly, fully understood the phenomenon and showed their solidarity with the just struggle of the people for national liberation and expressed satisfaction with carrying out a just cause. On 3 November 1918, a manifesto signed, among others, by Ady Endre, Bela Bartok, Gyorgy Bolony, Zoltan Kodaly and Jeno Varga, stressed: "We have no claim on our sister nations. And we consider ourselves a renewed nation, a now liberated force, as well as those brothers happily rising to a fresh life on the ruins of the monarchy. We wake eased with the awareness that we no longer are being forced to be the pillars of oppression. Let us live next to each other in peace as free nations with other free nations."[5] An act with broad significance for understanding the community of interests of the Romanians and the cohabiting nationalities on the matter of building the united Romanian national state is the unre erved solidarity with the 1918 union of Germans, Schwabians and Jews.[6] For the more than 17 and on -half million inhabitants of the new Romania within its ethnic borders (of which 73 percent were Romanians), a new stage of development was beginning on the path of progress, a stage which was placing on the agenda the overcoming of the big lags at all levels, an inheritance left by the long period of exploitation, plunder and oppression committed by the big neighboring empires.

In a study entitled "History, Is It Art or Science?" contained in the valuable set of manuscripts of ASTRA Library in Sibiu, A. D. Xenopol stated: "For the person who feels that the main purpose of history is a nice presentation, regardless of whether that presentation reproduces the development of life or only a fairytale, for him history is an art; for the one entrusted that history must reproduce the truth about the course of human things, with all the difficulties to be overcome, regardless of whether his presentation is nice or not , for that person, of course, history is a science"[7]; the words of the great scholar remain very current, especially if we bear in mind the circulation of essays in specialized or mass literature, essays which construct the history of certain phenomena in conformity with previously established conclusions. There is a single truth in this literature: denial of objective historical truth, eluding or distorting the facts, formulating "appropriate" theses which rhyme with just as "appropirate" facts. Of course, the question is posed of whether such "fairy tales," as Xenopol called them, deserve the attention of those historians who make history a science and of whether, on such a base, it is possible to have a real scientific polemic. Because what really could be the answer to this kind of question: The break-up of the Austro-Hungarian empire following the national liberation struggle of the oppressed nations "is a legend diametrically opposed to historical facts,"[8] as if the year 1918 did not even exist in history? Also, what really could be the answer to the assertion that the alliance treaty concluded by Romania with the Entente powers in 1916, a treaty which completely subordinated Romania's participation in the war to a single goal--freeing the Romanian provinces subjugated

by Austro-Hungary and reuniting them with the country--is characterized as "criminal," "imperialist?"[9] Does the thesis according to which Romania is "the product of the 1919 peace" really deserve an answer, simply tossing in the wastebasket all the history of a people who had buried in the earth where they had lived many generations of ancestors, when tribes of migrating populations rushed across these flourishing lands?

Undoubtedly, Nicolae Iorga was right when he said: "The person earnest in his right cannot have any kind of passion. He has passion when he is removed from the place which is not his due, from that place where he felt he was master through conquest and master through oppression. That person has passion."[10] But this "passion" in the attempt to demonstrate that which cannot be demonstrated, that of denying implacable historical truths and of "creating" so-called truths from the peak of the pen, thus, making anti-history, really recalls the times when the Austro-Hungarian or tsarist offices "decreed" that the "national problem" did not exist in their empires, while the repressive measures applied to the oppressed peoples were intended to "resolve" that national liberation struggle which was so dangerous.

Romanian scholars, particularly those who carefully saw to the historical past of their people, deciphering their purposes and their aims, never did "science for science's sake"; the past, with all that was good or not so good in it, served the present, in its most intense moments, while everything was serving the future; and it was more than once, defending a present full of hopes, that the patriotic Romanian scholars spoke out for the truth, that truth which was mixed up withthe very history of their people. On the basis of this truth, then, we shall try to bring to your attention the historical facts which prove that the year of 1918 for the Romanians was an objective law, the act of will and struggle of a nation of nearly 18 million people, a concrete and irreversible reality which the progressive international community helped and recognized as such; this moment--1918--which meant fulfillment of a national ideal for which difficult sacrifices of the entire Romanian nation were made does not permit any defilement or damages from anybody, no matter who it is; that is why, beyond any scientific polemic, beyond what may be called a "difference of opinion," in this case it is a question of the respect due historical truth and the historical evolution of a people who never were brought to their knees during their exence and who do not owe anything to anybody in the work they did themselves, who enjoyed the international solidarity of the progressive forces in various eras.

In an interesting study which proposes to analyze and explain the orientation of Hungarian historiography after 1918 under the new political-historical conditions,which were completely different from the previous ones, Ferenc Glatz points out that the attention of historical literature to a large extent was directed toward explaining the decomposition of the dualist monarchy and, as a result, of "historical Hungary," bringing out "historical" arguments, with the tendency really being "to write about the disintegration of the old state formation as a vital problem of the nation."[11] And the author, trying to explain this phenomenon, feels: "The Hungarian historian--making an abstraction of Marxist historical concept which, also due to its exclusion from Hungary then, could not play an important role--suffered terribly" due to the "Trianon shock."[12] The decisive influence of this "shock," in the author's opinion, explains the orientations of "non-Marxist" Hungarian historiography after 1920, that is, "the historical-geographic unity of Great Hungary " Ardeal considered as "the symbol of the independent Hungarian state," "the historical motivation" of rebuilding old Hungary (since "economic reasoning could be reversed, while ethnic arguments were only partially usable, since merely a small portion of the Hungarian residents were

living on the separated territories"); "the investigation of Ardeal's history was not restricted merely to the subject of the independent Hungarian state of the Hapsburgs, but was broadened up to the presentation of Ardeal as belonging organically to mother Hungary" [13] as Ferenc Glatz points out. The "national problem" in the old empire also held a primary spot in Hungarian historiography after World War I, that is, "the relationship between Hungarians and nationalities." In approaching this latter problem, an important category of study, as Ferenc Glatz finds, "attempted to show continually that the Hungarians can claim the role of political leader on the basis of the right of the one who came first."[14] Another aspect of the "sui generis" method of approaching the national problem in the former monarchy also was the attempt to show, as Ferenc Glatz recalls, that "the Hungarians always lived together well with the other cohabiting peoples in the country, that is, that Hungarian national policy always took the nationalities into account,"[15] in other words, the "nonexistence" of any real national problem in old Hungary.

Actually, with or without the "shock" caused not by Trianon or other peace treaties but by the national liberation revolutions of 1918, the ones who regretted the old states of affairs launched theories subordinate to a single goal for the ones who wanted to exploit them: revising the national-ethnic borders of the states established or completed in 1918, or obtaining a new territorial-political status in central Europe under the federative formula, clearly having Hungary as the center. For example, who does not recall what Paul Teleki, future president of the council, wrote when he maintained that Hungary with the "separated" regions "forms a geographic unit, it has borders and a clearly defined center and its parts are economically and harmoniously completed"[16]; later, fascist Admiral Horthy claimed that dismembering the Austro-Hungarian monarchy was "a madness today regretted by everybody."[17] Horthy, who pushed the slogan "nem, nem soha!" (no, no, never), also maintained with the same conviction the error that "in Transylvania, the Romanians were only a minority" and that, through the action of its troops, Romania "annexed" this province at the end of December 1918.[18] Who also does not recall the theory of the"Switzerland of the East" of Oskar Jaszi* who actually aimed at creating a confederation of states which were former "members" of the monarchy and adjacent states comprised of Austria, Hungary, Bohemia, Serbia, Croatia, Dalmatia, while Transylvania was offered a "cultural and living independence in conformity with the spirit of Renner's Austro-Marxism."[19] The formula of "rebuilding" old Hungary, as we know, circulated throughout the interwar period in varying ways and with different motivations, among which, clearly, the one of the "impossibility" of the existence of a Hungary lacking Transylvania and the other territories which had belonged to the "Crown" of Saint Stephen was not missing and of the need for rebuilding this factor of "order and balance" in central Europe.

With what justification did Nicolae Iorga rise in 1933 against such aberrations which smacked of "historical science" when he wrote: "Because it was a question of economic life, I do not know what kind of historians of political economics or very political economists threw out the following argument in Budapest: Hungary must be rebuilt, since it was a model of an economic unit. First you ask yourself--which Hungary? The Hungary of Saint Stephen created by the pope for an incentive in the crusades?" "The apostolic kingdom," Iorga pointed out, "is neither territorial or national. It can be big or small. It was big when there were the crusades; there are no more crusades, it gathered nicely within the convenient enough borders which it has now and which it can fill everyday with the national feeling. However, the national feeling," the scholar stressed," does not mean to seek a quarrel with the neighbor in order to take back what you yourself took from him at one time, but the positive, creative and honest national feeling is that which makes you arrange matters well in your own country."[20]

Of course, it is natural that today, particularly after the demonstration made by the 60 years of recent history of the states which, after 1918, formed the subject of so many attacks more or less dissimulated by theories of the kinds mentioned, the truth of 1918 should appear in all its complexity, although, naturally, differing opinions exist with regard to certain phenomena, points, situations.

For example, in a general work on the history of central Europe in the 19th and 20th centuries which appeared relatively recently, G. Ranki and I. T. Berend stress that "the principle of nationalities proved to be incompatible with the dynastic feudal principle of the Hapsburgs."[21] Using many arguments and statistical data, the authors show that at the beginning of our century, of the total of 50 million inhabitants of Austro-Hungary, the two nations whose dominating class held the power, formed only 44 percent , while the people under their rule, some gravitated toward union with their independent countries and others wished to establish their own, independent states.[22] In the years of World War I, they continue to point out, the process developed and the states established were the result of its finalization.[23]

The idea also is developed by Istvan Pinter in a recent article. "Even at the watershed of the century, Hungarian nationalism was an ideological form and basic policy which the interests of the big landowners and industrialists wore and the trends to achieve a Great Hungary, independent from Austria, within which they would oppress the nationalities which were living there. The classes in power in Hungary," the author points out, "understood their domination over the non-Hungarian peoples in the Carpathian basin as a mission, a historic task, and they denied other nationalities' right to national existence."[24] He also stresses another characteristic: "The idea of the thousands-year-old Hungarian state with a bourgeois content became an integral part of the idea that the Hungarians should have a leading role in southeastern Europe."[25]

As we know, the idea of the "historic" mission did not belong just to the Austrian empire or to Hungarian imperialism. Analyzing this feature of the foreign policy of the tsarist empire, the Soviet historian A. A. Iordansky shows that Catherine II, flying the banner of "liberation of the oppressed Christians in the Balkan Peninsula from the Turkish yoke," fiercely confronted Maria Theresa for domination at the mouths of the Danube, Black Sea and the Balkans. In this confrontation, when Maria Theresa annexed northern portion of the independent principality of Moldavia (the future "Bucovina"), to the great dissatisfaction of the Russian peasantry, the latter tried without success to obtain the "move of the Romanian principalities to the rule of the Polish king, Stanislav Poniatowski, the protege of Russia. Since, however,at the same time Poland was living its last days before being divided," A. A. Iordansky states, "Catherine's proposal simply meant moving the principalities to Russia."[26] The tsarist occupation of the Romanian principalities and the great material and political advantages which resulted from this situation for this empire once again convinced Catherine the Great of the importance which would have been held by "establishing a 'Greek-Eastern Empire' in the European part, which would include the Danube principalities, with Potemkin to be placed at the head of it."[27] Dwelling at length on the Austro-Russian-Turkish relations and the situation of the Romanian principalities "caught between two fires "[28] in the last quarter of the 18th century and beginning of the 19th century, the abovementioned Soviet historian stresses that the Romanian principalities of Moldavia and Muntenia were necessary to imperial Russia "as the base for future move forward toward Constantinopole and Trimtori and as the final point in the big water artery of the Danube."[29] As we know, Catherine II's old plan was again picked up in various formulas in Tilsit and Erfurt by her successor,

who also tried to get the other powers interested. Secret understandings between the cabinets in Vienna-Petersburg-Paris regarding the Romanian principalities, whose status of independence had been gravely violated by the tsarist military occupation in the period of the interminable tsarist-Ottoman wars, brought the Soviet historian K. K. Persky to feel that they (the secret understandings) "produced a powerful impression on the Romanians, who understood that both Austria and Russia wished not the liberation of the Romanians but merely increasing the possessions they held at their expense,"[30] while another Soviet historian, N.A. Mokhov, referring to the same confrontation of interests between Petersburg and Vienna, stressed realistically that "the fate of the principalities becomes a currency of exchange in the international diplomatic struggle."[31] Actually, in June 1811, for example, N. P. Rumyantsev, the foreign minister of Tsar Alexander I, wrote to Gen M. I. Kutuzov, supreme commander of the occupation troops in the Romanian principality of Moldavia that "obtaining both principalities would place in our hands the opportunity of making a favorable exchange with Austria, ceding the Romanian Country for another region and even if such an exchange does not take place, then, having the opportunity to then propose Wallachia either as a transfer or as an exchange, we would keep permanently the greatest share in the political system of the Vienna cabinet."[32] So this is how two principalities with status as independent states were treated as "currency of exchange" in the politics of the time's great empires. The deterioration of relations with Napoleon, however, caused Tsar Alexander to reduce his big political plans to what he felt was "achievable," that is, annexation of the principality of Moldavia up to the Siret and Danube where it flowed into the Black Sea, at the same time claiming from the Ottoman Port "financial damages" for "rejection" of the principality of Wallachia."[33] For the latter, Alexander had "to be satisfied with 'such little' compensation in the opinion of the Petersburg politicans," A. A. Yordansky pointed out, "only because at that time the relations between Alexander and Napoleon had become so complicated that war between Russia and France had become inevitable"[34]; this matter, the Soviet historian stresses, returning to the idea of the "liberating mission" of the countries, "finally explained before the Romanian patriots the role of the Russian emperor and the true motives for the interest of 'the greatest Christian power' in the cause of liberating the oppressed peoples in the near east."[35] I should add that, with regard to the Romanians and their principalities, enjoying political, administrative, religious, economic and cultural independence, they weren't in asituation of being "liberated," not being "provinces" (pashaliks) of Turkey. So, as far as they were concerned, the big "Christian" empires could not in any way invoke the motive of liberating the Romanians from the Ottoman yoke."

During a later period, the idea of the "historic mission" also was expressed in other formulas, among which a distinct part was held by that of the "federative state," a formula which had in mind perpetuating the states of affairs in the big multinational empires under the cover of a new form. Along this line of idea, we stress the remarkable contribution of Gyula Merei, the Hungarian historian, to the analysis of the causes for the crisis of the Hapsburg empire. He felt that no type of plan for federalization of the Hapsburg empire could save it, with its break-up being an historical need."[36] Referring broadly to the various formulas for "federation" planned, beginning with the Wesseleny-Garasanin plan and ending with the one advanced by Aurel Popovici in his work "The United States of Great Austria" at the beginning of the 20th century and of Oskar Jaszi during the war, Gyula Merei rejects the idea that survival of the Austro-Hungarian empire under those historical conditions would have been possible any longer, when all the oppressed nationalities wanted their own independent states, regardless of the degree of liberalization which a federative state could offer them.[37] In the same position, the authors of the monograph "Histoire de la Hongrie" published in Budapest several years ago evaluated the inevitable nature of the

break-up of the double monarchy, with the decisive element in this phenomenon being the struggle for national and political emancipation of the oppressed nationalities who were aspiring to establish their own states which were independent and sovereign. With regard to the peace treaty of Trianon, the authors rightfully feel that it "gave satisfaction to the just aspirations" of the nationalities of the former empire.[38]

The problems of the break-up of the Austro-Hungarian empire under the action of the struggle of the oppressed nationalities is treated in a very interesting report presented at the Romanian-Czech colloquium in Bucharest in 1967 and by the well-known historian J. Macurek.[39] Referring to the political-historical context of the Hapsburg monarchy up to 1872, J. Macurek dwells on the phenomenon of the national liberation struggle at various points, showing the development of collaboration between the Czechs and Romanians for one and the same goal: national-political emancipation, reestablishment of the independent states of the Czechs and the Slovaks, the union of the Romanians and the territories inhabited by them which were under the rule of Austria and Hungary, with the mother country.

His compatriot, historian Zdenek Kutina, concerned with the states in central and southeastern Europe established or accomplished in 1918, stresses that "the inclusion of all Romanians and territories occupied by them in a single national state" was the goal sought by Romania when it entered the war in August 1916, while the state achieved through the will and struggle of the entire Romanian nation in 1918 was "a united national state"; thus, we see that the peace treaties of 1919-1920 in Romania's case as well as that of the other states in this geographic zone meant "an actual reality."[40]

Against the same background of idea, Juliu Bardach, professor at the University of Warsaw, and Hubert Izdebski analyze report on the federative principle and the federal state in history, a report presented at the 15th international congress of history in Bucharest (August 1980), the flagrant inequality of treatment between the dominant nations on one hand and the dominated nations on the other, both within the framework of the Austro-Hungarian empire as well as the tsarist empire.These inequalities were more emphatic toward the end of the 19th and beginning of the 20th centuries, with the national liberation struggle to establish sovereign and independent states becoming a definitive feature of the political-social situation in the big empires.[41]

The acute nature of the crisis in the dualist empire is brought out by Emil Neiderhauser, who stresses the emphasis of the "big contradictions between the oppressed nations and the dominant Austrian and Hungarian classes and between the dominating and oppressed nations" on the eve of World War I. As Neiderhauser points out, "It was natural for the Poles, Romanians, Serbs and Italians to travel the path of unification with their comrades in other states and to wish to part from the empire."[42] So, the national-political emanicipation in the framework of their own states for the oppressed nations of the double monarchy appears in the view of the historian mentioned as an objective historical phenomenon.

Of the multitude of problems belonging to the broad process of the decomposition of the Hapsburg empire, the British historian Kenneth Johnstone dwells on Romania's place in the history of Europe in the modern age, while he expressly analyzes the political-national regime of the Transylvanian and Bucovina Romanians in the context of the evolution of relations between Austria and Hungary on one hand and the relations between the Hapsburg empire and the tsarist empire on the other. This

historian feels that under these circumstances "the stage was set for the big dispute between Russia and Austria for the Balkan countries and what was considered to be the dying Ottoman Empire." This historian feels that due to their geographic placement, the Romanian principalities "were for Russia a natural corridor toward Turkey and the Balkans and, as such, a basic means for movement in the frequent Russian-Turkish wars."[43]

In connection with all this, the Soviet historian N. A. Mokhov, to whose studies we have referred before, in analyzing the political-diplomatic circumstances under which the Austrian-Russian contradictions were aggravated in the Balkan zone and the Danube zone in the last quarter of the 18th century, points out that, after Maria Theresa annexes Bucovina, a severe policy is established in this province against the native population: "The Austrian government insistently colonizes Bucovina with Austrians, Poles and people of other nationalities. Teaching in the schools was in German everywhere,"[44] the abovementioned historian stresses.

Under the international conditions of deepening rivalries between the Hapsburg and tsarist empires for domination and influence in the southeastern zone of Europe, the situation of the Romanians under foreign rule worsened greatly. "The wild policy of Magyarization," British historian Kenneth Johnstone continues to point out, "being conducted by the Hungarian government throughout the half-century which followed" (after 1848) "dispelled any hope for a solution, besides that of total capitulation; the compromise of 1867 ended any dreams of an independent Romanian province under the imperial crown."[45]

We also find similar judgments in a broad work devoted to the history of the Hapsburg empire following 1867 by the American historian Arthur J. May; analyzing the features of the domestic and foreign policy of the "empire of ruin," as Lloyd George called it, in the age of the momentum for national liberation struggle, A. J. May dwells on the Romanians' situation and states that the Transylvania problem without question dominated the evolution of relations between Austro-Hungary and Romania, an opinion in full agreement with reality.[46] The author presents the characteristic aspects of the tough policy of Magyarization of the nationalities as promoted by Count Coloman Tisza and continued by D. Bannfy and later by Count Apponvi and he stresses the steadfast opposition resistance of the oppressed nationalities, who made a common front in defending their rights; in this context, A. J. May formulates the appraisal that the Romanians conducted the most tenacious and effective struggle against denationalization, resorting to extremely varied and clever methods and being permanently supported by their compatriots in independent Romania. The final goal of their struggle, A. J. May shows, was the union of Romanians in a single state.[47]

Again picking up the matter of the Romanians, Soviet historian N. A. Mokhov shows that "finding themselves under foreign encirclement, the people kept their language and customs and, although tsarism hindered national development, it continued; the development of the ethnic awareness also continued among the people."[48] Also, in a collection of studies published in the USSR 3 years ago and devoted to the national problem in the former empire, it is pointed out that "particularly after the 1848 revolution," a revolution for the suppression of which the tsarist armies had a main role in the three Romanian principalities, "the national oppression practiced by tsarism intensified."[49]

The momenum of revolutionary liberation movements in the multinational empires, movements which involved broad masses of the oppressed peoples, demonstrated in many

actions, represents a broad range of problems to which the well-known French historian Pierre Renouvin directed his attention, analyzing predominantly the evolution of the political crisis on the eve of the outbreak of World War I; in this framework, P. Renouvin presents the status of the various nationalities subjugated by the big empires and he brings out the indisputable truth that, despite the harsh policy of oppression, these nationalities "did not lose the awareness of their individuality."[50]

Renouvin feels that the break-up of these empires in favor of the independent national states was a natural requirement of the time, the accomplishing of which could not be halted by the forces concerned with preserving the old states of affairs. He concludes: "'Balkanization' of Danubian Europe, which the diplomats of the Entente powers long felt was an undesirable prospect, was an "act accomplished before the offices even thought to intervene."[51] So, the Danubian peoples decided their future by themselves, independent of the will and plans of the big powers (including the Entente), placing already consumated facts before the peace conference.

Similar conclusions about the way in which the principle of the nationalities took action as a catalyzer of the struggle for political emancipation of the oppressed nationalities in the big empires also are formulated by Herbert J. Muller, who shows that this phenomenon "was a vivid reality of international modern life, a result of a century of unrest,"[52] while Hugo Hantsch feels that the national problem remained unsolved in Austro-Hungary, with the dualism of 1867 giving Austria and Hungary fictitious statuses as unifed states.[53] Robert Kann also speaks of the fictitious nature of the status as unified states given Hungary and Austria which, in his opinion, compromised the federative idea which would have permitted a more liberal status for the numerous nationalities included between the borders of the empire.[54]

Jacques Droz, in a work published immediately following World War II, states, as do the abovementioned historians, that particularly after 1867, a broad "revolution of the nationalities" takes place in the Hapsburg empire for national and political emancipation.[55] (Several years later, Jacques Droz changed his opinio maintaining that preservation of the Hapsburg empire would have been in the nationalities' interest.)[56]

Peter Sugar also takes the same position, feeling that "the only solution" for solving the problem of the Romanians under foreign rule was their union with Romania.[57]

The principle of the nationalities, as a basic element in establishing a new political order superior to what existed in Europe at the end of the 19th and beginning of the 20th centuries, with its corrolary--establishment of united, national, independent states and the nature of "fait accomplis" at the point when the peace conference opened--represents truths recognized in their defining features in many of the older or newer studies. Among the historians concerned with these problems, H. W. V. Temperley, for example, stresses that the principle of the nationalities substituted old dynastic principles in the content of the peace treaties of Trianon and Saint Germain.[58] Also, Maurice Crouzet feels that the liberation of the subjugated peoples in central and southeastern Europe and the establishment of national independent united states put an end to the sharp conflict of a national nature within the former empires, while the borders of the new states in general lines conform with the national aspirations of the people. [59]

Along the same line, Maxim Mourin finds that the union of Romanians in a single national state, achieved by them themselves, was a real reality which the Paris peace conference "was invited to sanction,"[60] while G. D. Spector, the well-known American

historian who was closely concerned with the activity of Romania's delegation to the peace conference, also feels that the territorial changes on the map of central and southeastern Europe were produced much before the opening of the peace conference, with its being able merely to ratify an already existing situation.[61] C. Bratianu, Spector says, "much more experienced than any other of the four big ones," was perfectly aware that actually the conference could do nothing but accept the decisions already applied by the peoples in central Europe.[62] In turn, R. Ristelhueber, stressing that in 1918 Romania "finally achieved its traditional aspirations, uniting all the Romanian lands as in the time of the reign of Mihai Viteazul,"[63] implicitly reaches the same relationship between "fait accompli" and the recording of it by the peace conference. Also, the American historian V. S. Mamatey, after he gives a broad explanation of how Romania--a united national state--and the other states in the same geographic zone came into existence, states, "The peace conference in this way was faced with an accomplished fact in eastern central Europe, which it neither wished nor could succeed in changing.[64] Concerned with the same problems, Robert Lee Wolf shows that the union of Romanians in a single state resulted from expression of the national will in Alba Iulia on 1 December 1918[65]; so, the peace treaties, in his concept, play a secondary role at the level of establishing the united Romanian national state. Identical conclusions also are expressed by Gottold Rhode, who emphasizes that the will of the popular masses brought the act of the union of all Romanians in a single state,[66] while L. S. Stavrianos in turn explains that in Paris the peace conference could only recognize and strengthen the actual situation existing in central and southeastern Europe through its decisions.[67]

Whereas in the great majority of its representative works, modern historiography evaluates the break-up of the big multinational empires and the establishment of independent, united, national states as inexorable phenomena of history ,there also are authors who circulate contrary theses, often with particular insistence, theses which are not original at all and which perhaps take somewhat further those old viewpoints presented by Ferenc Glotz in the study quoted above.

For example, some theses circulated by various historians and which actually result from each other, inevitably lead to a single conclusion: the artificial nature of the states in central and southeastern Europe. Here are several of the links in the chain of distorting historical facts: "Self-determination appeared as an ideology at the point where, connected with some apparently democratic demands, it served both to dissimulate expansion as well as to combat the despotic and aggressive principle, that is, the 'Germanic' principle," maintains Maria Ormos.[68] Pointing out that national self-determination or the principle of the nationalities was supported by the big Entente powers as "ideological camouflage" following "the break-down of the separate peace tries of Austro-Hungary at the beginning of 1918,"[69] the author, in referring to the peace conference, feels that "the decisions in their favor (of the states in central and southeastern Europe--editor's note) were adopted without their contribution." Maria Ormos feels that the states in central and southeastern Europe, natural results of the political-economic-strategic interests of the big powers as well as the plans of France "intended to promote the economic recovery of the region (it is a question in 1918 of reconstruction of the entire Czechoslovak, Polish, Hungarian and Romanian economies)," the plan of the Danube confederation and so forth--all these "aimed at filling this vacuum resulting from the disappearance of the monarchy with a new unit which would have been created under France's leadership."[70] So,this is how we find out from the abovementioned author that the abolishment of national oppression of approximately 30 million people in central and southeastern Europe generated a "vacuum," while the establishment of independent, sovereign, united and national states led no more or no less to economic chaos. If we take Maria Ormos' judgment further, of course one may say that the abolishment of colonial

exploitation over the widespread territories in Africa and Asia and today's proclamation of more than one hundred independent states were not phenomena of historical progress but they caused a "vacuum," with the "resolution" probably being a formula which would bring back the previously exploited peoples into a so-called political-economic unit placed under the sponsorship of the former parent states. Resorting to this kind of judgment contradicts the living history of hundreds of millions of people and dozens of independent states.

The theory of "vacuum" caused by the break-up of the dualist monarchy and the liberation of millions of people from under foreign domination is also supported by Istvan Dioszegi in an article on the international situation on the eve of the Paris peace conference; for example, he asserts that "a vacuum was created in world politics and in the immediate vicinity of the conquered countries, toward which various forces were demonstrated uninterrupted," with these "forces," in his opinion, being the big conquering powers and the small states of central and southeastern Europe which "strived to fill the void created by the world war,"[71] resulting from his demonstration that the main role in the break-up of the Hapsburg empire was played by the military defeat of the central powers in the war.

Returning to the problem discussed by Maria Ormos, we find that the failure of all France's attempts and rejection in the coming years by Romania, Yugoslavia, Czechoslovakia of other numerous actions initiated by the big powers with the idea of economic "reconstruction" of the central-southeastern European region would have resulted in maintaining the vacuum created in central Europe by the break-up of the dualist empire, and the author asks: "Why did the small states in central Europe make the French plan fail, the idea of unity of the region; why did they want to preserve this vacuum in central Europe?" And we find the answer to this in the following statement: "The fact that the policy of these countries was determined by the past explains the atavistic fear, the archaic picture of the enemy. This is a general phenomenon but it becomes a private phenomenon in central Europe due to the narrow politic outlook of the small nations and perhaps also due to the fact that the backward consciousness is connected too closely with defense of the recently achieved independence and by the nationalism brought on by this."[72] Thus, making a total abstraction of the centuries of struggle for national and political liberation of the nations oppressed in the multinational empire, completely forgetting that the year 1918 existed when the subjugated nations chose the path they would take in the future by themselves, failing to take into consideration not even the simple chronology of the facts which establish that Romania, Czechoslovakia, the Serbian-Croatian-Slovenian kingdom and Poland existed as independent states by the end of 1918 and that the treaties of Saint-Germain and Trianon brought nothing new from this viewpoint, Maria Ormos sees a big political and economic vacuum in central and southeastern Europe following the break-up of the Hapsburg empire and she believes that only "recovery" of the economic unity of the zone could have brought "salvation." But what is very difficult to imagine for a historian today is the idea that the defense of national independence would be attributed to a "backward awareness"; commenting on the background for such a concept, we see that national independence is equal with chauvinist nationalism, with economic anarchy, with the refusal of any cooperation, while the melting of national independence and borders into an "economic unit" placed under the sponsorship of a certain power would equal historical progress. The lack of originality of Maria Ormos' assertions also is proven by the fact that the well-informed people of the 30's were rising decisively against the ones who were maintaining that the independence and sovereignty of the states would be "stumbling blocks" in the path of progress and peace." "To recommend under current conditions the abolishing of national independence as a remedy for eternal peace

not only recommending an inadmissible prescription but means throwing the world into chaos and anarchy if we were to proceed on such a road and to preach that the remedy for eternal peace is destruction of the national sentiment not only is an impossibility but is taking from man the most important support of his present individuality,"[73] Nicolae Titulescu said in the German Reichstag in May 1929. And he also emphasized another generally valid truth: "For that reason, today, international right seems to everyone in particular as a law of coordination, not subordination, while the position of each state separately, compared with the other states, is a position of independence, not dependence."[74]

In close connection with the abovementioned theories and in the same view of treating the problems, the thesis of the "economic unity" of the old empire is also formulated, the empire "destroyed" by the Trianon peace treaty decisions. "The territories which formed an economic unit in the old days," Magda Adam maintains, "were separated from the political and legal viewpoint" into what the author calls "parts with a unilateral economic structure, competing among themselves and incapable of full independence."[75] So the states in central and southeastern Europe established through the national liberation struggle are, in the opinion of this historian, "parts" of an economic "whole" which had been the dualist monarchy. Oaszkar Jaszi also supported this thesis in 1921, when he predicted the "break-up" of the new states due to the "impossibility to survive" following the destruction of "the economic-political" whole which had been the monarchy." "It is impossible to destroy one half of a complicated economic organism and for the other half not to be contaminated by eath. Eastern and central Europe," O. Jaszi found, "are facing the total fuin of dissolution: production cannot proceed, unemployment is increasing each day, moral and state ties are falling apart."[76] This thesis contradicts objective, well-known facts. For example, we know that far from being an "economic unit," the Hapsburg monarchy presented the picture of big inequalities from one region to another with regard to economic development. Transylvania, for example, permanently remained in the situation as a supplier of raw materials and the market for sale of industrial goods. "We from Transylvania," wrote Gheorghe Barit in the middle of the last century, "are as poor as we should be wealthy, because we have a) a total lack of credit; b) a lack of commercial markets; c) almost total lack of scientific institutes for agriculture, industry and commerce; d) immeasurable tributes to the circumstances shown in the three points; e) the stronger mad luxury of a large portion of the Hungarian aristocracy, while it will be of the bourgeoisie of all nationalities 20 years from now."[77] Transylvania's situation was aggravated together with the creation of dualism in 1867, when the province was integrated in the united customs system of the monarchy; the Austrian and Hungarian bourgeoisie kept Transylvania in a state of colonial dependence, placing here a large quantity of industrial products and obtaining their raw materials under advantageous conditions.[78]

We also know that the process of creating the national economic complex for Romania, prepared centuries on end by the close economic and spiritual links between all the Romanian provinces, entered into a higher phase in 1859 and 1877-1878, sped up through the organic integration of Transylvania in 1918,as well as of the other provinces inhabited by Romanians who had been under foreign rule, into Romania's economy. The formation and development of the national economic complex was imposed as a legal objective law of the development of the national economy , one which was valid for all states. Under the cnew conditions, the international division of law took place in the new dimensions, concerning both the various branches of the national economy as well as the geographic-administrative regions; new economic branches and units appear and develop, ones which are needed for the national economic complex. Magda

Adam's viewpoint according to which "the bourgeoisie of the newly established countries refuses the old economic and political ideas of collaboration,combatting the division of labor established within the monarchy," and ignores the economic bases for the "new ideas" which were incompatible with the anachronistic division of labor within the Hapsburg monarchy. The new states' renunciation of the "old economic and political ideas of collaboration" caused by the imperialist division of labor as well as organization of the national economic complex in conformity with the objective needs of the independent national state represent an act of historic progress also confirmed by today's development of a similar process in the countries liberated from under colonial domination.

A problem today returning to international discussion in connection with the socio-political-national changes in central and southeastern Europe in 1918 is that of world revolution, as we know, a thesis supported by many communist militants and theoreticians at that time. Recently, for example, L. Nagy Zsuzsa, referring to this question, feels that the program of the Hungarian revolution on abolishing the borders and establishing a world proletarian republic "was a concept with a broad outlook. It is expected that the sufferings caused by wars, social contradictions as well as the policy conducted by the victorious Entente should lead to the rapid revolutionization of Europe's peoples, during which the dictatorships of the proletariat takes place, which, in this framework, will ally itself on the basis of proletarian democracy and national bourgeois contradictions also will be solved fast."[79] Proceeding from the idea that "creation" of independent states in central and southeastern Europe--"national bourgeois states"--was a poor solution which "could only promise the beginning of a new period of violence," Dioszegi Istvan also feels that "the conquerors and the conquered should have kept in mind the current facing mankind caught by the future national conflicts and prospects for supranational, internationalist solutions."[80] With the same view but in a manner of extending the theoretical and practical problems of 1918-1919 to present history, Andres Firon feels that "neither at that moment did solution lie in mapping out borders, no matter how carefully this would have been done" and that "the political realism of 1918-1919," in his opinion, lies precisely in the fact that the Hungarian revolution of the councils came out against territorial integrity and against the borders. The abovementioned author feels himself capable of evaluating that "a closed policy within national limits," understanding by this the new national states' own independent policy, would, in the perspective of history, have proven to be a poor political formula which caused new conflicts. "A solution is needed and the whole world feels this," the author finds. But solution can only be b ought by the socialist historical perspective for eastern Europe taken as a whole," Andres Firon asserts unequivocably.[81] With regard to Janos Kende, he feels that the formula recommended by the Republic of Councils of Hungary, that is, a Soviet socialist republic of peoples of the former monarchy, a formula through which the "Hungarian Communist Party separated from the policy of territorial integrity," "could have represented an appropriate counterweight to the imperialist plans of the Entente."[82]

So here, revived after more than 60 years, are the theories whose erroneous essence was even revealed from the beginning by history and which is continually revealed by today's realities. To feel today that world revolution is the best solution to the big problems of 1918 as well as that its failures then"do not prove the correctness of the adversaries but rather, at most, the superiority of their force," to feel today that a "supranational republic" would be a possible organizational framework for developing human society mean not only to formula and support utopias, to pick up old theses again, ones which were outdated and refuted by history itself, but also

mean in particular failing to take into account the objective laws of economic-social-political development with regard to the nations' inalienable right to exist independently and to organize their lives within the independent national states, states whose preservation in time cannot be determined exactly, at least during the current stage of historical development.

In connection with the theses formulated by the abovementioned authors, several clarifications are required.

First, it is a question of a narrow and deformed understanding of the world revolutionary process. As we know, the great diversity of contradictions in modern society causes extremely diverse forces and components of the world revolutionary process which bringtogether in a single stream the revolutionary struggle against imperialism and capitalism, the national liberation struggle, the anticolonialist struggle and so forth. It includes all the phenomena and processes which cause structural changes in society life at the world level in favor of social progress, national liberation and democracy. To place an equal sign between the world revolutionary process--a highly complex phenomenon which takes on extremely varied forms--and the world socialist revolution proves a great narrowness of views; the opinion according to which the national liberation revolutions and democratic revolutions are not part of this process but only those which are of a totally anticapitalist nature lead to basic denial of historical progress, a direct result of the world revolutionary process in the multitude of its manifestations.[84] This way of viewing the revolution was characteristic of many of the socialist and communist militants and theoreticians in the years of revolutionary elan. For example, before the international socialist congress in London in 1896, where the resolution entited "Political Actions of the Working Class" was adopted, which specified "direct and unequivocable recognition of the right for all nations to self-determination," Rosa Luxemburg had published the article "Neue Stromungen in der Polnischen Sozialistischen Bewegung in Deutschland und Osterrich," in which she criticized the leaders of the Polish Socialist Party for their position favoring creation of an independent Poland[85]; in 1913-1914 under conditions of the upsurge of national liberation movements, the discussions on the problem of self-determination were picked up again on an even broader level, confronting the two main concepts: the Marxist one which came out for the nations' self-determination up to the separation of the multinational states and the establishment of national, independent states and the Austrian social democratic concept (Otto Bauer, Karl Renner) which rejected the idea of self-determination, opposing national-cultural independence. Even after the victory of the socialist revolution in Russia and adoption of the historic document on the right to self-determination up to the separation for all peoples held for cefully in the former empire of the tsars, positions and concepts going along the old line of Rosa Luxemburg, Otto Bauer and Karl Renner continued to be demonstrated in the national movement. Of course, we know how in the time of the Hungarian revolution of the councils the point had been reached which asserted that "nations do not exist, just classes"[86] or that "nationality was a type of grouping of second rank people," feeling that "national oppression is actually oppression of the proletariat"[87]; from here the finding was reached that "in Soviet Hungary there is no national problem."[88] In the series of lectures held by the leader of the Hungarian revolution, Bela Kun, on changing the party program, the above theses are presented in a broad way; proceeding from the idea that "the entire right to self-determination is, from our viewpoint, an idle fiction, since we do not want the right to self-determination, we do not want separation, but we want the unity of the proletariat, regardless of nationality, without taking into consideration the national borders," Bela Kun formulates the goal of the Hungarian revolution; that is: "Unified kingdom of socialism achieved at the international level"[89] and he

states that "we must break with the policy of territorial integrity, since this is an insignificant problem" which is excluded by itself within the world revolution. Also, judging any phenomenon of that time through the prism of the concept mentioned, the Hungarian revolution refused to recognize the legitimacy of establishing independent national states as the result of a legal process, an irreversible one, which put into concrete form an objectively necessary historical stage of historical progress. For example, the documents of the time state that in central Europe "new militarist states have appeared like magic,"[90] while on 1 April 1919 NEPSZAVA declared: "We shall erase any color from the map. The world revolution will bring world peace"[91]; on 7 April, during a popular meeting in Kaposvar, assurances were given that "in several weeks, all of Europe will be in flames and proletarian dictatorship will govern everywhere."[92]

In the years of World War I, when the national liberation struggle had taken on unprecedented scope, Lenin treated the problem of self-determination in the program of the socialist movement, analyzing it in correlation with the thesis of doing away with the frontiers and the so-called world republic. "We assert that to reject achievement of the nations' self-determination under the conditions of socialism would mean a betrayal of socialism," Lenin felt, showing that national oppression is "one of the forms of political oppression; that is, keeping a nation within the state borders of another nation through force."[93] Liberation of the oppressed nations involves, on one hand "full equality of rights" and, on the other, "freedom for political separation." Stressing that Marx' thesis remains valid for the socialists, the thesis on "recognition of the necessity of the state," Lenin criticizes those who "imagine either that the democratic state of socialism victorious will exist without borders (precisely as a 'complex of sensations,' without matter) or that the borders will be established 'exclusive' in accordance with the needs of production."[94] He rightfully felt that, under the conditions of the victory of the socialist revolution and achievement of the right of the peoples to self-determination, "the borders will be established democratically, that is, in accordance with the will and 'sympathies' of the population."[95]

Second, the thesis on the "supranational" state (republic) obligatorily excludes the equality among nations and fuses political independence and sovereignty into a relationship of subordination. There is no more than one step from here until the formula of the "historic mission" of one nation or another. Also, Oscar Jaszi stated clearly, but in 1919-1921, that for a "new order" in central Europe under conditions of the break-up of the dualist empire, "the single condition is precisely true democracy, honest independence and a launching on the road of rational socialism with all the forces. In such an international order," he stated, "the Hungarians, unchained from the feudal and capitalist ties, would become one of the most productive factors, fuller of initiative and most enthusiastic in the Danube basin," while "the German nature, freed of the militarist and imperialist chains, will be the natural guider and consolidator of this new balance."[96] So, even in 1919-1921, simply and clearly expressed, is a formula for "supranational" republic, in which the participating peoples would be given independence, with "the natural guider" for such a state formation being the "German nature"; what is absurd is precisely the fact that the initiators of the formula found that only in this way could one reach a "true democracy," the so-called "rational socialism." However, what is certain is that neither in 1918 nor later were the nations disposed to accept perpetuation of the old situation of subordination and political-national-economic-cultural discrimination, they refused any "guidance" or "advice" from outside, regardless of who assumed this "historic mission," and they rejected any political formula with these kinds of obligations.

Third, in connection with the above, the problem of internationalism arises as approached by the abovementioned authors in a view which has proven to be bypassed by history, by the facts. If in 1919 it still was being maintained that the "internationalism of the worker movement, the international nature of the revolution is what should serve as the departure point in creating all the programs of the worker parties"[97] and, in this view, it was stressed that "the workers of various countries do not have different interests, they have a single interest--that of the international liberation of the revolutionary proletariat, a liberation which can only be the task of the world revolution. The program must start with this job," then time and the facts have shown that this kind of "internationalism" meant the existence of a single leading center, the use of single methods and means in working out the revolutionary tactics and strategy without taking into consideration the specific nature of the national socio-political-economic framework in which the parties of the working class were taking action. For example, this is how Bela Kun explained the matter in a lecture held on 15 May 1919: "The Third International differed from the Second International, particularly because the first is a united organization, whose unity is expressed not only by the principled and theoretical bases which are united but also its tactic also is a unified one, its method of struggle is unified and the party of each country separately must be considered, as, in their time, the first workers' parties headed by Marx and Engels were, as sections of a unified international organization." Criticizing the concept of the "national parties," Bela Kun believed that "all actions of the worker movement must be guided in a unified way because only a unified international action is capable of showing the proletariat the path to follow in order to escape from the chains of capitalism."[99] In this view, then, the proletariat should have acted under the guidance of a supranational forum, whose purpose was to work out a "unifed" strategy and tactics which were obligatory for all the communist and worker parties and simple sections of this forum. Naturally, under such conditions, the concepts of national independence and sovereignty disappeared, while militant solidarity between the communist and worker parties, based on equality and mutual respect for the independence of action of the working class in each country and independence of each party in working out its own program of action according to local conditions and in determining the goals of its struggle to conform to the interests and aspirations of all the people, were replaced with relations of subordination to a foreign leading center.

The documents of the Romanian socialist movement in 1880-1890, proceeding from the postulate that "socialism is merely a well-known direction for social progress"[100] and demonstrating that socialism "is not an exotic plant" in Romania but appeared and developed naturally in Romanian society,[101] considered it "indisputable that, from the viewpoint of tactics, Romanian socialism must have its own weapons, economic conditions and economic field on which it would have to work, being its own," while "with regard to the methods by which this goal is to be reached, each is to use what is required by the special conditions of his country."[102] So, accepting the generally valid principles of socialism, the Romanian socialists saw their accomplishment in Romania only in relationship to the specific conditions and stage of development of Romanian society and the vital and major interests of the popular masses.

It is not useless to recall that a number of aspects of the narrow and defective way of understanding "internationalism" were subject for analysis for Engels, even at the end of the 19th century. For example, in a letter to Kautsky of 12 September 1882, in analyzing the liberation process in the colonies of Africa, America and other continents, a process which would be led to a good end by the domestic forces, Engels emphasized that "the victorious proletariat will not be able to make any foreign

people happy under compulsion without undermining its own victory through this, a thesis which Lenin took over in July 1916, commenting on it in this way: "Engels formulates a single principle as being 'undoubtedly' and indisputably internationalist and he applies it in the case of all foreign people that is, not only to the colonial peoples: to make them happy under compulsion means to undermine the victory of the proletariat."[103] With regard to the importance of the goal of national self-determination as an integral part of internationalism, Lenin formulated a number of truths which are perfectly valid today, but especially true in 1916-1919, when tens of millions of people were putting into practice the principle of self-determination in the central, southeast and east of Europe: "The center of gravity for the internationalist education of workers in the oppressor countries must unmistakably be the propagation and support of the freedom of the oppressed countries to separate. Without this, internationalism cannot exist."[104] Lenin gave such great importance to the self-determination of the oppressed nations and to establishment of independent national states that he characterized it as "an absolute requirement, even if the separation could have been possible and achievable only in one case in a thousand before the establishment of socialism."[105]

Even from their assertion in the political life of our country, the Romanian socialists felt that the national liberation of all Romanians and their union with the country into a single independent state was a major problem of the struggle for socialism in Romania. This is how clearly this goal was expressed in 1892: "We want a great and powerful Romania, however a Romania which is free and comprised of citizens who are free economically and politically. This is our ideal with regard to the national question."[106] As the liberation struggle of the oppressed nations in the multinational empires was intensifying, parallel with sharpening of the regime of terror and denationalization under conditions of the deeper internal crisis in these empires, the national problem took on a greater and greater share of the revolutionary theory and practice of the Romanian socialists. At the same time, they felt that only national self-determination, finalized in establishment of independent national states, permitted a real and powerful internationalist solidarity of the proletariat headed by their own socialist (national) parties in the struggle against imperialism and for the victory of the principles of socialism. For example, stressing that the social democratic party in Romania was the only "democratic and national" party "in the most profound meaning of the word," the Declaration of 28 October 1918 came out "against any national subjugation. It supports the nations' rights to decide their own fate" and, at the same time, stated: "the social democratic party is an internationalist one. Only through the fraternal link of the proletariat in all countries, of all religions can work be made free and war eliminated,"[107] in other words, "internationalism was seen as a broad militant solidarity of the proletariat in all countries to fulfill the ideals of socialism and in no way as a cancelling out of the particular national features or independence of action of the socialist parties in each country. The Romanian socialists understood the existence of the perfect compatability between the national and international in the struggle for socialism and communism. This idea is expressed in the documents of the socialist movement in Romania of these years in all its complexity. Thus, coming out unreservedly for the union of all Romanians in a single independent state, this being "a condition sine qua non for our future," the Romanian socialists felt that "a decentralized people can never develop their particular national features for the good of all mankind,"[108] a thesis whose significance needs no commentary. At the same time the evaluation--rather well disseminated in 1917-1918--was considered mistaken and "naive," according to which the union of Romanians under the rule of the great empires with the "Kingdom of Romania" actually would mean an abdication from the principles of socialism,

with the formula being taught being that of the world revolution and the Soviet republic without borders. "The kingdom in its origin cannot be accepted by socialism even in principle," it was stressed in a document of the Romanian Transylvanian socialists around the time of the union. But "thousands of arguments exist which claim the union of all Romanians" and only in a unified state, guiding the energies of the people at the national level, Romanian socialism which "has its own ideal," can immediately put it into practice when it has available the necessary force."[109]

As we know, acting in the spirit of this concept, the Romanian socialists participated actively in implementing the great act of the Union of 1 December 1918 in Alba Iulia. Once again, the documents of the Social Democratic Party Congress of Transylvania and Banat, held in January 1919 in Sibiu, stressed: "The congress finds that the union of the Romanian people in a single independent state is an historic need, based on the right for all peoples to have a free state of mind and Romanian social democracy, when it followed implementation of this ideal of Romanians everywhere, in no way exceeded the principles established by the socialist international congress, which always recognized the right of each oppressed nation which was divided under many foreign rulers to struggle first for its own independence."[110] The self-determination of the Romanian nation and its union into a single independent national state, together with the self-determination of other oppressed nations in the big multinational empires as was natural was considered not only a legal phenomenon but also a component part, a necessary stage in the struggle of the working class and the socialist parties for the triumph of the principles of socialism. "The socialist party of Romania," the Declaration of 13 February 1919 points out, "appeals to all the proletarian and socialist forces in Bessarabia, Bucovina and Transylvania for their unification, forming a single socialist bloc, a single proletarian party which will lead forward the struggle of the working class of the new Romania toward achievement of its socialist ideal of freedom from under the bourgeois-capitalist oppression. Today's new Romania must become the socialist Romania of tomorrow."[111]

These ideas expressed in the program documents of the Romanian socialists in 1916-1919 were in agreement with the natural evolution of society and with the big changes which were being produced at the sociopolitical plevel in the period of the proletariat's assertion as the most revolutionary force in society, in the period when the national problem had become the most ardent problem in the multinational empires. The truths expressed by them were in keeping with the historical progress of society, just as denial of the principle of self-determination up to the separation of the oppressed nations and propagation of a borderless state--that "complex of sensations without matter," as Lenin called it--were the deliberate denial of certain striking realities.

As I asserted earlier, the various theses in circulation regarding the so-called economic and political unity of the former dualist empire and the "historical error" of destroying it, regarding the "world revolution" and the "borderless" states regarding subordination of the people's national liberation to carrying out the socialist "world revolution," and so forth, with their many political-ideological ramifications, are links in a single conclusion, that is, the states in central and southeastern Europe are artificial* creations of the Paris peace treaties of 1919-1920, a conclusion which results logically from the failure to recognize the legitimacy of the acts of national self-determination of 1918 and establishment of unified, sovereign and independent states. I shall dwell briefly in the following on some of the aspects of this question.

Proceeding from the idea that World War I in its totality was an imperialist war on the part of all the warring sides, the historian V. N. Vinogradov states unequivocally: "The nature of Romania's participation in World War I and its goals were determined

not by the Romanians of the "old kingdom" to unite as well as those from Transylvania but by the line of bourgeois-landowner oligarchy which wrapped the most bold and gross conquest in the national flag,"[112] and this "conquest" of territories, the author points out, "was directed toward the four cardinal points."[113] And V. N. Vinogradov's conclusion is as follows: "In Versailles, Saint Germain, Trianon and Neuilly, the representatives of the Romanian government signed treaties with Germany, Austria, Hungary and Bulgaria at the victors' table, treaties which nearly doubled the state's territorial area ."[114] Other historians, who dwell on the "conquering intentions" of Romania with regard to Transylvania, Banat and Bucovina, treat the problem of establishment of the unified Romanian national state in the same view.[115]** Referring expressly to the Trianon peace treaty, Istvan Pinter considered it "an unjust, imperialist peace" and this was "because it made important concessions to the greed of the bourgeoisie which had come to power in the new neighboring national states."[116] Historian Frank Zwitter. also selecting the thesis that the states in central and southeastern Europe were the result of the imperialist world war of 1914-1918, however, also makes as bizarre a "completion" as possible: "In general, however, the results of World War I, were yet another victory for the ahistorical ("unhistorische") peoples. Clearly, he feels that the Austrians and Hungarians are "historical" peoples.[117] In turn, Maria Ormos, in an ther recent study, picking up the theses we already have referred to, gives the just national claims of the peoples hardly liberated from under the rule of the dualist monarchy the qualification of "nationalist imperialism" and he feels that in Paris, these small "imperialist" states succeeded in obtaining at least partially the satisfaction of their territorial claims "in the name of anti-Bolshevism and defense of democracy."[118] Magda Adam, taking the same position, adds that the peace of Trianon"codified the claims based on economic and strategic interests of the bourgeoisie of the successoral states which deviated from the national principle propagated in Paris," while the borders of Trainon, in the author's opinion, "became the source for grave contradictions between Hungary and the successoral states."[119] Istvan Dioszegi feels that with regard to Romania of 1918 one cannot admit the thesis to which "historiography and politics" resorted, that is, "reunification of Romanian territories"; Romania as well as the other neighboring states in the zone, he maintains, were the result of the "policy of force of the victors and of unchained nationalism." The conclusion he comes to is that "the system of bourgeois national states, after four years of bloodshed, could only promise the start to a new period of violence."[120]

Although small in number, historians like the ones mentioned above maintain the historical and political absurdity which, far from being able to argue them scientifically, they place into circulation either with historical falsehoods or with philosophical-political speculations or with deliberate ignoring of certain all too well-known facts.

For example, the thesis on the "imperialist" nature of Romania's participation in World War I is a deliberate historical falsehood, because:

Romania declared war only on Austro-Hungary, from whom it was claiming its national territories--Transylvania, Bucovina, Banat, Maramures, Crisana, the territories inhabited by Romanians;

The strategic concept and military war plans of the Romanian army were completely subordinate to the political goal of the entry into the war; liberation of the Romanian territories ruled by Austria and Hungary; the same nature of participation in the war--liberation of the territories inhabited by Romanians--was even preserved when the offense was taken up again in November 1918;

The decision to liberate these territories was taken even in the summer of 1914 and not following " maneuvering between various groupings of the big imperialist powers," siding with the most powerful[121]; far from being a cabinet decision, this decision answered a desire of the entire nation, while the struggle to reunite the country was led by all the Romanian pepple on both sides of the Carpathians;

Romania's entrance into the struggle in August 1916 was made following ultimative pressures from Russia and France due to the precarious situation of the allied armies;

Romania's military defection and occupation of the greatest portion of the national territory by the armies of the central powers were due to the failure of France, Russia and England to respect the commitments made through the treaties with Romania in the summer of 1916; it would be interesting to know how the tsarist army "saved Romania from being crushed during those days."[122] Lenin, for example, referring precisely to "those days" at the end of 1916 and start of 1917 when the tsar and the Germanophile party around him were heading for a separate peace with Germany, wrote about the reasoning behind this kind of separate peace from the viewpoint of the interests of tsarist imperialism: "If 'we' run after too big a spoils in Europe, we risk completely exhausting'our' military resources and not get almost anything in Europe and lose the opportunity to get what is 'ours ' in Asia--that is how tsarism reasons and it reasons correctly from the viewpoint of imperialist interests." "If we have no way of taking more in Europe, even after the rally of Romania and Greece (from whom 'we' took what we could), at least let us take what we can! England cannot give 'us' anything now. Germany would give us back Kurlanda and part of Poland, and, undoubtedly, eastern Galicia."[123] And, referring directly to Romania's place in the relations between the two kingdoms, Lenin felt it was justified to assert that they would divide Romania, Galicia and Armenia between them: "One cannot know if such a conversation took place or not," Lenin wrote on 31 January 1917. It is important that matters evolve precisely in this direction. If the tsar did not remain convinced of the arguments of the German diplomats, in exchange the 'arguments' of Mackensen's army in Romania should have had a more convincing effect. Regarding the plan to divide Romania between Russia and the 'quadruple alliance' (that is, the allies of Germany, Austria and Bulgaria), there is direct talk of this in the German imperialist press."[124]

In V. N. Vinogradov's opinion, Romania's "sal vation" from destruction lay in these imperial plans to divide Romania , about which Lenin spoke and toward which innumerable facts from "those days" converge. I feel that it still has not been stressed enough that the salvation then was the job of the Romanian people themselves, the heroism of millions of people, known and unknown, of political firmness and diplomatic ability. As many other times in their history, the Romanians saved the existence of their state and took action through all means to free their country.

The thesis according to which Romania--a unified national and independent state--was a creation of the 1919-1920 peace treaties and that it was comprised of "foreign" territories obtained through military conquest also is an historical falsehood, because:

Self-determination up to the separation from the old state formations and union with the country of the provinces inhabited by Romania was carried out in 1918 by plebiscite acts representing the will and decision of the Romanian nation; these decisions for union were merely ratified by the Romanian government;

The decisions for union with the country expressly specified the ethnic borders of reunited Romania; these borders in general lines were maintained and confirmed through the peace treaties.

So it is clear that the decisions made by 17 millionpeople to live in a single independent country, decisions sanctioned by the country's legal government and recognized by the international peace conference in Paris have nothing in common with the acts of force, imperialism and annexation, but are precisely counter to them.

Finally, the thesis according to which establishment of the states in central and southeastern Europe meant the victory of the "ahistorical" peoples, in our opinion, is much more than an historical falsehood; here we are facing a total ignorance of history itself. By what criteria can peoples be divided into "historical" and "ahistorical?" The strict meaning of the term would determine peoples "with" history and peoples "without" history, which becomes absurd; the Romanians, for example, are the most ancient people in the places where, just a thousand years ago, the Hungarian tribes led by Arpad settled, a fact stated in all the encyclopedias. The supporter of the formula mentioned, however, has something else in mind, that is, that which improperly is called "historical" in the sense that the territories which the "ahistorical" peoples established for their own states in 1918 belonged to old "historical" Hungary and just as "historical" Austria through "historical tradition." In place of any other commentary, we shall print a portion of a speech entitled "Order in Thought," delivered by Nicolae Titulescu in Bratislava in June 1937: "Finally, what is this so-called historical right? It is a theft sanctioned by time." I would just add that the "historical right," a concept circulated a lot in the two decades between the first and second world wars had a multitude of derivatives as "historic mission," civilizing mission," going right up to the theory of superior races and inferior races with all the cortege of political-social implications; on another level, we know very well the concepts of an arbitrary division of states into states with "general interests" and states with "limited interests," the security of the big powers and of the small powers and so forth, with all these being in open conflict with the principles of international right, with democratic rights and freedoms. Revitalization of the theory of "historic right" in the era of the unprecedented wave of people's liberation on all continents, of assertion of small and medium-sized states in international life, with the majority having obtained independence recently, no longer are a matter of "speciality." This theory purely and simply is inadmissible, a residue of times which history for good.

The question is correctly posed of who is served today by cultivating the nostalgia of the centuries of Austro-Hungarian imperial domination over other peoples. Reality shows that precisely under the conditions of freedom and equality for peoples of the world--including for those in southeastern Europe--can progress along the path of civilization, well-being, while international solidarity--with its required attribute of respect for the individuality of each people and of their independence and sovereignty--is translated not only in the mutual aid in the struggle for progress and peace, but represents a broad base for multilateral cooperation among the progressive forces all over the world.

* The well-known Hungarian sociologist and director of HUSZADIK SZAZAD (20th Century), Oszkar Jaszi,receivedinto the Karolyi government the leadership of the ministry of nationalities. Hope was placed in Jaszi that he would be able to preserve in the same "Hungarian country" the foreign nationalities, assuring exclusive right of the Hungarians over such a type of motley state. Oskar Jaszi's lack of perspicacity on this problem and his insistence on the impossible action he was undertaking appear all the more lacking in sense when, in the period in which he had begun application of the renowned Apponyi law, Jaszi had made a "sociological" survey in Transylvania and had become convinced of the Romanian realities. "Despite his vast culture and his progressive ideas, Jaszi could never rise above the narrow outlook of the 'thousands-year-old, national, unified Hungarv,'" one of the brilliant **representatives** of the generation of the Great Union, Onisifor Ghibu, felt. The nationalities, although they formed more than 50 percent of the country's population, had to be satisfied with the situation provided them by the rulers; they had to be 'patriots' in the meaning decided by those who a thousand years before had conquered the land of the country by the sword," (see Onisifor Ghibu, "At the Barricades of Life. My Years of Teaching," Dacia Publishers, Cluj-Napoca, 1981, p 200.

**. It should be stated that in some history works which appeared in Romania in the 60's and partially in the 70's, the thesis also was supported according to which Romania's participation in World War I was determined by annexationist goals, while Romania in 1918 was characterized as an "artificial" state created by the peace treaties of Paris in 1919-1920. In very many cases the "arguments" of these old and unscientific works are being taken over and used by some modern authors.

GRBIC ASKS WHY LAWS NOT OBEYED

Zagreb VJESNIK in Serbo-Croatian 12 Sep 81 SEDAM DANA Supplement p 6

[Interview with Cedo Grbic, president of the Constitutional Court of Croatia, by Vlado Rajic: "The System Needs To Be Reexamined"; date and place not specified]

[Text] If the conclusion is valid that a large portion of the troubles we have are caused by the already proverbial lawbreaking, then it is strange that it should be so difficult to answer the question: Who is it who is not obeying the law? Following the step of logic and being careful not to generalize, it follows that "some people" are not abiding by laws. Who are these "some" (that is, not all) who by ignoring the law are causing troubles for the entire community? And, if these "some" constitute a minority, then why are there so many problems because of a minority?

Self-management acts, self-management accords and social compacts, the resolutions of party congresses, meetings of self-managers and worker caucuses, and the decisions of workers' councils ... these are a step further than laws (if the latter are regarded as a part of the mechanism of government coercion). These self-management statutes, if we can call them that, did not come about as a consequence of the functioning of the government apparatus, but are presumably an expression of the will, the interests and the commitments of those who drafted those standards. But we are not abiding by them either?

We talked with Cedo Grbic, president of the Constitutional Court of Croatia, about these two dilemmas.

[Question] I am taking the first question from numerous resolutions and guidelines we have adopted: Why is there such a gap between what has been put down on paper and reality, between the legal norms or those of self-management and their implementation?

[Answer] I would issue an immediate caution, we do have laws and legally binding measures which are in force, especially in the field of economic policy. For instance, enforcement of regulations and the measures set forth which burden the income of organizations of associated labor, norms which fix contributions, taxes and similar payments, is especially effective. On a broader basis than that, collections which the banks make on the basis of credit arrangements with business are also effective. Consequently, there are two different situations

in which we should examine and evaluate enforcement of norms. The first is that which is stated, and the other situation is the one in which there is no effectiveness. Concerning this latter we should be mindful of the fact that every norm, aside from setting forth and regulating a constructive social relationship, is oriented toward solutions which alter particular socioeconomic relations. This is where the gap between the norm and actual practice is most obvious, especially with respect to fulfillment of the requirements of the constitution and the Law on Associated Labor concerning the realization and distribution of income on the basis of joint income. It is with this idea that the credit relations and the banking system are to be superseded and the influence of the working class on expanded reproduction established. But the opposite has happened: The economy's share in financing expanded reproduction dropped from 40 percent in 1966 to only 35 percent in the last medium-term planning period. It is for that reason that the forms of linkage and pooling are making slow progress, and it is also evidenced in the fact that joint revenues represent only 9 percent of gross income, and the share of joint income is only 0.2 percent of total income.

Forces Offering Resistance

[Question] Do you say that about the centers of alienated power, as we like to call them, which have been mentioned so many times, or about a concrete distribution of forces in society in which certain people are responsible for making decisions and others for carrying them out?

[Answer] Call it what you like, the fact still remains that the old socioeconomic relations are stronger than many of the arrangements set forth in the constitution and the Law on Associated Labor, that they stand in opposition to establishment of the relations which they have proclaimed. We thus come to a real topic for reflection: Has this principle proclaimed in the constitution and the Law on Associated Labor been well stated, with accuracy and precision? Does it not leave some ambiguity, an empty space which is then filled by those who are better suited by the old system? It is obvious that the system needs to be reexamined; by the way, why shouldn't it be, we are a developing society. In so doing we should make a distinction and we should accept and build on what we have already implemented, for example, the conception of the organization of associated labor which has by and large been implemented, and we should insist on a change of relations in those processes which have not yet even begun.

[Question] It is a well-known case of thesis [and antithesis]. On the one hand there is the assertion that we have a "good system which should be implemented," and in response the other assertion: "a system is not good when for such a long time it is not implemented."

[Answer] In my opinion there is no dilemma about whether the system is good or bad. Posing that dilemma needs clarification. The essential thing is whether some institution that has been sketched out is inapplicable because it has not been realistically examined in particular social relations or, on the other hand, because the problem lies in the socioeconomic relations and the forces that operate through them. The problem, then, lies in the forces which resist every change which takes away their power and in the excessively slow

construction of the system, both of which, parallel to one another, are frustrating implementation of the institutions of self-management as they have been outlined.

[Question] The thesis that construction of the system needs to be completed is something that can be debated. After all, completion of construction of the system is something that can be accomplished only if there is a different lineup of those forces you speak about. Shouldn't we first of all change that balance of power? What I mean is this: If we take the resistance offered by power centers as the reality, and nonimplementation of norms as its parallel, then we end up with a closed circle. These forces are at the moment, you say, stronger than the constitution and the Law on Associated Labor, and the constitution and the Law on Associated Labor ought to be supplemented so that those forces are not so strong.

[Answer] It is true that that parallel does exist in our system, the simultaneous showdown with the old and construction of the new, will not be successful so long as the status of the workers and their influence are blocked along many lines. We all know that the decisions about certain essential issues of this society are made outside the working class, and there is no need to reiterate that one essential issue, the realization and distribution of income, is not in the hands of the workers. This then would be the main reason why so many things bypass the system, and it is feared that the gap between the constitution and practice is greatest.

Protection of Self-Management

[Question] There are many opponents who frequent amendment of the constitution. Opponents, that is, of that process which we have long ago adopted as the way to complete construction of the system. For those who do not think that amending the constitution is a sign of weakness the real question is this: If we spend so much time putting finishing touches on the constitution, why is it that we do not read it?

[Answer] Here again you are right, since we all swear by the constitution, even those who are openly working against it. Of course, no one is going to say in public that he is against the constitution; he would then get caught in the cross winds of commitments, and he would be risking the power which he possesses today. It is therefore better to hide behind the proclamation, and behind it work on the creation of self-management and to determine how much self-management the working class can get. So long as our commitments to principle and provisions pile up, so long as declarations are more important to us than their implementation, our self-management will be optional, rigged and measured out in doses. This is made possible by the fundamental provisions of the constitution which are not being adequately implemented and are not being added to by practice. If lengthy application and insistence on addition to the provisions of the constitution do not alter relations, then the constitution ought to be changed.

[Question] You mentioned awhile ago decisionmaking, referring to it as a form without content. Does it seem to you that the entire matter of evading laws and

other regulations, even self-management norms, lies in the simple fact that decisionmaking is precisely a form without content? And, if that is the case, what is it that obliges me to abide by norms, decisions and declarations? Because there are so many of them?

[Answer] There is criticism in numerous quarters to the effect that we have too many regulations, too many laws, and especially too many economic policy measures which strike deep into business life. What I would call this sort of trust in the government, this confidence in the reach of government norms, is indicative of a weakness of self-management, of the insufficient strength of self-management institutions, which by virtue of their own strength ought to be regulating social and economic relations. And when we already have so many government measures, then we ought to speak about elements of state socialism in our country. And that calls for changes in the system, changes that I would think of in terms of a mechanism to protect self-management. The purpose of that mechanism would be to prevent the government from intervening without very good reason in the relations of self-management and other relations.

[Question] If what you say is so, then all this time we have been building a dual system, self-management as an exhibit, and the government for specific business.

[Answer] It seems to me that even we have not been bypassed by the influence of what is an almost worldwide process of stronger government. All systems are going toward government regulation when new relations lack internal strength. And the relations in society are increasingly complex, so that strengthening of the government is becoming an objective fact. This is the case even in our country, and we should reject the illusion that the state will soon wither away. It is our great ambition to establish the socialist relations of self-management, whose strength must replace the role of the government. For this to happen social contradictions need to be resolved through self-management, and not with the help of the government. And that is the thing that is out of tune in our system. Contradictions exist, we feel them, and we often react in such a way that by uncontrolled pressure we demand rapid rescue measures and laws. All those urgent measures, and during the time of stabilization we have had a great many of them, do not demonstrate the effectiveness of the system, but rather its weakness. And every time there is criticism to the effect that laws are being enacted slowly, those people emerge who favor government intervention. Do I have to cite examples of the laws which we have adopted in haste, and then 3 days later they prove to be bad ones. And then in their haste the delegates are in a situation where they just raise their hands and pass a law or some measure. Here again there is neither self-management, nor the delegate system, nor ultimately even enforcement of the regulations.

Who Is the Government?

[Question] You are always speaking about the state, the government. Who is the government? That is, when we say the government, isn't there something else hiding behind that. The struggle for power, for example?

[Answer] I think that that is not the essence. Just look at how many declarations we have from party, self-management, trade union and all other gatherings. Let us look at how all these gatherings abide by the basic commitments of the constitution and laws in their declarations. But why do we not implement the resolutions of those gatherings? Obviously, declarative support alone is not sufficient for implementing the propositions of the constitution. Something concrete is needed, needed, moreover, in two directions. First, those things that are no good, which hold back and interfere, those things that should be changed and supplemented. Second, ideological action, above all by the League of Communists, must be more concrete, more precise; it must not consist of mere repetition of commitments and nothing more than that. That is why the work of primary organizations of the party, the trade unions and other sociopolitical organizations is swamped in generality.

[Question] Now that we have "dropped down" to the base, let us also discuss the plans of OOUR's [basic organization of associated labor] for a moment. Aren't these plans a matter of the commitment of the workers on behalf of their progress, their development, and so on. Yet even these plans, even though they stand as a law governing behavior, establish guidelines, and so on, remain only words on paper?

[Answer] I do not think that a plan is a law. As soon as one says that, then the conception is already the conception of state socialism. The plan ought to be a social compact concerning development, a self-management decision of all those involved in the plan (but this we have not achieved). Today our plans are a mixture of the desires of the self-managers and the government with respect to future development. It is our obligation to build the system of self-management planning as soon as possible, and that system presupposes strictness in fulfillment.

[Question] We have not understood one another. When I said that the plan ought to be a law, I was thinking of our custom of frequently debating a decision, even after it has been adopted, while up to that point we behave toward that same decision as someone else's job. What I mean is that we have therefore altogether forgotten work discipline. That is why nonfulfillment of plans is a consequence of formal decisionmaking and informal implementation.

[Answer] Today's plans, I agree, are so much a matter of principle and generalities that they do not convey a sense of having to be fulfilled. Who has ever been called to account for failure to fulfill the plan? But the essential question is how to arrive at a self-management plan?

[Question] As you have said, the way it is people in working organizations can have a clear conscience, even when they have not fulfilled the plan.

[Answer] The adoption of plans is not exclusively the concern of the workers, at least not at present, nor do the workers always know what the plan is all about. It would be another matter if the workers had occasion to consciously participate in drafting them, if the specialized staff services did not create the policy, but only assured the conditions for better information, for substantiating particular proposals, and alternatives.

The Pattern of Behavior of State Socialism

[Question] The worker is not incompetent (if one can speak at all about incapacity) so that he cannot make decisions on his own. The public debate of the Social Compact on Income, for example, "dredged up" about 2,000 proposals, suggestions, points of criticism and amendments for the proposed compact. And in a meeting of the commission which was working on it I heard the objection that very, very few of those suggestions were honored.

[Answer] That is, of course, an incomprehensible procedure. As for public debates about a new legislative bill, I know that the procedure is the opposite of the one in your example. Even the poor and tendentious proposals have to be examined, since they also are indicative of the field which the law is supposed to regulate.

[Question] Let me just clarify; objections are often made to the effect that public debates are lukewarm, and the attitude toward the suggestions of workers and individuals in previous debates is forgotten. So if a man is ignored in the public debate, then he will also ignore the "product" of that debate.

[Answer] Here we are talking about outright usurpation of small groups, of a breakdown of the delegate system, of getting around the laws, etc.

[Question] Let us go back up a little from the base. This summer the delegate system was "on vacation," and the administration was minding the store. Is there room for the judgment that the emergency measures that were adopted this summer might have been enacted even earlier in the debate with the delegate assemblies, since the things they were supposed to influence did not spring up yesterday?

[Answer] That issue of the so-called emergency measures is in any case a very important one. Our administrative agencies are too little concerned with the problems of implementing policy, which is their principal job and the one for which they bear greatest responsibility. And the harsher the public demand that they do so, the more they turn toward the problem of development policy and its formulation. That, of course, is not their job. Here we see the influence of state socialism, which I have already discussed. However, the problem of enforcing the laws, of implementing the postulates of the system, and so on, is also a matter of the activity of sociopolitical organizations and communities, which are also too little concerned with this. If the approach were different, then there would be no need for us to talk about nonenforcement of laws, self-management legislation, the resolutions of political gatherings, and so on; at any particular moment we would know what is not working and should be changed and which things should be persisted in.

Enforcement of laws, accords and compacts, resolutions and proclamations, to be sure, is a matter of the conscience of every individual, but sincerely this is also everyone's job duty, from the basic organization of associated labor to the government administration.

SERBIAN SELF-MANAGEMENT DEFENDER INTERVIEWED

Belgrade ZUM REPORTER in Serbo-Croatian No 787, 30 Jul 81 pp 20-23

[Interview with Milovan Dinic, public defender of self-management law in the Republic of Serbia, by Branko Vukovic in Belgrade: "Thieves With a Cover"; date not specified]

[Text] "Not long ago a university professor from here in Belgrade came in. His school at the university was refusing to put him on the waiting list for allocation of apartments, and the professor was seeking my intervention. But they had not put him on the list because until recently he had an apartment. In the meantime he has been divorced and wants a new apartment.... The school has already drawn up its waiting list, but this fellow did everything for them to put him on the list immediately, to treat him not as an individual with an apartment, but as someone without housing. And it is only logical that I had to tell him: 'You know what, it is your right to get divorced and remarried, but a certain time has to pass for that altered situation, and then you can apply for a new apartment.' The professor, of course, went away mad."

This conversation with the impatient professor was only one of many similar conversations which Milovan Dinic, republic public defender of self-management law, has every day. A variety of people in distress knock on the door of his office, people who have knocked on many doors in their quest for justice. And they all expect that it is Milovan Dinic that will resolve "their case" once and for all.

There are thousands of such "cases." As a rule they are very complicated, so that it is by no means easy to "cut through" the matter and find a fair solution. After all, people can develop very bad blood, especially when their personal interest is at stake. Thus many of these cases can easily be put under the heading "Believe it or not."

Why the Public Defender of Self-Management Law Exists

It is the task of the public defender of self-management law to protect the self-management rights of the workers and social property. His job is a responsible one and by no means easy.... This institution of ours is a relatively young one, and there has been quite a bit of misunderstanding and resistance, especially at the outset. Certain responsible comrades were not enthusiastic about the idea of having alongside them an official entity that would be "ferreting about," presenting embarrassing matters and "making problems...." You

know, no one wants to be constantly monitored in his work, to have someone examine his acts, and moreover take steps against him as well.

[Question] It is said that you have rather broad powers?

[Answer] There has been talk about that recently, when we were preparing amendments of the federal constitution and the constitutions of the republics and provinces. There have been attempts, isolated ones to be sure, to have certain arrangements reevaluated. Along the line of whether excessive powers had not been granted to public defenders of self-management law, whether they hadn't been set up as a power outside our system, and so on. The judgment is that these objections are not valid, that there is no need to amend the provisions of the constitution on the public defender of self-management law.

[Question] Your interventions are more of a political nature than legal?

[Answer] The steps which we take are free of the usual formalities. When we spot some irregularity, we first give notice, we go to the organization of associated labor for a talk, we give advice on solving the problem that has arisen. There is no danger that we are usurping someone's rights in this, since we have no power to impose penalties. For example, we cannot go to the OUR [organization of associated labor] and say: "Comrades, you were wrong when you allocated that apartment to Marko, you have to make a decision to allocate the apartment to Janko, and we are penalizing you so much and so much." The public defender of self-management law does not have that power. But he can advise the OUR that its workers are appealing to him frequently and that it should be more mindful of this. He can point out that the regulation and distribution is not in conformity with the law and that it should be amended and supplemented, and so on.

Which means that we first take steps to resolve the matter within the OUR, we join with comrades from the OUR in seeking solutions, and only when we fail in this do we use legal means. By contrast with us, law enforcement agencies or the courts, for instance, are unable to say: "Comrades, your worker Petar Petrovic has stolen so much and so much, ask him to return the money...." I have simplified it a bit, but these are certain specific features of the activity of the public defender of self-management law.

Now You See Him, Now You Don't!

[Question] You have been active for 7 years now. Can it be said that you have fully established yourself as an institution?

[Answer] At the beginning many people did not even know about it. Even certain of the high officials asked me: "What is this public defender of self-management law, what is it you really do?" Some people were unable to remember the title....

Today matters are different. Most people know what the public defender of self-management law does, how and how much he can help. At the beginning of last year the Federal Assembly also issued a favorable assessment of our work. And then, as far as I know, there is not a single opstina assembly which has

complained about the work of the public defender of self-management law. But it is not my job to evaluate whether and to what extent public defenders of self-management law have established themselves. We recently wrote a report on our work, which will be examined in the fall by the Serbian Assembly. That will give the best insight into what and how much the public defenders of self-management law have achieved.

[Question] You have been fairly self-critical in that report?

[Answer] That is to be expected. Not all public defenders of self-management law have had the same performance. As everywhere, we also have those with good performance and those with poor performance. That is why we openly said in that report that there had been oversights, that we had not all been equally committed to protecting self-management rights and social property. The great majority of public defenders of self-management law have been and are performing their function conscientiously--especially in Belgrade and certain other towns--but there have also been some who have simply spent a certain time in the job--without any noticeable results.

[Question] In some opstinas there has not been a public defender of self-management law even after 7 years?!

[Answer] Yes, unfortunately, some have still not appointed a public defender of self-management law. These are the opstinas of Knic, Cicevac and Rekovac. In Golubac and Sjenica they did so only at the beginning of this year. I therefore put a frank question: Who gives those opstinas the right not to have a public defender of self-management law even when 7 years have passed since this institution was created by the constitution?

However, there is a greater problem. There are a number of opstinas where the public defender of self-management law has left his position, has been dismissed, has been assigned to other work, and a new person has been appointed to replace him. In other words, as the saying goes, now you see him, now you don't! Raca Kragujevacka, for instance, has not had a public defender of self-management law for 4 years now. In Krusevac the public defender of self-management law retired all of a year ago, a bit embittered after an awkward article about his personal income, and a new public defender of self-management law has not been appointed to replace him. The public defender of self-management law from Trstenik was appointed my deputy more than a year ago, and there is none there. In Varvarin they named the public prosecutor public defender of self-management law, so that in effect they did away with the post of public defender of self-management law. Recently this has also been done in Batocina: after the key official for the economy was arrested, they immediately appointed the public defender of self-management law to his position, but that left them without the public defender. We therefore are inclined to ask: what is the situation of those workers who until yesterday had a public defender of self-management law, but today do not?

Let us be clear: I am not against public defenders of self-management law moving to new positions even before the end of their term of office. But what I cannot understand in this personnel policy of ours, is that a new individual is

not "produced by the personnel system," if I can put it that way, to fill that vacancy. That is impermissible!

They Are Glad To Leave

[Question] Those who left were not very sorry to go?

[Answer] Unfortunately, a sizable portion could hardly wait to leave that position. And when you talk to them about this, all of them emphasize difficulties and numerous problems in their work. Beginning with the fact that this is a relatively new job, inadequately defined and practiced, and beyond that we are still building up the method of our activity, and going all the way to pressures and lack of understanding on the part of various official structures.

One of the first of the public defenders of self-management law, who took up this position enthusiastically, told me later when he was assigned to the post of director of the Social Accounting Service: "I am glad to go, since there I have a staff, I have staff service, I have people who do their job, and I am not directly responsible for anything. Here I am alone, as a practical matter I have no one to work with." Another public defender of self-management law has told me: "I am in a position here to turn people against me more and more, and I don't know how I will get along afterwards. I am not afraid, now, but when my term of office is over.... It is therefore better to leave when a good chance offers itself."

[Question] Which means that something must be changed in personnel policy?

[Answer] That is clear, since this personnel turnover is not good. I am especially against any promotion to a better job when he has not produced at all in this position. Though it turns out that this was some kind of place created for him, a place to bide his time awhile and wait for better days. One public defender of self-management law spent 3 years in the post in that way, and we do not know of a single case he followed through on. After that he left for a higher position! Another left the position of public defender of self-management law to take an important high administrative post in the region, and only when the new public defender of self-management law came in did we establish that there was no documentation whatsoever on the work of his predecessor during the previous 3 years! So we see that he took it easy, prepared for his master's degree and waited for his moment.... These are, of course, exceptions. There are far more public defenders of self-management law who have affirmed themselves, who have gained a reputation and who have gone to better positions.

[Question] Have some been replaced?

[Answer] Over the last 2 years 30 percent of the public defenders of self-management law have left before the end of their term of office. Only one was dismissed against his will, the others left to fill vacancies.

Two Public Defenders of Self-Management Law--Two Opinions

[Question] A moment ago you mentioned pressures on public defenders of self-management law. Who is exerting these pressures, and why?

[Answer] The pressures come mainly from failure to understand the nature of this post. When the public defender of self-management law was established, the principal idea was actually for it to be an independent public entity. It therefore was strongly emphasized in both the constitution and in law that the public defender of self-management law was an independent body of the social community....

[Question] And not a body of the opstina....

[Answer] ... And not a body of the particular opstina and so on. However, in practice this has sometimes not been the case. For example, in some places people have understood from the fact that the opstina assembly appoints the public defender of self-management law and furnishes the funds for his work, that he is a body of that opstina, and not a body of the social community as a whole. The public defender of self-management law is therefore called upon to act solely from the positions of that opstina, to neglect the general public interest. If public defenders of self-management law give in to that pressure, then we have an absurd situation: two public defenders of self-management law have diametrically opposed views on the same issue! But that is unacceptable from the standpoint of our overall function.

When the campaign was waged for certain components to withdraw from the Beograd Agricultural Combine, we found ourselves in an unpleasant situation. The public defender of self-management law and his deputy in Vrsac argued persistently that components of the Beograd Agricultural Combine in that opstina should withdraw from the SOUR [complex organization of associated labor]. The public defenders of self-management law in Belgrade followed an altogether different line of argument: that there was no real need for that withdrawal, that this amounted to enclosure within opstina boundaries, and so on.

[Question] What other ways are pressures put on the public defenders of self-management law?

[Answer] There are a multitude of forms. For instance, in cases of what is referred to as gainful misappropriation of funds, pressure is exerted on the public defender of self-management law not to take steps, because this was "good for the organization," it "increased its income," "this man put nothing in his own pocket," and the like. Or the president of the opstina will telephone the public defender of self-management law: "Listen, buddy, why are you getting after that organization of associated labor, don't you know that's where we get our living?"

[Question] And when personnel, individuals, are involved?

[Answer] Then pressure is exerted on the public defender of self-management law not to "spoil" certain juggling of personnel involving particular individuals....

Recently we had a flagrant example in Belgrade. In one Belgrade opstina an official's term of office had expired, and his friends in the opstina planned for him the post of assistant director in a large work organization. However, the public defender of self-management law found that such a job slot had not been envisaged in the bylaws, and he opposed the appointment of that official. Well, the entire political elite of the opstina immediately called him in for a talk, where the public defender of self-management law was sharply criticized. They tried to "convince" him to change his opinion. Fortunately, the public defender of self-management law had the courage to resist the pressure resolutely, he did not give in.... They had to look for another job for that official, who had already been appointed to the position of assistant director.

"He Makes the Workers Restless"

[Question] Public defenders of self-management law frequently disturb "wasp nests," they get into confrontations with influential people. What are the consequences?

[Answer] It is not just a question of "wasp nests." It is more a question of powerful individuals occupying positions. By contrast with us, for example, the court is dealing with a person against whom proceedings have been instituted and charges filed. The prosecutor has in front of him a man who has been indicted, and so on. We are dealing with people in associated labor who occupy high positions in the organization of associated labor, the self-managing community of interest, or the sociopolitical community. And here, whether we file charges or want to learn something on our own initiative, it is not easy at all. These people, these influential individuals, are often very perfidious and subtle when they need to obstruct the public defender of self-management law. They try to discredit him publicly, they use misinformation and slander, they pin labels on the public defender of self-management law and accuse him of "making the workers restless," of "protecting slackers," and the like.

I will give you an example of the former director of the Hotel and Restaurant College in Belgrade. This man developed an entire system of misinformation about the public defender of self-management law. It is amazing the strings this man pulled to prevent intervention of the university committee, and it was a question how the public defender of self-management law would ultimately fare.

A fresh example of that of the director of one of the COUR's [basic organization of associated labor] in the cement factory in Paracin. This man also fabricated a wealth of lies, instituted a campaign, wrote letters everywhere....

We devote particular attention to this form of resistance and attack on public defenders of self-management law. We try to suppress them, though it is not easy. It is important to emphasize that this resistance is not waged by workers, but precisely by those against whose behavior the public defenders of self-management law are taking steps. They want to frustrate the public defender of self-management law, to prevent him from raising "hot topics," they want to divert him onto petty issues of no importance. Insofar as the public defender of self-management is concerned with these key and more difficult problems, then, to that extent he is exposed to a greater danger and greater risks....

Who Is Protecting the Slackers

[Question] What is the most frequent reason for workers to appeal to the public defender of self-management law?

[Answer] Over the last 3 years we have intervened most frequently because of violations of rights arising out of the employment relation (hiring and termination of employment, work assignment, pronouncement of disciplinary measures, etc.). Then come problems in the housing field, which are becoming more and more common. In third place are matters related to distribution of personal incomes.

[Question] Are there frequent cases of efforts to get rid of workers who speak openly and critically?

[Answer] There are, of course, such cases. Sometimes a person who has spoken critically about the problems in distribution of income is assigned to a poorer job or receives a disciplinary penalty. Sometimes the entire management structure plots against the worker, and this is difficult to stop and to protect the person. I am surprised that even his trade union organization usually will not come to his defense. Not to mention the legal service!

[Question] What view do they take in the workplace toward workers who appeal to the public defender of self-management law?

[Answer] They do not look on him with sympathy! They usually say: "You didn't have to go there, we could have resolved this among ourselves." Many workers say in their criticism that they have been persecuted, abused and punished because they sought our help. This is a disturbing phenomenon.

[Question] You are accused of protecting slackers. Recently we read in the papers a statement by a director to the effect that there was no point in trying to get rid of slackers, since the public defender of self-management law and the courts would reinstate him.

[Answer] I do not believe that is the case. It is not true that the law, the courts and public defenders of self-management law are protecting slackers. However, it is true that there are quite a few slackers who escape responsibility. Why? Usually for formal reasons. But since there is no content without form, we demand that the prescribed procedure be followed in the taking of steps. A person cannot be fired without getting a hearing. Proceedings must be conducted, evidence must be presented and the facts established. And then when the decision is made in the first instance, he must be allowed to appeal. I am in favor of speeding up this procedure, but I don't agree that it favors slackers.

Habitual Litigants

[Question] You also receive requests from people for whom nothing is ever right, for whom everyone is to blame and dishonest. How do you deal with them?

[Answer] Nearly 20 percent of the applications are unfounded. Then the public defender of self-management law does not intervene. I think that this is not a disturbing percentage, since it would be quite a situation if everyone who complained was right. Then our society would be a society of lawlessness.

These unfounded petitions indicate that we are also dealing with slackers, with people who see only their own rights, but not their obligations, with habitual litigants. Some people indeed want to wangle something in a way that is unlawful and contrary to self-management, using impermissible means and methods. This is typical in resolving housing issues and then with unjustified sick leave and the like.

You have people who have complained to everyone all along the line and everywhere they have lost. And now he thinks that the public defender of self-management law is the one who can resolve the matter on his own--regardless of the decision of the court, regardless of the decision of the self-management body, regardless of the decision of the agency of the sociopolitical community. And when you explain to him that what he is doing makes no sense at all, he still does not lose heart: "I will go elsewhere, I will complain even about you!" What are we to do, go ahead and complain! Even public defenders of self-management law are not infallible....

[Question] Do you sometimes manage to convince them?

[Answer] There was a man named Jovanovic from Vranje who listened to me. For 6 years he had a dispute with the cotton combine. He went to the federal public prosecutor, and even there he did not win support. Then he came to me. We talked as one comrade to another. I told him: "Give it up, man, calm down, there are no grounds for intervention." He listened to me and gave it up. I have heard that he is doing good work now.

There is one man I am trying to convince right now. He has married twice, twice he has obtained an apartment. Now he has married again, again he wants a new apartment. His reasoning is this: "A new wife--a new apartment!"

[Question] One gets the impression that not a single apartment can be allocated without intervention from the court and the public defender of self-management law.

[Answer] There are a great many of these disputes. And the problems which arise in this area are numerous. There are few apartments, there are many more applicants. Often the apartments are allocated under the influence of individuals or groups. In some places apartments are allocated, but self-management acts have not been adopted at all. There are many errors, oversights and abuses by those seeking apartments. It is not a rare thing for a father to give his apartment to his son and then to apply for a job as a person who does not have an apartment. Family households are fictitiously divided up, there are divorces, and so on. All this results in a large number of disputes and intervention by the courts and the public defenders of self-management law.

The Limits of Avarice

[Question] Recently flagrant attacks on social property have become more frequent. The scandals in Beograd Engineering, the Rakovica Opstina Assembly, and certain self-managing communities of interest.... How do you explain that?

[Answer] Social property, especially in certain spheres, is seriously threatened. The mechanism for protecting social property is not functioning well. We therefore constantly have cases of very bold attacks on social property. You mentioned the self-managing communities of interest. I honestly cannot give you a single example where workers' control in some self-managing community of interest has taken measures or has made a name for itself in protecting social property. But it is here that there is the greatest illegality and the largest number of "cases."

[Question] The delegate system seems not to be functioning at all in this area?

[Answer] Enormous assets of society are concentrated in the self-managing communities of interest, and the secretaries and staff services have the decisive role in spending them. Their behavior, the quality of their work, the size of the staff, and so on, indicate that the self-managing communities of interest are becoming more and more alienated centers of power over which the workers cannot exert an influence. Nevertheless, the establishment of new self-managing communities of interest is being proposed, though there is no real need for them.

[Question] We asked you ...

[Answer] Yes, yes ... Beograd Engineering, Rakovica.... I can cite you a number of other examples of losses to social property and of enrichment without work. Public defenders of self-management law have done quite a bit here, they have made a name for themselves in specific examples and have resolutely stood in the way of abuses. To be sure, we have not always wanted to get press coverage, but there are a number of examples when the public defenders of self-management law have been the first to rise up.... That was the case in Vrnjacka Banja, Sokobanja, Smederevo, Cukarica, Rakovica, Krusevac and elsewhere. It is a question of abuses in the allocation of lots and credits for housing construction.

We advocated, for example, that the lots and credits be allotted in a self-management way, through competitions and under equal conditions for everyone. We were also resolutely opposed to the expropriation of the property of private persons, and then allocating that same land to individuals to build on after 2 or 3 years.

How do I explain these cases? The mechanism which is supposed to protect social property is often absent. Second, people have a weakened sense of responsibility when there are no penalties. I often wonder at the degree to which some people become avaricious and insatiable. What does it mean when someone obtains a lot in the center of the city for a song, without a competition, under the

most favorable conditions? Kragujevac is unfortunately just one example here, not the only one.

Everything Is "According to the Law"

[Question] Not infrequently the scoundrels you speak about take pains to put things in a legal form.

[Answer] Of course, since no one is any longer so naive as to undertake outright theft. They seek a cover in the decisions of the legal authorities, so that at first it seems that everything is "according to the law," but flagrant losses are nevertheless inflicted on social property.

[Question] Some time ago the issue of embezzlement in the former Association of Journalists was raised once again, rather timidly to be sure. It seemed as though everything would be covered up.

[Answer] That was a case in which social property was passed out with both hands. I have something to say about this in a meeting, but the press did not carry it in its entirety, and it dropped.... I do not share the opinion that investigatory agencies and the court work slowly, since this is truly an enormous job. We are dealing with several hundred names and I therefore do not have the impression that they are trying to cover anything up. In fact, I did not speak about that, but I took the position that these matters must be dealt with by administrative agencies responsible for income as well. That is, did he declare that income or not? If one and the same person turns up as the recipient of a high fee of the Association of Journalists, in the Business College, in some other college in Rijeka, that is, at several places, then that person must pay nearly 70 percent of his earnings in taxes. So, if he has regularly reported all that and honestly paid his tax.... In fact, I am critical of the staff of the administration for income because it only assesses the tax, but it does not run a check on how much tax I as an individual have declared. And that will be especially important now when we are discontinuing these commissions for investigation of the origin of property.

Self-Managing Bodies Are Violating Self-Management

[Question] According to certain figures, violations of the self-management rights of the workers and social property are committed most frequently by the bodies of self-management, i.e., by bodies which the workers have elected themselves. Isn't this absurd?

[Answer] I will give you precise figures on who is infringing on the self-management rights of the workers. We have found that of the total number of violations' of workers' rights last year about 23 percent were committed by workers' councils. Then about 22 percent by commissions and committees. Nearly 11 percent of the violations were committed by directors, more than 8 percent were made by other supervisory personnel, and violations were committed in 5.7 percent of the cases by worker caucuses.

In analyzing this phenomenon we came to the conclusion that the specialized services and key supervisors often offer unlawful arrangements to the bodies of self-management, and the latter simply adopt them. In other words, they are being deceived in a way. In addition, we have also detected cases of threats, pressures and manipulation of the bodies of self-management. That is why defenders of self-management law insists that these people be called to account. And that means all of them--members of the workers' council and commissions, directors and other supervisors. After all, we cannot allow our behavior to be governed by the well-known adage: "Tie up the horse where the aga tells you." No one is entitled to the excuse that he did not know or anything of that kind.

[Question] Can you illustrate with specific cases?

[Answer] Here is a drastic case. It occurred in one OOUR in the cement plant in Popovac. Thanks to the good situation on the market that plant today has no problems whatsoever in operation of its business. Well, though they do not have a regulation on innovations, the workers' council of that OOUR adopted a decision to pay the director 108 million old dinars on behalf of innovations. Of course, the public defender of self-management law had that decision struck down in the court, since it was unlawful. And what happened? The workers' council does not acknowledge its error. It does not agree that such decisions may not be adopted without a general self-management act, but again meets and decides. This time--50 million! Then the bidding begins.... So, we will again have that evaluated. We will call upon the court to evaluate those 50 million as well and state whether it is alright or not.

The next example is also drastic. The director of a boarding school in Leskovac went off to obtain coal for heating. He rushed off to Bosnia, traveled by taxi, looked for it and found it. He justified his action by a decision of the council of the boarding school. What is more, he managed to buy the coal! Everything is alright, we said, but how about the way in which he did it? Does this mean that he might also have gone by airplane?! And now you have a conflict. On the one hand is the public defender of self-management law, who feels that this is an abuse and squandering of social resources. On the other side is the council of the boarding school, and its position is that if the director had not gone, they would be left without coal!

As I say, there are many examples. That is why we are constantly pointing to these cases and calling for a more responsible attitude. It is a question of responsibility. No one can seek cover behind the decisions of a collective body, everyone must bear personal responsibility. But that is what we lack today.

An OOUR With Three Workers!

[Question] Public defenders of self-management law are also pointing to group-ownership behavior.

[Answer] Not only the public defenders of self-management law, but we are all speaking about that frequently, we are adopting resolutions and positions, we are making evaluations, and so on. However, when it comes down to pointing

specifically to those who are behaving after the pattern of group ownership, here we are slack, here we water things down.

To be specific, we detect group-ownership behavior in certain scientific institutions when it comes to realizing and distributing income. In large institutions it is not uncommon for scientists not to divide up income at the level of the OOUR, but the income goes to certain teams, work units, and so on. So, if a certain team has done more work, if it has someone with stronger connections who brings it work, he earns more. The money is divided up within the team, within the work unit, and not at the level of the OOUR. We managed to put a stop to that practice in the Institute for Foreign Trade, but we have not entirely succeeded in the Institute for Chemistry and Technology. And in the latter, incidentally, they had an OOUR with three workers for a time!

To go on, as we see it, the cement factory in Popovac was an example of group-ownership behavior. Everyone is getting along fine, they are earning high personal incomes, and it is not unusual for them to reason: "Since we are all getting along fine, let's give our director 100 million or so for innovations"! And who has the right to interfere with their doing so, when that is theirs! Of course, when we describe this as group-ownership behavior then problems arise.

The Unpleasant Side of Self-Management

[Question] There has been reference to the flood of legal enactments--laws and general self-management acts. As if this is justice on paper....

[Answer] That problem does exist, and we confront it in a serious way. We have a sea of laws and self-management acts, we endeavor to regulate everything, to cover every situation in life with some norm. It makes it difficult even for a professional attorney to get his bearings, much less an ordinary man. It also opens up possibilities for abuse, and, what is important, it increases the size of the administration. We have precise figures on this.

In 1977, for example, in Serbia proper we had 851 work communities in associated labor. Two years later the number had increased to 1,164. Since work communities consist mainly of office workers, it is clear that we have a large growth of administration. In addition, the number of persons employed in these communities has been growing very rapidly. Often the work communities are poorly set up from the organizational standpoint, and their tasks have not been precisely set forth, their responsibility to the OOUR's has not been defined. It is therefore no wonder that the OOUR's are setting themselves apart and increasing their own administration, since they are dissatisfied with the quality of services from the work communities.

[Question] Every day you encounter various illegalities, abuses, and arbitrariness on the part of individuals and groups. Isn't there too much of this?

[Answer] It is our function to be concerned less with the sanguine side of life and more with the other side. It is true that the number of petitions and applications to public defenders of self-management law has been growing year after year. However, it would be a mistake--I always give this particular

emphasis--for us to conclude from this that there is less self-management, that everyone is violating the law and self-management acts. It is actually the opposite--this demonstrates that the working people have become far more critical toward the acts of individuals and institutions and that they are becoming more aware and freer in seeking protection of their rights. This in actuality means that the working people are increasingly ready to get involved in the struggle against those things that are hampering the development of self-management and democracy.

CHARGES AGAINST MARKO VESELICA DISCUSSED

Zagreb VJESNIK in Serbo-Croatian 12 Sep 81 SEDAM DANA Supplement pp 17-18

[Article by Djordje Licina: "Counterarguments Without Evidence"]

[Text] "It is not I who is doing you harm, but the material which you gave me to carry across the border!" That is what Mila Sram, key witness for the prosecution, very calmly and resolutely said on the fourth day of the trial to Dr Marko Veselica, former university docent, thereby for all practical purposes completing the exposure of his hostile activity, thus proving what the prosecutor had long since asserted: that Marko Veselica, one of the principal ideologues and organizers of what has been referred to as the mass movement in 1971, has since his release from prison not only been engaged in hostile propaganda, but has even deliberately entered into relations with Ustasha terrorists abroad, giving them and receiving from them guidelines for activity against Yugoslavia.

The words of the witness--Veselica's secret messenger--pronounced during the confrontation of witnesses in the trial, that is, in front of a broad and diverse audience, were indisputably the most dramatic moment of the 7-day trial. They had the effect of a kind of psychological mallet which mercilessly crushed Veselica's very last hope that he would manage to prove the opposite. The last day of the trial also showed how fateful that woman's testimony was for the defendant: Veselica's concluding speech lasted more than 4.5 hours; in it he talked more about his well-known nationalistic theses, supporting them with various quotations, presumably so as to give the idea that there are also others who think like he does, and less about the allegations of the indictment, though there were reasons in plenty for the latter. He spoke about the witness Mila Sram less than 2 minutes. In order to completely discredit her testimony or because he simply did not have counterarguments against her assertions? It is obvious that the latter was involved, since the course of the trial has unambiguously shown that Veselica suspected that this secret channel of his to the fascist emigre community abroad might be discovered and cut off, so that at one moment--as the witness very convincingly reconstructed--he asked for his report to the Ustasha emigres not to be sent from Bratsk but from Berne, where Mila Sram had previously spent time on several occasions in performing a similar task.

Veselica's ties with the fascist terrorist organizations abroad is an altogether new detail (the president of the panel of criminal judges referred to it as a

new attribute) in his continuous hostile activity. In its hearing on the verdict in the first instance in 1972 (when he was sentenced to 7 years in prison) the Supreme Court of Croatia said that it had not been proven against Veselica, who operated from counterrevolutionary and nationalistic positions within the framework of the ideology of what was referred to as the mass movement, that he had established links with the fascist emigre community. Now, however, that new attribute has come to light, proving the assertion that this most recent case did not involve merely indirect contacts having to do with propaganda, but in fact a coincidence and identity of views and opinions and ideological ties.

Emigre Examples

That is, it is beyond dispute that Veselica had been heeding, following and analyzing the actions of the extremist emigre community, just as it is quite certain that that political underground had honored the defendant's opinions and positions. This incidentally is also indicated by certain reports which traveled to Veselica from abroad and from Veselica abroad. Via his messenger last October Veselica received from the well-known Ustasha emigre Tihomil Radja, who lives in Switzerland, the guidelines of a fascist organization under the code name "Jack London," according to which all documentation on persecution was to be delivered abroad, and that documentation was to be used as a provocative act in Madrid at the Conference of Security and Cooperation in Europe. According to those same guidelines of Radja's, Veselica was to send exhaustive data on the economic situation in the SFRY and the impact it was having on the Croatian economy. A directive also arrived from Berne in October calling for the accused and those holding the same political views to establish links and cooperation with the dissidents in Belgrade, with Djilas and others, in order to set in motion a campaign for amnesty of political prisoners.

Nor, however, was Veselica only on the receiving end: In a report sent to the Ustasha emigres Mirko Vidovic and Tihomil Radja he gives advice on what should be done and which task is urgent: "Attempt to organize groups of intellectuals and public figures of various countries ... to which letters of protest and appeals addressed to their own and our government for halting the persecution in Croatia could be sent for certification. As was the case a few days ago of the German newsmen and the intellectuals of the journal PRAXIS, who sent an open letter to the president of the Serbian Assembly. Unless all this together is done and world public opinion set in motion, there could be large-scale persecutions and consequences for the destiny of Croatia."

The conviction has been created in recent years in the hostile political emigre community that the "battle for an independent new Croatia" can be won only by forces within the country, and that the emigre community can merely offer its aid in this. We are well aware which forces those are. That is why it is altogether impossible to remain in doubt as to why this connection suddenly cropped up between Marko Veselica and fascist exponents abroad. In planning and carrying out its hostile activity, especially activity to sow distrust between Croats and Serbs, the fascist emigre community has sought and is constantly seeking the most outspoken proponents of this kind of nationalistic platform. In Veselica's interview with the West German newsman Hans Joachim Bornemann they saw an exceptional occasion for warming over their malicious theses and for inciting ethnic

enmity. Though Veselica tried throughout the trial to convince the court of the supposed harmlessness of the political messages and the tolerance of the views expressed in that conversation, the interview is among other things a typical example of deliberate dissemination of intolerance and enmity toward other ethnic communities in Yugoslavia. It is indeed full of provocative messages and irritating insinuations, theses which are pronouncedly nationalistic, and it advocates indivisible national sovereignty, that is, pure ethnic exclusiveness. It also attempts to impose the conviction that the Croatian people in Yugoslavia is culturally subordinate, neglected and denied, while SR [Socialist Republic] Croatia is exposed to systematic and arrogant plundering by the other republics and provinces. "If, then, Montenegro is to be able to catch up with SR Croatia and the other advanced portions, it must exploit the Croatian economy to a horrifying extent, while at the same time it bears no sort of moral or economic motivation to conduct its economic activity efficiently," Marko Veselica says in one passage.

"Large-Scale Persecutions"

In his interview, which the Ustasha emigre community hastened to publish in certain of its periodicals (and Hans Peter Rullman, agent of a foreign intelligence service who 10 years ago was tried for espionage in Yugoslavia, followed their lead), Veselica did not actually say much that was new. He chewed over certain of his theses already exploited in the period of the so-called mass movement, embellishing them only with certain new "scientific discoveries and new knowledge." Including this among others, in which he alludes to the 21st Meeting of the LCY Presidium in Karadjordjevo: "But then the dark fell, the darkness known to everyone, out of which has sprung the brutal and large-scale persecution of innocent Croatian youth, intellectuals and the people, a persecution that leads nowhere.... Thus, though we who were tried in 1972 and 1973 are now out, and we were tried as alleged members of the mass movement and the counterrevolution, we are being followed by new groups of innocent people who have been convicted...."

What sort of "large-scale persecutions" are actually being referred to? Veselica's "information," however, is refuted by ordinary statistics: In 1979 117 persons were charged in SR Croatia (though not necessarily tried), all of 98 percent of them for minor political crimes (curses, insults, etc.). A year later 275 persons were charged and the percentage of those for minor political offenses was almost the same. In the first 6 months of this year only 32 persons have been charged, 11 of them for a serious form of political crime.

It is obvious, then, that through his thesis of alleged large-scale persecutions in Croatia Veselica is actually trying to launch the conviction which he scrupulously advocated in the major portion of his interview: That "the modern thing is to constantly maintain criticism of fascism concerning Croatia in order to halt the process of its democratic expansion and so as to nurture in a programmed way the feeling of its permanent guilt and frustration even when it is altogether innocent...."

It needs to be said, however, that Veselica is not the only nationalist who has persistently and systematically revived the imagined guilt complex in the

Croatian people. This has been done by others before him and after him. With always the same goal, to build upon it their chauvinistic program of revanchism.

In his interview with the West German newsmen Veselica gave answers typical of him to the difficulties with which our community is burdened, and his already well-known constant stood at the heart of all those answers: that the Croatian nation has been reduced to an oppressed class within the borders of Yugoslavia and that the Serbs are a privileged bureaucratic and ruling class. He therefore holds that the Croatian people is thereby menaced, and at one place in the interview he says: "Never will the beatings and persecutions which some Serbs are unjustifiably administering to Croats and other nationalities of Yugoslavia destroy the Croatian dream of greater freedom and achievement of full sovereignty of the Croatian people guaranteed it by the new constitution, but denied it by the actual power structure in which the Serbs have in Croatia an absolute domination which at present is not jeopardized nor controlled in any way...."

What is actually the purpose of sowing this kind of systematic suspicion toward another nationality in Croatia? Obviously not merely to set the two nationalities at odds, but also to establish a line of politics that would rehabilitate the darkest part of our recent past and would actually be aimed toward general disunification, which certain foreign appetites could hardly wait for.

It is also in that context that we should examine the motions of the defense in the evidenciary proceedings in which it called for an ethnic recount of persons employed in federal bodies, agencies and organizations, Yugoslavia's foreign diplomatic and consular missions, leadership bodies of opstina committees of the League of Communists, and also law enforcement agencies and the army. The nature of these demands by the defense does not at all coincide with the well-known demands made in the time of the so-called mass movement, which came down to "absolute personnel purity," which really is nothing other than an obvious harangue against other nationalities and ethnic minorities. We believe, however, that this demand was more a deliberate provocation than a sober move motivated by justice.

A Memory Block

What else did the trial just ended prove? Many objective observers were left entirely of two minds when they listened to the testimony of the witness Zora Heger, who had known Marko Veselica and Mila Sram and later had established a permanent link between them. They remained of two minds simply because this witness declared that she was not acquainted with Dr Marko Veselica at all. However, this testimony sounded absolutely unconvincing when certain documents proving the contrary were shown to Zora Heger: to the effect that she not only knew Marko Veselica, but was in fact his devoted collaborator. This emerges from the following material facts: When Zora Heger's apartment was searched, a photocopy of Veselica's interview with the newsman of the West German magazine DER SPIEGEL was found in it. The witness testified at the trial that she had found the interview in her mailbox rolled up together with some other material. Zora Heger then began to copy the interview she had "found" on her typewriter. Why? She gave a rather laconic answer in the trial: for practice. The interview ultimately ended up in Heger's stove, which she did not use. It was found

hidden there together with a pile of other hostile propaganda material. She was unable to give a reasonable explanation as to what she used this material for. However, Mila Sram provided an altogether logical answer: "I received that material from Tihomir Radja and I was to deliver it to Veselica."

The trial showed that Zora Heger's apartment was the "mission headquarters" and the point of origin and destination of the illegal channel whereby Veselica maintained relations with the Ustasha extremists. This is also confirmed by the report entitled "Political Processes in Croatia" which Veselica sent by his messenger to the emigre Mirko Vidovic in Lyon. This report was written on an Erica typewriter owned by Zora Heger. In the trial, however, the witness declared that it was not clear to her how that was possible, since she, she said, did not type that report. Zora Heger was also unable to give a logical answer to the question of how a letter came to be found in her apartment which had been sent to Marko Veselica by the so-called European Helsinki group, a nongovernmental institution abroad which has been infiltrated by foreign intelligence services and of which Mirko Vidovic the Ustasha emigre is also a member. Nor could she remember what her motive was when she gave Mila Sram, on the eve of her last trip abroad, a message written in her own hand containing certain details about the criminal proceedings against Marko Veselica.

How is it that Zora Heger suddenly suffered this total memory block? The prosecutor explained this phenomenon in his conclusion in approximately these words: We know who Zora Heger is. She was tried immediately after the war for collaboration with bands of Crusaders [members of a Catholic clerical organization--translator's note] and served sentence in the Criminal House of Correction in Slavonska Pozega, where she also came to know Mila Sram (sentenced to 4 years for illegal trade). This past of hers and her political conviction are the answer to the question of why she was protecting Dr Marko Veselica.

What did the trial also show? Among other things ... the untenability of Veselica's main line of defense that he is being tried because of his beliefs. In presenting the information contained in the interview, he said, he was exercising his legitimate right to free expression of thought and conviction. In so reasoning Veselica has obviously forgotten the nature of our legal statutes: No one can exercise that freedom and those rights to conduct hostile activity against the SFRY. And what Marko Veselica has said and done cannot be described otherwise than as a deliberate hostile act. Which is why the sentence of 11 years in prison (8 of them for establishing relations with the fascist emigre community) should be viewed as a logical answer to these "beliefs" of Veselica's, and especially to the supposed nonexistent tie between him and the Ustasha emigres abroad.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

VARNAI ATTACKS U.S.-CHINESE RELATIONS

Budapest NEPSZABADSAG in Hungarian 1 Sep 81 p 4

[Article by Ferenc Varnai: "Almost Allied... Concerning the International Strategy of the Chinese Leadership"]

[Text] Since the removal of Hua Guofeng from the post of chairman of the CCP and the appointment of Hu Yaobang, who stands close to Deng Xiaoping, to this function bourgeois commentators have been using an awful lot of paper to evaluate the "de-Maoization" of China. More than a few have conceived of and still conceive of a departure from the ultraleft policy and plans aimed at modernization of the economy as a break with Maoist policy. But the essence of the Maoist conception never lay simply in the ultraleftist policy of the "great leap" and the "cultural revolution:--at most these were manifestational forms of the ideological system and policy of Maoism for a briefer or longer time. The essence lay primarily in the nationalist, great power chauvinist ambition which is increasingly gaining the ascendancy in the foreign policy of the present Peking leadership.

Peking and the Trilatralists

This is also indicated by the rapprochement which is taking place between the present Chinese leadership and the Reagan government, which is sharpening international tension at an accelerating pace. The visit of Haig, the American general and secretary of state, to Peking at the beginning of summer not only opened the door for US arms shipments to China but also led to an agreement pertaining to harmonization of the strategic plans of the two countries. A conference which took place in Peking at the end May, on the eve of Haig's trip, a conference about which the bourgeois and Chinese press has remained quite silent, betrays especially much about the development of links between Peking and Washington. The capitalist news organs, so hungry for sensations, proved extraordinarily discreet on this occasion; they limited themselves to a brief statement of the facts. But this was a sensation, one of the best.

What happened was that the Trilateral Commission, which includes many leading strategists, politicians and businessmen of the United States, Western Europe and Japan and which helps to work out and coordinate the policy of international monopoly capital and get it implemented in the policy of imperialist governments, held its regular scheduled meeting in Peking (!). This fact indicated that the policy makers of the capitalist world were thus including the Chinese leadership in an institutionalized form in the harmonization of their political, economic and military strategy. It also indicated that the host was demanding for himself a part

in the development and implementation of the policy of the imperialist powers! (Deputy premier Ji Pengfei announced: "The prospects for cooperation between China and the Trilateral Commission are broad." To which David Rockefeller, chairman of the commission, hastened to add: "There are many more common traits than differences between China and the trilateralists, and even the differences can be overcome.")

To prove that this is not some sort of presumption or overestimation let us quote the West German FRANKFURTER RUNDSCHAU which recently leaked, under the headline "China Wants to Form an Alliance Against the Soviet Union," the report read at the conference, which belongs to the army. (No one in Peking denied the text published by the FRANKFURTER RUNDSCHAU.) We quote parts for this report below.

The Leaked Report

"The Soviet Union is striving for world hegemony--without war; or, if necessary, with war too.... The strategic target of the Soviet Union is Europe.... If the Soviet Union should occupy West Europe then the United States would be in immediate danger also.... At this time the chief expansion target of the Soviet Union is the southern front, the area rich in strategic raw materials, primarily the Near East and the oil along the Persian Gulf, which is of vital importance for the western economy.... If the Soviet Union should cut oil supplies to the West, on which its life depends, then the entire strategy of the western world would be inoperative. What would Japan, the United States and Europe do?"

This so-called analysis agrees letter for letter with those assertions with which the most extreme circles of American militarism justify the arms race and their adventurous actions. But let us see how Xiu Xin summed up the task for joint action against the Soviet Union:

"1. The United States, Japan, West Europe and the third world countries should jointly oppose Soviet hegemonism....

"2. A front for the united struggle against hegemonism must be formed in Afghanistan and Cambodia....

"3. The Soviet Union must be weakened politically, economically and militarily; it must be caused the greatest possible difficulty....

"4. The important role of the third world must be developed to full extent in the struggle against Soviet hegemonism.... For this reason the West must evidence a careful behavior and policy in regard to the third world. At present it must treat wisely primarily the Palestinian and Namibian questions."

"We would gladly unite our forces," he added, "with the United States, Japan, West Europe and the third world countries in the decisive struggle against Soviet hegemonism on any front." He then bragged in this way: "We are fully conscious of our role in the united international struggle being waged against imperialism (this is how they name the Soviet Union--the editors). One quarter of the entire military strength of the Soviet Union is tied down on the Chinese-Soviet border and the great bulk of the Vietnamese armed forces are tied down on the Chinese-Vietnamese border."

Parts of the other two Chinese speeches have leaked out from western diplomatic sources also. Pei Monong, deputy director of the Chinese institute dealing with the study of international questions, emphasized:

"That strategic link which has come into being between China, the United States, Japan, West Europe and some of the third world countries took form in the struggle against Soviet hegemonism. The foundation for this link is a common strategic interest."

Xiong Xianghui, vice-president of the Chinese People's Foreign Affairs Institute, said no less than what we now quote:

"The Chinese leaders have said on numerous occasions that they regard the Soviet Union, and not the United States, as the fundamental source of war.... It is incorrect for the Trilateral Commission to use the expression 'Communist China' in its publications. This expression is not precise; it suffices to say simple 'China.'.... It is not correct for the Trilateral Commission to refer to China in various of its documents as an 'eastern country,' together with the Soviet Union, nor is it correct for the Commission to say that the world today is divided by an 'East-West conflict.' This conception reflects views fashionable in the early 1950's and it does not correspond to the reality of the present world situation."

The Logic of Maoist Development

In the light of all this it also becomes clear how the Peking leadership interprets the so-called "three worlds theory" which is being developed into the foundation for China's foreign policy and which was repeatedly confirmed by the most recent 6th plenum of the Central Committee of the CCP. This "theory" is based on the idea that the so-called "second world" (the industrially developed countries, without distinction, with which China lists itself) must fight with united strength against the "first world" (the Soviet Union and the United States, again without class distinctions). But for the present Chinese leadership only the Soviet Union, out of this "first world," qualifies as an enemy. What has happened is what the Central Committee of the CPSU said--at its February 1964 session--about the logic of the development of Maoist policy:

"The Maoists, betraying the class interests of the workers and the ideals of the Chinese revolution, will sink from leftist pseudo-revolutionary calls for the immediate annihilation of the 'paper tiger of American imperialism' to making direct military-political deals with them.... Proceeding on their own anti-Leninist mistaken road the Chinese leaders must come to a practical intertwining with the reactionary, militant elements of imperialism."

Unfortunately, this has happened. For the present American leaders China has been raised to the rank of the "almost allied."

Two Sorts of Conceptions

Under such circumstances the anti-American Peking criticism voiced from time to time in the Taiwan question has the misleading role of keeping nationalism alive or rather of reassuring theforces wary of excessive subordination to the US. The already quoted Pei Monuong formulated it this way before the Trilateral Commission:

"The Taiwan question is not simply a bilateral problem but is a part of the general strategy. So we cannot permit the Taiwan question to result in a reversal in Chinese-American relations because all things like this have a harmful effect on the development of the strategic contacts which are of primary importance."

Of course, the American and Chinese strategies which have found one another on the soil of anti-Sovietism are far from being uniform in regard to their long-range plans. Each is trying to bind the other more closely to its policy, while trying to retain a free hand for itself.

When the Chinese leaders, with their offers of alliance, urge the United States, Japan and West Europe to step up their arming against the Soviet Union, when they applaud the upsetting of the SALT agreement, the western European deployment of medium-range missiles and the manufacture of the neutron bomb, they are basing their calculations on the idea that all this may result in a clash which could lead to the destruction or weakening of all their potential rivals. And they lull themselves in the illusion that they themselves may remain outside the zone of destruction and the leading role in the world which they so long for may fall in their laps. This is nothing other than the unadulterated dream of Mao: "The wise monkey sitting on the peak of the mountain watches the struggle of the tigers in the valley."

Washington's conception of the Chinese-American rapprochement is obviously entirely different. Joseph Sisco, former American under-secretary of state, wrote as follows in the article titled "Selective Pledges" which appeared recently in FOREIGN POLICY:

"An Enduring Soviet-Chinese hostility will tie down resources which otherwise Moscow would concentrate against the West."

In other words, China is getting partial tasks in the realization of the Asian plans of the American leadership--Peking is to exercise pressure on Vietnam, hinder the changes taking place in people's Cambodia, support the Afghan counterrevolutionaries and, especially, follow an anti-Soviet line everywhere and in everything, so as to tie down "Soviet resources."

Increasing Resistance

The Chinese leadership--being the weaker party--is actually selling the sovereignty of their homeland. Among other things this is shown by the fact that Peking has permitted the deployment on Chinese territory of American monitoring and reconnaisance stations directed against the Soviet Union. Some Washington diplomats are already pondering when their medium-range missiles directed against the Soviet Union can be deployed in China also. The United States--as in the case of West Europe also--wants to attain strategic superiority against the Soviet Union at the price of risking the existence of others.

The Chinese hegemonists, whether they want to play an independent role in the Far East or undertake "partial tasks" from the plans of the imperialists, are in any case acting against the fundamental interests of their neighbors, the peoples of the area, and especially, their own people. For this reason their policy is running into strengthening resistance.

TRAINING, CORRECTION OF SOLDIERS DISCUSSED

Warsaw PRZEGLAD WOJSK LADOWYCH in Polish No 6, Jun 81 pp 85-87

[Article by Master Capt Adam Kulbiej: "The Shaping of Personality"]

> [Text] Personality is a combination of closely connected, fundamental, relatively stable and lasting psychological qualities formed under concrete conditions of social life, delineating the behavior and activity of a soldier. The subject of military training is a young man of 19-21 years, who is supposed to master specific knowledge connected with his role in defense of the country and social life. A young man of this age is still not fully formed psychologically and physically. Every trainer and commander must be aware of this and form his own conclusion.

As a social institution, the military exerts a definite impact on the shaping of the personality of the young citizen. And it is for this reason that exceptional moral responsibility lies with a soldier's superiors.

Unlike other institutions, in which the age range of trainees is broad, in the military youth constitute a social group equalized with regard to age. Moreover, every day of a soldier's life is defined by regulations, the order of the day and particular orders. This creates quite a different situation for the trainer and trainee here than in other institutions.

The aims of training. The aim of military training is to prepare the soldier for action on the field of battle and for life and work in socialist society. Shaping the personality of subordinates as creative, rational and noble defenders of the fatherland prepares them for work and life in the civilian environment.

Principles of training. This refers to the most general norm regulating the conduct of the trainer during the training process.

The principle of the personality. Conscious human activity depends primarily on the defined ideas which one lives by and which guide human behavior. In accordance with this principle, a soldier should have a good understanding of the aims and tasks in the name of which he must surmount difficulties, endure ordeals and always be prepared to work for the good of the fatherland.

The principle of the systematic training effect depends on exacting tasks from the soldier, increasing requirements and means of action, and the continuity of training endeavors.

Respect for personality. The individual treatment of each trainee guarantees respect for the trainee's personality. Thanks to respect for the soldier's dignity, relations between superior and subordinate are becoming easier. Then the training impact is greater. Familiarity with the soldier's mental characteristics, character and temperament allows the superior to define his suitability for a specified function and to anticipate his behavior in one or another situation.

After he has started his basic military service, a young man frequently encounters difficulties with which he cannot cope. The new environment, tasks requiring physical and mental stress, a tightly organized life regimen, strict discipline, sudden separation from family and friends, the need to rebuild the whole lifestyle that the soldier has had until now--all these changes demand great physical and mental effort on the part of the soldier. Therefore, all commanders, especially in the initial period of military service, should remember the individual approach to each soldier.

Training work. This cannot be limited only to instructions, orders and stories. Soldiers are trained by people, a situation, exercises, labor and military life, and the conditions prevailing in the collective. The training process is a constant process; it cannot be planned for certain hours, days and weeks. The basic training work aimed at positive personality formation is the commander's recognition of the individual traits of each member of the collective.

Recognition of personality. In the recognition process, which is governed by familiarity with the general principles of human personality structure, the following factors should be considered:

--the soldier's personal data;
--the influence of his way of life up until now and his upbringing;
--his state of health;
--his intellect;
--his emotions;
--his temperament;
--his character;
--his essential capabilities, habits and skills in his work;
--his interests; and
--his world view.

The more important ways of recognizing the soldier's personality are: observation, individual interview and data obtained from documents.

Pedagogical tact has a great influence on relations in the subunit, especially during meetings and individual conversations between the commander and his subordinates. This is the ability to feel, the way that one should behave and act in various situations with people. You can tell a person everything, but you have to do it in a way that will not cause negative training effects.

Work With Problem Soldiers

Many problem soldiers are capable, but they put their abilities to inappropriate use. Sometimes they are leaders of informal groups which have an unfavorable influence on the surroundings. Therefore, it is rather essential to conduct corrective work with them.

Practice with correction shows that the mind of an undisciplined soldier cannot be reshaped using penalties alone. Corrective methods should depend on the person upon whom they act. Desired changes can be achieved only be creating an atmosphere of cooperation between the commander and subordinate based on mutual respect for human dignity. This follows, moreover, from the basic principle of pedagogical humanism. By eliminating negative attitudes, the subunit becomes integrated.

The foremost training task is to strive for complete development of the personality of the subordinates and for his integration into the subunit.

We know from practice that the problem soldier who is continually punished does not change his behavior but rather, as a rule, behaves even worse, no longer fearing subsequent penalties. Moreover, the penalties release obstinacy and aggression in him. The use of a work penalty, out of turn, without thinking it out properly also has similar effects.

The aim of socialist training is to inculcate a liking for work and good fulfillment of obligations. When work starts to be a punishment, achievement of this aim is impossible. Punishing someone with work out of turn seems advisably only when it is meant to correct harm that has been done or to benefit the public. This should be explained accurately to the person being punished, and he should be made to understand that--notwithstanding the punishment being meted out to him--respect is being shown for his human dignity.

Punishment cannot be the only means of correction. It is supposed to solve the problem, and not to create a new one. Therefore, one must not constantly remind trainees and mention punishment. It is essential to restore the punished soldier to the rights which the regulations give him (furloughs, periodic leaves) as soon as possible. The point is to make him understand that his persistance in a posture of rebellion against his superiors and his environment is inadvisable, that in his case this posture has lost its effectiveness.

As a rule, punishment itself does not lead to the cessation of undesirable habits. A significant role is played by conversations--held freely, in a sincere atmosphere--on the subject of family circumstances and future life plans and by knowledge of the conditions in which the soldier was brought up and the environment from which he came to the military.

But a problem soldier has not always brought that baggage of negative traits with him when he joins the military. The sad fact is that these soldiers are "created" in the military by commanders with poor pedagogical qualifications. Such commanders think that they can build up their authority by meting out harsh punishments. I believe that the restive soldier notices only the ruthless and relentless commander. Frequently, these commanders use outcries, name calling, and threats, and they do

not fulfill the soldier's desires. This kind of behavior has negative results. Rigors are the mainspring of correction, but thoughtless repression in the form of punishments always causes an increase in negative reactions. Let me give you an example. A problem soldier has committed an offense (not for the first time); his commander has punished him by confining him to quarters, but at the same time he has told the soldier: furloughs do not apply to you, and you'll go on leave in civilian life. Although these promises usually fall into oblivion, nevertheless there takes shape in the mind of the soldier a very negative reaction--a reaction of aggression and rebellion: "there is no way for me to improve myself, because I don't have any chances." Such punishments kill the soldier's desire to improve himself, and they affirm his feeling that the situation is hopeless. By the same token, they destroy the important source of inner coercion, so important for matters of leadership and training.

Consistency is a basic training directive, without which it is difficult to achieve the training goal. To achieve consistency requires placing well thought out and great demands on the subordinate, maintaining constant supervision, and evaluating the progress and general attitude of the trainee. Only the consistent commander enjoys the confidence of, and authority over, the subordinate. These things are acquired not by the threat of punishment or by vindictiveness, but by having the commander place demands on the subordinate and on himself. Consequently, trainers should act in accordance with these recommendations:

--show interest--and sincere interest--in your subordinate, especially in the problem soldier;

--give preference to the individual approach to every soldier instead of having a schematic, equal attitude towards everyone; and

--include problem soldiers in the active life of the subunit.

How should the commander act so that singling out a subordinate or punishing him will play a positive role in the process of resocializing problem soldiers?

Primarily, it is indispensable to combine the training efforts of commanders at all levels. Including the problem soldier directly and actively in the mainstream of the life of the subunit also plays an essential role in the resocialization process. Initially the allotted tasks should be quite easy, but the commander cannot forget about singling a soldier out for accomplishing these tasks in an exemplary fashion. Singling soldiers out when this is not justified has very negative training effects. At first the problem trainee will argue that he is not anxious for this distinction. But this is only a feigned attitude. For there are no people without ambition, and everyone has a need for recognition in others' eyes. Therefore, it is better to single out a soldier even for small accomplshments than to punish him unnecessarily or harshly even once. Singling out (also punishing) a soldier belatedly is ineffective, and sometimes the absence of an anticipated distinction acts like a punishment.

In the complex of pedagogical reactions to problem soldiers, many remarks are devoted to the appropriate adjustment of the environment to these soldiers. The creation of an atmosphere of goodwill by the commander is important, but so is the creation of regulated order that is binding on everyone. It is easier to correct a soldier who

is convinced that people wish him well and who wants to be helped. Sometimes punishment is an indispensable corrections medium. Whether or not it fulfills its task is determined by the way in which it is meted out. Conduct that offends human dignity, sarcasm, and also engaging in name calling, abusive language, and threats will not yield the desired result. For a subordinate's feeling of inferiority runs deep, killing the feeling of his own worth. Depriving a subordinate of the function which he is fulfilling is a painful punishment, which it sometimes is more advantageous to mete out in an appropriate manner and under suitable circumstances.

Offense that warrant disciplinary action should be considered during the official daily briefing. Primarily, the commander must stimulate the perpetrator of an offense warranting disciplinary action to evaluate the situation and to look at it from the standpoint of a superior or colleague. For the reaction to be a positive one, in the conversation preceding this confrontation the act being censured should be qualified impartially, without discrediting the punished individual in any way. The soldier must be convinced of the validity of the punishment. Only then does he not occupy the position of an enemy and adversary in relation to the commander-trainer, but, rather, he takes on himself the responsibility for the offense, submitting of his own free will to the consequences resulting from this offense. It should be remembered that the soldier has ample opportunities to better himself and to remit his punishment for good behavior.

Among the many training actions, persuasion occupies an important place. It is not a matter of moralizing trivially, but of patiently transmitting experiences, knowledge, and capabilities. The arousal of the need for stability in military society, for recognition in the collective, plays an essential role. This effect is achieved precisely by persuasion--similar to the overcoming of frustration, that is, the state of unpleasant mental stress caused by the failure to satisfy some needs or by the inability to attain some goal, and primarily by the failure to have geniune training contact between the soldier and his commander and the soldier collective.

Thus, pointers can be specified with regard to corrective behavior toward problem soldiers:

--Corrective activity should be based on persuasion, encouragement, and recognition, assuring cooperation with the problem soldier when a decision is made regarding him, and with renunciation of supervision of the problem soldier that is based exclusively on domination.

--It is essential to arouse in the problem soldier the feeling of self-control and of responsibility for achieved tasks and attitude, and to increase the requirements for his acceptance.

--The trainee's conviction concerning his commander's goodwill and desire to come to his aid should be confirmed.

--Strive to arouse the need to obtain approval and reward, and to create an atmosphere of sympathy, goodwill and mutual trust.

--Utilize resocialization possibilities sometimes overlooked by the circle of military youth.

In particular cases, when all the pointers discussed here fail, there is another method, that of sending problem soldiers, including perpetrators of offenses meriting disciplinary action, to the soldier collectives for training. The forms and principles of this method are defined in a detailed manner in guidelines No 8 from the chief of the Main Political Directorate of the Polish military from 14 December 1970 on the principles and forms of activity of soldier collectives in the process of correcting perpetrators of crimes and offenses meriting disciplinary action in the military.

'CREATIVE' SOCIALISM OF CEAUSESCU HAILED BY RAUTU

Bucharest ANALE DE ISTORIE in Romanian No 3, May-Jun 81 pp 61-64

[Article by Leonte Rautu, member of the Political Executive Committee of the Romanian Communist Party's Central Committee, president of the Leadership Council and rector of the "Stefan Gheorghiu" Academy: "The Creative Approach to the Problems of Building Socialism in the Activities of the Romanian Communist Party and Those of its Secretary General, Comrade Nicolae Ceausescu"]

[Text] From its birth and throughout the entire course of its activities, which are rich in moments of great tension and drama, as well as great events and victories, the Romanian Communist Party as expressed itself as the legitimate successor of the lofty traditions of our people's struggle for national and social liberacion. It is a fact full of significance that the Party's Program itself contains a synthesis of the entire path covered by the Romanian people during its millenary history as an expression of the idea that there is an indestructible organic link between the past, present and future of the Romanian nation and that without delving into the deep meanings of its historical evolution and its crucial moments the view into its status today and for tomorrow will appear incomplete.

One of these crucial moments, whose real significance in historical perspective was understood at the time by the most lucid and enlightened minds, was the founding of the Romanian Communist Party. Under its leadership, as pointed out by one of the recent documents of the party, the working class and the workers forged a glorious path of struggle and victories, carried out the great goals of the social and national, anti-imperialist and anti-fascist revolution, ensured the democratic and socialist transformation of society and laid the lasting foundations for today's socialist Romania as a prosperous, independent and sovereign country.

The 60th anniversary of the founding of the Romanian Communist Party, it was stressed in the report, offers an opportunity for a review of the great achievements and the radical revolutionary transformations that have occurred in all the areas of social affairs in our country since the party has been at its helm.

A turning point in the history of the party and our people was the Ninth Congress and the election of comrade Nicolae Ceausescu to head the party. The work of great theoretical and practical complexity that it undertook, a work profoundly hostile

to any rigidity and dogma, to any immobilism in political thought and practice and to any theoretical fetishes, was based upon and is based upon a profoundly scientific, objective and courageous analysis of the course traveled, including the errors that were made, upon a penetrating examination of the new realities in all their aspects and upon an intransigent struggle against things obsolete and an uncovering of the mature requirements for the later development of society.

The structural modifications and profound changes that have taken place in recent years as a result of the dynamic development of the forces of production, the growth of national wealth and the continued improvement of the people's standard of living represent the supreme criteria of the justness of the party's policies, its scientific nature and the ability that our socialist society has to consciously direct the economic-social processes.

We all know that our party and its leadership have a strong feeling for reality and are directly involved in all aspects and facets of practical activities. At the same time, narrow and commonplace empiricism and practicism are totally foreign to the party. The Romanian Communist Party represents, as has been said more than once, an immense laboratory of theoretical thought, of synthesizing accumulated experience, of forecasting future development, of profoundly investigating the new phenomena and processes at the national and international levels and of drawing up both certain innovative theoretical theses and highly original forms and methods for specific social actions. The indissoluble and organic unity between theory and practice is one of the guiding principles for the manner in which our party understands how to work. For that reason, the stress given by the secretary general of the party is of a principled exceptional significance in that the theoretical study of the problems of the development of the new order and the forecasting of the future evolution of socialist society represent an objective requirement for the advancement of our country towards communism.

Beginning with this, the speaker particularly stressed two aspects that are, furthermore, closely interrelated and characteristic of the manner in which the secretary general of the party deals with the problems of revolutionary theory.

A fundamental aspect refers to his passionate plea for the spread of new social experiences on a theoretical level, as well as the spread of the recent data of human knowledge, going beyond a dogmatic concept that is hostile to the spirit itself of revolutionary thought, a concept which states that Marxist theory is something closed and intangible and that Marxism represents a type of closed system that is blind to the profound changes that have occurred and are occurring in the history of humanity. On the contrary, the report noted, Marxist revolutionary theory is a forever living theory whose essence is constantly being renewed from the spring of universal thought and knowledge, from the advances of all sciences,

from the profound social and political changes that are taking place in contemporary social affairs and from revolutionary practices. As was shown in the Report to the 12th Congress, an essential condition for success in the struggle of each revolutionary party is being guided by the concepts of dialectic and historical materialism, by scientific socialism and by the thinking in the classics of revolutionary theory. "At the same time, it must be understood that we are living in another historical era and that this requires a new approach to the fundamental problems of social development."
